» Inulin is a polysaccharide which, on hydrolysis, yields mainly fructose. It contains not less than 94.0 percent and not more than 102.0 percent of $C_6H_{11}O_5(C_6H_{10}O_5)_n OH$, calculated on the dried basis.

Packaging and storage—Preserve in well-closed containers. Store at 25°, excursions permitted between 15° and 30°.

USP Reference standards ⟨11⟩—
USP Dextrose RS
USP Fructose RS

Completeness of solution—Dissolve 10 g in 20 mL of boiling water in a 200-mL volumetric flask, add 150 mL of water, allow to cool, dilute with water to volume, and mix: the solution is clear.

Specific rotation ⟨781S⟩**:** between –32.0° and –40.0°.
Test solution: 100 mg per mL, in 0.012 N ammonium hydroxide.

Microbial enumeration tests ⟨61⟩ and ***Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Salmonella* species and *Escherichia coli* and for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa;* the total aerobic microbial count is less than 1000 per g.

Loss on drying ⟨731⟩**:** not more than 10.0% after it has been dried at 105° for 2 hours, 2 g of the finely ground powder being used for the test.

Residue on ignition ⟨281⟩—Multiply the percentage of *Calcium* found by 3.4. The residue on ignition does not exceed this percentage by more than 0.05%.

pH, Chloride, Iron, and Reducing sugars—Dissolve 10.0 g in 20 mL of boiling water in a 100-mL volumetric flask, allow to cool, dilute with water to volume, and mix. Use the solution for the following tests.

pH ⟨791⟩—The pH of the solution is between 4.5 and 7.0.

Chloride ⟨221⟩—A 10-mL portion of the solution shows no more chloride than corresponds to 0.20 mL of 0.020 N hydrochloric acid (0.014%).

Iron—To 10 mL of the solution add 0.5 mL of hydrochloric acid and 3 drops of potassium ferrocyanide TS: the solution does not become blue within 1 minute.

Reducing sugars—To 2 mL of the solution add 5 mL of alkaline cupric tartrate TS: no reduction occurs at room temperature, and only slight reduction occurs after 1 minute of boiling.

Calcium—Heat 10.0 g in 100 mL of water to dissolve. Cool to room temperature, add 15 mL of 1 N sodium hydroxide and 300 mg of hydroxy naphthol blue, and titrate with 0.05 M edetate disodium VS to a blue endpoint. Not more than 5.0 mL is required: not more than 0.10% calcium is found.

Sulfate ⟨221⟩—A 1.0 g portion shows no more sulfate than corresponds to 0.5 mL of 0.020 N sulfuric acid (0.05%).
[NOTE—Inulin should be dissolved in 30 to 40 mL of water with gentle warming, prior to dilution to final volume.]

Free fructose—
Blue tetrazolium solution—Dissolve 50 mg of blue tetrazolium in 10 mL of alcohol, and mix.
Tetramethylammonium hydroxide solution—Prepare a mixture of 1 volume of tetramethylammonium hydroxide TS and 9 volumes of alcohol.
Standard stock solution—Prepare an aqueous solution having a known concentration of about 250 µg of USP Fructose RS per mL. Store at about 4°.
Standard preparation—On the day of use, quantitatively dilute a portion of the *Standard stock solution* with alcohol to obtain a solution having a known concentration of about 2.5 µg per mL. Store at about 4°.

www.webofpharma.com

Test preparation—Transfer about 2.5 g of Inulin, accurately weighed, to a 100-mL volumetric flask, add about 75 mL of water, heat on a steam bath until solution is complete, cool to room temperature, dilute with water to volume, and mix. Pipet 1 mL into a 100-mL volumetric flask, dilute with alcohol to volume, and mix. If the solution is turbid, pass through fine-porosity filter paper.

Procedure—Pipet 10 mL of the *Test preparation* and 10 mL of the *Standard preparation* into separate glass-stoppered centrifuge tubes. Into each of the tubes, and into a similar tube containing 10.0 mL of alcohol to provide the blank, pipet 1 mL of *Blue tetrazolium solution,* and mix. Then into each tube pipet 1 mL of *Tetramethylammonium hydroxide solution,* mix, and allow to stand in the dark for 60 minutes. Without delay, concomitantly determine the absorbances of the solutions from the *Test preparation* and the *Standard preparation* at 530 nm, with a suitable spectrophotometer, against the blank. Calculate the percentage, *F,* of free fructose in the Inulin taken by the formula:

$$F = (C/W)(A_U/A_S)$$

in which *C* is the concentration, in µg per mL, of USP Fructose RS in the *Standard preparation; W* is the quantity, in g, of Inulin taken; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation,* respectively. The limit is 2.0%, calculated on the dried basis.

Content of combined glucose—

Standard stock solution—Transfer about 50 mg of USP Dextrose RS, accurately weighed, to a 100-mL volumetric flask, dissolve in a solution of benzoic acid (1.7 in 1000), dilute with the same solution to volume, and mix. Allow to stand at room temperature for not less than 3 hours before using. This solution is stable for 1 month at about 4°.

Standard preparation—Pipet 7 mL of *Standard stock solution* into a 100-mL volumetric flask, dilute with water to volume, mix, and use at once.

Assay preparation—Transfer about 0.5 g of Inulin, accurately weighed, to a 100-mL volumetric flask, add 5.0 mL of water, dissolve by heating on a steam bath, cool to room temperature, add 0.5 mL of 8 N hydrochloric acid, and mix. Place the flask in a boiling water bath for 5 minutes, cool, dilute with water to volume, and mix. Pipet 2 mL of this solution into a 10-mL volumetric flask, dilute with water to volume, and mix. [NOTE—This solution is used also for preparing the *Assay preparation* in the *Assay for inulin.*]

Procedure—Pipet 3-mL portions of glucose oxidase–chromogen TS into 3 separate test tubes, and bring to a temperature of 37 ± 0.5° in a water bath. Pipet 2 mL of *Standard preparation* into one of the tubes, pipet 2 mL of *Assay preparation* into another, and pipet 2 mL of water into the third tube to provide the blank. Maintain at 37 ± 0.5° for an additional 10 minutes, then remove the tubes, and allow them to cool. Determine the absorbances of the solutions from the *Assay preparation* and the *Standard preparation* at about 505 nm, with a suitable spectrophotometer, using the reagent blank as a reference. Calculate the percentage of combined glucose, *G,* in the Inulin taken by the formula:

$$G = 50(C/W)(A_U/A_S)$$

in which *C* is the concentration, in mg per mL, of USP Dextrose RS in the *Standard preparation; W* is the amount, in g, of Inulin taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation,* respectively. Not less than 2.0% and not more than 5.0%, calculated on the dried basis, is found.

Assay for inulin—

Thiobarbituric acid solution—Dissolve 250 mg of thiobarbituric acid in 100 mL of 8 N hydrochloric acid, and mix. This solution is stable for 2 weeks at a temperature of about 4°.

Standard stock solution—Quantitatively dissolve an accurately weighed quantity of USP Fructose RS in an aqueous solution of benzoic acid (1.7 in 1000) to obtain a solution having a known concentration of about 1 mg of USP Fructose RS per mL. [NOTE—This solution is stable for 1 month at about 4°.]

Standard preparation—Quantitatively dilute the *Standard stock solution* with water to one-fiftieth of its concentration. Use immediately.

Assay preparation—Pipet 4 mL of the *Assay preparation* from the *Content of combined glucose* into a 200-mL volumetric flask, add water to volume, and mix.

Procedure—Pipet 1-mL portions of the *Standard preparation* and the *Assay preparation* into separate glass-stoppered tubes. Pipet 1 mL of water into a third tube to provide the blank. Pipet 5-mL portions of *Thiobarbituric acid solution* into each tube, and mix. Place all of the tubes simultaneously in a water bath maintained at a temperature of about 83°, and allow them to stay immersed for 5 minutes, accurately timed. Remove the tubes simultaneously, and allow them to cool in a dark place for 30 minutes. Determine the absorbances of the solutions from the *Assay preparation* and the *Standard preparation* at about 435 nm, with a suitable spectrophotometer, using the reagent blank as a reference. Calculate the percentage of $C_6H_{11}O_5(C_6H_{10}O_5)_n OH$ in the Inulin taken by the formula:

$$0.900[2.5(C/W)(A_U/A_S) - F] + G$$

in which 0.900 is the ratio of the formula weight of an anhydrofructose unit of inulin to that of fructose; *C* is the concentration, in µg per mL, of USP Fructose RS in the *Standard preparation; W* is the quantity, in g, of Inulin weighed for the *Content of combined glucose;* A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation,* respectively; *F* is the percentage of free fructose; and *G* is the percentage of combined glucose.

Inulin in Sodium Chloride Injection

» Inulin in Sodium Chloride Injection is a sterile solution, which may be supersaturated, of Inulin and Sodium Chloride in Water for Injection. It may require heating before use if crystallization has occurred. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $(C_6H_{12}O_6)_n$ and not less than 95.0 percent and not more than 105.0 percent of the labeled amount of NaCl. It contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose containers, preferably of Type I or Type II glass.

USP Reference standards ⟨11⟩—
USP Dextrose RS
USP Fructose RS

Clarity—If particulate matter is present, heat at 100° for 30 minutes: the resulting solution is free from turbidity and particulate matter.

USP Monographs

www.webofpharma.com

[NOTE—Before applying the following tests, dissolve any solid matter by heating, and cool to room temperature.]
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 0.1 USP Endotoxin Unit per mg of inulin.
pH ⟨791⟩: between 4.0 and 7.0.

Free fructose—
Blue tetrazolium solution, Tetramethylammonium hydroxide solution, Standard stock solution, and *Standard preparation*—Proceed as directed in the test for *Free fructose* under *Inulin.*
Test preparation—Transfer an accurately measured volume of Injection, equivalent to about 2.5 g of inulin, to a 100-mL volumetric flask, add water to volume, and mix. Just prior to use, pipet 1 mL of this solution into a 100-mL volumetric flask, dilute with alcohol to volume, mix, and, if the solution is turbid, pass through fine-porosity filter paper.
Procedure—Proceed as directed for *Procedure* in the test for *Free fructose* under *Inulin.* Calculate the quantity, *F,* in mg, of free fructose in each mL of the Injection taken by the formula:

$$10(C/V)(A_U/A_S)$$

in which *C* is the concentration, in µg per mL, of USP Fructose RS in the *Standard preparation; V* is the volume, in mL, of Injection taken; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation,* respectively. The limit is 2.2 mg per mL.
Other requirements—It meets the other requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay for inulin—
Content of combined glucose—Proceed as directed in the *Content of combined glucose* under *Inulin,* but in preparing the *Assay preparation* use, instead of 0.5 g of inulin, an accurately measured volume of the Injection equivalent to about 0.5 g of inulin. Calculate the quantity, in mg, of combined glucose, *G,* in each mL of the Injection taken by the formula:

$$500(C/V)(A_U/A_S)$$

in which *C* is the concentration, in mg per mL, of USP Dextrose RS in the *Standard preparation; V* is the volume, in mL, of Injection taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation,* respectively.
Procedure—Proceed as directed in the *Assay for inulin* under *Inulin.* Calculate the quantity, in mg, of $(C_6H_{12}O_6)_n$ in each mL of the Injection taken by the formula:

$$0.900[25(C/V)(A_U/A_S) - F] + G$$

in which 0.900 is the ratio of the formula weight of an anhydrofructose unit of inulin to that of fructose; *C* is the concentration, in µg per mL, of USP Fructose RS in the *Standard preparation; V* is the volume, in mL, of Injection taken; A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation,* respectively; and *F* is the quantity, in mg, of free fructose in each mL of Injection, and the other terms are as defined therein.
Assay for sodium chloride—Pipet a volume of Injection, equivalent to about 90 mg of sodium chloride, into a porcelain casserole, and add 140 mL of water and 1 mL of dichlorofluorescein TS. Mix, and titrate with 0.1 N silver nitrate VS until the silver chloride flocculates and the mixture acquires a faint pink color. Each mL of 0.1 N silver nitrate is equivalent to 5.844 mg of NaCl.

Iodine

I_2 253.81
Iodine [7553-56-2].

DEFINITION
Iodine contains NLT 99.8% and NMT 100.5% of I.

IDENTIFICATION
- **A.** Solutions (1 in 1000) in chloroform and in carbon disulfide have a violet color.
- **B.**
  Analysis: To a saturated solution add starch–potassium iodide TS.
  Acceptance criteria: A blue color is produced. When the mixture is boiled, the color vanishes but reappears as the mixture cools, unless it has been subjected to prolonged boiling.

ASSAY
- **PROCEDURE**
  Sample: 500 mg of powdered Iodine
  Analysis: Place the *Sample* in a tared, glass-stoppered flask, insert the stopper, and add 1 g of potassium iodide dissolved in 5 mL of water. Dilute with water to 50 mL, add 1 mL of 3 N hydrochloric acid, and titrate with 0.1 N sodium thiosulfate VS, adding 3 mL of starch TS as the endpoint is approached. Each mL of 0.1 N sodium thiosulfate is equivalent to 12.69 mg of Iodine (I).
  Acceptance criteria: 99.8%–100.5%

IMPURITIES
- **LIMIT OF CHLORIDE OR BROMIDE**
  Sample solution: Triturate 250 mg of finely powdered Iodine with 10 mL of water, and filter the solution.
  Analysis: To the *Sample solution* add, dropwise, sulfurous acid (free from chloride), previously diluted with several volumes of water, until the iodine color just disappears. Add 5 mL of 6 N ammonium hydroxide, followed by 5 mL of silver nitrate TS in small portions. Filter, and acidify the filtrate with nitric acid.
  Acceptance criteria: The resulting liquid is not more turbid than a control made with the same quantities of the same reagents to which 0.10 mL of 0.020 N hydrochloric acid has been added, the sulfurous acid being omitted (0.028% as chloride).
- **LIMIT OF NONVOLATILE RESIDUE**
  Analysis: Place 5.0 g in a tared porcelain dish, heat on a steam bath until the iodine has been driven off, and dry at 105° for 1 h.
  Acceptance criteria: NMT 0.05% of the residue remains.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers.

Iodine Topical Solution

DEFINITION
Iodine Topical Solution contains NLT 1.8 g and NMT 2.2 g of iodine (I) and NLT 2.1 g and NMT 2.6 g of sodium iodide (NaI) in each 100 mL.

Iodine	20 g
Sodium Iodide	24 g
Purified Water, a sufficient quantity to make	1000 mL

www.webofpharma.com

Dissolve *Iodine* and *Sodium Iodide* in 50 mL of *Purified Water*, then add sufficient *Purified Water* to bring to final volume.

IDENTIFICATION

• **A.**

Analysis: Add 1 drop to a mixture of 1 mL of starch TS and 9 mL of water.

Acceptance criteria: A deep blue color is produced.

• **B. IDENTIFICATION TESTS—GENERAL** ⟨191⟩, *Iodide*

Sample: Evaporate a few milliliters on a steam bath to dryness.

Acceptance criteria: The residue meets the requirements of the test for *Iodide*.

• **C. SODIUM:** The *Sample* obtained in *Identification B* imparts an intense yellow color to a nonluminous flame.

ASSAY

• **IODINE**

Sample: 10.0 mL

Titrimetric system

Mode: Direct titration

Titrant: 0.1 N sodium thiosulfate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask, and dilute with 10 mL of water. Titrate with *Titrant*, adding 3 mL of starch TS as the endpoint is approached. Each milliliter of *Titrant* is equivalent to 12.69 mg of iodine (I).

Acceptance criteria: 1.8–2.2 g in 100 mL of Topical Solution

• **SODIUM IODIDE**

Sample: 10.0 mL

Titrimetric system

Mode: Direct titration

Titrant: 0.05 M potassium iodate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask, add 30 mL of water and 50 mL of hydrochloric acid, cool to room temperature, and titrate with *Titrant* until the dark brown solution that is produced becomes pale brown. Add 1 mL of amaranth TS, and continue the titration slowly until the red color just changes to yellow. The difference in volume, in milliliters, between the *Titrant* used and half the volume of 0.1 N sodium thiosulfate VS used in the *Assay* for *Iodine*, multiplied by 14.99, represents the number of milligrams of sodium iodide (NaI) in the portion of Topical Solution taken.

Acceptance criteria: 2.1–2.6 g in 100 mL of Topical Solution

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store at a temperature not exceeding 35°.

Strong Iodine Solution

DEFINITION

Strong Iodine Solution contains, in each 100 mL, NLT 4.5 g and NMT 5.5 g of iodine (I), and NLT 9.5 g and NMT 10.5 g of potassium iodide (KI).

Strong Iodine Solution may be prepared by dissolving 50 g of Iodine and 100 g of Potassium Iodide in 100 mL of Purified Water, then adding Purified Water to make the product measure 1000 mL.

IDENTIFICATION

• **A.**

Analysis: Dilute 1 drop with 10 mL of water, and add 1 mL of starch TS.

Acceptance criteria: A deep blue color is produced.

• **B. IDENTIFICATION TESTS—GENERAL,** *Potassium* ⟨191⟩ and *Iodide* ⟨191⟩

Analysis: Evaporate a few mL on a steam bath to dryness, and ignite gently to volatilize any free iodine.

Acceptance criteria: Meets the requirements

ASSAY

• **IODINE**

Sample solution: Transfer 10.0 mL of Solution into a glass-stoppered 500-mL flask, and add 10 mL of water.

Titrimetric system

Mode: Direct titration

Titrant: 0.1 N sodium thiosulfate VS

Endpoint detection: Visual

Analysis: Titrate the *Sample solution* with *Titrant*, adding 3 mL of starch TS as the endpoint is approached. Each mL of 0.1 N sodium thiosulfate is equivalent to 12.69 mg of iodine (I).

Acceptance criteria: 4.5–5.5 g of iodine (I) in each 100 mL

• **POTASSIUM IODIDE**

Sample solution: Transfer 10.0 mL of Solution to a glass-stoppered 500-mL flask, add 30 mL of water and 50 mL of hydrochloric acid, and cool to room temperature.

Titrimetric system

Mode: Direct titration

Titrant: 0.05 M potassium iodate VS

Endpoint detection: Visual

Analysis: Titrate the *Sample solution* with *Titrant* until the dark brown solution that is produced becomes pale brown. Add 1 mL of amaranth TS, and continue the titration slowly until the red color just changes to yellow. The difference between the number of mL of 0.05 M potassium iodate used and half the number of mL of *Titrant* used in the *Assay* for *Iodine*, multiplied by 16.60, represents the number of mg of KI in the volume of the Solution taken.

Acceptance criteria: 9.5–10.5 g of potassium iodide (KI) in each 100 mL

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers, preferably at a temperature not exceeding 35°.

Iodine Tincture

DEFINITION

Iodine Tincture contains NLT 1.8 g and NMT 2.2 g of iodine (I) and NLT 2.1 g and NMT 2.6 g of sodium iodide (NaI) in each 100 mL.

Prepare Iodine Tincture as follows.

Iodine	20 g
Sodium Iodide	24 g
Alcohol	500 mL
Purified Water, a sufficient quantity to make	1000 mL

Dissolve *Iodine* and *Sodium Iodide* in *Alcohol*. Add *Purified Water* to bring to final volume.

USP Monographs

www.webofpharma.com

IDENTIFICATION

• **A.**

Analysis: Add 1 drop to a mixture of 1 mL of starch TS and 9 mL of water.

Acceptance criteria: A deep blue color is produced.

• **B. IDENTIFICATION TESTS—GENERAL** ⟨191⟩, *Iodide*

Sample: Evaporate a few milliliters on a steam bath to dryness.

Acceptance criteria: The residue meets the requirements of the test for *Iodide*.

• **C. SODIUM:** The *Sample* obtained in *Identification B* imparts an intense yellow color to a nonluminous flame.

ASSAY

• **IODINE**

Sample: 10 mL

Titrimetric system

Mode: Direct titration

Titrant: 0.1 N sodium thiosulfate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask, and dilute with 10 mL of water. Titrate with *Titrant*, adding 3 mL of starch TS as the endpoint is approached. Each milliliter of *Titrant* is equivalent to 12.69 mg of iodine (I).

Acceptance criteria: 1.8–2.2 g in 100 mL of Tincture

• **SODIUM IODIDE**

Sample: 10 mL

Titrimetric system

Mode: Direct titration

Titrant: 0.05 M potassium iodate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask, add 30 mL of water and 50 mL of hydrochloric acid, cool to room temperature, and titrate with *Titrant* until the dark brown solution that is produced becomes pale brown. Add 1 mL of amaranth TS, and continue the titration slowly until the red color just changes to yellow. The difference in volume, in milliliters, between the *Titrant* used and half the volume of the 0.1 N sodium thiosulfate used in the *Assay* for *Iodine*, multiplied by 14.99, represents the number of milligrams of sodium iodide (NaI) in the portion of Tincture taken.

Acceptance criteria: 2.1–2.6 g in 100 mL of Tincture

OTHER COMPONENTS

• **ALCOHOL DETERMINATION** ⟨611⟩**:** 44.0%–50.0%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight containers.

Strong Iodine Tincture

DEFINITION

Strong Iodine Tincture contains NLT 6.8 g and NMT 7.5 g of iodine (I) and NLT 4.7 g and NMT 5.5 g of potassium iodide (KI) in each 100 mL.

Prepare Strong Iodine Tincture as follows.

Potassium Iodide	50 g
Iodine	70 g
Purified Water	50 mL
Alcohol, a sufficient quantity to make	1000 mL

Dissolve *Potassium Iodide* in *Purified Water*. Add *Iodine* and agitate until the solution is effected. Add *Alcohol* to bring to final volume.

IDENTIFICATION

• **A.**

Analysis: Add 1 drop to a mixture of 1 mL of starch TS and 9 mL of water.

Acceptance criteria: A deep blue color is produced.

• **B. IDENTIFICATION TESTS—GENERAL** ⟨191⟩, *Iodide*

Analysis: Evaporate a few milliliters on a steam bath to dryness.

Acceptance criteria: The residue meets the requirements of the test for *Iodide*.

• **C. POTASSIUM:** The *Sample* obtained in *Identification B* imparts a violet color to a nonluminous flame. The presence of small quantities of sodium masks the color unless the yellow color produced by sodium is screened out by viewing through a blue filter that blocks the emission at 589 nm (sodium). It is transparent to the emission at 404 nm (potassium). [NOTE—Traditionally, cobalt glass has been used, but other suitable filters are commercially available.]

ASSAY

• **IODINE**

Sample: 10 mL

Titrimetric system

Mode: Direct titration

Titrant: 0.1 N sodium thiosulfate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask and add 10 mL of water. Titrate with *Titrant*, adding 3 mL of starch TS as the endpoint is approached. Each milliliter of *Titrant* is equivalent to 12.69 mg of iodine (I).

Acceptance criteria: 6.8–7.5 g of iodine (I) in 100 mL

• **POTASSIUM IODIDE**

Sample: 10 mL

Titrimetric system

Mode: Direct titration

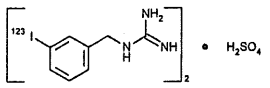
Titrant: 0.05 M potassium iodate VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* into a glass-stoppered 500-mL flask, add 30 mL of water and 50 mL of hydrochloric acid, cool to room temperature, and titrate with *Titrant* until the dark brown solution that is produced becomes pale brown. Add 1 mL of amaranth TS, and continue the titration slowly until the red color just changes to yellow. The difference between the volume of *Titrant* used and half the volume of 0.1 N sodium thiosulfate used in the *Assay* for *Iodine*, in milliliters, multiplied by 16.60, represents the number of milligrams of potassium iodide (KI) in the portion of Tincture taken.

Acceptance criteria: 4.7–5.5 g of potassium iodide (KI) in 100 mL

OTHER COMPONENTS



• **ALCOHOL DETERMINATION** ⟨611⟩**:** 82.5%–88.5%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers.

www.webofpharma.com

Iobenguane I 123 Injection

$(C_8H_{10}{}^{123}IN_3)_2 \cdot H_2SO_4$
[[3-(Iodo-^{123}I)-phenyl]methyl]guanidine sulfate (2:1).
(*m*-Iodo-^{123}I)-benzyl)guanidine sulfate (2:1) [139755-80-9].

» Iobenguane I 123 Injection is a sterile solution containing iobenguane sulfate in which a portion of the molecules contain radioactive iodine (^{123}I) in the molecular structure. Iobenguane I 123 Injection contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of I 123 as iobenguane expressed in megabecquerels (or in millicuries) per mL at the time indicated in the labeling. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of iobenguane. It may contain preservatives or stabilizers.

Packaging and storage—Preserve in single-dose or in multiple-dose containers that are adequately shielded. Store in a freezer.
Labeling—Label it to include the following: the time and date of calibration; the amount of ^{123}I as iobenguane expressed as total megabecquerels (or millicuries) per mL at the time of calibration; the name and quantity of any added preservative or stabilizer; the expiration time; and the statement "Caution —Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{123}I is 13.2 hours.
Radionuclidic identification (see *Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of ^{123}I of known purity that exhibits a major photopeak having an energy of 159 KeV.
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 175/*V* USP Endotoxin Unit per mL of the Injection, when compared with the USP Endotoxin RS, in which *V* is the maximum recommended total dose, in mL, at the expiration time.
pH ⟨791⟩: between 6.0 and 7.5.
Radionuclidic purity (see *Radioactivity* ⟨821⟩)—Using a suitable counting assembly, determine the radionuclidic purity of the Injection: not less than 97% of the total radioactivity is present as ^{123}I.

Radiochemical purity—
METHOD 1 (High-pressure liquid chromatographic method) —
Mobile phase, Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay for iobenguane sulfate,* except that the liquid chromatograph is also equipped with a collimated radiation detector (see *Radioactivity* ⟨821⟩).
Test preparation—Use *Iobenguane I 123 Injection.*
Procedure—Inject a volume (about 20 µL) of Injection, equivalent to 1.6 to 2.7 MBq (44 to 64 µCi) of the Injection into the chromatograph, record the chromatogram, and measure the areas for the major peaks. The radioactivity of the iobenguane ^{123}I peak is not less than 90% of the total radioactivity measured, and its retention time is within 10% of that in the chromatogram of the *Standard preparation* obtained in the *Assay for iobenguane sulfate.*

METHOD 2 (Thin-layer chromatographic method)—Apply 0.2 to 0.4 µL of the Injection 10 mm from one end of a 20- × 200-mm silica gel glass plate (see *Chromatography* ⟨621⟩), and allow to dry. Develop the chromatogram by ascending chromatography until the solvent front has moved 100 mm from the origin (about 20 minutes), using a solvent system consisting of a mixture of alcohol, ethyl acetate, and ammonium hydroxide (20:20:1). Air-dry the chromatogram, and determine the radioactivity distribution by scanning the chromatogram with a collimated radiation detector: not less than 90% of the total radioactivity is found as ^{123}I at the origin.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that the Injection may be distributed or dispensed prior to the completion of the test for *Sterility Tests* ⟨71⟩, the latter test being started on the day of final manufacture, and except that it is not subject to the recommendation on *Container Content.*

Assay for iobenguane sulfate—
Mobile phase—Prepare a filtered and degassed mixture of water and acetonitrile (900:100). Add 3.04 g of triethylamine per liter, and adjust with phosphoric acid to a pH of 4. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Using an accurately weighed quantity of iobenguane sulfate, prepare a solution in water having a known concentration of about 1 mg per mL.
Assay preparation—Use the Injection, which has not yet been brought to full volume with bacteriostatic saline.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 229-nm detector and a 4.6-mm × 25-cm column that contains 10-µm packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed under *Procedure:* the column efficiency is not less than 1000 theoretical plates, the tailing factor is not more than 1.2, and the relative standard deviation for replicate injections is not more than 1.5%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of iobenguane sulfate in each mL of the Injection taken by the formula:

$$C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of iobenguane sulfate in the *Standard preparation;* and r_U and r_S are the iobenguane peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.
Assay for radioactivity—Using a counting assembly, determine the radioactivity, in MBq (or µCi), per mL, of the Injection by use of a calibrated system as directed under *Radioactivity* ⟨821⟩.

Sodium Iodide I 123 Capsules

Sodium iodide ($Na^{123}I$).
Sodium iodide ($Na^{123}I$) [41927-88-2].

» Sodium Iodide I 123 Capsules contain radioactive iodine (^{123}I) processed in the form of Sodium Iodide obtained from the bombardment of enriched tellurium 124 with protons or of enriched tellurium

www.webofpharma.com

122 with deuterons, or by proton irradiation of enriched xenon 124, or by the decay of xenon 123 in such manner that it is carrier-free. Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ^{123}I as iodide expressed in megabecquerels (microcuries or millicuries) at the time indicated in the labeling. Other chemical forms of radioactivity do not exceed 5 percent of the total radioactivity. The Capsules may contain a stabilizer.

Packaging and storage—Preserve in well-closed containers that are adequately shielded.
Labeling—Label the Capsules to include the following: the name of the Capsules; the name, address, and batch or lot number of the manufacturer; the time and date of calibration; the amount of ^{123}I as iodide expressed in megabecquerels (microcuries or millicuries) per Capsule at the time of calibration; the name and quantity of any added preservative or stabilizer; a statement indicating that the Capsules are for oral use only; the expiration date and time; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{123}I is 13.2 hours.
Radionuclide identification—A solution or suspension of 1 or more Capsules in water responds to the test for *Radionuclide identification (see Radioactivity 821)*— under *Sodium Iodide I 123 Solution.*
Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—Determine the instrument response of each of 20 Capsules by measurement in a suitable counting assembly and under identical geometric conditions. Calculate the mean radioactivity value per Capsule: the requirements of the test are met if not less than 19 of the Capsules are within the limits of 96.5% and 103.5% of the mean radioactivity value.
Radionuclidic purity—A solution or suspension of 1 or more Capsules in water responds to the test for *Radionuclidic purity (see Radioactivity 821)*— under *Sodium Iodide I 123 Solution.*
Radiochemical purity—Homogenize 1 Capsule in 3 mL of water, add 3 mL of methanol, and centrifuge: the supernatant so obtained meets the requirements of the test for *Radiochemical purity*— under *Sodium Iodide I 123 Solution.*
Other requirements—A solution or suspension prepared by homogenizing 1 or more Capsules in water to yield a concentration of not less than 1 MBq (25 µCi) per mL meets the requirements of the *Assay for radioactivity*— under *Sodium Iodide I 123 Solution.*

Sodium Iodide I 123 Solution

Sodium iodide ($Na^{123}I$).
Sodium iodide ($Na^{123}I$) [41927-88-2].

» Sodium Iodide I 123 Solution is a solution, suitable for oral or for intravenous administration, containing radioactive iodine (^{123}I) processed in the form of Sodium Iodide, obtained from the bombardment of enriched tellurium 124 with protons or of enriched tellurium 122 with deuterons, or by proton irradiation of enriched xenon 124, or by the decay of xenon 123 in such manner that it is carrier-free.

Sodium Iodide I 123 Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ^{123}I as iodide expressed in megabecquerels (microcuries or millicuries) per mL at the time indicated in the labeling. Other chemical forms of radioactivity do not exceed 5 percent of the total radioactivity. The Solution may contain a preservative or stabilizer.

Packaging and storage—Preserve in single-dose or multiple-dose containers that previously have been treated to prevent adsorption, if necessary.
Labeling—Label it to include the following: the time and date of calibration; the amount of ^{123}I as iodide expressed as total megabecquerels (microcuries or millicuries) per mL at the time of calibration; the name and quantity of any added preservative or stabilizer; a statement to indicate whether the contents are intended for oral or for intravenous use; the expiration date and time; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{123}I is 13.2 hours.
Radionuclide identification (see *Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of ^{123}I of known purity that exhibits a major photoelectric peak having an energy of 0.159 MeV.
Radionuclidic purity (see *Radioactivity* ⟨821⟩)—Using a suitable counting assembly, determine the radionuclidic purity of the Solution: not less than 90% of the total radioactivity is present as I 123.
Bacterial Endotoxins Test ⟨85⟩—Solution intended for intravenous use meets the requirements of the *Bacterial Endotoxins Test* ⟨85⟩; and the limit of endotoxin content is not more than $175/V$ USP Endotoxin Unit per mL of the Injection, when compared with USP Endotoxin RS, in which V is the maximum recommended total dose, in mL, at the expiration date or time.
pH ⟨791⟩**:** between 7.5 and 9.0 for solutions intended for intravenous administration; between 7.5 and 10.0 for solutions intended for oral administration.
Radiochemical purity—Place a measured volume of a solution, containing 100 mg of potassium iodide, 200 mg of potassium iodate, and 1 g of sodium bicarbonate in each 100 mL, 25 mm from one end of a 25- × 300-mm strip of chromatographic paper (see *Chromatography* ⟨621⟩), and allow to dry. To the same area add a similar volume of appropriately diluted Solution such that it provides a count rate of about 20,000 counts per minute, and allow to dry. Develop the chromatogram over a period of about 4 hours by ascending chromatography, using dilute methanol (7 in 10). Dry the chromatogram in air, and determine the radioactivity distribution by scanning with a suitable collimated radiation detector: the radioactivity of the iodide ^{123}I band is not less than 95.0% of the total radioactivity, and its R_F value falls within ±5.0% of the value found for sodium iodide when determined under similar conditions. Confirmation of the identity of the iodide band is made by the addition to the suspected iodide band of 6 drops of acidified hydrogen peroxide solution (prepared by adding 6 drops of 1 N hydrochloric acid to 10 mL of hydrogen peroxide solution) followed by the dropwise addition of starch TS: the development of a blue color indicates the presence of iodide.

www.webofpharma.com

Other requirements—Solution intended for intravenous use meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that it may be distributed or dispensed prior to completion of the test for *Sterility*, the latter test being started on the day of final manufacture, and except that it is not subject to the recommendation on *Container Content*.
Assay for radioactivity—Using a suitable counting assembly, determine the radioactivity, in MBq (μCi) per mL, of Solution by use of a calibrated system as directed under *Radioactivity* ⟨821⟩.

Iodinated I 125 Albumin Injection

Albumin labeled with iodine-125.

» Iodinated I 125 Albumin Injection is a sterile, buffered, isotonic solution containing normal human albumin adjusted to provide not more than 37 megabecquerels (1 millicurie) of radioactivity per mL. It is derived by mild iodination of normal human albumin with the use of radioactive iodine (^{125}I) to introduce not more than one gram-atom of iodine for each gram-molecule (60,000 g) of albumin.

Iodinated I 125 Albumin Injection contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of ^{125}I as iodinated albumin, expressed in megabecquerels (microcuries or in millicuries) per mL at the time indicated in the labeling. Other forms of radioactivity do not exceed 3 percent of the total radioactivity. Its production and distribution are subject to federal regulations (see *Biologics* ⟨1041⟩ and *Radioactivity* ⟨821⟩).

Packaging and storage—Preserve in single-dose or in multiple-dose containers, at a temperature between 2° and 8°.
Labeling—Label it to include the following, in addition to the information specified for *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*: the date of calibration; the amount of ^{125}I as iodinated albumin, expressed as total megabecquerels (microcuries or millicuries), and concentration as megabecquerels (microcuries or millicuries) per mL on the date of calibration; the expiration date; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{125}I is 60 days.
Radionuclide identification (see *Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of ^{125}I of known purity that exhibits a major photopeak having an energy of 0.0355 MeV.
Bacterial Endotoxins Test ⟨85⟩—The limit of endotoxin content is not more than 175/*V* USP Endotoxin Unit per mL of the Injection, when compared with the USP Endotoxin RS, in which *V* is the maximum recommended total dose, in mL, at the expiration date or time.
pH ⟨791⟩: between 7.0 and 8.5.
Radiochemical purity—Place a measured volume, diluted with a suitable diluent so that it provides a count rate of about 20,000 counts per minute, about 25 mm from one end of a 25- × 300-mm strip of chromatographic paper (see *Chromatography* ⟨621⟩), and allow to dry. Develop the chromatogram over a period of about 4 hours by ascending chromatography, using dilute methanol (7 in 10), and air-dry. Determine the radioactivity distribution by scanning the chromatogram with a suitable collimated radiation detector: not less than 97.0% of the total activity is found as albumin (at the point of application).
Other requirements—It meets the requirements under *Biologics* ⟨1041⟩ and under *Injections and Implanted Drug Products* ⟨1⟩, except that it is not subject to the recommendation on *Container Content*. It meets all other applicable requirements of the FDA.
Assay for radioactivity—Using a suitable counting assembly, determine the radioactivity, in MBq (μCi) per mL, of Injection by use of a calibrated system as directed under *Radioactivity* ⟨821⟩.

Iothalamate Sodium I 125 Injection

» Iothalamate Sodium I 125 Injection is a sterile solution of Iothalamic Acid in Water for Injection prepared with the aid of Sodium Bicarbonate. A portion of the molecules contain radioactive iodine (^{125}I) in the molecular structure. It may contain small amounts of suitable buffers or a stabilizer.

Iothalamate Sodium I 125 Injection contains not less than 90.0 percent and not more than 110.0 percent of the concentration of Iothalamate Sodium and of the labeled amount of ^{125}I as Iothalamate Sodium expressed in kilobecquerels (or in microcuries) per mL at the time indicated in the labeling. Other chemical forms of radioactivity do not exceed 2.0 percent of the total radioactivity.

Packaging and storage—Preserve in single-dose or in multiple-dose containers that are adequately shielded.
Labeling—Label it to include the following, in addition to the information specified for *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*: the time and date of calibration; the amount of ^{125}I as iothalamate sodium expressed as total megabecquerels (microcuries or millicuries equivalent) per mL at the time of calibration; the expiration date; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{125}I is 60 days.
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 175/*V* USP Endotoxin Unit per mL of the Injection, when compared with the USP Endotoxin RS, in which *V* is the maximum recommended total dose, in mL, at the expiration date or time.
pH ⟨791⟩: between 7.0 and 8.5.
Radionuclide identification (see*Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of ^{125}I of known purity that exhibits a major photoelectric peak having an energy of 0.035 MeV.
Radiochemical purity—Place a measured volume of Injection, diluted with a suitable diluent so that it provides a count rate of about 20,000 counts per minute, about 25 mm from one end of a 25- × 300-mm strip of chromatographic paper (see *Chromatography* ⟨621⟩), and allow to dry. Develop

www.webofpharma.com

the chromatogram over a period of about 4 hours by ascending chromatography, using methanol and ammonium hydroxide (100: 1.5) adjusted with 2 N sulfuric acid to a pH of 3 to 6, and air-dry. Determine the radioactivity distribution with a suitable collimated radiation detector. The radioactivity under the free radioiodide peak is not more than 2% of the total area of all peaks: not less than 98% of the total activity is found at the point of application (as iothalamate sodium).
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that it is not subject to the recommendation in *Container Content*.
Assay for radioactivity—Using a suitable counting assembly, determine the radioactivity, in kilobecquerels (or μCi) per mL, of the Injection by use of a calibrated system as directed under *Radioactivity* ⟨821⟩.

Iodinated I 131 Albumin Injection

Albumin labeled with iodine-131.

» Iodinated I 131 Albumin Injection is a sterile, buffered, isotonic solution containing normal human albumin adjusted to provide not more than 37 MBq (1 mCi) of radioactivity per mL. It is derived by mild iodination of normal human albumin with the use of radioactive iodine (^{131}I) to introduce not more than one gram-atom of iodine for each gram-molecule (60,000 g) of albumin.

Iodinated I 131 Albumin Injection contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of ^{131}I as iodinated albumin, expressed in megabecquerels (microcuries or in millicuries) per mL at the time indicated in the labeling. Other forms of radioactivity do not exceed 3 percent of the total radioactivity. Its production and distribution are subject to federal regulations (see *Biologics* ⟨1041⟩ and *Radioactivity* ⟨821⟩).

Labeling—Label it to include the following, in addition to the information specified for *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*: the date of calibration; the amount of ^{131}I as iodinated albumin, expressed as total megabecquerels (millicuries or microcuries), and concentration as megabecquerels (microcuries or millicuries) per mL on the date of calibration; the expiration date; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{131}I is 8.08 days.
Radionuclide identification (see *Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of ^{131}I of known purity that exhibits a major photopeak having an energy of 0.364 MeV.
Other requirements—It meets the requirements for *Packaging and storage*—, *Bacterial Endotoxins Test 85*—, *pH 791:*, *Radiochemical purity*—, and *Assay for radioactivity*—under *Iodinated I 125 Albumin Injection*. It meets also the requirements under *Biologics* ⟨1041⟩, and the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that it is not subject to the recommendation on *Container Content*. It meets all other applicable requirements of the FDA.

Sodium Iodide I 131 Capsules

Sodium iodide ($Na^{131}I$).
Sodium iodide ($Na^{131}I$) [7790-26-3].

» Sodium Iodide I 131 Capsules contain radioactive iodine (^{131}I) processed in the form of Sodium Iodide from products of uranium fission or the neutron bombardment of tellurium in such a manner that it is essentially carrier-free and contains only minute amounts of naturally occurring iodine 127. Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ^{131}I as iodide expressed in megabecquerels (microcuries or millicuries) at the time indicated in the labeling. Other chemical forms of radioactivity do not exceed 5 percent of the total radioactivity. The Capsules may contain a stabilizing agent.

Packaging and storage—Preserve in well-closed containers.
Labeling—Label the Capsules to include the following: the date of calibration; the amount of ^{131}I as iodide expressed in megabecquerels (microcuries or millicuries) per Capsule at the time of calibration; a statement of whether the contents are intended for diagnostic or therapeutic use; the expiration date; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{131}I is 8.08 days.
Radionuclide identification—A solution or suspension of 1 or more Capsules in water responds to the test for *Radionuclide identification (see Radioactivity 821)*— under *Sodium Iodide I 131 Solution*.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—Determine the instrument response of each of 20 Capsules by measurement in a suitable counting assembly and under identical geometric conditions. Calculate the mean radioactivity value per Capsule. The requirements are met if not fewer than 19 of the Capsules are within the limits of 96.5% and 103.5% of the mean radioactivity value.
Radiochemical purity—Homogenize 1 Capsule in 3 mL of water, add 3 mL of methanol, and centrifuge. The supernatant meets the requirements of the test for *Radiochemical purity* under *Sodium Iodide I 131 Solution*.
Other requirements—A solution or suspension prepared by homogenizing 1 or more Capsules in sufficient water to yield a concentration of not less than 1 MBq (25 μCi) per mL meets the requirements of the *Assay for radioactivity*— under *Sodium Iodide I 131 Solution*.

Sodium Iodide I 131 Solution

Sodium iodide ($Na^{131}I$).
Sodium iodide ($Na^{131}I$) [7790-26-3].

» Sodium Iodide I 131 Solution is a solution suitable for either oral or intravenous administration, containing radioactive iodine (^{131}I) processed in the

USP Monographs

form of Sodium Iodide from the products of uranium fission or the neutron bombardment of tellurium in such a manner that it is essentially carrier-free and contains only minute amounts of naturally occurring iodine 127.

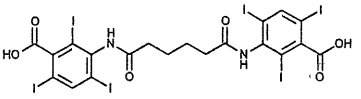
Sodium Iodide I 131 Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ^{131}I as iodide expressed in megabecquerels (microcuries or in millicuries) per mL at the time indicated in the labeling. Other chemical forms of radioactivity do not exceed 5 percent of the total radioactivity. The Solution may contain a preservative or stabilizer.

Packaging and storage—Preserve in single-dose or multiple-dose containers that previously have been treated to prevent adsorption.

Labeling—Label it to include the following: the time and date of calibration; the amount of ^{131}I as iodide expressed as total megabecquerels (microcuries or millicuries) and as megabecquerels (microcuries or millicuries) per mL at the time of calibration; the name and quantity of any added preservative or stabilizer; a statement of the intended use, whether oral or intravenous; a statement of whether the contents are intended for diagnostic or therapeutic use; the expiration date; and the statement "Caution—Radioactive Material." The labeling indicates that in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{131}I is 8.08 days.

Radionuclide identification (see *Radioactivity* ⟨821⟩)—Its gamma-ray spectrum is identical to that of a specimen of iodine 131 of known purity that exhibits a major photopeak having an energy of 0.364 MeV.

Bacterial Endotoxins Test ⟨85⟩—Solution intended for intravenous use meets the requirements of the *Bacterial Endotoxins Test* ⟨85⟩, the limit of endotoxin content being not more than 175/*V* USP Endotoxin Unit per mL of the Solution, when compared with the USP Endotoxin RS, in which *V* is the maximum recommended total dose, in mL, at the expiration date or time.



pH ⟨791⟩: between 7.5 and 9.0 for solutions intended for intravenous administration; between 7.5 and 10.0 for solutions intended for oral administration.

Radiochemical purity—Place a measured volume of a solution containing 100 mg of potassium iodide, 200 mg of potassium iodate, and 1 g of sodium bicarbonate in each 100 mL, 25 mm from one end of a 25- × 300-mm strip of chromatographic paper (see *Chromatography* ⟨621⟩), and allow to dry. To the same area add a similar volume of appropriately diluted Solution such that it provides a count rate of about 20,000 counts per minute, and allow to dry. Develop the chromatogram over a period of about 4 hours by ascending chromatography, using dilute methanol (7.0 in 10). Dry the chromatogram in air, and determine the radioactivity distribution by scanning with a suitable collimated radiation detector: the radioactivity of the iodide ^{131}I band is not less than 95% of the total radioactivity, and its R_F value falls within ±5% of the value found for sodium iodide when determined under parallel conditions. Confirmation of the identity of the iodide band is made by the addition to the suspected iodide band of 6 drops of acidified hydrogen peroxide solution (prepared by adding 6 drops of 1 N hydrochloric acid to 10 mL of hydrogen peroxide solution) followed by the dropwise addition of starch TS; the development of a blue color indicates presence of iodide.

Other requirements—Solution intended for intravenous use meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that the Solution may be distributed or dispensed prior to completion of the test for *Sterility*, the latter test being started on the day of final manufacture, and except that it is not subject to the recommendation on *Container Content*.

Assay for radioactivity—Using a suitable counting assembly, determine the radioactivity, in MBq (μCi) per mL, of Solution by use of a calibrated system as directed under *Radioactivity* ⟨821⟩.

Iodipamide

$C_{20}H_{14}I_6N_2O_6$ 1139.76

Benzoic acid, 3,3′-[(1,6-dioxo-1,6-hexanediyl)diimino] bis[2,4,6-triiodo-.

3,3′-(Adipoyldiimino)bis[2,4,6-triiodobenzoic acid] [606-17-7].

» Iodipamide contains not less than 98.0 percent and not more than 102.0 percent of $C_{20}H_{14}I_6N_2O_6$, calculated on the anhydrous basis.

Packaging and storage—Preserve in well-closed containers. Store at 25°, excursions permitted between 15° and 30°.

USP Reference standards ⟨11⟩—

USP 3-Amino-2,4,6-triiodobenzoic Acid RS

$C_7H_4I_3NO_2$ 514.83

USP Iodipamide RS

Identification—

A: It responds to the *Thin-Layer Chromatographic Identification Test* ⟨201⟩, the test solution and the Standard solution being prepared at a concentration of 1 mg per mL in an 0.8 in 1000 solution of sodium hydroxide in methanol, the solvent mixture being a mixture of chloroform, methanol, and ammonium hydroxide (20:10:2), and short-wavelength UV light being used to locate the spots.

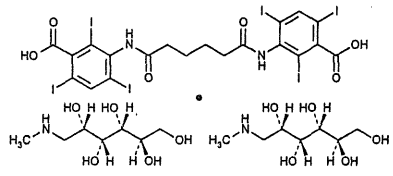
B: Heat about 500 mg in a suitable crucible: violet vapors are evolved.

Water Determination, *Method I* ⟨921⟩: not more than 1.0%.

Residue on ignition ⟨281⟩: not more than 0.1%.

Free aromatic amine—Transfer 1.0 g to a 50-mL volumetric flask, and add 12.5 mL of water and 2.5 mL of 1 N sodium hydroxide. To a second 50-mL volumetric flask transfer 4 mL of water, 10 mL of 0.1 N sodium hydroxide, and 1.0 mL of a Standard solution prepared by dissolving a suitable quantity of USP 3-Amino-2,4,6-triiodobenzoic Acid RS in 0.1 N sodium hydroxide (use 0.2 mL of the 0.1 N sodium hydroxide for each 5.0 mg of the Reference standard) and by diluting with water to obtain a solution having a known concentration of 500 μg per mL. Proceed as directed in the test for *Free aromatic amine* under *Diatrizoate Meglumine* beginning with "To a third 50-mL volumetric flask add 5 mL of water."

Other requirements—It meets the requirements of the tests for *Iodine and iodide* under *Diatrizoic Acid*.



Assay—Transfer about 300 mg of Iodipamide, accurately weighed, to a glass-stoppered, 125-mL conical flask, add 30 mL of 1.25 N sodium hydroxide and 500 mg of powdered

USP Monographs

www.webofpharma.com

zinc, connect the flask to a reflux condenser, and reflux the mixture for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the filter and the flask thoroughly, adding the rinsings to the filtrate. Add 5 mL of glacial acetic acid and 1 mL of tetrabromophenolphthalein ethyl ester TS, and titrate with 0.05 N silver nitrate VS until the yellow precipitate just turns green. Each mL of 0.05 N silver nitrate is equivalent to 9.498 mg of $C_{20}H_{14}I_6N_2O_6$.

Iodipamide Meglumine Injection

$C_{20}H_{14}I_6N_2O_6 \cdot 2C_7H_{17}NO_5$ 1530.19

Benzoic acid, 3,3′-[(1,6-dioxo-1,6-hexanediyl)diimino] bis[2,4,6-triiodo-, compd. with 1-deoxy-1-(methylamino)-D-glucitol(1:2).

1-Deoxy-1-(methylamino)-D-glucitol 3,3′-(adipoyldiimino) bis[2,4,6-triiodobenzoate] (2:1) (salt) [3521-84-4].

» Iodipamide Meglumine Injection is a sterile solution of Iodipamide in Water for Injection, prepared with the aid of Meglumine. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of iodipamide meglumine ($C_{20}H_{14}I_6N_2O_6 \cdot 2C_7H_{17}NO_5$). It may contain small amounts of suitable buffers and of Edetate Calcium Disodium or Edetate Disodium as a stabilizer. Iodipamide Meglumine Injection intended for intravascular use contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose containers, preferably of Type I or Type III glass, protected from light.

Labeling—Label containers of Injection intended for intravascular injection to direct the user to discard any unused portion remaining in the container. Label containers of Injection intended for other than intravascular injection to show that the contents are not intended for intravascular injection.

USP Reference standards ⟨11⟩—

USP 3-Amino-2,4,6-triiodobenzoic Acid RS
$C_7H_4I_3NO_2$ 514.83

USP Iodipamide RS

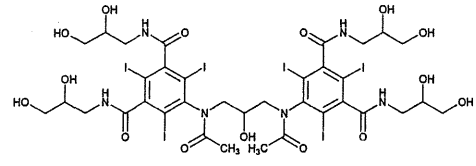
Identification—

A: Dilute a volume of the Injection, if necessary, with a 0.8 in 1000 solution of sodium hydroxide in methanol to obtain a test solution having a concentration of 1 mg per mL. The test solution responds to the *Thin-layer Chromatographic Identification Test* ⟨201⟩, the Standard solution being prepared at a concentration of 1 mg of USP Iodipamide RS per mL in a 0.8 in 1000 solution of sodium hydroxide in methanol, the solvent mixture being a mixture of chloroform, methanol, and ammonium hydroxide (20:10:2), and short-wavelength UV light being used to locate the spots.

B: Evaporate a volume of Injection, equivalent to about 500 mg of iodipamide, to dryness, and heat the residue so obtained in a suitable crucible: violet vapors are evolved.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 3.6 USP Endotoxin Units per mL.

pH ⟨791⟩: between 6.5 and 7.7.



Free aromatic amine—Transfer an accurately measured volume of Injection, equivalent to 1 g of iodipamide meglumine, to a 50-mL volumetric flask, dilute with water to 5 mL, and add 10 mL of 0.1 N sodium hydroxide. To a second 50-mL volumetric flask add 10 mL of 0.1 N sodium hydroxide, 4 mL of water, and 1.0 mL of a Standard solution prepared by dissolving a suitable quantity of USP 3-Amino-2,4,6-triiodobenzoic Acid RS in 0.1 N sodium hydroxide (use 0.2 mL of the 0.1 N sodium hydroxide for each 5.0 mg of the Reference Standard) and diluting with water to obtain a solution having a known concentration of 500 µg per mL. Proceed as directed in the test for *Free aromatic amine*— under *Diatrizoate Meglumine*, beginning with "To a third 50-mL volumetric flask add 5 mL of water."

Meglumine content—Proceed as directed in the test for *Meglumine content*— under *Diatrizoate Meglumine Injection*. The meglumine content is not less than 23.5% and not more than 26.8% of the labeled amount of iodipamide meglumine.

Other requirements—It meets the requirements of the tests for *Iodine and iodide*— under *Diatrizoate Meglumine Injection*. It meets also the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—Pipet a volume of Injection, equivalent to about 5 g of iodipamide meglumine, into a 100-mL volumetric flask, add 1.25 N sodium hydroxide to volume, and mix. Pipet 10 mL of the solution into a glass-stoppered, 250-mL flask, add 20 mL of the sodium hydroxide solution and 500 mg of powdered zinc, and proceed as directed in the *Assay*— under *Diatrizoate Meglumine Injection*, beginning with "connect the flask to a reflux condenser." Each mL of 0.05 N silver nitrate is equivalent to 12.75 mg of $C_{20}H_{14}I_6N_2O_6 \cdot 2C_7H_{17}NO_5$.

Iodixanol

$C_{35}H_{44}I_6N_6O_{15}$ 1550.18

1,3-Benzenedicarboxamide, 5,5′-[(2-hydroxy-1,3-propanediyl)bis(acetylimino)]bis[*N,N′*-bis(2,3-dihydroxypropyl)-2,4,6-triiodo-;

5,5′-[(2-Hydroxytrimethylene)bis(acetylimino)]bis[*N,N′*-bis(2,3-dihydroxypropyl)-2,4,6-triiodoisophthalamide] [92339-11-2].

DEFINITION

Iodixanol contains NLT 98.6% and NMT 101.0% of iodixanol ($C_{35}H_{44}I_6N_6O_{15}$), calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

www.webofpharma.com

• **B.** The retention times of the three principal peaks of the *Sample solution* correspond to those of the *Identification solution*, as obtained in the test for *Limit of Iodixanol Related Compound E and Iodixanol Impurity H*. [NOTE—A third isomer may appear as a minor peak.]

ASSAY

• **PROCEDURE**

Sample solution: Transfer 500 mg of Iodixanol to a glass-stoppered, 125-mL conical flask. Add 25 mL of 1.25 N sodium hydroxide and 500 mg of powdered zinc. Connect the flask to a reflux condenser, and reflux for 1 h. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and pass the mixture through a filter. Rinse the flask and the filter thoroughly with small portions of water, adding the rinsings to the filtrate. Add 5 mL of glacial acetic acid.

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.1 N silver nitrate VS

Endpoint detection: Potentiometric

Analysis

Sample: *Sample solution*

Titrate the *Sample solution* with the *Titrant*.

Calculate the percentage of iodixanol ($C_{35}H_{44}I_6N_6O_{15}$) in the portion of Iodixanol taken:

$$\text{Result} = [(V \times N \times F)/W] \times 100$$

V = sample titrant volume (mL)
N = *Titrant* normality (meq/mL)
F = equivalent weight of iodixanol, 258.4 mg/meq
W = weight of iodixanol (mg)

Acceptance criteria: 98.6%–101.0% on the anhydrous basis

IMPURITIES

• **LIMIT OF FREE IODIDE**

Sample solution: 5 g of Iodixanol in 30 mL of water

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.001 N silver nitrate VS

Endpoint detection: Potentiometric

Analysis

Calculate the percentage of free iodide in the portion of Iodixanol taken:

$$\text{Result} = [(V \times N \times F)/W] \times 100$$

V = sample titrant volume (mL)
N = *Titrant* normality (meq/mL)
F = equivalent weight of iodide, 0.1269 mg/meq
W = weight of iodixanol (mg)

Acceptance criteria: NMT 0.001%

• **LIMIT OF IONIC COMPOUNDS**

[NOTE—Rinse all glassware with water.]

Standard solution: 4 µg/mL of sodium chloride in water

Sample solution: 2 g of Iodixanol in 100 mL of water

Acceptance criteria: The specific conductance in the *Sample solution* is NMT that of the *Standard solution* (equivalent to NMT 0.02% of ionic compounds, as sodium chloride).

• **LIMIT OF FREE AROMATIC AMINE**

Solution A: 3 mg/mL of *N*-(1-naphthyl)ethylenediamine dihydrochloride in a mixture of propylene glycol and water (70:30)

Blank solution: Add 15 mL of water to a 25-mL volumetric flask.

Standard stock solution: 10 µg/mL of USP Iohexol Related Compound B RS in water

Standard solution: Transfer 10.0 mL of the *Standard stock solution* and 5 mL of water to a 25-mL volumetric flask.

Sample solution: Transfer 200 mg of Iodixanol to a 25-mL volumetric flask, and add 15 mL of water.

Instrumental conditions

Mode: UV-Vis

Analytical wavelength: 495 nm

Cell: 5 cm

Analysis

Samples: *Blank solution*, *Standard solution*, and *Sample solution*

Treat the *Samples* as follows. Place the flask in an ice bath for 5 min. Add 1.5 mL of 6 N hydrochloric acid, and mix by swirling. Add 1.0 mL of sodium nitrite solution (20 mg/mL), and allow to stand in the ice bath for 4 min. Remove the flask from the ice bath, add 1.0 mL of sulfamic acid solution (40 mg/mL), and swirl gently until gas evolution ceases. [**CAUTION**—Considerable pressure is produced.] Add 1.0 mL of *Solution A*, dilute with water to volume, and allow to stand for 5 min.

Measure the absorbance of the *Standard solution* and the *Sample solution* against the *Blank solution*.

Acceptance criteria: The absorbance of the *Sample solution* is NMT that of the *Standard solution* (NMT 0.05% of free aromatic amine).

• **LIMIT OF 2-METHOXYETHANOL**

Internal standard solution: 0.01 mg/mL of secondary butyl alcohol in water

Standard stock solution: 0.005 mg/mL of methanol and 0.01 mg each of isopropyl alcohol, secondary butyl alcohol, and 2-methoxyethanol in *Internal standard solution*

Standard solution: Transfer about 0.25 g of USP Iodixanol RS and 1.0 mL of *Standard stock solution* to a headspace vial and seal the vial with a septum and crimp cap.

Sample solution: Transfer about 0.25 g of Iodixanol and 1.0 mL of *Internal standard solution* to a headspace vial and seal the vial with a septum and crimp cap.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: GC with suitable headspace autosampler

Detector: Flame ionization

Column: 0.53-mm × 30-m fused-silica; coated with a 1-µm phase G16

Temperatures

Autosampler: 105°

Needle: 130°–140°

Injection port: 150°

Detector: 200°

Column: See *Table 1*.

Table 1

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold Time at Final Temperature (min)
40	—	40	3
40	8	100	1

Carrier gas: Helium

Flow rate: 11 mL/min

Injection volume: 1 mL of the headspace

System suitability

Sample: *Standard solution*

www.webofpharma.com

[NOTE—The typical relative retention times for methanol, isopropyl alcohol, secondary butyl alcohol, and 2-methoxyethanol are 0.5, 0.6, 1.0 and 1.9 respectively.]

Suitability requirements

Resolution: NLT 1.0 between methanol and isopropyl alcohol

Relative standard deviation: NMT 10.0% for the ratio of 2-methoxyethanol to internal standard

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the amount of 2-methoxyethanol in the portion of Iodixanol taken:

$$\text{Result} = (R_U/R_S) \times (C_S/C_U)$$

R_U = peak response ratio of 2-methoxyethanol to the internal standard from the *Sample solution*

R_S = peak response ratio of 2-methoxyethanol to the internal standard from the *Standard solution*

C_S = concentration of 2-methoxyethanol in the *Standard solution* (µg/mL)

C_U = concentration of Iodixanol in *Sample solution* (g/mL)

Acceptance criteria: NMT 10 µg/g of 2-methoxyethanol

• **ORGANIC IMPURITIES**

Solution A: Water

Solution B: Acetonitrile and water (50:50)

System suitability solution: 0.25 mg/mL of USP Iodixanol RS, 0.0025 mg/mL of USP Iodixanol Related Compound C RS, and 0.005 mg/mL of USP Iodixanol Related Compound D RS in water

Sample solution: 2.5 mg/mL of Iodixanol in water

Mobile phase: See *Table 2*.

Table 2

Detector: UV 254 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 1 mL/min

Injection volume: 10 µL

System suitability

Sample: *System suitability solution*

Use the chromatogram from the *System suitability solution* to identify the peaks based on the relative retention times given in *Table 3*.

Suitability requirements

Resolution: NLT 1.5 between the two peaks due to iodixanol related compound D

Peak-to-valley ratio: NLT 1.3 between the first iodixanol peak and iodixanol related compound C (first peak)

Analysis

Sample: *Sample solution*

[NOTE—If iodixanol related compound C is present, only the first and larger peak with a retention time of 1.04 relative to the main iodixanol peak is seen between the two principal iodixanol peaks; the second iodixanol related compound C peak co-elutes with iodixanol. The area of the first and larger peak corresponds to approximately 80% of the total area of iodixanol related compound C. Determine the peak area of the first peak by drawing a vertical line through the minimum before the peak and a horizontal baseline at the minimum after the peak.]

Calculate the percentage of each impurity in the *Sample solution*:

$$\text{Result} = (r_U/r_T) \times (1/F) \times 100$$

r_U = peak response of each impurity in the *Sample solution*

r_T = sum of all peak responses greater than 0.05% of the principal peaks in the *Sample solution*

F = relative response factor (see *Table 3*)

Acceptance criteria: See *Table 3*. Disregard any impurity less than or equal to 0.05%.

Table 3

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Iodixanol related compound D (first peak)	0.8	1.0	Sum of both peaks 0.1% if present
Iodixanol related compound D (second peak)	0.9	1.0	
Iodixanol (first peak)	1.0	—	—
Iodixanol related compound C (first peak)	1.04	0.76	0.4
Overalkylated impurities	1.3–1.7	1.0	(Sum of all) 1.0
Any individual unspecified impurity	—	1.0	0.10
Total impurities	—	—	1.5

Iodixanol Injection

DEFINITION
Iodixanol Injection is a sterile solution of Iodixanol in Water for Injection. It contains NLT 95.0% and NMT 105.0% of the labeled amount of iodixanol ($C_{35}H_{44}I_6N_6O_{15}$), as organically bound iodine. It may contain stabilizers and buffers. It contains no antimicrobial agents.

IDENTIFICATION
• **A.** The retention times of the two major peaks of the *Sample solution* correspond to those of *Standard solution B*, as obtained in *Organic Impurities, Procedure 2*.

ASSAY
• **PROCEDURE**
Sample solution: Transfer 2 mL of the Injection to a glass-stoppered, 125-mL conical flask, add 50 mL of 5% sodium hydroxide solution and 1.0 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 1 h. Cool the flask to room temperature, and rinse the condenser with 20 mL of water, adding the rinsing to the refluxed solution. Filter the mixture, rinsing the flask and the filter with several small portions of water, and adding the filtered rinsings to the filtrate. Add 20 mL of glacial acetic acid, dilute with water to 200.0 mL, and transfer 100.0 mL of this solution to a 250-mL conical flask.
Analysis: Titrate with 0.1 N silver nitrate VS using autotitration. Each mL of 0.1 N silver nitrate is equivalent to 25.84 mg of $C_{35}H_{44}I_6N_6O_{15}$. [NOTE—The result must be corrected for any inorganic halides that may be present due to added stabilizers or buffers.]
Acceptance criteria: 95.0%–105.0%

IMPURITIES
• **ORGANIC IMPURITIES, PROCEDURE 1**
Solution A: Acetonitrile and water (1:1)
Solution B: Water
Blank solution: Water
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	6	94
30	20	80
70	100	0
80	100	0
81	6	94
90	6	94

Standard stock solution A: 12.5 mg/mL of anhydrous iodixanol from USP Iodixanol RS in water

www.webofpharma.com

Standard stock solution B: 0.25 mg/mL of anhydrous iodixanol related compound C from USP Iodixanol Related Compound C RS in water
Standard stock solution C: 0.025 mg/mL of anhydrous iodixanol related compound D from USP Iodixanol Related Compound D RS in water
Standard solution A: 2.5 mg/mL of *Standard stock solution A* in water
Standard solution B: *Standard stock solution A*, *Standard stock solution B*, *Standard stock solution C*, and water (5: 2.5: 2.5: 15)
Sample solution A: 25 mg/mL of iodixanol obtained from a volume of Injection in water
Sample solution B: 2.5 mg/mL of iodixanol obtained from a volume of Injection in water
Control solution: *Sample solution A*, *Standard stock solution B*, and water (5: 2.5: 42.5)
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Samples: *Blank solution*, *Standard solution A*, at least three replicates of *Standard solution B*, and *Control solution*
Chromatograph the solutions as mentioned above. The chromatogram from *Standard solution A* exhibits two or three principal unresolved peaks. If the chromatogram exhibits two principal peaks, their relative areas are 60% and 40%. If the chromatogram exhibits three principal peaks, their relative areas are 60%, 38%, and 2%. The chromatogram from *Standard solution B* exhibits two resolved peaks due to iodixanol related compound D that elute before the iodixanol peaks and one iodixanol related compound C peak between the two principal iodixanol peaks. The area of the two iodixanol related compound D peaks is between 0.075% and 0.125% of the total area. Add the areas of the two isomer peaks for iodixanol related compound D from each of the three injections of *Standard solution B*, and calculate the relative standard deviation for the three summed areas: the relative standard deviation is NMT 5%. Measure the height of the iodixanol related compound C peak, and, if necessary, adjust the sensitivity of the amplifier to obtain a peak height between 80% and 100% of the full scale. Measure the height, *A*, above the baseline of the iodixanol related compound C peak and the height, *B*, above the baseline of the lowest part of the curve separating this peak from the first principal iodixanol peak: *A* is NLT 1.3*B*. In the chromatogram from the *Control solution*, iodixanol related compound C exhibits a measurable peak.
Analysis
Samples: *Blank solution*, *Sample solution A*, and *Sample solution B*
High-low chromatography: Where it is specified to proceed as directed for *High-low chromatography*, for the chromatogram from *Sample solution A*, calculate the percentage of each specified related compound in the portion of Injection taken:

$$\text{Result} = (10X)/(0.1Y + Z)$$

X = peak area for each of the specified related compounds from *Sample solution A*
Y = total area of all the peaks eluted before and after iodixanol from *Sample solution A*, disregarding any peaks due to injection noise or solvent
Z = sum of peak areas of iodixanol and any related compounds that are eluted together with, and between, the principal iodixanol peaks from *Sample solution B*

Iohexol: If iohexol is present, it exhibits two peaks, with retention times of 0.37 and 0.39 relative to the main iodixanol peak, in the chromatogram from *Sample solution A*. Draw a baseline at the height of the baseline from the *Blank solution*.
Calculate the total area of the two peaks and the percentage of iohexol in the portion of Injection taken as directed for *High-low chromatography*.
Iohexol related compound A[1]**:** If iohexol related compound A is present, it elutes as a single peak with a retention time of 0.34 relative to the main iodixanol peak, in the chromatogram from *Sample solution A*. Draw a baseline at the height of the baseline from the *Blank solution*.
Calculate the area of the peak and the percentage of iohexol related compound A in the portion of Injection taken as directed for *High-low chromatography*.
Iodixanol related compound C: If iodixanol related compound C is present, only the first and larger peak, with a retention time of 1.07 relative to the main iodixanol peak, is seen between the two principal iodixanol peaks in the chromatogram from *Sample solution A*; the second iodixanol related compound C peak co-elutes with iodixanol. The area of the first and larger peak corresponds to 80% of the total area of iodixanol related compound C. Draw a vertical line through the minimum before the first and larger peak. Draw a horizontal baseline at the minimum after the first and larger peak.
Calculate the percentage of iodixanol related compound C in the portion of Injection taken:

$$\text{Result} = 12.5X_2/(0.1Y + Z)$$

X_2 = iodixanol related compound C peak area
Y = total area of all the peaks eluted before and after iodixanol from *Sample solution A*, disregarding any peaks due to injection noise or solvent
Z = sum of peak areas of iodixanol and any related compounds that are eluted together with, and between, the principal iodixanol peaks from *Sample solution B*

Iodixanol related coumpound F[2]**:** If iodixanol related compound F is present, only the first and smaller peak with a retention time of 0.8 relative to the main iodixanol peak can be seen in the chromatogram from *Sample solution A*; the second peak co-elutes with iodixanol. The area of the first and smaller peak corresponds to 25% of the total area of iodixanol related compound F. Draw the baseline at the height of the baseline from the *Blank solution*.
Calculate the percentage of iodixanol related compound F in the portion of Injection taken:

$$\text{Result} = 40X_1/(0.1Y + Z)$$

X_1 = actual observed area of the peak of iodixanol related compound F from *Sample solution A*

[1] 5-(Acetylamino)-*N*,*N*′-bis(2,3-dihydroxypropyl)-2,4,6-triiodo-1,3-benzenedicarboxamide.
[2] 2-[[Acetyl[3,5-bis[[(2,3-dihydroxypropyl)amino]carbonyl]-2,4,6-triiodophenyl]amino]methyl]-*N*,*N*′-bis(2,3-dihydroxypropyl)-2,3-dihydro-5,7-diiodo-4*H*-1,4-benzoxazine-6,8-dicarboxamide.

USP Monographs

www.webofpharma.com

Y = total area of all the peaks eluted before and after iodixanol from *Sample solution A*, disregarding any peaks due to injection noise or solvent
Z = sum of peak areas of iodixanol and any related compounds that are eluted together with, and between, the principal iodixanol peaks from *Sample solution B*

Iodixanol related compound G[3]**:** If iodixanol related compound G is present, the second and larger peak, with a retention time of 1.18 relative to the last iodixanol peak, is seen in the chromatogram from *Sample solution A*; the first peak co-elutes with iodixanol. The area of the second peak corresponds to 85% of the total area of iodixanol related compound G. Draw the baseline at the height of the baseline from the *Blank solution*.
Calculate the percentage of iodixanol related compound G in the portion of Injection taken:

$$\text{Result} = 10X_3/[0.85(0.1Y + Z)]$$

X_3 = peak area of iodixanol related compound G
Y = total area of all the peaks eluted before and after iodixanol from *Sample solution A*, disregarding any peaks due to injection noise or solvent
Z = sum of peak areas of iodixanol and any related compounds that are eluted together with, and between, the principal iodixanol peaks from *Sample solution B*

Overalkylated related compounds: These compounds elute after iodixanol related compound G, with a retention time greater than 1.18 relative to the last iodixanol peak. Draw the baseline at the height of the baseline from the *Blank solution*, and determine the peak areas.
Calculate the percentage of overalkylated related compounds as directed for *High-low chromatography*.
Unspecified related compounds: Examine the chromatograms from *Sample solution A* and the area of each peak eluting before or after iodixanol, other than those of iodixanol, specified related compounds, specified impurities, and overalkylated related compounds. Draw the baseline at the height of the baseline from the *Blank solution*.
Calculate the percentage of the largest of these peaks as directed for *High-low chromatography*.
Other unspecified related compounds: Determine the area of any unspecified peak eluting between those of iodixanol. Draw the baseline between minima, and calculate the percentage as directed for *High-low chromatography*.
Individual impurities: See *Table 2*.

Table 2

Name	Acceptance Criteria, NMT (%)
Iohexol related compound A	0.2
Iodixanol related compound C	0.4
Iodixanol related compound F	0.2
Iodixanol related compound G	0.2
Iohexol	0.6
Overalkylated related compounds	1.0
Any individual unspecified related compound	0.2
Total unspecified related compounds	0.5

[3] 4-Acetyl-2-[[acetyl[3,5-bis[[(2,3-dihydroxypropyl)amino]carbonyl]-2,4,6-triiodophenyl]amino]methyl]-*N*,*N*′-bis(2,3-dihydroxypropyl)-2,3-dihydro-5,7-diiodo-4*H*-1,4-benzoxazine-6,8-dicarboxamide.

Total related compounds: From each of the chromatograms from *Sample solution A*, calculate the percentage of all related compounds as the sum of the results for the peaks appearing between the two principal iodixanol peaks, and the area percent:

$$\text{Result} = [100(Y - X_1 - X_3 + X_1/0.25 + X_2/0.8 + X_3/0.85)]/10(0.1Y + Z)$$

Y = total area of all the peaks eluted before and after iodixanol from *Sample solution A*, disregarding any peaks due to injection noise or solvent
X_1 = actual observed area of the peak of iodixanol related compound F from *Sample solution A*
X_3 = peak area of iodixanol related compound G
X_2 = iodixanol related compound C peak area
Z = sum of peak areas of iodixanol and any related compounds that are eluted together with, and between, the principal iodixanol peaks from *Sample solution B*

Total impurities: NMT 1.5%

• **ORGANIC IMPURITIES, PROCEDURE 2**
Solution A: Acetonitrile
Solution B: Water
Blank solution: Water
Mobile phase: See *Table 3*.

Table 3

Time (min)	Solution A (%)	Solution B (%)
0	85	15
25	66	34

Standard stock solution A: 12.5 mg/mL of anhydrous iodixanol from USP Iodixanol RS
Standard stock solution B: 0.025 mg/mL of anhydrous iodixanol related compound D from USP Iodixanol Related Compound D RS
Standard stock solution C: 2.5 mg/mL of anhydrous iodixanol related compound E from USP Iodixanol Related Compound E RS
Standard solution A: 2.5 mg/mL of anhydrous iodixanol from *Standard stock solution A* diluted with water
Standard solution B: 2.5 mg/mL of anhydrous iodixanol and 0.0025 mg/mL of anhydrous iodixanol related compound D from *Standard stock solution A* and *Standard stock solution B*, respectively, diluted with water
Standard solution C: 2.5 mg/mL of anhydrous iodixanol and 0.25 mg/mL of anhydrous iodixanol related compound E from *Standard stock solution A* and *Standard stock solution C*, respectively, diluted with water
Sample solution: 2.5 mg/mL of iodixanol from a volume of Injection
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 25-cm; 5-µm packing L8
Flow rate: 2.5 mL/min

www.webofpharma.com

Injection volume: 10 µL
System suitability
Samples: *Standard solution A*, three times of *Standard solution B*, *Standard solution C*, and *Sample solution*
The chromatogram from *Standard solution A* exhibits three principal unresolved peaks: the relative areas are 62%, 35%, and 3%; and the retention time of the last iodixanol peak is NMT 14 min. The chromatogram from *Standard solution B* exhibits two partially unresolved peaks due to iodixanol related compound D, with relative retention times of 0.33 and 0.39, that elute before the iodixanol peaks: the peak area of iodixanol related compound D is between 0.075% and 0.125% of the total area. Disregard any peak due to the solvent.
Determine the sum of the peak areas of the two isomers of iodixanol related compound D for each of the three chromatograms from *Standard solution B*.
Relative standard deviation: NMT 5%
The chromatogram from *Standard solution C* exhibits two unresolved peaks due to iodixanol related compound E, with relative retention times of 0.67 and 0.72, that elute before the iodixanol peaks. Adjust the sensitivity of the amplifier so that the peak heights are between 90% and 100% of full scale of the highest peak.
Resolution, R: NLT 5.0 between the first and largest iodixanol related compound E peak and the first principal iodixanol peak
Analysis
Samples: *Standard solution A*, three times of *Standard solution B*, *Standard solution C*, and *Sample solution*
For the first chromatogram from *Standard solution B*, adjust the sensitivity of the amplifier to obtain a peak height of 15% of the first and larger peak that corresponds to iodixanol related compound D. Use this sensitivity setting for the subsequent injections.
Compare the retention times of the peaks from *Standard solution C* to those from the *Sample solution*. Iodixanol related compound E exhibits two peaks, the second of which may partly overlap with another peak; use only the area of the first and larger peak, which corresponds to 60% of the total area of iodixanol related compound E. Draw a baseline at the height of the baseline from the *Blank solution*.
Calculate the percentage of iodixanol related compound E by dividing the area from the *Sample solution* by 0.6 and using area percent.
Iodixanol related compound H[4]: Appears as a single peak, with a shoulder, on the tail of the iodixanol peak. Calculate the percentage of iodixanol related compound H by using area percent.
Acceptance criteria: NMT 0.3% of iodixanol related compound E is found and NMT 0.6% of iodixanol related compound H is found.

SPECIFIC TESTS
- **pH** ⟨791⟩: 6.8–7.7
- **Bacterial Endotoxins Test** ⟨85⟩: NMT 0.2 USP Endotoxin Unit/50 mg of iodine
- **Osmolality and Osmolarity,** *Osmolality* ⟨785⟩: 270–310 mOsmol/kg
- **Injections and Implanted Drug Products** ⟨1⟩: Meets the requirements
- **Limit of Free Iodide**
Sample: 5.0 mL of Injection
Analysis: Transfer *Sample* to a suitable container, add 2.0 mL of acetic acid solution (1:5 glacial acetic acid in water) and 30 mL of water, and titrate with 0.001 N silver nitrate VS. Each mL of 0.001 N silver nitrate is equivalent to 0.1269 mg of iodine. NMT 15.0 mL of 0.001 N silver nitrate is required.
Acceptance criteria: NMT 0.02% based on the content of iodixanol

ADDITIONAL REQUIREMENTS
- **Packaging and Storage:** Preserve in single-dose or multi-dose plastic or Type I glass containers. Store at controlled room temperature, protected from light. Do not freeze.
- **Labeling:** Label containers of Injection to direct the user to discard any unused portion. The labeling states also that it is not to be used if it is discolored or contains a precipitate. Label it to state its routes of administration. Label it to indicate "not approved for intrathecal use".
- **USP Reference Standards** ⟨11⟩

Iodoform

CHI_3 393.73
Triiodomethane [75-47-8].

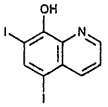
DEFINITION
Iodoform, previously dried over silica gel for 24 h, contains NLT 99.0% and NMT 100.5% of iodoform (CHI_3).

IDENTIFICATION
- **A.**
Sample: 0.1 g
Analysis: Heat the *Sample*.
Acceptance criteria: A purple gas is evolved.

ASSAY
- **Procedure**
Sample: 200 mg of Iodoform, previously dried over silica gel for 24 h
Titrimetric system
(See *Titrimetry* ⟨541⟩.)
Mode: Residual titration
Titrant: 0.1 N silver nitrate VS
Back-titrant: 0.1 N ammonium thiocyanate VS
Endpoint detection: Visual
Analysis: Transfer the *Sample* to a 500-mL glass-stoppered conical flask. Add 20 mL of alcohol, and swirl to dissolve. Add 30.0 mL of *Titrant* and 10 mL of nitric acid, insert the stopper, and allow it to stand in a dark place for 16 h. Add 150 mL of water and 5 mL of ferric ammonium sulfate TS, and titrate the excess silver nitrate with *Back-titrant*.

[4] 5-[[3-[[3-[[[3-[[3-[[3,5-Bis-[[[2,3-dihydroxypropyl]amino]carbonyl]-2,4,6-triiodophenyl](acetylimino)]-2-hydroxypropyl](acetylimino)]-5-[[[2,3-dihydroxypropyl]amino]carbonyl]-2,4,6-triiodophenyl]carbonyl] amino]-2-hy droxypropyl]oxy]-2-hydroxypropyl](acetylimino)]-*N*,*N*′-bis(2,3-dihy droxypropyl)-2,4,6-triiodo-1,3-benzendicarboxamide.

www.webofpharma.com



Perform a blank determination. Each mL of 0.1 N silver nitrate is equivalent to 13.124 mg of iodoform (CHI_3).
Acceptance criteria: 99.0%–100.5% on the previously dried basis

IMPURITIES
• **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%
• **CHLORIDE AND SULFATE,** *Chloride* ⟨221⟩
Sample solution: 3.0 g of powdered Iodoform in 75 mL of water. Shake this solution for 1 min, allow to stand, and filter the supernatant. Use the filtrate for the analysis of Chloride and Sulfate.
Analysis: To 25 mL of the *Sample solution* add 6 mL of 3 N nitric acid, and dilute with water to 40 mL.
Acceptance criteria: 0.011%; this solution shows no more chloride than corresponds to 0.15 mL of 0.020 N hydrochloric acid.
• **CHLORIDE AND SULFATE,** *Sulfate* ⟨221⟩
Sample solution: Use as directed in the analysis of Chloride.
Analysis: To 25 mL of the *Sample solution* obtained in the test for *Chloride* add 1 mL of 3 N hydrochloric acid, and dilute with water to 40 mL.
Acceptance criteria: 0.017%; this solution shows no more sulfate than corresponds to 0.17 mL of 0.020 N sulfuric acid.

SPECIFIC TESTS
• **LOSS ON DRYING** ⟨731⟩
Analysis: Dry over silica gel for 24 h.
Acceptance criteria: NMT 0.5%
• **COLORING MATTER, ACIDS, AND ALKALIES**
Sample: 2 g
Analysis: Shake the *Sample* with 5 mL of water for 1 min, and filter.
Acceptance criteria: The filtrate is colorless and is neutral to litmus.

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers, store at controlled room temperature, and prevent exposure to excessive heat.
• **LABELING:** Label it to indicate that it is intended for use in compounding dosage forms for topical, periodontal, nasal, and intracavitary use only.

Iodoquinol

$C_9H_5I_2NO$ 396.95
8-Quinolinol, 5,7-diiodo-;
5,7-Diiodo-8-quinolinol [83-73-8].

DEFINITION
Iodoquinol contains NLT 96.0% and NMT 100.5% of iodoquinol ($C_9H_5I_2NO$), calculated on the dried basis.

IDENTIFICATION
• **A. INFRARED ABSORPTION**
Standard solution: 5 mg/mL of USP Iodoquinol RS in carbon disulfide. Warm slightly, if necessary, to effect a complete solution.
Sample solution: 5 mg/mL of Iodoquinol in carbon disulfide. Warm slightly, if necessary, to effect a complete solution.
Instrumental conditions
Mode: IR
Wavelength range: 7–11 µm
Cell: 3-mm sodium chloride
Blank: Carbon disulfide
Acceptance criteria: The spectrum of the *Sample solution* exhibits absorption maxima and minima only at the same wavelengths as those of the *Standard solution.*
• **B.**
Analysis: Warm a small quantity of Iodoquinol with 1 mL of sulfuric acid.
Acceptance criteria: Violet vapors of iodine are evolved.

ASSAY
• **PROCEDURE**
Sample solution: 14 mg of Iodoquinol. Proceed as directed in *Oxygen Flask Combustion* ⟨471⟩ using a mixture of 10 mL of sodium hydroxide solution (1 in 100) and 1 mL of freshly prepared sodium bisulfite solution (1 in 100) as the absorbing liquid. When the combustion is complete, place a few mL of water around the stopper of the flask. Loosen the stopper. Then rinse the stopper, the specimen holder, and the sides of the flask with 20 mL of water, added in small portions. Add 1 mL of an oxidizing solution prepared by adding 5 mL of bromine to 100 mL of a solution (1 in 10) of sodium acetate in glacial acetic acid. Insert the stopper in the flask, and shake vigorously for 1 min. Add 0.5 mL of formic acid, replace the stopper, and shake vigorously for 1 min. Remove the stopper. Then rinse the stopper, the specimen holder, and the sides of the flask with several small portions of water. Bubble nitrogen through the flask to remove the oxygen and excess bromine. Add 500 mg of potassium iodide, swirl to dissolve, add 3 mL of 2 N sulfuric acid, and allow to stand for 2 min.
Titrimetric system
Titrant: 0.02 N sodium thiosulfate VS
Endpoint detection: Visual
Analysis: Titrate with *Titrant,* adding 3 mL of starch TS as the endpoint is approached. Each mL of 0.02 N sodium thiosulfate is equivalent to 0.6616 mg of iodoquinol ($C_9H_5I_2NO$).
Acceptance criteria: 96.0%–100.5% on the dried basis

IMPURITIES
• **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.5%

SPECIFIC TESTS
• **LOSS ON DRYING** ⟨731⟩
Analysis: Dry over silica gel for 4 h.
Acceptance criteria: NMT 0.5%
• **FREE IODINE AND IODIDE**
Sample solution: 50 mg/mL of Iodoquinol in water. Shake the *Sample solution* for 30 s, allow to stand for 5 min, and filter.
Control solution: Dilute 2 mL of potassium iodide solution (1 in 6000) with water to 10 mL. Add 6 mL of 2 N sulfuric acid, 1 mL of potassium dichromate TS, and 2 mL of chloroform; and shake for 15 s.
Analysis: To 10 mL of the filtrate from the *Sample solution* add 1 mL of 2 N sulfuric acid, then add 2 mL of chloroform, and shake; no violet color appears in the chloroform (free iodine). To the mixture add 5 mL of 2 N sulfuric acid and 1 mL of potassium dichromate TS, and shake for 15 s.
Acceptance criteria: The color in the chloroform layer is not deeper than that produced for the *Control solution* (0.05% of iodide).

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in well-closed containers.

USP Monographs

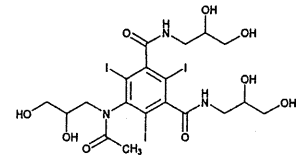
www.webofpharma.com

• **USP REFERENCE STANDARDS** ⟨11⟩
USP Iodoquinol RS

Iodoquinol Tablets

DEFINITION
Iodoquinol Tablets contain NLT 95.0% and NMT 105.0% of the labeled amount of iodoquinol ($C_9H_5I_2NO$).

IDENTIFICATION
• **A. INFRARED ABSORPTION**
Blank: Carbon disulfide
Standard solution: 0.5 mg/mL of USP Iodoquinol RS in the *Blank*. Warm slightly, if necessary, to effect a complete solution.
Sample solution: Shake a portion of finely powdered Tablets, equivalent to 0.5 mg/mL of iodoquinol, with the *Blank*, and filter. Warm slightly, if necessary, to effect complete solution.
Instrumental conditions
Mode: IR
Wavelength range: 7–11 µm
Cell: 3-mm sodium chloride
Acceptance criteria: The spectrum of the *Sample solution* exhibits absorption maxima and minima only at the same wavelengths as those of the *Standard solution*.
• **B.**
Sample: Powdered Tablets prepared for the *Assay*, nominally 50 mg of iodoquinol
Analysis: Place a portion of the *Sample* in a dry test tube, add 1 mL of sulfuric acid, and warm gently.
Acceptance criteria: Violet vapors of iodine are evolved.



ASSAY
• **PROCEDURE**
Sample solution: Finely powder NLT 20 Tablets. Using a portion of the powder, nominally 14 mg of iodoquinol, and using a mixture of 10 mL of sodium hydroxide solution (1 in 100) and 1 mL of freshly prepared sodium bisulfite solution (1 in 100) as the absorbing liquid, proceed as directed in *Oxygen Flask Combustion* ⟨471⟩. When the combustion is complete, place a few mL of water around the stopper of the flask, loosen the stopper, then rinse the stopper, the specimen holder, and the sides of the flask with 20 mL of water, added in small portions. Add 1 mL of an oxidizing solution prepared by adding 5 mL of bromine to 100 mL of a solution (1 in 10) of sodium acetate in glacial acetic acid. Insert the stopper in the flask, and shake vigorously for 1 min. Add 0.5 mL of formic acid, replace the stopper, and shake vigorously for 1 min. Remove the stopper. Then rinse the stopper, the specimen holder, and the sides of the flask with several small portions of water. Bubble nitrogen through the flask to remove the oxygen and excess bromine. Add 500 mg of potassium iodide, swirl to dissolve, add 3 mL of 2 N sulfuric acid, and allow to stand for 2 min.
Titrimetric system
Titrant: 0.02 N sodium thiosulfate VS
Endpoint detection: Visual
Analysis: Titrate with *Titrant*, adding 3 mL of starch TS as the endpoint is approached. Each mL of 0.02 N sodium thiosulfate is equivalent to 0.6616 mg of iodoquinol ($C_9H_5I_2NO$).
Acceptance criteria: 95.0%–105.0% of the labeled amount

IMPURITIES
• **SOLUBLE IODIDES**
Sample solution: Digest a quantity of powdered Tablets, nominally 100 mg of iodoquinol, with 5 mL of water for 10 min, cool, and filter.
Analysis: To the filtered *Sample solution* add 1 mL of 3 N hydrochloric acid, 2 drops of ferric chloride TS, and 2 mL of chloroform. Shake gently, and allow to separate.
Acceptance criteria: Any violet color in the chloroform is not more intense than that in a blank to which 0.2 mg of potassium iodide has been added.

PERFORMANCE TESTS
• **DISINTEGRATION** ⟨701⟩**:** 1 h
• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in well-closed containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Iodoquinol RS

Iohexol

$C_{19}H_{26}I_3N_3O_9$ 821.14
1,3-Benzenedicarboxamide, 5-[acetyl(2,3-dihydroxypropyl) amino]-*N*,*N*′-bis(2,3-dihydroxypropyl)-2,4,6-triiodo;
N,*N*′-Bis(2,3-dihydroxypropyl)-5-[*N*-(2,3-dihydroxypropyl) acetamido]-2,4,6-triiodoisophthalamide [66108-95-0].

DEFINITION
Iohexol contains NLT 98.0% and NMT 102.0% of iohexol ($C_{19}H_{26}I_3N_3O_9$), calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
• **B.** The retention times of the two principal peaks of the *Sample solution* correspond to those of the *System suitability solution*, as obtained in the test for *Organic Impurities*.

ASSAY
• **PROCEDURE**
Sample: 500 mg of Iohexol
Sample solution: Transfer the *Sample* to a glass-stoppered, 125-mL conical flask. Add 25 mL of 1.25 N sodium hydroxide and 500 mg of powdered zinc. Connect the flask to a reflux condenser, and reflux for 1 h. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and pass the mixture through a filter. Rinse the flask and the filter thoroughly with small portions of water, adding the rinsings to the filtrate. Add 5 mL of glacial acetic acid.
Titrimetric system
(See *Titrimetry* ⟨541⟩.)
Mode: Direct titration
Titrant: 0.1 N silver nitrate VS

USP Monographs

www.webofpharma.com

Endpoint detection: Potentiometric
Analysis: Titrate the *Sample solution* with 0.1 N silver nitrate VS.
Calculate the percentage of iohexol ($C_{19}H_{26}I_3N_3O_9$) in the portion of Iohexol taken:

$$\text{Result} = [(V \times N \times F)/W] \times 100$$

V = *Titrant* volume consumed by the *Sample* (mL)
N = *Titrant* normality (mEq/mL)
F = equivalent weight of iohexol, 273.7 mg/mEq
W = *Sample* weight (mg)

Acceptance criteria: 98.0%–102.0% on the anhydrous basis

IMPURITIES

• **LIMIT OF IONIC COMPOUNDS**
Rinse all glassware five times with distilled water.
Standard solution: 0.002 mg/mL of sodium chloride in water
Sample solution: 1 g of Iohexol in 50 mL of water
Analysis
Samples: *Standard solution* and *Sample solution*
Acceptance criteria: The specific conductance of the *Sample solution* is NMT that of the *Standard solution* (equivalent to 0.01% ionic compounds as sodium chloride).

• **LIMIT OF FREE IODIDE**
Sample: 5 g of Iohexol
Sample solution: Dissolve the *Sample* in 20 mL of water.
Titrimetric system
(See *Titrimetry* ⟨541⟩.)
Mode: Direct titration
Titrant: 0.001 N silver nitrate VS
Endpoint detection: Potentiometric
Analysis
Calculate the percentage of free iodide in the portion of the *Sample* taken:

$$\text{Result} = [(V \times N \times F)/W] \times 100$$

V = *Titrant* volume consumed by the *Sample* (mL)
N = *Titrant* normality (mEq/mL)
F = equivalent weight of iodide, 126.9 mg/mEq
W = *Sample* weight (mg)

Acceptance criteria: NMT 0.001%

• **ORGANIC IMPURITIES**
Solution A: Acetonitrile
Solution B: Water
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	1	99
60	13	87

System suitability solution: 1.5 mg/mL of USP Iohexol RS and 0.0075 mg/mL of USP Iohexol Related Compound A RS in water
Sample solution: 1.5 mg/mL of Iohexol
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)

Detector: UV 254 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Sample: *System suitability solution*
[NOTE—Iohexol may give two nonresolved peaks due to exo–endo isomerism. In addition, a small peak due to iohexol usually appears at the leading edge of the first principal peak. This small peak has a retention time about 1.2 min less than the first principal peak. The relative retention times for the iohexol related compound A, iohexol endo-isomer, iohexol exo-isomer, and *O*-alkylated compounds peaks are 0.85, 0.96, 1.0, and 1.1–1.4, respectively.]
Suitability requirements
Resolution: NLT 5.0 between iohexol related compound A and the exo-isomer (the second and greater peak) of iohexol
Analysis
Sample: *Sample solution*
Calculate the percentage of *O*-alkylated compounds and any other individual impurity in the portion of Iohexol taken. Disregard any peak less than or equal to 0.03% of the principal peaks.

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each impurity
r_T = sum of all of the peak responses

Acceptance criteria
***O*-alkylated compounds:** NMT 0.6%
Any individual impurity: NMT 0.1%
Total impurities excluding *O*-alkylated compounds: NMT 0.3%

• **LIMIT OF 2-METHOXYETHANOL**
Internal standard solution: 0.01 mg/mL of secondary butyl alcohol in water
Standard stock solution: 0.005 mg/mL of methanol and 0.01 mg/mL each of isopropyl alcohol, secondary butyl alcohol, and 2-methoxyethanol in *Internal standard solution*
Standard solution: Transfer about 0.25 g of USP Iohexol RS and 1.0 mL of *Standard stock solution* to a headspace vial, and seal the vial with a septum and crimp cap.
Sample solution: Transfer about 0.25 g of Iohexol and 1.0 mL of *Internal standard solution* to a headspace vial, and seal the vial with a septum and crimp cap.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: GC with suitable headspace autosampler
Detector: Flame ionization
Column: 0.53-mm × 30-m fused-silica coated with a 1-µm phase G16
Temperatures

Injection volume: 1 mL of the headspace
System suitability
Sample: *Standard solution*
[NOTE—The typical relative retention times for methanol, isopropyl alcohol, secondary butyl alcohol, and 2-methoxyethanol are 0.5, 0.6, 1.0, and 1.9, respectively.]
Suitability requirements
Resolution: NLT 1.0 between methanol and isopropyl alcohol
Relative standard deviation: NMT 10.0% for the ratio of 2-methoxyethanol to the internal standard
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the amount of 2-methoxyethanol in the portion of Iohexol taken:

$$\text{Result} = (R_U/R_S) \times (C_S/C_U)$$

R_U = peak response ratio of 2-methoxyethanol to the internal standard from the *Sample solution*
R_S = peak response ratio of 2-methoxyethanol to the internal standard from the *Standard solution*
C_S = concentration of 2-methoxyethanol in the *Standard solution* (µg/mL)
C_U = concentration of Iohexol in the *Sample solution* (g/mL)

Acceptance criteria: NMT 20 µg/g of 2-methoxyethanol

• **LIMIT OF 3-CHLOROPROPANE-1,2-DIOL**
Standard solution: 0.025 mg/mL of 3-chloropropane-1,2-diol in ethyl acetate
Sample solution: Transfer 1 g of Iohexol to a separator. Dissolve in 1 mL of water. Extract 4 times with 2 mL of ethyl acetate, and combine the extracts. Dry the combined extracts with anhydrous sodium sulfate. Filter, and wash the filter with a small amount of ethyl acetate. Combine the wash with the filtrate, and concentrate to a volume of 0.7 mL, using a warm water bath and a stream of nitrogen. Dilute with ethyl acetate to 2 mL.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: GC
Detector: Flame ionization
Column: 0.32-mm × 30-m fused-silica capillary bonded with a 1-µm layer of phase G46
Temperatures
Injection port: 230°
Detector: 250°
Column: See *Table 3*.

Table 3

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold Time at Final Temperature (min)
80	—	80	2

275	—	275	2

Carrier gas: Helium at 1 mL/min
Injection volume: 2 µL
System suitability
Sample: *Standard solution*
[NOTE—The retention time of the 3-chloropropane-1,2-diol peak is about 8 min.]
Suitability requirements
Relative standard deviation: NMT 10.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Acceptance criteria: The area of the principal peak from the *Sample solution* is NMT the area of the principal peak from the *Standard solution* (NMT 0.0025%).

• **LIMIT OF FREE AROMATIC AMINE**
Solution A: 3 mg/mL of *N*-(1-naphthyl)ethylenediamine dihydrochloride in a mixture of propylene glycol and water (70:30)
Standard stock solution: 10 µg/mL of USP Iohexol Related Compound B RS in water
Standard solution: Transfer 5 mL of water and 10.0 mL of the *Standard stock solution* to a 25-mL volumetric flask.
Sample solution: Transfer 200 mg of Iohexol to a 25-mL volumetric flask, add 15 mL of water, and mix to dissolve.
Blank: Add 15 mL of water to a 25-mL volumetric flask.
Instrumental conditions
Mode: Vis
Analytical wavelength: 495 nm
Cell: 5 cm
Analysis
Samples: *Standard solution*, *Sample solution*, and *Blank*
In conducting the following steps, keep the flasks in iced water and protected as much as possible from light until all of the reagents have been added.
Treat the *Samples* as follows. Place the flask in an ice bath for 5 min. Add 1.5 mL of 6 N hydrochloric acid, and mix by swirling. Add 1.0 mL of sodium nitrite solution (20 mg/mL), and allow to stand in the ice bath for 4 min. Remove the flask from the ice bath, add 1.0 mL of sulfamic acid solution (40 mg/mL), and swirl gently until gas evolution ceases. [**CAUTION**—Considerable pressure is produced.] Add 1.0 mL of *Solution A*, dilute with water to volume, and allow to stand for 5 min. Measure the absorbance of the *Standard solution* and *Sample solution* against the *Blank solution*.
Acceptance criteria: The absorbance of the *Sample solution* is NMT that of the *Standard solution* (NMT 0.05% of free aromatic amine).

SPECIFIC TESTS

• **COLOR OF SOLUTION**

Iohexol Injection

DEFINITION
Iohexol Injection is a sterile solution of Iohexol in Water for Injection. It contains NLT 95.0% and NMT 105.0% of the labeled amount of iohexol ($C_{19}H_{26}I_3N_3O_9$) as organically bound iodine. It may contain small amounts of suitable buffers and Edetate Calcium Disodium as a stabilizer. Iohexol Injection intended for intravascular or intrathecal use contains no antimicrobial agents.

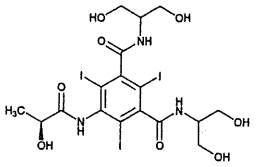
IDENTIFICATION
• **A.** The retention times of the major peaks of the *Sample solution* correspond to those of the *System suitability solution*, as obtained in the test for *Organic Impurities*.

ASSAY
• **PROCEDURE**
Sample: A volume of Injection equivalent to 300 mg of iodine
Analysis: Transfer the *Sample* to a glass-stoppered, 250-mL conical flask. Add 25 mL of 1.25 N sodium hydroxide and 500 mg of powdered zinc, connect the flask to a reflux condenser, and reflux the solution for 1 h. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and the filter thoroughly with small portions of water, adding the rinsings to the filtrate. Add 5 mL of glacial acetic acid, and titrate with 0.1 N silver nitrate VS. Each mL of 0.1 N silver nitrate is equivalent to 27.37 mg of $C_{19}H_{26}I_3N_3O_9$.
Acceptance criteria: 95.0%–105.0%

IMPURITIES
• **ORGANIC IMPURITIES**
Solution A: Acetonitrile
Solution B: Water
Mobile phase: The percentage of *Solution A* increases from 1% to 13% at a rate of 0.2%/min.
System suitability solution: 1.5 mg/mL, 0.0075 mg/mL, and 0.0069 mg/mL each of USP Iohexol RS, USP Iohexol Related Compound A RS, and USP Iohexol Related Compound C RS in water
Sample solution: 1.5 mg/mL of Iohexol
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 25-cm stainless steel column; packing L1
Flow rate: 1.0 mL/min
Injection volume: 10 µL
System suitability
Sample: *System suitability solution*
[NOTE—The relative retention times for the *exo*-isomer of iohexol and the *O*-alkylated compounds are 1.0 and between 1.1 and 1.4, respectively.]
[NOTE—The peak area of iohexol related compound C is 0.5% ± 0.1% compared to the total area of all the peaks in the chromatogram.]
Suitability requirements
Resolution: NLT 20.0 between iohexol related compound A and iohexol related compound C
Analysis
Sample: *Sample solution*
Excluding peaks with retention times between 0.84 (relative to the *endo*-isomer of iohexol, which is the first main peak) and 1.0, calculate the percentage of *O*-alkylated compounds and any other individual impurity peak, in the portion of Iohexol taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each impurity
r_T = sum of all the peak responses



Acceptance criteria
Individual impurity: NMT 0.6% of *O*-alkylated compounds; NMT 0.1% of any other individual impurity
Total impurities: NMT 0.3%, excluding *O*-alkylated compounds

SPECIFIC TESTS
• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** NMT 0.2 USP Endotoxin Unit per 50 mg of iodine
• **pH** ⟨791⟩**:** 6.8–7.7
• **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩**:** The Injection labeled for intrathecal use meets the requirements for small-volume injections.
• **FREE IODIDE:** Transfer 5.0 mL of Injection to a suitable container, add 20 mL of water, and titrate with 0.001 N silver nitrate VS using a silver electrode in combination with an appropriate reference electrode. Each mL of 0.001 N silver nitrate is equivalent to 0.1269 mg of iodine.
Acceptance criteria: NMT 0.02%, based on the content of iohexol
• **INJECTIONS AND IMPLANTED DRUG PRODUCTS** ⟨1⟩**:** Meets the requirements

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve Injection intended for intravascular or intrathecal use in single-dose or multiple-dose plastic or Type I glass containers. Store at controlled room temperature, protected from light. Do not freeze.
• **LABELING:** Label containers of Injection to direct the user to discard any unused portion. The labeling states also that it is not to be used if it is discolored or contains a precipitate. Label it also to state its routes of administration. When the specific dose strength is not intended for intrathecal use, label it to indicate "serious injury can occur if given by intrathecal route".

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: Heat about 500 mg in a suitable crucible: violet vapors are evolved.

C: The retention time of the major peak in the chromatogram of the *Identification solution* corresponds to that of the iopamidol peak observed in the chromatogram of the *System suitability solution*, as obtained in the test for *Related compounds*.

Specific rotation ⟨781S⟩: between −4.6° and −5.2° (*t* = 20°; λ = 436 nm).

Test solution: 400 mg per mL, in water, heating on a water bath, if necessary to effect solution, and passing through a membrane filter having a 3-µm or finer porosity.

Loss on drying ⟨731⟩—Dry it at 105° for 4 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩: not more than 0.1%.

Free aromatic amine—Transfer 500 mg to a 25-mL volumetric flask, and add 20 mL of water, heating on a water bath, if necessary, to effect solution. To a second 25-mL volumetric flask transfer 18.4 mL of water and 1.6 mL of a Standard solution prepared by dissolving a suitable quantity of USP Iopamidol Related Compound A RS in water and diluting with water to obtain a solution having a concentration of 62.5 µg per mL. To a third 25-mL volumetric flask add 20 mL of water to provide a blank. Treat each flask as follows. Place the flasks in an ice bath, protected from light, for 5 minutes. [NOTE—In conducting the following steps, keep the flasks in the ice bath and protected from light as much as possible until all of the reagents have been added.] Add slowly 1 mL of hydrochloric acid, mix, and allow to stand for 5 minutes. Add 1 mL of sodium nitrite solution (1 in 50), mix, and allow to stand for 5 minutes. Add 1 mL of ammonium sulfamate solution (3 in 25), shake, and allow to stand for 5 minutes. [**CAUTION**—Considerable pressure is produced.] Add 1 mL of *N*-(1-naphthyl)ethylenediamine dihydrochloride solution (1 in 1000), and mix. Remove the flasks from the ice bath, and allow to stand in a water bath at about 25° for 10 minutes. Dilute with water to volume, mix, and without delay (about 5 minutes from final dilution), concomitantly determine the absorbances of the solution from the substance under test and the Standard solution in 1-cm cells at the wavelength of maximum absorbance at about 500 nm, with a suitable spectrophotometer, against the prepared blank. The absorbance of the solution from the Iopamidol is not greater than that of the Standard solution (0.02%).

Free iodine—Transfer 2.0 g to a stoppered, 50-mL centrifuge tube, add sufficient water to dissolve, heating on a water bath, if necessary, to effect solution, and dilute with water to 25 mL. Add 5 mL of toluene and 5 mL of 2 N sulfuric acid, shake well, and centrifuge: the toluene layer shows no red color.

Limit of free iodide—Transfer about 6.0 g, accurately weighed, to a suitable container, dissolve in 50 mL of water, and add 2.0 mL of 0.001 M potassium iodide. Titrate with 0.001 N silver nitrate VS, determining the endpoint potentiometrically, using a silver indicator electrode and an appropriate reference electrode. Perform a blank determination, and make any necessary correction. Each mL of 0.001 N silver nitrate is equivalent to 126.9 µg of iodide. Not more than 0.001% is found.

Free acid or alkali—Dissolve 10.0 g in 100 mL of freshly boiled and cooled water. Using a pH meter and a glass–calomel electrode system, determine the volume of 0.01 N hydrochloric acid VS or 0.01 N sodium hydroxide VS to bring the pH of the test solution to 7.0: not more than 1.37 mL of 0.01 N sodium hydroxide, equivalent to a free acid content of 5 mg of hydrochloric acid per 100 g, or not more than 0.75 mL of 0.01 N hydrochloric acid, equivalent to a free alkali content of 3 mg of sodium hydroxide per 100 g, is required.

Related compounds—

Solution A—Use water.

Solution B—Prepare a filtered and degassed mixture of water and acetonitrile (1:1).

Mobile phase—Use variable mixtures of *Solution A* and *Solution B* as directed for *Chromatographic system*. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Dissolve accurately weighed quantities of USP Iopamidol RS and USP Iopamidol Related Compound C RS in water, and dilute with water to obtain a solution having concentration of about 20 µg per mL of each.

Standard solution—Dissolve accurately weighed quantities of USP Iopamidol RS and USP Iopamidol Related Compound C RS in water, and dilute with water to obtain a solution having concentrations of about 20 µg per mL and 50 µg per mL, respectively.

Test solution—Transfer about 0.5 g of Iopamidol, accurately weighed, to a 50-mL volumetric flask, add water to volume, and mix.

Identification solution—Dilute a suitable volume of the *Test solution* with water to obtain a solution with a concentration of iopamidol of about 20 µg per mL.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 240-nm detector and two 4.6-mm × 25-cm columns that contain packing L11, connected in series. The column temperature is maintained at

USP Monographs

www.webofpharma.com

60°, and the flow rate is about 2.0 mL per minute. The chromatograph is programmed as follows.

Time (minutes)	Solution A (%)	Solution B (%)	Elution
0–18	100	0	isocratic
18–40	100→62	0→38	linear gradient
40–45	62→50	38→50	linear gradient
45–50	50→100	50→0	linear gradient
50–60	100	0	isocratic

Chromatograph the *System suitability solution*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between iopamidol related compound C and iopamidol is not less than 2.0. Chromatograph the *Standard solution*, and record the peak responses as directed for *Procedure:* the tailing factor for each peak is between 0.7 and 1.5, and the relative standard deviation for replicate injections for either of the two peaks is not more than 2.0%. Chromatograph the *Identification solution*, and record the peak responses as directed for *Procedure* to obtain a chromatogram for *Identification* test *C*.

Procedure—Separately inject equal volumes (about 20 µL) of the *Identification solution*, the *System suitability solution*, the *Standard solution*, and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak area responses.

Calculate the total percentage of iopamidol related compound C and 2-chloro derivative in the portion of Iopamidol taken by the formula:

$$100(C_1V/W)(r_i/r_S)$$

in which C_1 is the concentration, in mg per mL, of iopamidol related compound C in the *Standard solution*; *V* is the volume of the *Test solution*; *W* is the weight of Iopamidol used to prepare the *Test solution*; r_i is the total peak response for the iopamidol related compound C and 2-chloro derivative obtained from the *Test solution*; and r_S is the peak response for iopamidol related compound C obtained from the *Standard solution*.

Calculate the total percentage of any other impurity in the portion of Iopamidol taken by the formula:

$$100(C_2V/W)(r_i/r_S)$$

in which C_2 is the concentration of iopamidol, in mg per mL, in the *Standard solution*; *V* and *W* are as previously defined; r_i is the peak response for the individual impurity obtained from the *Test solution*; and r_S is the peak response for iopamidol obtained from the *Standard solution*. In addition to not exceeding the limits for each impurity shown in *Table 1*, not more than 0.1% of any other individual impurity is found; and not more than 0.20% of total impurities, other than iopamidol related compound C and 2-chloro derivative, is found.

Table 1

Name	Relative Retention Time	Limit (%)
Monocarboxylic acid[1]	0.1	0.1

[10] *N*¹-(1,3-Dihydroxypropan-2-yl)-5-(*S*)-lactamido-2,4,6-triiodo-*N*³,*N*³-dimethylisophthalamide.

Assay—Transfer about 300 mg of Iopamidol, accurately weighed, to a glass-stoppered, 125-mL conical flask, add 40 mL of 1.25 N sodium hydroxide and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux the mixture for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and the filter thoroughly, adding the rinsings to the filtrate. Add 5 mL of glacial acetic acid, and titrate with 0.1 N silver nitrate VS, determining the endpoint potentiometrically. Each mL of 0.1 N silver nitrate is equivalent to 25.90 mg of $C_{17}H_{22}I_3N_3O_8$.

Iopamidol Injection

» Iopamidol Injection is a sterile solution of Iopamidol in Water for Injection. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of iopamidol ($C_{17}H_{22}I_3N_3O_8$). It may contain small amounts of suitable buffers and of Edetate Calcium Disodium as a stabilizer. Iopamidol Injection intended for intravascular or intrathecal use contains no antimicrobial agents.

Packaging and storage—Preserve Injection intended for intravascular or intrathecal use in single-dose containers, preferably of Type I glass, and protected from light.

Labeling—Label containers of Injection to direct the user to discard any unused portion remaining in the container and to

www.webofpharma.com

check for the presence of particulate matter before using. Label it also to state its routes of administration.

USP Reference standards ⟨11⟩—

USP Iopamidol Related Compound B RS
5-Glycolamido-*N,N'*-bis[2-hydroxy-1-(hydroxymeth yl) ethyl]-2,4,6-triiodoisophthalamide.
$C_{16}H_{20}I_3N_3O_7$ 747.07

Identification—
A: Evaporate a volume of Injection, equivalent to about 500 mg of iopamidol, to dryness, and heat the residue so obtained in a suitable crucible: violet vapors are evolved.
B: It responds to the *Thin-Layer Chromatographic Identification Test* ⟨201⟩, the test solution and the Standard solution being prepared at a concentration of 0.5 mg per mL in a mixture of methanol and water (9:1), the solvent mixture being chloroform, methanol, ammonium hydroxide, and water (60:30:9:1), and short-wavelength UV light being used to locate the spots.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 0.6 USP Endotoxin Unit per mg of iodine.

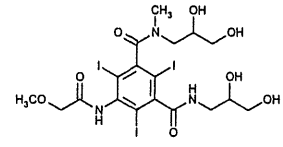
pH ⟨791⟩: between 6.5 and 7.5.

Particulate Matter in Injections ⟨788⟩ —The Injection labeled for intrathecal use meets the requirements for small-volume injections.

Free aromatic amine—Transfer an accurately measured volume of Injection, equivalent to about 500 mg of iopamidol, to a 25-mL volumetric flask, dilute with water to 20 mL, and mix. To a second 25-mL volumetric flask transfer 16 mL of water and 4.0 mL of Standard solution prepared by dissolving a suitable quantity of USP Iopamidol Related Compound A RS in water and diluting with water to obtain a solution having a concentration of 62.5 µg per mL. Proceed as directed in the test for *Free aromatic amine*— under *Iopamidol*, beginning with "to the third 25-mL volumetric flask add 20 mL of water." The absorbance of the solution from the iopamidol is not greater than that of the Standard solution (0.05%).

Free iodine—Transfer a volume of Injection, equivalent to 2.0 g of iopamidol, to a glass-stoppered test tube. Add 2 mL of 2 N sulfuric acid and 1.0 mL of toluene, shake, and allow the layers to separate: the toluene layer shows no red color.

Limit of free iodide—Transfer 10.0 mL of Injection to a beaker, add 40 mL of water, and mix. Proceed as directed in the *Limit of free iodide* test under *Iopamidol* beginning with "add 2.0 mL of 0.001 M potassium iodide." Not more than 3.1 mL of 0.001 N silver nitrate is required (0.04 mg of iodide per mL).



Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—
Solution A—Use water.
Solution B—Prepare a filtered and degassed mixture of water and methanol (3:1).
Mobile phase—Use variable mixtures of *Solution A* and *Solution B* as directed for *Chromatographic system.* Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Resolution solution—Transfer 10.0 mg of USP Iopamidol Related Compound B RS and 10.0 mg of USP Iopamidol RS to a 1000-mL volumetric flask. Dissolve in and dilute with water to volume, and mix.
Standard preparation—Dissolve about 20 mg of USP Iopamidol RS, accurately weighed, in about 10 mL of water, and dilute quantitatively and stepwise with water to obtain a solution having a known concentration of about 80 µg of USP Iopamidol RS per mL.
Assay preparation—Dilute an accurately measured volume of Injection, equivalent to about 1000 mg of iopamidol, quantitatively and stepwise with water to obtain a solution having a concentration of about 80 µg of iopamidol per mL.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 240-nm detector and a 4.6-mm × 25-cm stainless steel column that contains 5-µm packing L1. The column temperature is maintained at 35°, and the flow rate is about 1.5 mL per minute. The chromatograph is programmed to provide variable mixtures of *Solution A* and *Solution B,* the percentage of *Solution B* being 8.0% at the time of injection, and is held at that percentage for 6 minutes, then increased linearly to 35.0% at 18 minutes, after which it is changed to increase linearly to 92.0% at 30 minutes, maintained at that percentage for 4 minutes, and decreased linearly to 8.0% at 36 minutes, where it is held to the end of the run at 40 minutes. Chromatograph the *Resolution solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between iopamidol related compound B and iopamidol is not less than 7.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of iopamidol ($C_{17}H_{22}I_3N_3O_8$) in the portion of Injection taken by the formula:

$$12.5C(r_U/r_S)$$

in which C is the concentration, in µg per mL, of USP Iopamidol RS in the *Standard preparation,* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Iopromide

$C_{18}H_{24}I_3N_3O_8$ 791.11
1,3-Benzenedicarboxamide, *N,N'*-bis(2,3-dihydroxypropyl)-2,4,6-triiodo-5-[(methoxyacetyl)amino]-*N*-methyl-.
N,N'-Bis(2,3-dihydroxypropyl)-2,4,6-triiodo-5-(2-methoxyacetamido)-*N*-methylisophthalamide [73334-07-3].

» Iopromide contains not less than 97.0 percent and not more than 102.5 percent of $C_{18}H_{24}I_3N_3O_8$, calculated on the anhydrous and solvent-free basis.

Packaging and storage—Preserve in well-closed, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Iopromide RS
USP Iopromide Related Compound A RS
USP Iopromide Related Compound B RS
5-(Acetylamino)-*N,N'*-bis(2,3-dihydroxypropyl)-2,4,6-triiodo-*N*-methyl-1,3-benzenedicarboxamide.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: The R_F value of the principal spot in the chromatogram, developed with the *Basic eluant*, obtained from the *Test solution* corresponds to that obtained from the *Standard solution* in the *Ordinary impurities* test.

Water Determination, *Method I* ⟨921⟩: not more than 1.5%.

Residue on ignition ⟨281⟩: not more than 0.1%.

Free iodine—Transfer 2.0 g of Iopromide to a glass-stoppered test tube, and dissolve in 20 mL of water. Add 2 mL of toluene and 2 mL of diluted sulfuric acid, and shake vigorously: the toluene layer shows no red color.

Limit of free iodide—Transfer 10.0 g of Iopromide to a 150-mL conical flask, and dissolve in 70 mL of water. Adjust with 0.1 N sulfuric acid to a pH of 3.5 ± 0.5. Titrate with 0.001 N silver nitrate VS, determining the endpoint potentiometrically, using a silver or platinum electrode in combination with an appropriate reference electrode (see *Titrimetry* ⟨541⟩). Each mL of 0.001 N silver nitrate is equivalent to 126.9 µg of I: the limit is 0.002%.

Limit of free aromatic amine—

Test solution—Transfer 500 mg of Iopromide to a 25-mL volumetric flask, add 20 mL of water, and mix.

Standard solution—Dissolve a suitable quantity of USP Iopromide Related Compound A RS in water, and dilute with water to obtain a stock solution having a known concentration of 0.25 mg per mL. Transfer 2.0 mL of this stock solution to a 25-mL volumetric flask, add 18.0 mL of water, and mix.

Blank solution—Transfer 20 mL of water to a 25-mL volumetric flask.

Procedure—Treat each flask as follows. Place the flasks in an ice bath, and protect from light. Add slowly 1.0 mL of 8 N hydrochloric acid, mix, and allow to stand for 5 minutes. Add 1.0 mL of sodium nitrite solution (1 in 50), mix, and allow to stand for 5 minutes. Add 0.50 mL of freshly prepared sulfamic acid solution, (8 in 100). Shake each flask vigorously several times within the next 5 minutes, venting off the gas that evolves. [**CAUTION**—Considerable pressure is produced.] Add 1.0 mL of freshly prepared *N*-(1-naphthyl) ethylenediamine dihydrochloride solution, (1 in 1000) in a mixture of propylene glycol and water (70:30), and shake. Remove the flasks from the ice bath, and allow to stand in a water bath at about 25° for 10 minutes. Dilute with water to volume, mix, and degas with the aid of sonication for 1 minute. Concomitantly determine the absorbances of the *Test solution* and the *Standard solution* in 1-cm cells at the wavelength of maximum absorbance at about 495 nm, with a suitable spectrophotometer, using the *Blank solution,* treated in the same manner. The absorbance of the *Standard solution* is not less than 0.40. Calculate the percentage of free aromatic amine in the portion of Iopromide taken by the formula:

$$10(W_S/W_U)(A_U/A_S)$$

in which W_S is the quantity, in mg, of USP Iopromide Related Compound A RS taken to prepare the *Standard solution*; W_U is the quantity, in mg, of the Iopromide taken to prepare the *Test solution*; and A_U and A_S are the absorbances of the *Test solution* and the *Standard solution*, respectively: not more than 0.1% is found.

Limit of alcohol—

Standard solution—Prepare a solution of alcohol in dimethylformamide to obtain a solution having a known concentration of about 0.050 mg of alcohol (C_2H_5OH) per mL.

Test solution—Dissolve an accurately weighed portion of Iopromide in dimethylformamide to obtain a concentration of about 50 mg per mL.

Blank solution—Use dimethylformamide.

Chromatographic system (see *Chromatography* ⟨621⟩)—The gas chromatograph is equipped with a headspace injector, a flame-ionization detector, and a 0.25-mm × 30-m capillary column, the internal wall of which is coated with a 1.4-µm film of liquid phase G43. The column temperature is programmed according to the following steps: it is held at 40° for 10 minutes, then increased at a rate of 5° per minute to 70°; it is then increased at a rate of 30° per minute to 220°. The injector port is maintained at 160°; the headspace sampler is maintained at 80°; and the detector is maintained at 250°. Helium is used as the carrier gas at a flow rate of about 27 cm per second. Chromatograph the *Standard solution*, and record the peak responses as directed for *Procedure*:the retention time for alcohol is about 3 minutes; and the relative standard deviation for three injections of the *Standard solution* is not more than 4.0%. Chromatograph the *Blank solution*, and record the peak responses as directed for *Procedure:* the chromatogram shows no peak at the retention time for alcohol.

Procedure— [NOTE—Use peak areas where peak responses are indicated.] Transfer 2.0 mL each of the *Test solution*, the *Standard solution*, and the *Blank solution* to separate headspace vials, add 10 µL of 1 N hydrochloric acid to each vial, then seal the vials using a flanged cap so that the cap can no longer be turned. Record the chromatograms, and measure the responses for the alcohol peak. Calculate the concentration of alcohol in the portion of Iopromide taken by the formula:

$$(C/I)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of alcohol (C_2H_5OH) in the *Standard solution*; I is the quantity, in mg per mL, of Iopromide in the *Test solution*; and r_U and r_S are the alcohol peak responses in the chromatograms obtained from the *Test solution* and the *Standard solution*, respectively: not more than 0.4% of alcohol (C_2H_5OH) is found. Use the percentage obtained to calculate the *Assay* result on the solvent-free basis.

Limit of *N*-acetyl compound (iopromide related compound B)—Using the chromatograms obtained in the *Assay*, calculate the percentage of N-acetyl compound in the Iopromide taken by the formula:

$$20(W_B/W_I)[(A_{Y1} + A_{Y2})/(R_{Y1} + R_{Y2})]$$

in which W_B is the quantity, in mg, of USP Iopromide Related Compound B RS taken to prepare the *Related compound B standard solution*; W_I is the quantity, in mg, of Iopromide taken to prepare the *Assay preparation*; A_{Y1} and A_{Y2} are the peak responses for the iopromide related compound B *Y*1- and *Y*2-isomers, respectively, in the chromatogram obtained from the *Assay preparation*; and R_{Y1} and R_{Y2} are the peak responses for the iopromide related compound B *Y*1- and *Y*2-isomers, respectively, in the chromatogram obtained from the *Related compound B standard solution:* not more than 1.5% of N-acetyl compound is found.

Ordinary impurities ⟨466⟩—

Test solution: a mixture of methanol and water (1:1).

Standard solutions: a mixture of methanol and water (1:1).

Visualization solution—

SOLUTION A—Dissolve 2.7 g of ferric chloride in 100 mL of 2.4 N hydrochloric acid. Store this solution in a refrigerator.

USP Monographs

www.webofpharma.com

SOLUTION B—Dissolve 3.5 g of potassium ferricyanide in 100 mL of water. Store this solution in a refrigerator.

SOLUTION C—Dissolve 5.0 g of sodium arsenite in 30 mL of 1 N sodium hydroxide solution that has been cooled to 0°. While stirring, mix with 65 mL of 2.4 N hydrochloric acid, and store at room temperature. Use the clear supernatant.

Procedure—Mix 10 mL of *Solution A*, 10 mL of *Solution B*, and 2.0 mL of *Solution C*. Use within 30 minutes.

Basic eluant: a mixture of dioxane, water, and ammonium hydroxide (85:15:4).

Acidic eluant: a mixture of chloroform, methanol, water, and 96 percent formic acid (62:32:6:2).

Procedure—Apply 1 µL and 2 µL of the *Test solution* and 1 µL of each of the *Standard solutions* to two separate thin-layer chromatographic plates. Place one plate in a development chamber containing the *Acidic eluant*, and the second plate in a development chamber containing the *Basic eluant*. After the chromatograms have developed, remove the plates from the chambers, and allow to dry at room temperature.

Visualization—

DETECTION 1—Observe both plates under 254-nm UV light.

DETECTION 2—The plate developed with the *Acidic eluant* is exposed to ammonia vapors for 10 to 30 minutes and is air dried. Both plates are exposed to unfiltered 254-nm UV light for several minutes until the principal spots appear yellow. Overspray with *Visualization solution*, and examine the plates under ambient light. Determine the percentage of all secondary spots, except those due to free aromatic amine and to the *N*-acetyl compound.

Limit—The sum of all secondary spots observed in the chromatograms of the *Test solution*, except those due to the free aromatic amine and to the *N*-acetyl compound in addition to the percentage of *N*-acetyl compound obtained in the test for *Limit of N-Acetyl compound*, corresponds to not more than 3.0%.

Isomer distribution—Using the chromatogram of the *Assay preparation* obtained in the *Assay*, calculate the percentage of iopromide *E*1- and *Z*1-isomers in the Iopromide taken by the formula:

$$100(r_{E1} + r_{Z1})/(r_{E1} + r_{E2} + r_{Z1} + r_{Z2})$$

in which r_{E1}, r_{E2}, r_{Z1}, and r_{Z2} are the peak responses for iopromide *E*1-, *E*2-, *Z*1-, and *Z*2-isomers, respectively, in the chromatogram obtained from the *Assay preparation:* between 40.0% and 51.0% of *E*1- and *Z*1-isomers is found. Calculate the percentages of iopromide *E*2- and *Z*2-isomers in the Iopromide taken by the formula:

$$100(r_{E2} + r_{Z2})/(r_{E1} + r_{E2} + r_{Z1} + r_{Z2})$$:

between 49.0% and 60.0% *E*2- and *Z*2-isomers is found.

Assay—

Diluent—Prepare a mixture of methanol and water (1:1).

Mobile phase—

[NOTE—Use chloroform, methanol, and water that have been filtered and degassed.]

Mix 6 g of chloroform with 59 g of methanol, then add 900 g of water. Store in a sealed container, and do not stir or sparge the *Mobile phase* during use.

Standard preparation—Transfer an accurately weighed quantity of about 38 mg of USP Iopromide RS, to a 20-mL volumetric flask. Dissolve in and dilute with *Diluent* to volume, and mix.

Related compound B standard solution—Transfer about 1.9 mg of USP Iopromide Related Compound B RS, accurately weighed, to a 100-mL volumetric flask. Dissolve in and dilute with *Diluent* to volume, and mix.

Assay preparation—Transfer about 38 mg of Iopromide, accurately weighed, to a 20-mL volumetric flask. Dissolve in and dilute with *Diluent* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.2 mL per minute. The temperature is maintained at a constant temperature of about 20°. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative retention times for iopromide *E*1-isomer, iopromide *E*2-isomer, iopromide *Z*1-isomer, and iopromide *Z*2-isomer are about 0.70, 0.75, 0.85, and 1.0, respectively; the resolution, *R*, between iopromide isomers *Z*1 and *Z*2 is not less than 2.0; and the relative standard deviation for replicate injections for total iopromide area is not more than 2.0%. Chromatograph the *Related compound B standard solution*, and measure the area of the peak responses: the relative retention times for the iopromide related compound B *Y*1- and *Y*2-isomers are about 0.28 and 0.31, respectively; and the signal-to-noise ratio for the iopromide related compound B *Y*2-isomer is not less than 20.

Determine which peaks in the chromatograms correspond to the *E*-isomers as follows. Transfer a portion of the *Standard preparation* to a vial, seal with a crimp-top, and heat to 121° for 15 minutes. Inject the cooled solution. Compare the chromatogram obtained with that of the unheated *Standard preparation*, and note the retention times of the two *E*-isomer peaks, which increase in size after heating.

Procedure— [NOTE—Use peak areas where peak responses are indicated.] Separately inject equal volumes (about 10 µL) of the *Standard preparation*, the *Related compound B standard solution*, and the *Assay preparation* into the chromatograph, and measure the responses for the major peaks. Allow the *Mobile phase* to flow for not less than 60 minutes between each injection to prevent interference from late-eluting amine peaks. Calculate the quantity of $C_{18}H_{24}I_3N_3O_8$ in the portion of Iopromide taken by the formula:

$$C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Iopromide RS in the *Standard preparation*; and r_U and r_S are the sums of the peak responses for iopromide *E*1-isomer, iopromide *E*2-isomer, iopromide *Z*1-isomer, and iopromide *Z*2-isomer in the chromatograms obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Iopromide Injection

» Iopromide Injection is a sterile solution of Iopromide in Water for Injection. It contains not less than 94.0 percent and not more than 105.0 percent of the labeled amount of iopromide ($C_{18}H_{24}I_3N_3O_8$). It may contain small amounts of suitable buffers and of Edetate Calcium Disodium as a stabilizer. It contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose glass containers as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging*, and protect from light. Store at controlled room temperature.

Labeling—Label Injection to state that it is not to be used if it contains particulate matter and that after use any unused

www.webofpharma.com

portion remaining in the container is to be discarded. It is labeled also to state that it is not for intrathecal use.

USP Reference standards ⟨11⟩—
USP Iopromide RS
USP Iopromide Related Compound A RS
USP Iopromide Related Compound B RS
5-(Acetylamino)-*N*,*N*′-bis(2,3-dihydroxypropyl)-2,4,6-triiodo-*N*-methyl-1,3-benzenedicarboxamide.

Identification—

A: Evaporate 3 mL of Injection to dryness, and heat the residue so obtained in a crucible in a hood: violet vapors are evolved.

B: The R_F value of the principal spot in the chromatogram obtained from the *Test solution*, developed with the *Basic eluant*, in the test for *Ordinary impurities* corresponds to that obtained from the *Standard solution* similarly tested.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 1.25 USP Endotoxin Units per mL of Injection.

pH ⟨791⟩: between 6.5 and 8.0.

Free iodine—Transfer a volume of Injection, equivalent to 2 g of iopromide, to a 50-mL centrifuge tube. Dilute with water to 24 mL. Add 2 mL of toluene and 2 mL of diluted sulfuric acid solution, and shake: the toluene layer shows no red color.

Limit of free iodide—Transfer 10.0 mL of Injection and 50 mL of water to a 150-mL titration vessel, and titrate with 0.001 N silver nitrate VS using a silver or platinum electrode in combination with a reference electrode, determining the endpoint potentiometrically. Each mL of 0.001 N silver nitrate is equivalent to 126.9 µg of I. The limit is 80 µg of iodide per g of iopromide, based on the labeled content of iopromide.

Limit of free aromatic amine—Proceed as directed in the test for *Limit of free aromatic amine* under *Iopromide*, except to prepare the *Test solution* as follows. Transfer an accurately measured volume of Injection, equivalent to about 500 mg of iopromide, to a 25-mL volumetric flask, dilute with water to 20 mL, and mix. Calculate the percentage of free aromatic amine based on the labeled amount of iopromide in the Injection taken by the formula:

$$10(W_S/CV)(A_U/A_S)$$

in which W_S is the quantity, in mg, of USP Iopromide Related Compound A RS taken to prepare the *Standard solution*; *C* is the labeled concentration, in mg per mL, of iopromide in the Injection used to prepare the *Test solution*; *V* is the volume, in mL, of Injection to prepare the *Test solution;* and A_U and A_S are the absorbances of the *Test solution* and the *Standard solution*, respectively: not more than 0.2% is found.

Limit of *N*-acetyl compound (iopromide related compound B)—Using the chromatogram of the *Assay preparation* obtained in the *Assay*, calculate the percentage of *N*-acetyl compound in the iopromide in the Injection taken by the formula:

$$(W_B/C)[(A_{Y1} + A_{Y2})/(R_{Y1} + R_{Y2})]$$

in which W_B is the quantity, in mg, of USP Iopromide Related Compound B RS taken to prepare the *Related compound B standard solution*; *C* is the concentration, in mg of iopromide per mL, in the *Assay preparation* based on the labeled amount and the extent of dilution; A_{Y1} and A_{Y2} are the peak responses for iopromide related compound B *Y*1- and *Y*2-isomers, respectively, from the *Assay preparation*; and R_{Y1} and R_{Y2} are the peak responses for iopromide related compound B *Y*1- and *Y*2-isomers, respectively, from the *Related compound B standard solution:* not more than 1.5% is found.

Isomer distribution—Using the chromatogram of the *Assay preparation* obtained in the *Assay*, calculate the percentage of iopromide isomers in the iopromide in the Injection taken by the formula:

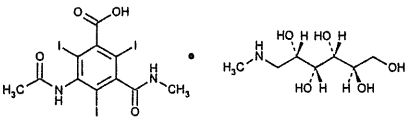
$$100(r_i)/(r_{E1} + r_{E2} + r_{Z1} + r_{Z2})$$

in which r_i is the peak response of each individual iopromide isomer; and r_{E1}, r_{E2}, r_{Z1}, and r_{Z2}, are the peak responses for the iopromide *E*1-, *E*2-, *Z*1-, and *Z*2-isomers, respectively, from the *Assay preparation:* between 8.0% and 12.0% of the *E*1-isomer, between 9.0% and 14.0% of the *E*2-isomer, between 32.0% and 40.0% of the *Z*1-isomer, and between 38.0% and 46.0% of the *Z*2-isomer are found.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, and meets the requirements for *Ordinary impurities* under *Iopromide*.

Assay—

Diluent, Mobile phase, Standard preparation, Related compound B standard solution, and *Chromatographic system*—Proceed as directed in the *Assay* under *Iopromide*.



Assay preparation—Dilute an accurately measured volume of Injection, quantitatively and stepwise, with *Diluent* to obtain a solution having a final nominal concentration of 1.9 mg of iopromide per mL.

Procedure—Proceed as directed in the *Assay* under *Iopromide*. Calculate the quantity, in mg, of iopromide ($C_{18}H_{24}I_3N_3O_8$) in each mL of the Injection taken by the formula:

$$(CL/D)(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Iopromide RS in the *Standard preparation*; *L* is the labeled quantity, in mg, of iopromide in each mL of Injection; *D* is the concentration, in mg per mL, of iopromide in the *Assay preparation*, based on the volume of Injection taken and the extent of dilution; and the other factors are as defined therein.

Iothalamate Meglumine Injection

$C_{11}H_9I_3N_2O_4 \cdot C_7H_{17}NO_5$ 809.13

Benzoic acid, 3-(acetylamino)-2,4,6-triiodo-5-[(methylamino)carbonyl]-, compd. with 1-deoxy-1-(methylamino)-D-glucitol (1:1).

1-Deoxy-1-(methylamino)-D-glucitol 5-acetamido-2,4,6-triiodo-*N*-methylisophthalamate (salt) [13087-53-1].

» Iothalamate Meglumine Injection is a sterile solution of Iothalamic Acid in Water for Injection, prepared with the aid of Meglumine. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of iothalamate meglumine ($C_{11}H_9I_3N_2O_4 \cdot C_7H_{17}NO_5$). It may contain small amounts of suitable buffers and of Edetate Calcium Disodium or Edetate Disodium as a stabilizer. Iothalamate Meglumine Injection intended for intravascular use contains no antimicrobial agents.

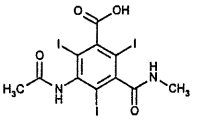
www.webofpharma.com

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass, protected from light.
Labeling—Label containers of Injection intended for intravascular injection to direct the user to discard any unused portion remaining in the container. Label containers of Injection intended for other than intravascular injection to show that the contents are not intended for intravascular injection.
USP Reference standards ⟨11⟩—
USP 5-Amino-2,4,6-triiodo-N-methylisophthalamic Acid RS
$C_9H_7I_3N_2O_3$ 571.88
USP Iothalamic Acid RS
Identification—Dilute 3 mL of Injection with water to 100 mL, add an excess of 3 N hydrochloric acid, and filter. Wash the precipitated iothalamic acid on the filter with four 10-mL portions of water, and dry at 105° for 4 hours: the dried iothalamic acid responds to the following tests.
A: The IR absorption spectrum of a 0.5% potassium bromide dispersion of the dried acid exhibits maxima only at the same wavelengths as that of a similar preparation of USP Iothalamic Acid RS.
B: Heat about 500 mg of the dried acid in a suitable crucible: violet vapors are evolved.
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 0.9 USP Endotoxin Unit per mL.
pH ⟨791⟩: between 6.5 and 7.7.
Free aromatic amine—Dilute a suitable volume of Injection with water to yield a solution containing 100 mg of iothalamate meglumine per mL. Proceed as directed in the test for *Free aromatic amine*— under *Iothalamic Acid*, beginning with "Pipet 5 mL of this solution into a 50-mL volumetric flask."
Iodine and iodide—Dilute a volume of Injection, equivalent to 2 g of iothalamate meglumine, with 20 mL of water in a 50-mL beaker, add 5 mL of 2 N sulfuric acid, stir, and filter into a glass-stoppered, 50-mL cylinder. Proceed as directed for *Procedure* in the test for *Iodine and iodide*— under *Iothalamic Acid*, beginning with "To the filtrate add 5 mL of toluene."
Meglumine content—Proceed as directed in the test for *Meglumine content*— under *Diatrizoate Meglumine Injection*. The meglumine content is not less than 22.9% and not more than 25.3% of the labeled amount of iothalamate meglumine.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.
Assay—Pipet a volume of Injection, equivalent to about 4 g of iothalamate meglumine, into a 250-mL volumetric flask, dilute with water to volume, and mix. Pipet 25 mL of this solution into a glass-stoppered, 125-mL conical flask, add 12 mL of 5 N sodium hydroxide and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 30 minutes. Cool to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the filter and the flask thoroughly, adding the rinsings to the filtrate. Add 40 mL of 2 N sulfuric acid, and titrate immediately with 0.05 N silver nitrate VS, determining the endpoint potentiometrically, using silver-calomel electrodes and an agar-potassium nitrate salt bridge. Each mL of 0.05 N silver nitrate is equivalent to 13.49 mg of $C_{11}H_9I_3N_2O_4 \cdot C_7H_{17}NO_5$.

Iothalamate Meglumine and Iothalamate Sodium Injection

» Iothalamate Meglumine and Iothalamate Sodium Injection is a sterile solution of Iothalamic Acid in Water for Injection, prepared with the aid of Meglumine and Sodium Hydroxide. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amounts of iothalamate meglumine ($C_{11}H_9I_3N_2O_4 \cdot C_7H_{17}NO_5$) and iothalamate sodium ($C_{11}H_8I_3N_2NaO_4$). It may contain small amounts of suitable buffers and of Edetate Calcium Disodium or Edetate Disodium as a stabilizer. Iothalamate Meglumine and Iothalamate Sodium Injection intended for intravascular use contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass, protected from light.
Labeling—Label containers of Injection intended for intravascular injection to direct the user to discard any unused portion remaining in the container. Label containers of Injection intended for other than intravascular injection to show that the contents are not intended for intravascular injection.
USP Reference standards ⟨11⟩—
USP 5-Amino-2,4,6-triiodo-N-methylisophthalamic Acid RS
$C_9H_7I_3N_2O_3$ 571.88
USP Iothalamic Acid RS
Identification—Dilute 3 mL of Injection with water to 100 mL, add an excess of 3 N hydrochloric acid, mix, and filter. Wash the precipitate of iothalamic acid so obtained with four 10-mL portions of water, and dry at 105° for 4 hours: the dried iothalamic acid so obtained responds to the following tests.
A: The IR absorption spectrum of a potassium bromide dispersion of it exhibits maxima only at the same wavelengths as that of a similar preparation of USP Iothalamic Acid RS.
B: Heat about 500 mg in a suitable crucible: violet vapors are evolved.
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 3.35 USP Endotoxin Units per mL.
pH ⟨791⟩: between 6.5 and 7.7.
Free aromatic amine—Dilute a suitable volume of Injection with water to yield a solution containing 100 mg of the total of iothalamate meglumine and iothalamate sodium per mL. Pipet 5 mL of this solution into a 50-mL volumetric flask, and add 10 mL of water. Proceed as directed in the test for *Free aromatic amine*— under *Iothalamic Acid*, beginning with "In another flask place 15 mL of water. The absorbance of the solution from the Injection is not greater than that of the Standard solution (0.05%).
Iodine and iodide—Dilute a volume of Injection, equivalent to 2 g of the total of iothalamate meglumine and iothalamate sodium, with 20 mL of water in a 50-mL beaker, and proceed as directed for *Procedure* in the test for *Iodine and iodide*— under *Iothalamic Acid*, beginning with "add 5 mL of 2 N sulfuric acid." The limit of *Iodine and Iodide* is 0.02% of iodide.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.
Assay for iothalamate meglumine—Pipet 5 mL of Injection into a 10-mL volumetric flask, add water to volume, and mix. Determine the angular rotation (see *Optical Rotation* ⟨781⟩) of the diluted Injection, using a 10-cm cell and a suitable polarimeter. Calculate the quantity, in mg per mL, of iothalamate meglumine in the Injection taken by the formula:



$$2000a/6.01$$

in which a is the observed angular rotation, in degrees, corrected for the blank; and the factor 6.01 is the specific rotation, in degrees, of iothalamate meglumine.

www.webofpharma.com

Assay for iothalamate sodium—Transfer an accurately measured volume of Injection, equivalent to about 4 g of iothalamate meglumine and iothalamate sodium, to a 250-mL volumetric flask, dilute with water to volume, and mix. Pipet 25 mL of this solution into a glass-stoppered, 125-mL conical flask, add 12 mL of 5 N sodium hydroxide and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux the mixture for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and the filter thoroughly, adding the rinsings to the filtrate. Add 40 mL of 2 N sulfuric acid, and titrate immediately with 0.05 N silver nitrate VS, determining the end-point potentiometrically, using silver–calomel electrodes and an agar–potassium nitrate salt bridge. Calculate the volume, in mL, consumed by the iothalamate meglumine in the portion of solution taken, using the value found in the *Assay for iothalamate meglumine*. Each mL of 0.05 N silver nitrate is equivalent to 13.49 mg of $C_{11}H_9I_3N_2O_4 \cdot C_7H_{17}NO_5$. Subtract this volume from the total volume of 0.05 N silver nitrate consumed. Use the resulting volume to calculate the amount, in mg per mL, of iothalamate sodium in the Injection. Each mL of 0.05 N silver nitrate is equivalent to 10.60 mg of $C_{11}H_8I_3N_2NaO_4$.

Iothalamic Acid

$C_{11}H_9I_3N_2O_4$ 613.91

Benzoic acid, 3-(acetylamino)-2,4,6-triiodo-5-[(methylamino)carbonyl]-.

5-Acetamido-2,4,6-triiodo-*N*-methylisophthalamic acid [2276-90-6].

» Iothalamic Acid contains not less than 98.0 percent and not more than 102.0 percent of $C_{11}H_9I_3N_2O_4$, calculated on the anhydrous basis.

Packaging and storage—Preserve in well-closed containers. Store at 25°, excursions permitted between 15° and 30°.

USP Reference standards ⟨11⟩—

USP 5-Amino-2,4,6-triiodo-N-methylisophthalamic Acid RS
$C_9H_7I_3N_2O_3$ 571.88

USP Iothalamic Acid RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

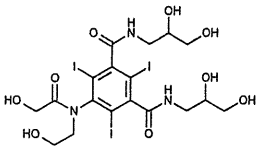
B: Heat about 500 mg in a suitable crucible: violet vapors are evolved.

Water Determination, *Method I* ⟨921⟩: not more than 1.0%.

Residue on ignition ⟨281⟩: not more than 0.1%.

Free aromatic amine—Dissolve 10.0 g of Iothalamic Acid in a minimal amount of 1 N sodium hydroxide in a 150-mL beaker, add 75 mL of water, and adjust with 1 N sulfuric acid to a pH of 7 ± 0.1. Transfer the solution to a 100-mL cylinder, dilute with water to 100 mL, and mix. Pipet 5 mL of this solution into a 50-mL volumetric flask, and add 10 mL of water. In another flask place 15 mL of water to provide a blank, and to a third flask add 12.5 mL of water and 2.5 mL of a Standard solution prepared as follows. Dissolve 25.0 mg of USP 5-Amino-2,4,6-triiodo-N-methylisophthalamic Acid RS, accurately weighed, in a mixture of 0.5 mL of 1 N sodium hydroxide and 2.5 mL of water in a 250-mL beaker, swirling to effect solution, then add 225 mL of water, mix, adjust with 1 N sulfuric acid to a pH of 7 ± 0.1, transfer to a 250-mL volumetric flask, add water to volume, and mix. Place the three flasks containing the solutions from the substance under test, the Standard solution, and the blank, respectively, in an ice bath. [NOTE—In conducting the following steps, keep the flasks in the ice bath and in the dark as much as possible, until all of the reagents have been added. Chill all reagents and the diluting water to about 5° prior to addition.] Treat each flask as follows. Add 5 mL of freshly prepared sodium nitrite solution (1 in 200), immediately add 10 mL of 1 N hydrochloric acid, and swirl gently to mix. [NOTE—Disregard any precipitate that may be formed at this point.] Allow to stand for 2 minutes, accurately timed. Add 10 mL of ammonium sulfamate solution (1 in 50), and shake frequently during 5 minutes. Five minutes after the addition of the ammonium sulfamate solution, add 3 drops of a 1 in 10 solution of 1-naphthol in alcohol. Mix, and allow to stand for 1 minute. Add 3.5 mL of a pH 10 buffer (made by dissolving 67.5 g of ammonium chloride in 300 mL of water, adding 570 mL of ammonium hydroxide, and diluting with water to 1 L). Mix, remove from the ice bath, and immediately dilute, with water that has been chilled to 5°, to volume. Within 20 minutes of diluting the contents of all three flasks to 50 mL, concomitantly determine the absorbances of the test solution and the Standard solution in 1-cm cells at the wavelength of maximum absorbance at about 485 nm, with a suitable spectrophotometer, versus the prepared blank. The absorbance of the solution from the Iothalamic Acid is not greater than that of the Standard solution (0.05%).

Iodine and iodide—



Test solution—To 10.0 g in a 50-mL beaker add 16 mL of 1 N sodium hydroxide, and stir until solution is complete. Dilute with water to about 35 mL, and adjust the solution to a pH of between 7.0 and 7.5 with 0.1 N sodium hydroxide or 0.1 N hydrochloric acid. Dilute with water to 50 mL.

Procedure—Dilute 10 mL of *Test solution* with 20 mL of water in a 50-mL beaker, add 5 mL of 2 N sulfuric acid, stir, and filter into a glass-stoppered, 50-mL cylinder. To the filtrate add 5 mL of toluene, and shake: the toluene layer shows no red color. Add 1 mL of sodium nitrite solution (1 in 50), and shake: any red color in the toluene layer is not darker than that obtained when a mixture of 2 mL of potassium iodide solution (1 in 4000) and 22 mL of water is substituted for the solution under test (0.02% of iodide).

Assay—Transfer about 400 mg of Iothalamic Acid, accurately weighed, to a glass-stoppered, 125-mL conical flask, add 12 mL of 5 N sodium hydroxide, 20 mL of water, and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and the filter thoroughly, adding the rinsings to the filtrate. Add 40 mL of 2 N sulfuric acid, and titrate immediately with 0.05 N silver nitrate VS, determining the endpoint potentiometrically, using silver-calomel electrodes and an agar-potassium nitrate salt bridge. Each mL of 0.05 N silver nitrate is equivalent to 10.23 mg of $C_{11}H_9I_3N_2O_4$.

USP Ioversol Related Compound B RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: Heat about 500 mg in a crucible: violet vapors are evolved.

Water Determination, *Method I* ⟨921⟩ **:** not more than 5%.

Residue on ignition ⟨281⟩**:** not more than 0.1%.

Related compounds—

Mobile phase—Prepare a degassed mixture of water and acetonitrile (99.5: 0.5).

Standard solution—Dissolve accurately weighed quantities of USP Ioversol Related Compound A RS and USP Ioversol Related Compound B RS in water to obtain a solution having known concentrations of about 1.0 µg per mL of USP Ioversol Related Compound A RS and 5.0 µg per mL of USP Ioversol Related Compound B RS.

Test solution—Transfer about 100 mg of Ioversol, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm stainless steel column containing packing L7. The flow rate is about 1 mL per minute. The column temperature is maintained at 35 ± 0.5°. The system is capable of operating at a column pressure of up to 3000 psi. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between ioversol related compound A and ioversol related compound B is not less than 2.0; and the relative standard deviation for replicate injections is not more than 5%.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses. Calculate the percentage of each ioversol related compound in the portion of Ioversol taken by the formula:

$$100(C/W)(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Ioversol Related Compound A RS or USP Ioversol Related Compound B RS in the *Standard solution; W* is the concentration, in mg per mL, of Ioversol in the *Test solution;* r_U is the peak response obtained from the *Test solution;* and r_S is the average peak response from the *Standard solution.* Not more than 0.10% of ioversol related compound A and not more than 0.50% of ioversol related compound B are found.

Iodine and iodide—Dissolve 2.0 g of Ioversol in water in a 50-mL glass-stoppered cylinder, and dilute with water to 15 mL. To this solution add 5 mL each of diluted sulfuric acid and toluene. Shake vigorously, and allow the layers to separate: the toluene layer shows no red color. Add 1 mL of sodium nitrite solution (1 in 50), and shake: any red color in the toluene layer is not darker than that obtained from a mixture of 2 mL of potassium iodide solution (1 in 4000) and 13 mL of water, similarly treated (0.02% of iodide).

Assay—Transfer about 500 mg of Ioversol, accurately weighed, to a glass-stoppered 125-mL conical flask, add 12 mL of 5 N sodium hydroxide, 20 mL of water, and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and filter thoroughly, adding the rinsings to the filtrate. Add 40 mL of 2 N sulfuric acid, and titrate immediately with 0.05 N silver nitrate VS, determining the endpoint potentiometrically, using a silver-silver chloride double junction reference electrode and a silver billet electrode. Each mL of 0.05 N silver nitrate is equivalent to 13.45 mg of $C_{18}H_{24}I_3N_3O_9$.

Ioversol Injection

» Ioversol Injection is a sterile solution of Ioversol in Water for Injection. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amounts of ioversol ($C_{18}H_{24}I_3N_3O_9$) and iodine (I). It may contain small amounts of suitable buffers and Edetate Calcium Disodium as a stabilizer. Ioversol Injection intended for intravascular use contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass, protected from light.

Labeling—Label containers of Injection intended for intravascular injection to direct the user to discard any unused portion remaining in the container.

USP Ioversol Related Compound A RS
USP Ioversol Related Compound B RS

Identification—

A: The IR absorption spectrum of the test specimen, a zinc sulfide cell having a thickness of 0.01 to 0.02 mm being used, exhibits maxima only at the same wavelength as that of a similar preparation of USP Ioversol RS.

B: Heat about 1 mL in a crucible: violet vapors are evolved.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 1.4 USP Endotoxin Units per mL of Injection.

pH ⟨791⟩: between 6.0 and 7.4.

USP Monographs

www.webofpharma.com

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Related compounds—

Mobile phase and *Chromatographic system*—Proceed as directed in the test for *Related compounds*— under *Ioversol.*

Standard solution—Dissolve accurately weighed quantities of USP Ioversol Related Compound A RS and USP Ioversol Related Compound B RS in water to obtain a solution having known concentrations of 1.5 and 15 µg per mL, respectively.

Test solution—Dilute an accurately measured volume of Injection with water to obtain a solution containing 1 mg of ioversol per mL.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses. Calculate the percentage of each ioversol related compound in the volume of Injection taken by the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Ioversol Related Compound A RS or USP Ioversol Related Compound B RS in the *Standard solution;* C_U is the concentration, in mg per mL, of Ioversol in the *Assay preparation;* r_U is the peak response obtained from the *Test solution;* and r_S is the average peak response obtained from the *Standard solution.* Not more than 0.15% of ioversol related compound A and not more than 1.5% of ioversol related compound B are found.

Assay—Transfer an accurately measured volume of Injection, equivalent to about 0.5 g of ioversol, to a glass-stoppered, 125-mL conical flask, add 12 mL of 5 N sodium hydroxide, 20 mL of water, and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 30 minutes. Cool the flask to room temperature, rinse the condenser with 20 mL of water, disconnect the flask from the condenser, and filter the mixture. Rinse the flask and filter thoroughly, adding the rinsings to the filtrate. Add 40 mL of 2 N sulfuric acid, and titrate immediately with 0.05 N silver nitrate VS, determining the endpoint potentiometrically, using a silver-silver chloride double junction reference electrode and a silver billet electrode. Each mL of 0.05 N silver nitrate is equivalent to 13.45 mg of $C_{18}H_{24}I_3N_3O_9$.

Ioxaglate Meglumine and Ioxaglate Sodium Injection

» Ioxaglate Meglumine and Ioxaglate Sodium Injection is a sterile solution of Ioxaglic Acid in Water for Injection, prepared with the aid of Meglumine and Sodium Hydroxide. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amounts of ioxaglate meglumine ($C_{24}H_{21}I_6N_5O_8 \cdot C_7H_{17}NO_5$) and iodine (I). It may contain small amounts of Edetate Calcium Disodium as a stabilizer. Ioxaglate Meglumine and Ioxaglate Sodium Injection intended for intravascular use contains no antimicrobial agents.

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass, protected from light.

Labeling—Label containers of Injection intended for intravascular injection to direct the user to discard any unused portion remaining in the container. Label containers of Injection intended for other than intravascular injection to indicate that the contents are not intended for intravascular injection.

USP Reference standards ⟨11⟩—
USP Ioxaglic Acid RS

Identification—

A: It responds to *A: Thin-Layer Chromatographic Identification Test 201*— test *A: Thin-Layer Chromatographic Identification Test 201*— under *Ioxaglic Acid,* a solution of 1.7 mL of Injection in 100 mL of water being used as the test solution.

B: Evaporate a volume of Injection, equivalent to about 500 mg of ioxaglate meglumine and ioxaglate sodium, to dryness, and heat the residue so obtained in a crucible: violet vapors are evolved.

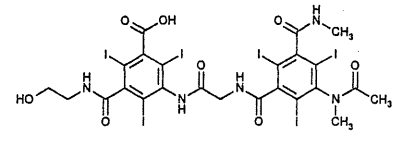
pH ⟨791⟩: between 6.0 and 7.6.

Free iodine and iodide—

Test solution—Transfer a volume of Injection, equivalent to 2 g of the total of ioxaglate meglumine and ioxaglate sodium, to a 50-mL centrifuge tube, add 25 mL of water and 15 mL of 2 N sulfuric acid, and mix thoroughly. Centrifuge for 15 minutes, and decant the supernatant layer into a glass-stoppered 50-mL graduated cylinder. Repeat the sulfuric acid washing and centrifugation once more, adding the supernatant layer into the 50-mL graduated cylinder.

Procedure—Proceed as directed for *Procedure* in the test for *Free iodine and iodide* under *Ioxaglic Acid* (0.02% of iodide).

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.



Assay for ioxaglate meglumine—Determine the angular rotation (see *Optical Rotation* ⟨781⟩) of the Injection, using a 10-cm cell and a suitable polarimeter. Calculate the percentage of ioxaglate meglumine in the Injection taken by the formula:

$$100a/3.32$$

in which a is the observed angular rotation, in degrees, corrected for a water blank; and 3.32 is the specific rotation, in degrees, of ioxaglate meglumine.

Assay for iodine—Transfer an accurately measured volume of Injection, equivalent to about 5 g (total) of ioxaglate meglumine and ioxaglate sodium, to a 250-mL volumetric flask, dilute with water to volume, and mix. Pipet 25 mL of this solution into a 125-mL conical flask, add 12 mL of 5 N sodium hydroxide and 1 g of powdered zinc, connect the flask to a reflux condenser, and reflux for 30 minutes. Proceed as directed in the *Assay for iodine* under *Ioxaglic Acid.* Each mL of 0.05 N silver nitrate is equivalent to 6.345 mg of iodine (I).

Ioxaglic Acid

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 10 µg per mL.
Medium: water.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 0.2 USP Endotoxin Unit per 50 mg of iodine.

pH ⟨791⟩**:** between 5.0 and 7.5, in a solution (1 in 10). [NOTE—Heat gently, if necessary, to dissolve. Cool to room temperature before proceeding.]

Water Determination, *Method I* ⟨921⟩ **:** not more than 4.0%.

Free iodine—Transfer 2 g to a stoppered flask, add 12 mL of water, and swirl to dissolve. [NOTE—Heat gently, if necessary, to dissolve. Cool to room temperature before proceeding.] Add 2.5 mL of 2 N sulfuric acid and 4 mL of toluene, stopper the flask, and shake for 1 minute. Allow the layers to separate: the toluene layer shows no red color. Reserve the contents of the flask for use as the test solution in the test for *Free iodide.*

Free iodide—Prepare a solution of potassium iodide in water containing 1000 µg of iodide per mL. Quantitatively dilute portions of this solution with water to obtain standard solutions having concentrations of 100, 50, 25, and 10 µg of iodide per mL. Transfer 2 mL of each standard solution to separate stoppered flasks, and add 12 mL of water to each flask. Add 14 mL of water to an additional flask to serve as the blank. Add 2.5 mL of 2 N sulfuric acid and 4 mL of toluene to the flasks containing the standard solutions and the blank, stopper the flasks, and shake for 1 minute. To the test solution obtained in the test for *Free iodine,* each of the standard solutions, and the blank, add 0.5 mL of sodium nitrite solution (2 in 100), stopper the flasks, and shake vigorously for 1 minute. Allow the layers to separate, transfer the toluene layers to separate centrifuge tubes, and centrifuge for 1 minute. Concomitantly determine the absorbances of the test solution and the standard solutions against the blank. From a linear

USP Monographs

www.webofpharma.com

regression equation calculated from the concentrations and absorbances of the iodide standard solutions, determine the content of iodide in the Ioxilan: the limit is 30 µg of iodide per g of Ioxilan.

Free aromatic amine— [NOTE—Protect the Standard solution, the test solution, and the blank from light throughout the test.]

pH 10 Buffer—To 33.7 g of ammonium chloride add 285 mL of ammonium hydroxide, dilute with water to 500 mL, and mix.

Procedure—Transfer 20 mg of USP Ioxilan Related Compound A RS, accurately weighed, to a 200-mL volumetric flask, dissolve in a small volume of hot water, cool, dilute with water to volume, and mix. Transfer 2.5 mL of this solution to a 50-mL volumetric flask, add 12 mL of water, and mix. Transfer 0.5 g of Ioxilan to a second 50-mL volumetric flask, add 12 mL of water, and shake to dissolve. [NOTE—Heat gently, if necessary, to dissolve. Cool to room temperature before proceeding.] To a third 50-mL volumetric flask, add 12 mL of water to serve as the blank, and place the flasks containing the Standard solution, the test solution, and the blank in an ice bath. [NOTE—In conducting the following steps, keep the flasks in the ice bath as much as possible until all of the reagents have been added.] Treat each of the flasks as follows. Add 5 mL of sodium nitrite solution (0.5 in 100), and shake.

[**CAUTION**—Considerable pressure is produced with the addition of each reagent.]

Add 10 mL of 1 N hydrochloric acid, swirl, and allow to stand for 2 minutes. Add 3 drops of a 1 in 10 solution of α-naphthol in alcohol, swirl, and allow to stand for 2 minutes. Add 3.5 mL of *pH 10 Buffer*, swirl, and allow to stand out of the ice bath for 2 minutes. Degas all solutions in a water bath at 25° for 10 minutes, dilute with water to 50 mL, and mix. Within 15 minutes of this final dilution, concomitantly determine the absorbances of the test solution and the Standard solution at the wavelength of maximum absorbance at about 485 nm, with a suitable spectrophotometer, against the blank. The absorbance of the test solution is not greater than that of the Standard solution (0.05%).

Residual methanol—

Standard stock solution—Transfer 200 mg of methanol to a tared 200-mL volumetric flask containing 20 mL of water, dilute with water to volume, and mix. Transfer 1.0 mL of this solution to a 100-mL volumetric flask containing 20 mL of water, dilute with water to volume, and mix.

Internal standard solution—Transfer 200 mg of dehydrated alcohol to a tared 200-mL volumetric flask containing 20 mL of water, dilute with water to volume, and mix. Transfer 10.0 mL of this solution to a 100-mL volumetric flask, dilute with water to volume, and mix.

Standard solutions A, B, C, and *D*—Transfer 0.5, 1.0, 2.0, and 4.0 mL of *Standard stock solution* to separate 10-mL volumetric flasks, each containing 2 mL of water. Add 1.0 mL of *Internal standard solution* to each flask, dilute with water to volume, and mix to obtain *Standard solutions A, B, C,* and *D* having concentrations of 0.5, 1.0, 2.0, and 4.0 mg of methanol per L, respectively.

Test solution—Transfer about 1 g of Ioxilan to a tared 10-mL ampul, and add water to the ampul to a final weight of 10.45 g, taking care to avoid leaving water in the neck of the ampul. Seal the ampul, and immerse it in a water bath at 90° until the Ioxilan is dissolved. Mix, and allow to cool to room temperature. Mix again, open the ampul, and dilute the contents with a volume of water suitable to obtain a methanol concentration within the range of the standard curve (between 0.5 and 4 mg per L), allowing for the addition of 1.0 mL of *Internal standard solution.*

Chromatographic system (see *System Suitability* under *Chromatography* ⟨621⟩)—The gas chromatograph is equipped with a flame-ionization detector and a 10-m × 0.53-mm fused silica capillary column coated with support S2. The column temperature is programmed to increase from 45° to 80° at a rate of 5° per minute. The injection port temperature is maintained at 180°, and the detector temperature is maintained at 200°. Helium is used as the carrier gas at a flow rate of about 30 mL per minute. Chromatograph *Standard solution D,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the methanol and alcohol peaks is not less than 10; the tailing factor for the methanol peak is not more than 3.0; and the relative standard deviation for replicate injections is not more than 5.0%.

Procedure—Separately inject equal volumes (about 1 µL) of each *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the areas of the peak responses. From a linear regression equation calculated from the ratios of the peak responses of methanol to those of alcohol for each of the *Standard solutions* versus the methanol concentrations, in mg per L, determine the methanol content in the *Test solution:* not more than 2.0% is found.

Limit of serinol impurity—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and water (91:9). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard solution—Transfer about 60 mg of USP Ioxilan RS to a 10-mL volumetric flask, add 1 mL of water, and heat at not more than 80° to dissolve. Cool to room temperature, dilute with acetonitrile to volume, and mix.

Test solution—Using about 60 mg of Ioxilan, proceed as directed for *Standard solution.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 25-cm × 4.6-mm stainless steel column that contains 5-µm packing L18. The flow rate is about 2 mL per minute, and the column temperature is maintained at 30°. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the retention time of the serinol peak is about 0.9 relative to that of the larger of the Ioxilan peaks; the resolution, *R,* between the larger of the Ioxilan peaks and the serinol peak is not less than 1.0; and the relative standard deviation of the response of the serinol peak for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Test solution* and the *Standard solution* into the chromatograph, and allow the chromatogram to run for about 35 minutes. Measure the areas of the peak responses, and determine the percentage of serinol in the portion of Ioxilan taken: not more than 0.5% is found.

Chromatographic purity—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and water (87:13). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard solution—Transfer about 60 mg of USP Ioxilan RS to a 10-mL volumetric flask, and add 1 mL of water. [NOTE—Heat gently, if necessary, to dissolve. Cool to room temperature before proceeding.] Dilute with acetonitrile to volume, and mix.

Test solution—Using about 60 mg of Ioxilan, proceed as directed for *Standard solution.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 25-cm × 4.6-mm stainless steel column that contains 5-µm packing L8. The column is maintained at 30°, and the flow rate is about 1 mL per minute. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the two largest

www.webofpharma.com

impurity peaks eluting immediately after the second ioxilan isomer peak is not less than 0.3.

Procedure—Separately inject equal volumes (about 10 µL) of the *Test solution* and the *Standard solution* into the chromatograph, record the chromatograms, and measure the areas of the peak responses. Determine the percentage of each impurity (excluding the serinol impurity, which has a retention time of 0.9 relative to the larger ioxilan isomer) in the portion of Ioxilan taken: not more than 0.5% of any individual impurity is found; and the total of all impurities is not more than 1.5%.

Assay—Transfer about 500 mg of Ioxilan, accurately weighed, to a 100-mL round-bottom flask. Add 1 g of powdered zinc and 40 mL of 1.25 N sodium hydroxide, connect the flask to a reflux condenser that is cooled with water at 5° to 10°, add a few glass boiling beads, and gently reflux the mixture for 1 hour. Allow the flask to cool to room temperature, and rinse the condenser with 10 to 20 mL of water. Disconnect the flask from the condenser, add 5 mL of glacial acetic acid, mix, and allow the mixture to cool. Pass through general purpose fast-flowing filter paper mixture. Rinse the flask and the filter with 1 N acetic acid, and add the rinsings to the filtrate. Add 5 mL of tetrabromophenolphthalein ethyl ester TS, and titrate with 0.1 N silver nitrate VS, with continuous stirring, until the precipitate turns green. Each mL of 0.1 N silver nitrate is equivalent to 26.37 mg of $C_{18}H_{24}I_3N_3O_8$.

Ioxilan Injection

» Ioxilan Injection is a sterile solution of Ioxilan in Water for Injection. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of ioxilan ($C_{18}H_{24}I_3N_3O_8$) as organically bound iodine. It may contain small amounts of suitable buffers and of Edetate Calcium Disodium as a stabilizer. Ioxilan Injection contains no antimicrobial agents.

Packaging and storage—Preserve injection in single-dose containers of Type I glass, protected from light.

Labeling—Label containers of the Injection to direct the user to discard any unused portion. The label states that it is not to be used if it is discolored or contains a precipitate and states also that it is not for intrathecal use.

USP Reference standards ⟨11⟩—
USP Ioxilan RS

Identification—

A: Evaporate a volume of Injection, equivalent to about 500 mg of ioxilan, to dryness. Char the residue so obtained in a suitable crucible: violet vapors are evolved (*presence of iodine*).

B: The retention times of the major peaks in the chromatogram of the *Assay preparation* correspond to those of the major peaks in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

Bacterial Endotoxins Test ⟨85⟩—It contains not more than 0.2 USP Endotoxin Unit per 50 mg of iodine.

pH ⟨791⟩: between 6.0 and 7.5.

Free iodine—Transfer an accurately measured volume of Injection, equivalent to about 1 g of Ioxilan, to a tared 25-mL volumetric flask, add 13 mL of water, and swirl to dissolve. Add 2.5 mL of 2 N sulfuric acid and 4 mL of toluene. Stopper the flask, and shake vigorously for 1 minute. Allow layers to separate: the toluene layer shows no red color. Reserve the contents of the flask for use as the test solution in the test for *Free iodide*.

Free iodide—Proceed as directed in the test for *Free iodine*— under *Ioxilan*. The limit is 200 µg of iodide per mL.

Residual methanol—

Standard stock solution, Internal standard solution, Standard solutions A, B, C, D, and *Chromatographic system*—Proceed as directed in the test for *Residual methanol*— under *Ioxilan*.

Test solution—Transfer an accurately measured volume of Injection, equivalent to about 1 g of ioxilan, to a 10-mL volumetric flask. Add 1.0 mL of *Internal standard solution*, dilute with water to volume, and mix.

Procedure—Proceed as directed for *Procedure* in the test for *Residual methanol*— under *Ioxilan*: not more than 0.005% is found.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and water (87:13). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation A—Transfer about 60 mg of USP Ioxilan RS, to a 10-mL volumetric flask, and add 1 mL of water. [NOTE—Heat gently, if necessary, to effect dissolution. Cool to room temperature before proceeding.] Dilute with acetonitrile to volume, and mix.

Standard preparation B—Prepare a 1 in 10 dilution of *Standard preparation A* in *Mobile phase*.

Assay preparation A—Transfer an accurately measured volume of Injection, equivalent to about 60 mg of ioxilan, to a 10-mL volumetric flask, add 1 mL of water, and swirl to mix. Dilute with acetonitrile to volume, and mix.

Assay preparation B—Prepare a 1 in 10 dilution of *Assay preparation A* in *Mobile phase*.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 25-cm × 4.6-mm stainless steel column that contains packing L8. The column is maintained at 30°, and the flow rate is about 1 mL per minute. Chromatograph *Standard preparation A*, and record the peak responses as directed under *Procedure*:the resolution, *R*, between the two largest impurity peaks eluting immediately after the second ioxilan isomer peak is not less than 0.3. Chromatograph *Standard preparation B*, and record the peak responses as directed under *Procedure*:the resolution, *R*, between the two ioxilan isomer peaks is not less than 2.2, the column efficiency, based on the larger ioxilan isomer peak, is not less than 4000 theoretical plates, and the relative standard deviation of the sums of the responses of the two ioxilan isomer peaks from replicate injections is not less than 2.0%.

Procedure—Separately inject equal volumes (about 10 µL) of *Assay preparation A, Assay preparation B, Standard preparation A,* and *Standard preparation B* into the chromatograph, record the chromatograms, and measure the areas of the responses for the major peaks. Record the integrated results, summing the areas of the two ioxilan peaks. From the chromatogram of *Assay preparation A* in comparison to that of *Standard preparation B*, determine the quantity of ioxilan in the Injection taken. Determine the percentage of impurities (excluding the serinol impurity with a relative retention time of 0.9 relative to the larger ioxilan isomer peak) by area percent, using the chromatogram of *Assay preparation A*. Not more than 0.5% of any individual impurity is found, and the total of all impurities is not more than 1.5%. [NOTE—The impurities eluting on the tail of the second ioxilan isomer peak should be integrated by skimming the peaks.]

www.webofpharma.com

Ipecac

DEFINITION

Ipecac consists of the dried rhizome and roots of *Cephaëlis acuminata* Karsten, or of *Cephaëlis ipecacuanha* (Brotero) A.Richard (Fam. Rubiaceae). Ipecac yields NLT 2.0% of the total ether-soluble alkaloids of ipecac. Its content of emetine ($C_{29}H_{40}N_2O_4$) and cephaeline ($C_{28}H_{38}N_2O_4$) together is NLT 90.0% of the amount of the total ether-soluble alkaloids. The content of cephaeline varies from an amount equal to, to an amount NMT 2.5 times, the content of emetine.

COMPOSITION

• **TOTAL ETHER-SOLUBLE ALKALOIDS**

[NOTE—It is important that the ether used in this *Assay* must have been shown by test to be free from peroxides within 24 h before use.]

The alkaloids may be extracted by either of the methods given below.

Method 1

Sample solution: To 10 g of finely powdered Ipecac, in a suitable container, add 100 mL of ether, accurately measured at 25°, insert the stopper in the container tightly, shake the mixture thoroughly, and allow to stand for 5 min. Add 10 mL of 6 N ammonium hydroxide, close again tightly, shake it for 1 h in a mechanical shaker or intermittently during 2 h, and allow to stand overnight at a temperature not exceeding 25°. Again shake the mixture intermittently during 30 min, and allow the drug to settle at 25°. Transfer to a separator a 50.0-mL aliquot of the clear supernatant, representing 5 g of Ipecac.

Method 2

Sample solution: Place 5 g of the finely powdered Ipecac in a continuous-extraction thimble. Add enough ether to cover the powder, and allow to stand for 10 min with occasional stirring. Add 3 mL of ammonium hydroxide, mix, and allow to stand overnight. Cover the drug with a pledget of cotton, pack well, and extract with ether for 5 h. Transfer the ether extract to a separator.

Analysis: Extract the alkaloids from the ether with 2 N sulfuric acid, using at first 15 mL, or more if necessary, to ensure an acid reaction, then successive 10-mL portions until extraction is complete, and filtering all extracts through the same filter into a second separator. To the combined acid solutions add an equal volume of ether, render the mixture distinctly alkaline with 6 N ammonium hydroxide (at least pH 10, by test paper), and extract with successive portions of ether until the last extract shows NMT a slight turbidity when treated as follows: Evaporate 1 mL of the last extraction, dissolve the residue in 0.5 mL of 0.5 N hydrochloric acid, and add 1 drop of mercuric iodide TS.

Filter each portion of the ether extract into a flask or beaker, and carefully evaporate the combined ether extracts on a steam bath almost to dryness. Add 5 mL of ether and 10.0 mL of 0.1 N sulfuric acid VS, and heat on a steam bath to dissolve the alkaloids and to remove all of the ether. Cool, add 15 mL of water, then add methyl red TS, and titrate the excess acid with 0.1 N sodium hydroxide VS. Each mL of 0.1 N sulfuric acid is equivalent to 24.0 mg of the total ether-soluble alkaloids of ipecac, calculated as emetine ($C_{29}H_{40}N_2O_4$).

Acceptance criteria: NLT 2.0%

• **EMETINE AND CEPHAELINE**

Solution A: Prepare 0.5 M monobasic potassium phosphate (containing 5.1 g/75 mL) and 0.5 M dibasic potassium phosphate (containing 2.2 g/25 mL). Mix three volumes of 0.5 M monobasic potassium phosphate with one volume of 0.5 M dibasic potassium phosphate, and adjust by the addition of one or the other of the solutions to a pH of 6.0 ± 0.05. Dissolve 7.5 g of potassium chloride in 100 mL of the resulting solution.

Solution B: 0.5 M sodium citrate (containing 6.5 g/50 mL) and citric acid (containing 4.8 g/50 mL). Mix equal volumes of these solutions, and adjust by the addition of one or the other of the solutions to a pH of 4.0 ± 0.05.

Standard solution: 50 µg/mL of emetine from USP Emetine Hydrochloride RS in 0.5 N sulfuric acid

Sample solution: Transfer 200 mg of the fine powder to a 150-mL beaker. Add 2 mL of dimethyl sulfoxide, mix with a flattened stirring rod to ensure complete wetting of the powder, and allow to stand for 30 min. Add 2 mL of water and 1 g of sodium bicarbonate.

Chromatographic columns: For each column, pack a pledget of fine glass wool in the base of a chromatographic tube (25- × 200-mm test tube to which is fused a 5-cm length of 7-mm tubing) with the aid of a tamping rod having a disk with a diameter 1 mm less than that of the tube.

Column I: Prepare *Column I* as follows. To the *Sample solution* add 6 g of purified siliceous earth, mix, transfer the mixture to the column, scrub the beaker with 1 g of the purified siliceous earth, transfer this to the top of the column, and tamp.

Column II: Prepare *Column II* using 3 g of the purified siliceous earth and 2 mL of *Solution A*.

Column III: Prepare *Column III* using 2 mL of *Solution B* and 3 g of the purified siliceous earth.

Column IV: Prepare *Column IV* using 2 mL of sodium hydroxide solution (1 in 50) and 3 g of the purified siliceous earth.

Pack a pledget of glass wool on the top of each column.

Analysis

[NOTE—Use water-saturated solvents throughout this *Analysis*. Rinse the tips of the chromatographic columns before discarding them.]

Emetine solution: Mount *Columns I* and *II* so that the effluent from *Column I* flows onto *Column II*. Pass three 50-mL portions of ether through the columns, and discard *Column I* and the eluate. Mount *Column III* below *Column II* and pass three 50-mL portions of a mixture of one volume of ether and three volumes of chloroform through the columns. Discard *Column II* and the eluate. Wash *Column III* with 25 mL of the ether–chloroform mixture, followed by 25 mL of a mixture of equal volumes of ether and isooctane, and discard the washings. Wash *Column IV* with 20 mL of a 1-in-50 solution of triethylamine in the ether–isooctane mixture, and discard the washing. Mount *Column IV* below *Column III*, and place as a receiver under *Column IV* a 125-mL separator containing 15 mL of 4 N sulfuric acid. Pass through the columns 10 mL of a 1-in-5 solution of triethylamine in the ether–isooctane mixture, followed by three 10-mL portions of a 1-in-50 solution of triethylamine in the ether–isooctane mixture. Discard *Column III*, and pass through *Column IV* 20 mL of the 1-in-50 solution of triethylamine in the ether–isooctane mixture. Shake the separator, allow the phases to separate, and transfer the aqueous extract to a 50-mL volumetric flask. Extract with two additional 10-mL portions of 0.5 N sulfuric acid, combining the extracts in the volumetric flask. Add 0.5 N sulfuric acid to volume.

Cephaeline solution: Elute *Column IV* with 75 mL of chloroform, collecting the eluate in a 250-mL separator containing 150 mL of ether. Discard *Column IV*. Extract with one 20-mL and then with two 10-mL portions of 0.5 N sulfuric acid, collecting the extracts in a 50-mL volumetric flask. Rinse the stem of the separator, and add the acid to volume.

www.webofpharma.com

Instrumental conditions
(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)
Mode: UV-Vis
Analytical wavelengths: 283 and 350 nm
Cell: 1 cm
Blank: 0.5 N sulfuric acid
Analysis
Samples: *Standard solution, Emetine solution,* and *Cephaeline solution*
Calculate the percentage of emetine in the portion of Ipecac taken:

$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times 100$$

A_U = difference in the absorbances of the emetine solution from the *Sample solution* at the wavelengths indicated by $(A_{283} - A_{350})$
A_S = difference in the absorbances of the emetine solution from the *Standard solution* at the wavelengths indicated by $(A_{283} - A_{350})$
C_S = concentration of emetine in the *Standard solution* (µg/mL)
C_U = nominal concentration of emetine in the *Sample solution* (mg/mL)

Calculate the percentage of cephaeline in the portion of Ipecac taken:

$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

A_U = difference in the absorbances of the cephaeline solution from the *Sample solution* at the wavelengths indicated by $(A_{283} - A_{350})$
A_S = difference in the absorbances of the cephaeline solution from the *Standard solution* at the wavelengths indicated by $(A_{283} - A_{350})$
C_S = concentration of emetine in the *Standard solution* (µg/mL)
C_U = nominal concentration of cephaeline in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of cephaeline, 466.61
M_{r2} = molecular weight of emetine, 480.64

Acceptance criteria: The content of emetine ($C_{29}H_{40}N_2O_4$) and cephaeline ($C_{28}H_{38}N_2O_4$) together is NLT 90.0% of the total amount of the ether-soluble alkaloids. The content of cephaeline varies from an amount equal to, to an amount NMT 2.5 times, the content of emetine.

CONTAMINANTS
• **ARTICLES OF BOTANICAL ORIGIN** ⟨561⟩, *Pesticide Residue Analysis*: Meets the requirements

SPECIFIC TESTS
• **BOTANICAL CHARACTERISTICS**
Macroscopic: A mixture of segments of the roots and rhizomes. The root segments are mostly curved and flexuous, occasionally branched, up to 15 cm in length and usually 3–6.5 mm in diameter, but may be up to 9 mm in diameter, grayish, grayish brown, or reddish brown, the reddish brown type often having light-colored abrasions, transverse ridges 0.5–1.0 mm wide that extend halfway around the circumference of the root and fade at their tapering extremities into the general surface, with from one to six of these ridges per centimeter, and annulations sometimes seen at irregular intervals. The rhizomes are cylindrical, 2 mm thick, finely longitudinally wrinkled, with a few elliptical scars. The odor is distinctive; the dust is sternutatory.

Microscopic: At the center of the root is a well-defined primary xylem but no pith. Surrounding this is a dense wood of secondary xylem crossed by medullary rays. These elements are all lignified. External to the wood is a narrow band of secondary phloem and a wide parenchymatous phelloderm surrounded by a narrow layer of cork a few cells thick. The secondary xylem consists of narrow, bordered-pitted tracheidal vessels and tracheids in combination with xylem parenchyma. The latter have simple pits and contain starch grains. Starch is present also in the medullary rays. The phloem occurs as small groups of sieve tissue embedded in parenchyma. The wide phelloderm consists of round-celled cellulose parenchyma filled with starch grains and a few idioblasts, each of which contains a bundle of acicular raphides of calcium oxalate crystals 30- to 80-µm long. The starch grains are rarely single but usually occur as 2–4 and sometimes 8 in a clump. Individual grains measure up to 22 µm in diameter.
The rhizome differs from the root in having a ring of xylem around a large pith. The pericycle contains characteristic sclerenchymatous cells. Spiral vessels are found in the protoxylem. The pith is composed of pitted parenchyma, which is somewhat lignified.
• **OVERGROUND STEMS:** The proportion of overground stems is NMT 5%.
• **ARTICLES OF BOTANICAL ORIGIN** ⟨561⟩, *Methods of Analysis, Foreign Organic Matter*: The proportion of foreign organic matter is NMT 2.0%.

ADDITIONAL REQUIREMENTS
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Emetine Hydrochloride RS

Powdered Ipecac

» Powdered Ipecac is Ipecac reduced to a fine or a very fine powder and adjusted to a potency of not less than 1.9 percent and not more than 2.1 percent of the total ether-soluble alkaloids of ipecac, by the addition of exhausted marc of ipecac or of other suitable inert diluent or by the addition of powdered ipecac of either a lower or a higher potency.

The content of emetine ($C_{29}H_{40}N_2O_4$) and cephaeline ($C_{28}H_{38}N_2O_4$) together is not less than 90.0 percent of the total amount of the ether-soluble alkaloids. The content of cephaeline varies from an amount equal to, to an amount not more than 2.5 times, the content of emetine.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Emetine Hydrochloride RS
Botanic characteristics—Thin-walled, fairly small cork cells, the starch grains rarely simple and usually 2- to 8-compound, the single grains up to 22 µm in diameter; raphides of calcium oxalate 30 to 80 µm in length; tracheids and tracheidal vessels found in groups having very numerous, small, bordered pits; parenchyma of phelloderm filled with starch or acicular crystals of calcium oxalate, having cells thin-walled, oval with intercellular spaces; parenchyma of the xylem composed of small rectangular and longitudinally elongated cells with moderately thick walls and scattered

USP Monographs

www.webofpharma.com

bordered or simple pits; rhizome parenchyma cells larger than root parenchyma cells, with slightly thicker walls and lignified with fairly numerous simple pits; sclereids from the rhizome large, rectangular, with uneven walls and large, conspicuous pits.

Assay for total ether-soluble alkaloids—Proceed with Powdered Ipecac as directed in the *Assay for total ether-soluble alkaloids* under *Ipecac*.

Assay for emetine and cephaeline—

Standard preparation, Phosphate buffer, Citric acid buffer, and *Chromatographic columns*—Prepare as directed in the *Assay for emetine and cephaeline* under *Ipecac*.

Assay preparation—Transfer to a 150-mL beaker about 200 mg, accurately weighed, of Powdered Ipecac. Add 2 mL of dimethyl sulfoxide, mix with a flattened stirring rod to ensure complete wetting of the powder, and allow to stand for about 30 minutes. Add 2 mL of water and about 1 g of sodium bicarbonate, and mix.

Procedure—Proceed as directed for *Procedure* in the *Assay for emetine and cephaeline* under *Ipecac*. Calculate the quantity, in mg, of emetine in the portion of Powdered Ipecac taken by the formula:

$$0.05C(A_{283} - A_{350})_U/(A_{283} - A_{350})_S$$

in which the parenthetic expressions are the differences in the absorbances of the solution of emetine from the *Assay preparation (U)* and the *Standard preparation (S),* respectively, at the wavelengths indicated by the subscripts; and C is as defined for *Procedure* in the *Assay for emetine and cephaeline* under *Ipecac*. Calculate the quantity, in mg, of cephaeline in the portion of Powdered Ipecac taken by the formula:

$$0.971(0.05C)(A_{283} - A_{350})_U/(A_{283} - A_{350})_S$$

in which 0.971 is the ratio of the molecular weight of cephaeline to that of emetine; the parenthetic expressions are the differences in the absorbances of the solution of cephaeline from the *Assay preparation (U)* and the *Standard preparation (S),* respectively, at the wavelengths indicated by the subscripts; and C is as defined above.

Ipecac Oral Solution

» Ipecac Oral Solution yields, from each 100 mL, not less than 123 mg and not more than 157 mg of the total ether-soluble alkaloids of ipecac.

The content of emetine ($C_{29}H_{40}N_2O_4$) and cephaeline ($C_{28}H_{38}N_2O_4$) together is not less than 90.0 percent of the amount of the total ether-soluble alkaloids. The content of cephaeline varies from an amount equal to, to an amount not more than 2.5 times, the content of emetine.

Powdered Ipecac	70 g
Glycerin	100 mL
Syrup, a sufficient quantity, to make	1000 mL

Exhaust the powdered Ipecac by percolation, using a mixture of 3 volumes of alcohol and 1 volume of water as the menstruum, macerating for 72 hours, and percolating slowly. Reduce the entire percolate to a volume of 70 mL by evaporation at a temperature not exceeding 60° and preferably in vacuum, and add 140 mL of water. Allow the mixture to stand overnight, filter, and wash the residue on the filter with water. Evaporate the filtrate and washings to 40 mL, and to this add 2.5 mL of hydrochloric acid and 20 mL of alcohol, mix, and filter. Wash the filter with a mixture of 30 volumes of alcohol, 3.5 volumes of hydrochloric acid, and 66.5 volumes of water, using a volume sufficient to produce 70 mL of the filtrate. Add 100 mL of Glycerin and enough Syrup to make the product measure 1000 mL, and mix.

Packaging and storage—Preserve in tight containers, preferably at a temperature not exceeding 25°. Containers intended for sale to the public without prescription contain not more than 30 mL of Oral Solution.

USP Reference standards ⟨11⟩—
USP Emetine Hydrochloride RS

Microbial enumeration tests ⟨61⟩ **and** ***Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Escherichia coli*.

Alcohol Determination ⟨611⟩: between 1.0% and 2.5% of C_2H_5OH.

Assay for total ether-soluble alkaloids— [NOTE—It is important that the ether used in this assay shall have been shown by test to be free from peroxides within 24 hours prior to use.] Transfer about 50 mL, accurately measured, of Oral Solution to a liquid-liquid automatic extractor, add water, if necessary, to reduce the viscosity, render the liquid distinctly alkaline with ammonium hydroxide, and extract with ether for at least 4 hours or until the extraction is complete. Use a water bath to boil the ether. Frequently disconnect the extractor from the condenser, and agitate the lower layer by raising and lowering the center tube or by other suitable manipulation. At the conclusion of the extraction period, transfer the ether extract to a separator, and rinse the extraction flask with 2 or more small volumes of ether, adding the rinsings to the separator. Complete the assay as directed in the *Assay for total ether-soluble alkaloids* under *Ipecac*, beginning with "Extract the alkaloids from the ether."

Assay for emetine and cephaeline—

Standard preparation, Phosphate buffer, and *Citric acid buffer*—Prepare as directed in the *Assay for emetine and cephaeline* under *Ipecac*.

Assay preparation—Pipet 10 mL of water into a 25-mL volumetric flask. With the aid of a 20-mL pipet, add Oral Solution to volume, taking care to prevent contact of the Oral Solution with the neck of the flask above the graduation line. Insert the stopper, and mix.

Chromatographic columns—Pack a pledget of fine glass wool in the base of a chromatographic tube (25-mm × 200-mm test tube to which is fused a 5-cm length of 7-mm tubing) with the aid of a tamping rod having a disk with a diameter about 1 mm less than that of the tube.

To prepare *Column I*, transfer 4.0 mL of the *Assay preparation* to a 150-mL beaker, add about 1 g of sodium bicarbonate, and mix. Then proceed as directed for *Chromatographic columns* in the *Assay for emetine and cephaeline* under *Ipecac*, beginning with "add 6 g of purified siliceous earth," and prepare *Columns II, III,* and *IV* as directed therein.

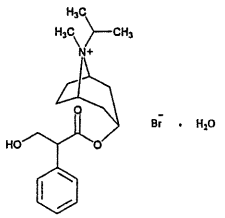
USP Monographs

www.webofpharma.com

Procedure—Proceed as directed for *Procedure* in the *Assay for emetine and cephaeline* under *Ipecac*.

Calculate the quantity, in mg, of emetine in each 100 mL of Oral Solution taken by the formula:

$$2.08C(A_{283} - A_{350})_U/(A_{283} - A_{350})_S$$



in which the parenthetic expressions are the differences in the absorbances of the solution of emetine from the *Assay preparation* (*U*) and the *Standard preparation* (*S*), respectively, at the wavelengths indicated by the subscripts, and *C* is as defined in the *Procedure*.

Calculate the quantity, in mg, of cephaeline in each 100 mL of Oral Solution taken by the formula:

$$0.971(2.08C)(A_{283} - A_{350})_U/(A_{283} - A_{350})_S$$

in which 0.971 is the ratio of the molecular weight of cephaeline to that of emetine, the parenthetic expressions are the differences in the absorbances of the solution of cephaeline from the *Assay preparation* (*U*) and the *Standard preparation* (*S*), respectively, at the wavelengths indicated by the subscripts, and *C* is as defined in the *Procedure*.

Ipratropium Bromide

$C_{20}H_{30}BrNO_3 \cdot H_2O$ 430.38

8-Azoniabicyclo[3.2.1]octane-3-(3-hydroxy-1-oxo-2-phenylpropoxy)-8-methyl-8-(1-methylethyl)-, bromide, monohydrate(*endo,syn*)-, (±)-;

(8*r*)-3α-Hydroxy-8-isopropyl-1αH,5αH-tropanium bromide (±)-tropate monohydrate [66985-17-9].

DEFINITION

Ipratropium Bromide contains NLT 98.0% and NMT 102.0% of ipratropium bromide ($C_{20}H_{30}BrNO_3$), calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

Adsorbent: A suitable HPTLC silica gel mixture
Application volume: 1 µL
Developing solvent system: Methylene chloride, dehydrated alcohol, water, and formic acid (18:18:3:1)
Spray reagent 1: Dragendorff's TS
Spray reagent 2: Sodium nitrite solution (5 in 100)

Analysis
Samples: *Standard solutions* and *Sample solution*
Develop the plate for 15 min, then remove from the tank and dry at 60° for 15 min. Spray the plate with *Spray reagent 1*, and allow to dry briefly. Spray the plate with *Spray reagent 2* and immediately cover with a glass plate. The R_F values for ipratropium bromide related compound A and ipratropium bromide are about 0.15 and 0.36, respectively.

Acceptance criteria: Any spot of the *Sample solution*, except for the principal spot, is not more intense than the spot from *Standard solution A* (0.1%).

• **ORGANIC IMPURITIES**
Solution A, Buffer, Mobile phase, and **Chromatographic system:** Proceed as directed in the *Assay*.
System suitability solution: 0.03 mg/mL of USP Ipratropium Bromide RS and 0.01 mg/mL of USP Ipratropium Bromide Related Compound B RS in *Mobile phase*
Standard solution: 0.03 mg/mL of USP Ipratropium Bromide RS in *Mobile phase*
Sample solution: 10 mg/mL of Ipratropium Bromide in *Mobile phase*
System suitability
[NOTE—See *Table 1* for the relative retention times.]
Sample: *System suitability solution*
Suitability requirements
Resolution: NLT 4 between ipratropium and ipratropium related compound B
Tailing factor: NMT 2.5 for the ipratropium peak
Relative standard deviation: NMT 5% for ipratropium
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Ipratropium Bromide taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of ipratropium from the *Standard solution*
C_S = concentration of USP Ipratropium Bromide RS in the *Standard solution* (mg/mL)
C_U = concentration of Ipratropium Bromide in the *Sample solution* (mg/mL)
F = relative response factor (see *Table 1*)

Acceptance criteria: See *Table 1*. Disregard the bromide counterion peak eluting at a relative retention time of about 0.1.

Ipratropium Bromide and Albuterol Sulfate Inhalation Solution

DEFINITION
Ipratropium Bromide and Albuterol Sulfate Inhalation Solution is an isotonic sterile solution of ipratropium bromide and albuterol sulfate. It may contain chelating agents, isotonicity agents and pH adjusting agents. It contains NLT 90.0% and NMT 110.0% of the labeled amount of ipratropium bromide ($C_{20}H_{30}BrNO_3$) and albuterol ($C_{13}H_{21}NO_3$) as albuterol sulfate.

IDENTIFICATION
• **A.** The retention times of the major peaks of the *Sample solution* correspond to those of the *Standard solution*, as obtained in the *Assay*.

USP Monographs

www.webofpharma.com

• **B.** The UV spectra of the major peaks of the *Sample solution* correspond to those of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Buffer: 2.7 g/L of monobasic potassium phosphate in water

Solution A: Acetonitrile and *Buffer* (5:95). [NOTE—The pH of the solution is about 4.7.]

Solution B: Acetonitrile and *Buffer* (40:60). [NOTE—The pH of the solution is about 5.4.]

Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	100	0
3	100	0
30	50	50
35	100	0
40	100	0

System suitability solution: 0.1 mg/mL of USP Ipratropium Bromide RS, 0.5 mg/mL of USP Albuterol Sulfate RS, and 0.05 mg/mL each of USP Ipratropium Bromide Related Compound B RS and USP Ipratropium Bromide Related Compound C RS in water

Standard solution: 0.04 mg/mL of USP Ipratropium Bromide RS and 0.25 mg/mL of USP Albuterol Sulfate RS in water

Sample solution: Nominally 0.04 mg/mL of ipratropium bromide and 0.25 mg/mL of albuterol sulfate from the pooled contents of NLT 20 vials of Inhalation Solution prepared as follows. Transfer a suitable volume of the pooled composite Inhalation Solution to a suitable volumetric flask. Dilute with water to obtain the final nominal concentration.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 210 nm. For *Identification B*, use a diode array detector in the range of 200–300 nm.

Column: 4.6-mm × 15-cm; 5-µm packing L7

Column temperature: 15°

Flow rate: 1 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

[NOTE—The relative retention times of the components relative to ipratropium are shown in *Table 2*.]

Table 2

Component	Relative Retention Time
Albuterol	0.3
Ipratropium related compound C	0.7
Ipratropium	1.0
Ipratropium related compound B	1.05

Suitability requirements

Resolution: NLT 2.0 between ipratropium and ipratropium related compound B, *System suitability solution*

Tailing factor: NMT 2.0 for the albuterol and ipratropium peaks, *Standard solution*

Relative standard deviation: NMT 1.0% for the albuterol and ipratropium peaks, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of ipratropium bromide ($C_{20}H_{30}BrNO_3$) in the portion of Inhalation Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of ipratropium from the *Sample solution*

r_S = peak response of ipratropium from the *Standard solution*

C_S = concentration of USP Ipratropium Bromide RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of ipratropium bromide in the *Sample solution* (mg/mL)

Calculate the percentage of the labeled amount of albuterol ($C_{13}H_{21}NO_3$) in the portion of Inhalation Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times N \times 100$$

r_U = peak response of albuterol from the *Sample solution*

r_S = peak response of albuterol from the *Standard solution*

C_S = concentration of USP Albuterol Sulfate RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of albuterol in the *Sample solution* (mg/mL)

M_{r1} = molecular weight of albuterol, 239.31

M_{r2} = molecular weight of albuterol sulfate, 576.70

N = number of moles of albuterol per mole of albuterol sulfate, 2

Acceptance criteria

Ipratropium bromide: 90.0%–110.0%

Albuterol: 90.0%–110.0%

PERFORMANCE TESTS

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meets the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Solution A: Dissolve 2.7 g of monobasic potassium phosphate in 1 L of water. Adjust with phosphoric acid to a pH of 3.9.

Solution B: Acetonitrile

Mobile phase: See *Table 3*.

Table 3

Time (min)	Solution A (%)	Solution B (%)
0	95	5
3	95	5
40	84	16
60	60	40
75	60	40
77	95	5
85	95	5

www.webofpharma.com

System suitability solution: 0.18 mg/mL of USP Ipratropium Bromide RS, 1 mg/mL of USP Albuterol Sulfate RS, and 0.005 mg/mL each of USP Levalbuterol Related Compound D RS, USP Ipratropium Bromide Related Compound B RS, and USP Ipratropium Bromide Related Compound C RS in water

Standard solution: 0.9 µg/mL of USP Ipratropium Bromide RS and 5 µg/mL of USP Albuterol Sulfate RS in water

Sample solution: Nominally 170 µg/mL of ipratropium bromide and 833 µg/mL of albuterol prepared by pooling the contents of 10 vials of Inhalation Solution into a suitable vessel. Shake well and inject as such.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 210 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7
Column temperature: 30°
Flow rate: 1 mL/min
Injection volume: 50 µL

System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—See *Table 4* for relative retention times.]
Suitability requirements
Resolution: NLT 1.5 between ipratropium related compound C and ipratropium; NLT 2.0 between ipratropium and ipratropium related compound B, *System suitability solution*
Tailing factor: NMT 2.0 for the albuterol and ipratropium peaks, *Standard solution*
Relative standard deviation: NMT 5.0% for albuterol and ipratropium, *Standard solution*

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of levalbuterol related compound D in the portion of Inhalation Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times (M_{r1}/M_{r2}) \times N \times 100$$

r_U = peak response of levalbuterol related compound D from the *Sample solution*
r_S = peak response of albuterol from the *Standard solution*
C_S = concentration of USP Albuterol Sulfate RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of albuterol in the *Sample solution* (µg/mL)
F = relative response factor of the corresponding degradation product from *Table 4*
M_{r1} = molecular weight of albuterol, 239.31
M_{r2} = molecular weight of albuterol sulfate, 576.70
N = number of moles of albuterol per mole of albuterol sulfate, 2

Calculate the percentage of atropic acid and ipratropium related compound C in the portion of Inhalation Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each degradation product from the *Sample solution*
r_S = peak response of ipratropium from the *Standard solution*
C_S = concentration of USP Ipratropium Bromide RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of ipratropium bromide in the *Sample solution* (µg/mL)
F = relative response factor of the corresponding degradation product from *Table 4*

Calculate the percentage of each unspecified degradation product in the portion of Inhalation Solution taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each unspecified degradation product from the *Sample solution*
r_T = sum of all the peak responses from the *Sample solution*

Acceptance criteria: See *Table 4*. The reporting threshold is 0.1%.

Table 4

Irbesartan Tablets

DEFINITION

Irbesartan Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of irbesartan ($C_{25}H_{28}N_6O$).

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
Sample: Add 10 mL of methanol to 1 Tablet, and sonicate for 10 min. Pass the solution through a glass microfiber membrane filter of 0.45-µm pore size. Evaporate to dryness, using a stream of nitrogen. Mix approximately 1 mg of the residue and approximately 250 mg of potassium bromide to obtain a homogenous mixture.
Acceptance criteria: The IR absorption spectrum of the *Sample* exhibits maxima only at the same wavelengths as that of a similarly prepared standard using USP Irbesartan RS.

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Buffer: Dilute 5.5 mL of phosphoric acid in approximately 950 mL of water. Adjust by adding triethylamine, slowly and dropwise, to a pH of 3.0, and dilute with water to 1 L.
Mobile phase: Acetonitrile and *Buffer* (400:600)
System suitability solution: 0.1 mg/mL each of USP Irbesartan RS and USP Irbesartan Related Compound A RS in methanol
Standard solution: 0.15 mg/mL of USP Irbesartan RS in methanol
Sample solution: Nominally 0.15 mg/mL of irbesartan in methanol prepared as follows. To a suitable amount of irbesartan from NLT 5 powdered Tablets add methanol to fill about 75% of the volume of the flask. Sonicate for 15 min, stirring at 5-min intervals. Dilute with methanol to volume, and pass through a glass microfiber membrane filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of irbesartan ($C_{25}H_{28}N_6O$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of irbesartan from the *Sample solution*

A_S = absorbance of irbesartan from the *Standard solution*

C_S = concentration of USP Irbesartan RS in the *Standard solution* (mg/mL)

L = label claim (mg/Tablet)

V = volume of *Medium*, 1000 mL

Tolerances: NLT 80% (Q) of the labeled amount of irbesartan ($C_{25}H_{28}N_6O$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Buffer, Mobile phase, System suitability solution, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Sample: *Sample solution*

Calculate the percentage of each impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each impurity

r_T = sum of the responses of all the peaks

Acceptance criteria

Irbesartan related compound A: NMT 0.2%

Any other impurity: NMT 0.2%

Total impurities: NMT 0.5%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in well-closed containers.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Irbesartan RS

USP Irbesartan Related Compound A RS

1-Pentanoylamino-cyclopentanecarboxylic acid [2′-(1*H*-tetrazol-5-yl)-biphenyl-4-ylmethyl]-amide.

$C_{25}H_{30}N_6O_2$ 446.54

Irbesartan and Hydrochlorothiazide Tablets

DEFINITION

Irbesartan and Hydrochlorothiazide Tablets contain NLT 90.0% and NMT 110.0% of the labeled amounts of irbesartan ($C_{25}H_{28}N_6O$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$).

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K▲** (CN 1-May-2020)

Sample solution: Transfer the contents of 1 Tablet, previously crushed with a mortar and pestle, to a suitable vial. Add 5 mL of acetone, sonicate for 10 min, and pass through a membrane filter of 0.45-µm pore size. Evaporate the filtrate to dryness.

• **B.** The relative retention times of the major peaks from the *Sample solution* correspond to those of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Buffer: Dissolve 1.36 g of monobasic potassium phosphate in 900 mL of water, add 2 mL of triethylamine, and adjust with phosphoric acid to a pH of 3.0 ± 0.1. Dilute further with water to 1 L.

Mobile phase: Acetonitrile, methanol, and *Buffer* (13:20:67)

Acidified water: Adjust with phosphoric acid (or sodium hydroxide, if necessary) to a pH of 2.0 ± 0.1.

Extraction solution: Methanol and *Acidified water* (7:3)

Irbesartan standard stock solution: Dissolve USP Irbesartan RS in a suitable volumetric flask in methanol (1/5 of the volume of the flask), and dilute with *Extraction solution* to prepare a 0.6 mg/mL solution. Sonicate for 2 min.

Hydrochlorothiazide standard stock solution: Dissolve USP Hydrochlorothiazide RS in methanol (1/20 of the volume of the flask), and dilute with *Extraction solution* to prepare a 0.1 mg/mL solution. Sonicate for 2 min.

Irbesartan related compound A standard stock solution: 0.1 mg/mL of USP Irbesartan Related Compound A RS in methanol. Sonicate for 2 min.

[1] A suitable filter is Acrodisc, manufactured by Gelman Sciences and distributed by Pall Corp. (www.pall.com).

www.webofpharma.com

Benzothiadiazine related compound A standard stock solution: 0.05 mg/mL of USP Benzothiadiazine Related Compound A RS in methanol. Sonicate for 2 min.
Standard solution: 0.24 mg/mL of irbesartan and 0.02 mg/mL of hydrochlorothiazide from the *Irbesartan standard stock solution* and the *Hydrochlorothiazide standard stock solution* in the *Extraction solution*
System suitability solution: Prepare 0.05 mg/mL of USP Irbesartan RS, 0.005 mg/mL of USP Hydrochlorothiazide RS, 1.0 µg/mL of USP Irbesartan Related Compound A RS, and 3.0 µg/mL of USP Benzothiadiazine Related Compound A RS in the *Extraction solution* from the respective Standard stock solutions
Sample stock solution: 0.75 mg/mL of irbesartan from NLT 5 Tablets in a suitable volumetric flask. Add *Acidified water* up to 30% of the volume of the flask, and sonicate until the Tablets disintegrate. Add methanol to fill the flask up to 90% of the total volume. Sonicate for 5 min, and stir. Dilute with methanol to volume, and pass through a filter of 0.45-µm pore size.
Sample solution: 0.225 mg/mL of irbesartan in the *Extraction solution* from the *Sample stock solution*. [NOTE—The hydrochlorothiazide concentration may vary depending on the ratio of irbesartan to hydrochlorothiazide in the Tablet.]
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 25-cm; 5-µm packing L10
Flow rate: 1.5 mL/min
Injection volume: 10 µL
System suitability
Samples: *Standard solution* and *System suitability solution*
Suitability requirements
Resolution: NLT 1.7 between irbesartan and irbesartan related compound A; NLT 1.7 between hydrochlorothiazide and benzothiadiazine related compound A, *System suitability solution*
Relative standard deviation: NMT 1.5% for both the irbesartan and hydrochlorothiazide peaks, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of $C_{25}H_{28}N_6O$ and $C_7H_8ClN_3O_4S_2$ in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak area of irbesartan or hydrochlorothiazide from the *Sample solution*
r_S = peak area of irbesartan or hydrochlorothiazide from the *Standard solution*
C_S = concentration of USP Irbesartan RS or USP Hydrochlorothiazide RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of irbesartan or hydrochlorothiazide in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩
Medium: 0.1 N hydrochloric acid; 1000 mL
Apparatus 2: 50 rpm
Time: 30 min
pH 3.0 phosphate buffer: 1.36 g/L of monobasic potassium phosphate in water. Adjust with 10% phosphoric acid to a pH of 3.0 ± 0.1. This solution is stable for 3 months.
Mobile phase: *pH 3.0 phosphate buffer*, methanol, and acetonitrile (45:35:20)
Irbesartan standard stock solution: Transfer 50 mg of USP Irbesartan RS to a 100-mL volumetric flask. Add 15 mL of methanol, and sonicate for 5 min. Dilute with *Medium* to volume. This solution is stable for 14 days when stored at 4°.
Hydrochlorothiazide standard stock solution: Transfer 20 mg of USP Hydrochlorothiazide RS to a 200-mL volumetric flask. Add 5 mL of methanol, and sonicate for 5 min. Dilute with *Medium* to volume. This solution is stable for 14 days when stored at 4°.
Standard solution: Prepare on day of use dilutions of the *Irbesartan standard stock solution* and *Hydrochlorothiazide standard stock solution* in *Medium* as directed in the table below:

Label Claim of Irbesartan/Hydrochlorothiazide (mg/Tablet)	Volume of the Irbesartan standard stock solution (mL)	Volume of the Hydrochlorothiazide standard stock solution (mL)	Final Volume (mL)
75/12.5	15	12.5	100
150/12.5	30	12.5	100
300/12.5	60	12.5	100
300/25	60	25.0	100

System suitability solution: Transfer 10 mg of USP Irbesartan Related Compound A RS to a 100-mL volumetric flask. Add 5 mL of methanol, and sonicate to dissolve. Dilute with *Medium* to volume. Transfer 10.0 mL of this solution, 5.0 mL of the *Irbesartan standard stock solution*, and 12.5 mL of the *Hydrochlorothiazide standard stock solution* to a 100-mL volumetric flask. Dilute with *Medium* to volume.
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, discarding the first few mL.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 272 nm
Column: 4.6-mm × 25-cm; 5-µm packing L10
Column temperature: 40°
Flow rate: 1.4 mL/min
Injection volume: 25 µL
System suitability
Samples: *Standard solution* and *System suitability solution*
Suitability requirements
Resolution: NLT 2.0 between irbesartan and irbesartan related compound A, *System suitability solution*
Relative standard deviation: NMT 2.0% for both the irbesartan and hydrochlorothiazide peaks, *Standard solution*
Calculate the percentage of irbesartan and hydrochlorothiazide dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response for irbesartan or hydrochlorothiazide from the *Sample solution*
r_S = peak response for irbesartan or hydrochlorothiazide from the *Standard solution*
C_S = concentration of irbesartan or hydrochlorothiazide in the *Standard solution*

www.webofpharma.com

L = label claim for irbesartan or hydrochlorothiazide (mg/Tablet)
V = volume of *Medium* (mL), 1000

Tolerances: NLT 80% (Q) of the labeled amounts of irbesartan ($C_{25}H_{28}N_6O$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) are dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

IMPURITIES

ORGANIC IMPURITIES

• **Procedure**

Buffer, Mobile phase, Acidified water, Extraction solution, System suitability solution, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of irbesartan related compound A in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of irbesartan related compound A from the *Sample solution*
r_S = peak response of irbesartan from the *Standard solution*
C_S = concentration of USP Irbesartan RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of irbesartan in the *Sample solution* (mg/mL)

Calculate the percentage of benzothiadiazine related compound A in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 1/F \times 100$$

r_U = peak response of benzothiadiazine related compound A from the *Sample solution*
r_S = peak response of hydrochlorothiazide from the *Standard solution*
C_S = concentration of USP Hydrochlorothiazide RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of hydrochlorothiazide in the *Sample solution* (mg/mL)
F = relative response factor (see *Impurity Table 1*)

Calculate the percentage of any other individual impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_T) \times 100$$

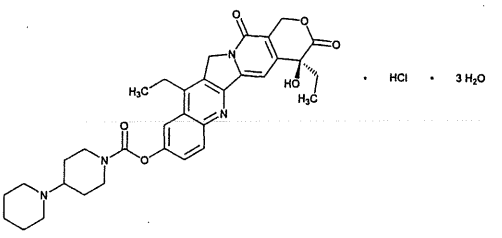
r_U = peak response of each other impurity in the *Sample solution*
r_T = sum of the peak responses excluding hydrochlorothiazide and benzothiadiazine related compound A from the *Sample solution*

Acceptance criteria

Individual impurities: See *Impurity Table 1*.

Total impurities: NMT 1.5% (sum of all the individual unknown impurities, irbesartan related compound A, and benzothiadiazine related compound A)

Impurity Table 1



Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Benzothiadiazine related compound A	0.15	1.3	1.0
Hydrochlorothiazide	0.18	—	—
Irbesartan related compound A	0.86	1.0	0.3
Irbesartan	1.00	—	—
Any other individual, unidentified impurity	—	1.0	0.2

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in well-closed containers.

• **USP REFERENCE STANDARDS** ⟨11⟩
USP Hydrochlorothiazide RS
USP Irbesartan RS
USP Irbesartan Related Compound A RS

Irinotecan Hydrochloride

$C_{33}H_{38}N_4O_6 \cdot HCl \cdot 3H_2O$ Anhydrous: 623.14 Trihydrate: 677.18
[1,4′-Bipiperidine]-1′-carboxylic acid, 4,11-diethyl-3,4,12,14-tetrahydro-4-hydroxy-3,14-dioxo-1*H*-pyrano[3′,4′:6,7] indolizino[1,2-*b*]quinolin-9-yl ester, monohydrochloride, trihydrate, (*S*)-;
(+)-7-Ethyl-10-hydroxycamptothecine 10-[1,4′-bipiperidine]-1′-carboxylate, monohydrochloride, trihydrate [136572-09-3].

DEFINITION

Irinotecan Hydrochloride contains NLT 98.0% and NMT 102.0% of $C_{33}H_{38}N_4O_6 \cdot HCl$, calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

• **B.** The retention time of the major peak of the *Sample solution* corresponds to the irinotecan (*S*-enantiomer) peak in the *Identification solution*, as obtained in the test for *Limit of Irinotecan Hydrochloride Enantiomer*.

• **C. IDENTIFICATION TESTS—GENERAL,** *Chloride* ⟨191⟩: A 2-mg/mL solution meets the requirements of the tests.

USP Monographs

Irinotecan Hydrochloride Injection

DEFINITION
Irinotecan Hydrochloride Injection is a sterile solution of Irinotecan Hydrochloride in Water for Injection. It contains NTL 90.0% and NMT 110.0% of the labeled amount of irinotecan hydrochloride ($C_{33}H_{38}N_4O_6 \cdot HCl \cdot 3H_2O$).

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
Sample solution: 4 µg/mL
Medium: Methanol
• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
• **PROCEDURE**
Buffer: Dissolve 2 g of sodium 1-hexanesulfonate and 2 mL of triethylamine in 1 L of water.
Mobile phase: Acetonitrile and *Buffer* (34:66). Adjust with phosphoric acid to a pH of 2.5.
Standard solution: 0.04 mg/mL of USP Irinotecan Hydrochloride RS in *Mobile phase*. Sonication and shaking may be used to aid dissolution.
Sample solution: 0.04 mg/mL of irinotecan hydrochloride in *Mobile phase* from Injection
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.5
Relative standard deviation: NMT 1.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of irinotecan hydrochloride ($C_{33}H_{38}N_4O_6 \cdot HCl \cdot 3H_2O$) in the portion of Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak area from the *Sample solution*
r_S = peak area from the *Standard solution*
C_S = concentration of USP Irinotecan Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of irinotecan hydrochloride in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of irinotecan hydrochloride ($C_{33}H_{38}N_4O_6 \cdot HCl \cdot 3H_2O$), 677.18
M_{r2} = molecular weight of irinotecan hydrochloride, anhydrous ($C_{33}H_{38}N_4O_6 \cdot HCl$), 623.14

Acceptance criteria: 90.0%–110.0%

IMPURITIES
• **ORGANIC IMPURITIES**
Solution A: Dissolve 2 g of sodium 1-hexanesulfonate and 1 mL of triethylamine in 1 L of water. Adjust with phosphoric acid to a pH of 2.5.
Solution B: Acetonitrile
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)

Iron, Carbonyl

Fe 55.85
[7439-89-6].

DEFINITION
Carbonyl Iron is elemental iron produced by chemical decomposition of purified iron pentacarbonyl. It is a powder, composed of spherical microparticles. It contains NLT 98.0% of iron (Fe), calculated on the as-is basis.

IDENTIFICATION
- **A.**
  Analysis: Dissolve a sample in a dilute mineral acid.
  Acceptance criteria: Hydrogen is evolved, and the resulting solutions give a positive test for *Identification Tests—General* ⟨191⟩, *Iron, Ferrous Salts*.
- **B.**
  Analysis: View a sample under a microscope having a magnifying power of 500 or greater.
  Acceptance criteria: It appears as spheres built up with concentric shells. Its particle size is 45–75 µm.

ASSAY
- **PROCEDURE**
  Sample: 200 mg
  Blank: Proceed as directed in the *Analysis*, omitting use of the *Sample*.
  Titrimetric system
  (See *Titrimetry* ⟨541⟩.)
  Mode: Direct titration
  Titrant: 0.1 N ceric sulfate VS
  Endpoint detection: Potentiometric
  Electrode system: Platinum indicating electrode and a silver–silver chloride reference electrode (or an equivalent combination electrode)
  Analysis: Transfer the *Sample* into a 300-mL Erlenmeyer flask. Add 50 mL of 2 N sulfuric acid, and close the flask with a stopper containing a Bunsen valve (made by inserting a glass tube connected to a short piece of rubber tubing with a slit on the side and a glass rod inserted in the other end and arranged so that gases can escape but air cannot enter). Heat on a steam bath to completely dissolve the *Sample*. [NOTE—The solution should be clear.] Remove the flask from the steam bath, and allow the solution to cool at room temperature with the stopper in place.
  Add a stir bar and 50 mL of recently boiled and cooled water to the flask. Titrate the solution with the *Titrant* through the inflection point. Perform a blank determination.
  Calculate the percentage of iron (Fe) in the *Sample* taken:

$$\text{Result} = \{[(V_S - V_B) \times N \times F]/W\} \times 100$$

V_S = *Titrant* volume consumed by the *Sample* (mL)
V_B = *Titrant* volume consumed by the *Blank* (mL)
N = actual *Titrant* normality (mEq/mL)
F = equivalency factor, 55.85 mg/mEq
W = *Sample* weight (mg)

Acceptance criteria: NLT 98.0% on the as-is basis

IMPURITIES
- **ACID-INSOLUBLE SUBSTANCES**
  Sample: 1 g of Carbonyl Iron
  Analysis: Dissolve the *Sample* in 25 mL of 2 N sulfuric acid, and heat on a steam bath until the evolution of hydrogen ceases. Filter through a tared filter crucible, wash the residue with water until free from sulfate, dry at 105° for 1 h, cool to room temperature, and weigh.
  Acceptance criteria: NMT 0.2%. The residue weighs NMT 2 mg.
- **ELEMENTAL IMPURITIES,** *Procedures* ⟨233⟩
  Acceptance criteria
  Arsenic: NMT 3 µg/g
  Lead: NMT 4 µg/g
  Mercury: NMT 2 µg/g

USP Monographs

SPECIFIC TESTS

- **PARTICLE SIZE DISTRIBUTION ESTIMATION BY ANALYTICAL SIEVING,** *Test Sieves* ⟨786⟩: NLT 100% passes through a 200-mesh sieve and NLT 95% passes through a 325-mesh sieve.

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed containers.

Iron Dextran Injection

DEFINITION

Iron Dextran Injection is a sterile, colloidal solution of ferric hydroxide in complex with partially hydrolyzed Dextran of low molecular weight, in Water for Injection. It contains NLT 95.0% and NMT 105.0% of the labeled amount of iron. It may contain NMT 0.5% of phenol as a preservative.

IDENTIFICATION

- **A.** To 1 mL of Injection on a watch glass add 2 drops of ammonium hydroxide. No precipitate is formed. Add 2 mL of hydrochloric acid, and add 2 mL of ammonium hydroxide. A brown precipitate is formed.

ASSAY

- **PROCEDURE FOR IRON**

Solution A: Transfer 2.64 g of calcium chloride dihydrate to a 1000-mL volumetric flask. Add 500 mL of water, and swirl to dissolve. Add 5.0 mL of hydrochloric acid, and dilute with water to volume.

Standard stock solution: 50 µg/mL of iron prepared as follows. Transfer 350 mg of ferrous ammonium sulfate hexahydrate to a 1000-mL volumetric flask. Add water to dissolve, dilute with water to volume, and mix.

Standard solutions: 1.0, 2.0, 3.0, 4.0, and 5.0 µg/mL of iron from *Standard stock solution* prepared as follows. To separate 100-mL volumetric flasks transfer 2.0, 4.0, 6.0, 8.0, and 10.0 mL, respectively, of *Standard stock solution*. Dilute the contents in each flask with *Solution A* to volume, and mix.

Sample stock solution: Nominally equivalent to 0.5 mg/mL of iron prepared as follows. Using a "to contain" pipet, transfer a volume of Injection, nominally equivalent to 100 mg of iron, to a 200-mL volumetric flask. Dilute with *Solution A* to volume, and mix.

Sample solution: Nominally equivalent to 4 µg/mL of iron in *Solution A* from *Sample stock solution* prepared as follows. Transfer 2.0 mL of *Sample stock solution* to a 250-mL volumetric flask, and dilute with *Solution A* to volume.

Instrumental conditions

(See *Atomic Absorption Spectroscopy* ⟨852⟩.)

Mode: Atomic absorption

Analytical wavelength: Iron emission line of 248.3 nm

Lamp: Iron hollow-cathode

Flame: Air–acetylene

Blank: *Solution A*

Analysis

Samples: *Standard solutions* and *Sample solution*

Plot the absorbance of each of the *Standard solutions* versus concentration, in µg/mL, of iron, and draw the straight line best fitting the five plotted points. From the graph so obtained, determine the concentration of iron, in µg/mL, in the *Sample solution*, C_A.

Calculate the percentage of the labeled amount of iron in the portion of Injection taken:

$$\text{Result} = (C_A/C_T) \times 100$$

C_A = concentration of iron in the *Sample solution*, determined from the standard calibration graph (µg/mL)

C_T = nominal concentration of the *Sample solution* (µg/mL)

Acceptance criteria: 95.0%–105.0%

OTHER COMPONENTS

- **ANTIMICROBIAL AGENTS—CONTENT,** *Phenol* ⟨341⟩: NMT 0.5%

IMPURITIES

- **CONTENT OF CHLORIDE**

Sample: Using a "to contain" pipet, transfer 10.0 mL of Injection to a 150-mL beaker, rinsing the pipet into the beaker with several small portions of water. Add 50 mL of water and 2 mL of nitric acid.

Titrimetric system

Mode: Direct titration

Titrant: 0.1 N silver nitrate VS

Endpoint detection: Potentiometric

Analysis: Titrate with *Titrant* determining the endpoint potentiometrically using silver–glass electrodes. Each mL of *Titrant* consumed is equivalent to 3.545 mg of chloride (Cl).

Acceptance criteria

For products labeled to contain 50 mg/mL of iron: 0.48%–0.68%

For products labeled to contain 75 or 100 mg/mL of iron: 0.8%–1.1%

- **NONVOLATILE RESIDUE**

Sample solution: Using a "to contain" pipet, transfer 1.0 mL of Injection onto 3–5 g of sand spread in a shallow layer in a stainless steel dish, the dish and sand having been previously dried and weighed. Rinse the pipet, with several small portions of water, onto the sand.

Analysis: Evaporate the *Sample solution* on a steam bath to dryness, continue the drying in an oven at 105° for 15 h, and weigh.

Acceptance criteria

For products labeled to contain 50 mg/mL of iron: 28.0%–32.0%

For products labeled to contain 75 mg/mL of iron: 35.0%–40.0%

For products labeled to contain 100 mg/mL of iron: 37.0%–43.0%

SPECIFIC TESTS

- **pH** ⟨791⟩: 4.5–7.0
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: NMT 0.50 USP Endotoxin Units/mg of iron
- **ACUTE TOXICITY**

Analysis: Select five mice, each weighing 18–25 g, maintained on an adequately balanced diet. Inject a dose of Injection, equivalent to 200 mg of iron/kg of body weight, into a tail vein at a rate of NMT 0.1 mL/s. Keep the mice under observation for 48 h after the injection. If none of the mice show outward symptoms of toxicity, the requirements of the test are met. If any of the mice die within the observation period, select four groups of 10 mice, each weighing 18–25 g. Inject, intravenously, all mice of one group with one of the following doses of Injection: 375, 500, 750, or 1000 mg of iron/kg of body weight. Observe the mice for 7 days, and record the number of deaths in each group. If more than 16 mice die, calculate the LD_{50} with log-doses and probits. The four doses of Injection, in mg of iron per kg of body weight, are transformed to $x_1 = 2.574$, $x_2 = 2.699$, $x_3 = 2.875$, and $x_4 = 3.000$. The probits corresponding to the number of deaths observed in each group of 10 mice are designated

www.webofpharma.com

y_1, y_2, y_3, and y_4, respectively, and are given in *Table 1* for mortalities from 10% to 90%. For observed deaths of 0 and 10 adjacent to doses giving an intermediate mortality, use the approximate probits 3.02 and 6.98, respectively; omit the end value (at x_1 or x_4) if not adjacent to an intermediate mortality. Since the information in a probit varies with its expectation, assign each probit an approximate relative weight (w) for computing the LD_{50} of the Injection, as shown in *Table 2*.

Table 2

No. of Deaths	0 or 10	1 or 9	2 or 8	3 or 7	4 to 6
Weight (w)	0.3	0.7	1.0	1.2	1.3

Calculate the weighted means:

$$\bar{x} = \Sigma(wx)/\Sigma w$$

and

$$\bar{y} = \Sigma(wy)/\Sigma w$$

from the sum of the weights, Σw, of the four (or three) acceptable responses and the corresponding weighted sums of the log-doses, $\Sigma(wx)$, and of the probits, $\Sigma(wy)$. From the sums of the weighted products, $\Sigma(wxy)$, and of the weighted squares, $\Sigma(wx^2)$, compute the slope b of the log-dose-probit line as:

$$b = [\Sigma(wxy) - \bar{x}\,\Sigma(wy)]/[\Sigma(wx^2) - \bar{x}\,\Sigma(wx)]$$

The LD_{50} for this safety test, in mg of iron per kg of body weight, is calculated as:

$$LD_{50} = \text{antilog}[\bar{x} + (5 - \bar{y})/b]$$

Acceptance criteria: NLT 500 mg of iron/kg of body weight

- **ABSORPTION FROM INJECTION SITE**

Analysis: Prepare a site over the semitendinosus muscle of one leg of each of two rabbits by clipping the fur and disinfecting the exposed skin. Inject each site with a dose of 0.4 mL/kg of body weight in the following manner. Place the needle in the distal end of the semitendinosus muscle at an angle such as to ensure that the full length of the needle is used, then pass it through the sartorius and vastus medialis muscles. House the rabbits separately. Seven days after the injection, sacrifice the rabbits, and dissect the treated legs to examine the muscles.

Acceptance criteria: No heavy black deposit of unabsorbed iron compounds is observed, and the tissue is only lightly colored.

- **OTHER REQUIREMENTS:** Meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose or multiple-dose containers, preferably of Type I or Type II glass.

Iron Sorbitex Injection

» Iron Sorbitex Injection is a sterile solution of a complex of iron, Sorbitol, and Citric Acid that is stabilized with the aid of Dextrin and an excess of Sorbitol. It contains not less than 94.0 percent and not more than 104.0 percent of the labeled amount of iron.

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass.

Labeling—Label it to indicate its expiration date, which is not more than 24 months after date of manufacture.

Identification—

A: To 1 mL of Injection add 5 mL of water and 1 mL of ammonium hydroxide: no precipitate is formed.

B: To 1 mL of Injection add 0.1 mL of 3 N hydrochloric acid and 0.5 mL of potassium ferrocyanide TS: a dark blue precipitate is formed.

C: To 1 mL of Injection in a separator add 4 mL of water and 10 mL of hydrochloric acid, and extract with three 15-mL portions of isopropyl ether. Dilute the aqueous layer with water to 25 mL, and mix. To 0.5 mL of this solution add 10 mL of water, 2 mL of 2 N sulfuric acid, and 10 mg of potassium

USP Monographs

www.webofpharma.com

periodate, allow to stand for 10 minutes, and then add 10 mL of 0.1 N sodium arsenite. When the solution is colorless, add 10 mL of a 1 in 250 solution of phenylhydrazine hydrochloride in 0.5 N hydrochloric acid. Allow to stand for 10 minutes, add 1 mL of potassium ferricyanide solution (1 in 20), allow to stand for 15 minutes, and then add 3 mL of hydrochloric acid: a wine-red color is produced (*presence of sorbitol*).

D: Dilute 1 mL of Injection with 50 mL of water, and to 4 mL of this solution add 1 mL of 6 N sulfuric acid and 0.5 mL of phosphoric acid, mix, and allow to stand for about 5 minutes or until decolorized. Add 1 mL of potassium bromide solution (1 in 10) and 1 mL of potassium permanganate solution (1 in 20). After 10 minutes, add hydrogen peroxide TS, dropwise, to discharge the pink color. Transfer the solution to a small separator, shake with 20 mL of solvent hexane, discard the water layer, and wash the hexane layer with 20 mL of water. To the washed hexane solution add 5 mL of a 1 in 25 solution of thiourea in sodium borate solution (1 in 50), and shake the mixture: the aqueous layer that separates shows a yellow color (*presence of citric acid*).

Specific gravity ⟨841⟩: between 1.17 and 1.19 at 20°.

Viscosity—Capillary Methods ⟨911⟩**:** between 8 and 13 centipoises, determined at 20° with a capillary tube viscometer.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 10.0 USP Endotoxin Units per mL.

pH ⟨791⟩: between 7.2 and 7.9.

Limit of ferrous iron—Using a "to contain" pipet, transfer 10 mL of Injection to a glass-stoppered, 125-mL flask, rinsing the pipet into the flask with several small portions of water. Add 5 mL of sulfuric acid, shake vigorously until decolorization is effected, add 2 drops of orthophenanthroline TS, and immediately titrate with 0.1 N ceric sulfate VS. Each mL of 0.1 N ceric sulfate is equivalent to 5.585 mg of ferrous iron. The ferrous iron content is not more than 8.5 mg per mL of Injection.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay for iron—

Standard preparation—Transfer an accurately weighed portion of ferrous ammonium sulfate, equivalent to about 100 mg of iron (Fe), to a 300-mL Kjeldahl flask, and proceed as directed under *Assay preparation*, beginning with "Add 10 mL of nitric acid," to obtain a *Standard preparation* having a known concentration of about 2 µg of iron per mL.

Assay preparation—Using a "to contain" pipet, transfer an accurately measured volume of Injection, equivalent to about 100 mg of iron, to a 300-mL Kjeldahl flask, rinsing the pipet into the flask with several small portions of water. Add 10 mL of nitric acid, 10 mL of sulfuric acid, and a few glass beads, and boil the solution gently until fumes of sulfur trioxide appear. Cool, add 3 mL of nitric acid, and heat gently again until fumes of sulfur trioxide appear. Continue the addition of nitric acid, followed by gentle boiling, until the solution is clear and light yellow or green in color, and then boil for an additional 30 minutes. Cool, cautiously add 100 mL of water, and boil gently until solution is complete. Cool, transfer the solution to a 500-mL volumetric flask, rinse the Kjeldahl flask with several small portions of water, dilute with water to volume, and mix. Transfer 5.0 mL of the solution to a second 500-mL volumetric flask, add 100 mL of water and 1 g of ascorbic acid, dilute with water to volume, and mix.

Procedure—Transfer 5.0-mL portions of the *Standard preparation*, of the *Assay preparation*, and of water to serve as the blank to separate, clean, dry test tubes, and to each add 3.0 mL of a 1 in 1500 solution of 2,2′-bipyridine in 0.6 N glacial acetic acid, mix, and allow to stand for 15 minutes. Concomitantly determine the absorbances of the solutions in 1-cm cells at the wavelength of maximum absorbance at about 510 nm, with a suitable spectrophotometer, using the blank to set the instrument. Calculate the quantity, in mg, of iron in each mL of the Injection taken by the formula:

$$(50C/V)(A_U/A_S)$$

in which C is the concentration, in µg per mL, of the *Standard preparation*; V is the volume, in mL, of Injection taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and *Standard preparation*, respectively.

Iron Sucrose Injection

DEFINITION

Iron Sucrose Injection is a sterile, colloidal solution of ferric hydroxide in complex with Sucrose in Water for Injection. It contains NLT 95.0% and NMT 105.0% of the labeled amount of iron. Sodium Hydroxide may be added to adjust the pH. It contains no antimicrobial agent, chelating agent, dextran, gluconate, or other added substances.

IDENTIFICATION

• **A. Iron**

To 2.5 mL of Injection add 17.5 mL of water and 5 mL of hydrochloric acid. Mix and heat the solution for 5 min in a boiling water bath. Cool, add dropwise 13.5 N ammonium hydroxide until no further precipitation of ferric hydroxide occurs, and filter. Wash the precipitate with water to remove excess ammonium hydroxide, dissolve the precipitate in a minimum volume of 2 N hydrochloric acid, and add sufficient water to make a volume of 20 mL. To 3 mL of the solution add 1 mL of 2 N hydrochloric acid and 1 mL of potassium thiocyanate TS: the resulting solution (Solution 1) is red. To 1 mL of Solution 1 add 5 mL of amyl alcohol or ethyl ether, shake, and allow to stand: the organic layer is pink. To a separate 1-mL aliquot of Solution 1 add 2 mL of mercuric chloride TS: a red color is discharged [iron (III) salts].

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay* for *Sucrose*.

• **C. Molecular Weight Determination**

Mobile phase: Dissolve 7.12 g of dibasic sodium phosphate dihydrate, 5.52 g of monobasic sodium phosphate, and 0.40 g of sodium azide in 2 L of water.

System suitability solution: Dissolve 200 mg of high molecular weight dextran and 100 mg of glucose in 20 mL of *Mobile phase*.

Standard solutions: Transfer about 20 mg of each polysaccharide molecular weight standard (5,000–400,000 Da) to separate 5-mL volumetric flasks. Add 4 mL of *Mobile phase* to each flask, and allow each aliquot to stand at or below 25° for a minimum of 12 h. After the agglomerate particles of each *Standard solution* have swelled to their fullest extent, gently swirl each *Standard solution* until dissolved.

[Note—The chromatograms of freshly prepared *Standard solutions* regularly show a small, unidentified secondary peak following the main peak. Discard the *Standard solutions* if the secondary peak reaches half the height of the main peak.]

Sample solution: Transfer 5.0 mL of Injection to a 10-mL volumetric flask, and dilute with *Mobile phase* to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

USP Monographs

www.webofpharma.com

Detector: Refractive index, maintained at a constant temperature of 45°
Columns: Two 7.8-mm × 30-cm; packing L39 with pore sizes of 1000 and 120 Å, respectively
Column temperature: 45 ± 2°
Flow rate: 0.5 mL/min
Injection volume: 25 µL

System suitability
Samples: *System suitability solution* and *Standard solutions*
Suitability requirements
Resolution: NLT 4.0 between dextran and glucose, *System suitability solution*
Correlation coefficient: NLT 0.98 for the calibration curve generated using a suitable program, plotting the retention times of the *Standard solutions* and their molecular weights to generate a third order (cubic) calibration curve

Analysis
Samples: *System suitability solution*, *Standard solutions*, and *Sample solution*
The molecular weight of the complex is calculated from the calibration curve. The molecular weight distribution curve of the sample is sliced into fractions.
Calculate the weight-average molecular weight (M_W) as follows:

$$\text{Result} = \Sigma(A_T M_T)/\Sigma A_T$$

Calculate the number-average molecular weight (M_N) as follows:

$$\text{Result} = \Sigma(A_T)/\Sigma(A_T/M_T)$$

A_T = area of each fraction of the sample distribution
M_T = corresponding mean molecular weight of each fraction as determined from its retention time on the calibration curve

Acceptance criteria: The molecular weight distribution curve of the Injection conforms to the following parameters.
M_W: 34,000–60,000 Da
M_N: NLT 24,000 Da
M_W/M_N: NMT 1.7

ASSAY

• **SUCROSE**

Mobile phase: Acetonitrile and water (79:21)
Standard solutions: Individual solutions of 13, 16, 18, 21, and 23 mg/mL of sucrose from USP Sucrose RS, in water
Sample solution: Transfer about 1.875 g of Injection to a 25-mL flask. Add 1.25 mL of water and mix. Add 1.25 mL of a monobasic sodium phosphate solution, prepared by dissolving 30 g in 50 mL, and mix. Allow the resulting solution to stand for 10 min to precipitate the colloidal ferric hydroxide. Dilute with water to volume. Centrifuge this solution at 3000 rpm for 15 min. Pass the resulting solution through a filter, discarding the first 2 mL of the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: Refractive index
Column: 4-mm × 25-cm; packing L8
Temperatures
Detector: 20–25° (±2°)
Column: 20–25° (±2°)
Flow rate: 2 mL/min
Injection volume: 20 µL

System suitability
Samples: *Standard solutions*
[NOTE—The retention time for sucrose is about 8 min.]
Suitability requirements
Correlation coefficient: NLT 0.998 from the linear regression of the *Standard solutions*

Analysis
Samples: *Standard solutions* and *Sample solution*
Plot the peak area for each *Standard solution* versus concentration of sucrose in mg/mL, and draw the straight line best fitting the five plotted points. From the graph, determine the concentration of sucrose, in mg/mL, in the *Sample solution*.
Calculate the quantity of sucrose, in mg, in each mL of Injection taken:

$$\text{Result} = (C_U \times D \times G)/W$$

C_U = concentration of sucrose in the *Sample solution* (mg/mL)
D = dilution volume of the *Sample solution* (mL)
G = density of Injection taken (g/mL)
W = weight of Injection taken (g)

Acceptance criteria: 260–340 mg/mL

• **IRON**

Solution A: Transfer 2.64 g of calcium chloride to a 1000-mL volumetric flask, add 500 mL of water, and swirl to dissolve. Add 5.0 mL of hydrochloric acid, and dilute with water to volume.
Standard stock solution: 50 µg/mL of iron prepared as follows. Transfer about 350 mg of ferrous ammonium sulfate to a 1000-mL volumetric flask. Add water to dissolve, dilute with water to volume, and mix.
Standard solutions: Individual solutions containing 2.0, 4.0, 6.0, 8.0, and 10.0 µg/mL of iron in *Solution A* from the *Standard stock solution*
Sample stock solution: Using a "to contain" pipet, transfer 2.0 mL of Injection to a 100-mL volumetric flask. Rinse the pipet several times with *Solution A*. Add 5 mL of hydrochloric acid, and swirl until the solution turns yellow. After the solution has cooled to room temperature, dilute with *Solution A* to volume, and mix.
Sample solution: Nominally 8.0 µg/mL of iron prepared as follows. Pipet 2.0 mL of the *Sample stock solution* to a 100-mL volumetric flask, and dilute with *Solution A* to volume.
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelength: 248.3 nm iron emission line
Lamp: Iron hollow-cathode
Flame: Air–acetylene
Blank: *Solution A*

Analysis
Samples: *Standard solutions* and *Sample solution*
Plot the absorbance of each *Standard solution* versus concentration, in µg/mL, of iron, and draw the straight line best fitting the five plotted points. From the graph, determine the concentration, in µg/mL, of iron in the *Sample solution*.
Calculate the percentage of the labeled amount of iron in each mL of Injection taken:

$$\text{Result} = (C_A/C_U) \times 100$$

C_A = actual concentration of iron in the *Sample solution* determined from the calibration curve (µg/mL)

www.webofpharma.com

C_U = nominal concentration of iron in the *Sample solution* (µg/mL)

Acceptance criteria: 95.0%–105.0%

OTHER COMPONENTS

- **CONTENT OF CHLORIDE**

Sample: About 12 g of Injection

Analysis: Transfer the *Sample* to a 50-mL beaker. Add 40 mL of water and 0.3 mL of 65% nitric acid, and, while stirring, titrate with 0.01 N silver nitrate VS, determining the endpoint potentiometrically with silver-glass electrodes. Calculate the content of chloride, in mg, of Injection taken. Each mL of 0.01 N silver nitrate consumed is equal to 0.3545 mg of chloride (Cl).

Acceptance criteria: 0.012%–0.025%

IMPURITIES

- **LIMIT OF IRON [Fe(II)]**

Supplementary electrolyte solution: Dissolve 15.0 g of sodium acetate in 100 mL of water and adjust with 0.1 N acetic acid to a pH of 7.0.

Sample solution: Volume of Injection equivalent to 20–120 µg/mL of elemental iron

Analysis: Transfer a suitable amount of *Supplementary electrolyte solution* to a polarographic cell equipped with a mercury drop electrode. With the electrode submerged in the liquid, bubble nitrogen through the liquid for 5 min. Avoiding any undue exposure to air, immediately transfer the *Sample solution* to the polarographic cell. The sample must be analyzed immediately upon opening the container.

Record the polarogram from 0 mV and –1700 mV. The iron [Fe(III)/Fe(II)] peak is detected at –750 ± 50 mV and the iron [Fe(II)/Fe(0)] peak is detected at –1400 ± 50 mV. Measure the iron [Fe(II)/Fe(III)] peak responses obtained from the polarogram, and perform a blank determination.

Calculate the content of iron [Fe(II)], in % w/v, in the volume of Injection taken:

$$\text{Result} = [1 - (2/R)] \times C_T$$

R = peak response ratio of iron [Fe(II)] to iron [Fe(III)]

C_T = total iron concentration of the Injection (% w/v)

Acceptance criteria: NMT 0.4%

SPECIFIC TESTS

- **pH** ⟨791⟩: 10.5–11.1 at 20°
- **TURBIDITY**

Sample solution: Transfer 0.5 g of Injection to a 150-mL beaker. Add 100 mL of water and, with constant stirring, adjust with 0.1 N hydrochloric acid VS to a pH of 6.0.

Analysis: Remove the pH electrode from the solution. Adjust a light source such that the beam hits the beaker at a parallel angle 2 cm below the surface of the liquid. The light must shine through to the surface, and the solution must not have any turbidity. Measurement must be carried out in a room as dark as possible. Slowly add 0.1 N hydrochloric acid VS, dropwise, until a slight but lasting turbidity develops. Record the pH of the solution as the turbidity point of the Injection.

Acceptance criteria: 4.4–5.3

- **ABSENCE OF LOW-MOLECULAR WEIGHT IRON [Fe(II) AND Fe(III)] COMPLEXES:** In the polarograms obtained in the test for *Limit of Iron [Fe(II)]*, no additional peaks are found.
- **ALKALINITY**

Sample solution: 5 mL of Injection

Analysis: Titrate the *Sample solution* with 0.1 N hydrochloric acid VS with constant stirring to a pH of 7.4. Record the volume of 0.1 N hydrochloric acid VS consumed, and calculate the alkalinity of the Injection as the volume of acid, in mL, consumed per mL of Injection.

Acceptance criteria: 0.5–0.8 mL of 0.1 N hydrochloric acid VS is consumed per mL of Injection.

- **OSMOLALITY AND OSMOLARITY** ⟨785⟩, *Osmolarity*

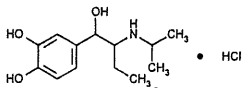
Sample solution: Dilute Injection in water (1 in 10).

Acceptance criteria: 1150–1350 mOsmol/L

- **SPECIFIC GRAVITY** ⟨841⟩: 1.135–1.165 at 20°
- **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩, *Method 1 Light Obscuration Particle Count Test*

Sample solution: Prepare a solution of Injection (1 in 40) using water that has been passed through a filter having a 1.2-µm or finer pore size.

Acceptance criteria: Meets the requirements for small-volume injections



- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: NMT 3.7 USP Endotoxin Units/mg of iron contained in Injection
- **OTHER REQUIREMENTS:** Meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose containers of Type I glass. Store at controlled room temperature. Do not freeze.
- **LABELING:** Label it to indicate that it is for intravenous use only, and that when administered by intravenous infusion, the Injection must be diluted with 0.9% Sodium Chloride Injection to a concentration of 1.0–2.0 mg/mL of elemental iron. Label it also to state the total osmolarity of the solution expressed in mOsmol/L.
- **USP REFERENCE STANDARDS** ⟨11⟩

USP Sucrose RS

Isoetharine Hydrochloride

$C_{13}H_{21}NO_3 \cdot HCl$ 275.77

1,2-Benzenediol, 4-[1-hydroxy-2-[(1-methylethyl)amino] butyl]-, hydrochloride.

3,4-Dihydroxy-α-[1-(isopropylamino)propyl]benzyl alcohol hydrochloride [2576-92-3].

» Isoetharine Hydrochloride contains not less than 97.0 percent and not more than 102.0 percent of $C_{13}H_{21}NO_3 \cdot HCl$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—

USP Isoetharine Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: A solution (1 in 100) responds to the tests for *Chloride* ⟨191⟩.

pH ⟨791⟩: between 4.0 and 5.6, in a solution (1 in 100).

Loss on drying ⟨731⟩—Dry it at 100° for 4 hours: it loses not more than 1.0% of its weight.

USP Monographs

www.webofpharma.com

Aromatic ketones—Its absorptivity (see *Ultraviolet-Visible Spectroscopy* ⟨857⟩) at 312 nm, determined in a solution in 0.01 N hydrochloric acid containing 2.0 mg per mL, is not more than 0.20.

Assay—

Standard preparation—Dissolve an accurately weighed quantity of USP Isoetharine Hydrochloride RS in freshly prepared sodium bisulfite solution (3 in 1000) to obtain a solution having a concentration of about 5 mg per mL. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with 0.17 N acetic acid to volume, and mix to obtain a solution having a known concentration of about 500 µg per mL.

Assay preparation—Transfer about 125 mg of Isoetharine Hydrochloride, accurately weighed, to a 25-mL volumetric flask, dissolve in sodium bisulfite solution (3 in 1000), dilute with sodium bisulfite solution to volume, and mix. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with 0.17 N acetic acid to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 278-nm detector and a 4-mm × 30-cm column that contains packing L1. The mobile phase is 0.17 N acetic acid, having a flow rate of about 2.2 mL per minute. Chromatograph five replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 3.0%.

Procedure—Using a microsyringe or sampling valve, chromatograph 10 µL of the *Standard preparation*, and adjust the specimen size and other operating parameters, if necessary, until satisfactory chromatography and peak responses are obtained. Chromatograph equal volumes of the *Standard preparation* and the *Assay preparation*, record the chromatograms, and measure the peak responses. Calculate the quantity, in mg, of $C_{13}H_{21}NO_3 \cdot HCl$ in the portion of Isoetharine Hydrochloride taken by the formula:

$$0.25C(h_U/h_S)$$

in which C is the concentration, in µg per mL, of USP Isoetharine Hydrochloride RS in the *Standard preparation;* and h_U and h_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Isoetharine Inhalation Solution

» Isoetharine Inhalation Solution is a sterile solution of Isoetharine Hydrochloride in Purified Water. It may contain Sodium Chloride. It contains not less than 92.0 percent and not more than 108.0 percent of the labeled amount of isoetharine hydrochloride ($C_{13}H_{21}NO_3 \cdot HCl$).

Packaging and storage—Preserve in small, tight containers that are well-filled or otherwise protected from oxidation. Protect from light.

Labeling—The label indicates that the Inhalation Solution is not to be used if its color is pinkish or darker than slightly yellow or if it contains a precipitate.

USP Reference standards ⟨11⟩—
USP Isoetharine Hydrochloride RS

Color and clarity—

Standard solution—Transfer 2.0 mL of 0.100 N iodine VS to a 500-mL volumetric flask, dilute with water to volume, and mix.

Procedure—Visually examine a portion of the Inhalation Solution *(Test solution)* in a suitable clear glass test tube against a white background: it is not pinkish and it contains no precipitate. If any yellow color is observed in the *Test solution*, concomitantly determine the absorbances of the *Test solution* and the *Standard solution* in 1-cm cells with a suitable spectrophotometer set at 460 nm: the absorbance of the *Test solution* does not exceed that of the *Standard solution*.

Identification—Dilute the Inhalation Solution with water to obtain a solution containing about 2.5 mg of isoetharine hydrochloride per mL. Apply 10-µL portions of this solution and a solution of USP Isoetharine Hydrochloride RS containing 2.5 mg per mL to a thin-layer chromatographic plate coated with silica gel mixture. Develop the plate in a mixture consisting of *n*-butyl alcohol, water, and formic acid (70:20:10) to a height of 12 to 14 cm above the point of application. Remove the plate, and evaporate the solvents with the aid of warm, circulating air. Examine under short-wavelength UV light. Spray the plate with Folin–Ciocalteu phenol TS, and then expose to ammonia vapor until the isoetharine spots develop an intense blue color: the R_F value and color of the principal spot obtained from the solution under test correspond to those obtained from the *Standard solution*.

Sterility Tests ⟨71⟩: meets the requirements.

pH ⟨791⟩: between 2.5 and 5.5.

Assay—

Standard preparation—Prepare as directed in the *Assay* under *Isoetharine Hydrochloride*.

Assay preparation—Transfer an accurately measured volume of Inhalation Solution, equivalent to about 50 mg of isoetharine hydrochloride, to a 100-mL volumetric flask, dilute with 0.17 N acetic acid solution to volume, and mix.

Chromatographic system—Proceed as directed in the *Assay* under *Isoetharine Hydrochloride*.

Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isoetharine Hydrochloride*. Calculate the quantity, in mg, of $C_{13}H_{21}NO_3 \cdot HCl$ in each mL of the Inhalation Solution taken by the formula:

$$0.1(C/V)(h_U/h_S)$$

in which V is the volume, in mL, of Inhalation Solution taken; and C, h_U, and h_S are as defined therein.

Isoetharine Mesylate

$C_{13}H_{21}NO_3 \cdot CH_4O_3S$ 335.42

1,2-Benzenediol, 4-[1-hydroxy-2-[(1-methylethyl)amino] butyl]-, methanesulfonate (salt).

3,4-Dihydroxy-α-[1-(isopropylamino)propyl]benzyl alcohol methanesulfonate (salt) [7279-75-6].

» Isoetharine Mesylate contains not less than 97.0 percent and not more than 102.0 percent of $C_{13}H_{21}NO_3 \cdot CH_4O_3S$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—
USP Isoetharine Hydrochloride RS

USP Monographs

www.webofpharma.com

Identification—

A: It responds to the *Thin-layer Chromatographic Identification Test* ⟨201⟩, the test solution and the Standard solution of USP Isoetharine Hydrochloride RS being prepared at a concentration of 2.5 mg per mL in methanol, the solvent mixture being *n*-butanol, water, and formic acid (64:25:11), and the spots being located by spraying with sodium hydroxide solution (1 in 10).

B: Mix about 50 mg with about 200 mg of powdered sodium hydroxide, transfer the mixture to a small test tube, heat in a small flame to fusion, and continue the heating for a few minutes longer. Cool, add about 0.5 mL of water, then add a moderate excess of hydrochloric acid, and warm: starch iodate paper placed over the mouth of the test tube turns blue.

Melting range ⟨741⟩: between 162° and 168°.

pH ⟨791⟩: between 4.5 and 5.5, in a solution (1 in 100).

Loss on drying ⟨731⟩—Dry it at 80° under vacuum at a pressure of not more than 5 mm of mercury for 4 hours: it loses not more than 1.0% of its weight.

Limit of keto precursor—Its absorptivity (see *Ultraviolet-Visible Spectroscopy* ⟨857⟩) at 312 nm, determined in a solution in 0.01 N hydrochloric acid containing 2.0 mg per mL, is not more than 0.20.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of 0.1 M sodium sulfate in 0.8% acetic acid. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Transfer about 60 mg of USP Isoetharine Hydrochloride RS, accurately weighed, to a 25-mL volumetric flask, add 4.0 mL of alcohol, and mix. Add 3 drops of 1 N hydrochloric acid, dilute with water to volume, and mix.

Assay preparation—Transfer about 75 mg of Isoetharine Mesylate, accurately weighed, to a 25-mL volumetric flask, add 4.0 mL of alcohol, and mix. Add 3 drops of 1 N hydrochloric acid, dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains packing L9. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed under *Procedure:* the relative standard deviation for replicate injections is not more than 3.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the peak responses. Calculate the quantity, in mg, of $C_{13}H_{21}NO_3 \cdot CH_4O_3S$ in the portion of Isoetharine Mesylate taken by the formula:

$$0.025C(335.42/275.77)(r_U/r_S)$$

in which C is the concentration, in µg per mL, of USP Isoetharine Hydrochloride RS in the *Standard preparation;* 335.42 and 275.77 are the molecular weights of isoetharine mesylate and isoetharine hydrochloride, respectively; and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Delete the following:

▲Isoetharine Mesylate Inhalation Aerosol

» Isoetharine Mesylate Inhalation Aerosol is a solution of Isoetharine Mesylate in Alcohol in an inert propellant base. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of isoetharine mesylate ($C_{13}H_{21}NO_3 \cdot CH_4O_3S$).

Packaging and storage—Preserve in small, nonreactive, light-resistant, aerosol containers equipped with metered-dose valves and provided with oral inhalation actuators.

USP Reference standards ⟨ 11 ⟩ —
USP Isoetharine Hydrochloride RS

Identification—

A: Expel a quantity of Inhalation Aerosol, equivalent to about 12 mg of isoetharine mesylate, into 2 mL of methanol, dilute with methanol to 5 mL, and mix: this solution responds to *Identification* test *A* under *Isoetharine Inhalation Solution.*

B: Expel a quantity of Inhalation Aerosol, equivalent to about 12 mg of isoetharine mesylate, into a test tube, evaporate on a steam bath just to dryness, and add 50 mg of powdered sodium hydroxide. Heat in a small flame to fusion, and continue heating for a few seconds longer. Cool, add about 0.5 mL of water, then add a moderate excess of 3 N hydrochloric acid: starch iodate paper placed over the mouth of the test tube turns blue.

Alcohol Determination ⟨611⟩ —Weigh accurately a filled Inhalation Aerosol container, and record the weight. Invert the container, and place the outlet tip against the bottom of a 50-mL beaker containing 5 mL of water. Slowly actuate the valve 10 times. Raise the unit above the contents of the beaker, and wash the outlet with 1 mL of water. Collect the washings in the beaker. Dip the outlet stem in alcohol, shake to remove the solvent completely, air-dry the valve, and again weigh the Inhalation Aerosol container. Record the weight of the expelled specimen. Transfer the contents of the beaker, with the aid of 4 mL of water, to a glass-stoppered graduated cylinder. Determine the alcohol content of the test solution thus prepared by the gas-liquid chromatographic procedure, 2 mL of dilute isopropyl alcohol (15 in 100) being used as the internal standard. Calculate the alcohol content of the Inhalation Aerosol taken by the formula:

$$SV/W$$

in which S is the percentage (w/v) of alcohol in the test solution; V is the total volume, in mL, of the test solution; and W is the weight, in g, of the expelled specimen taken: between 25.9% and 35.0% (w/w) of C_2H_5OH is found.

Dose uniformity over the entire contents: meets the requirements for *Metered-Dose Inhalers* under *Aerosols, Nasal Sprays, Metered-Dose Inhalers, and Dry Powder Inhalers* ⟨601⟩.

PROCEDURE FOR DOSE UNIFORMITY—

Ferro-citrate solution and *Buffer solution*—Prepare as directed under *Epinephrine Assay* ⟨391⟩.

Standard preparation—Dissolve an accurately weighed quantity of USP Isoetharine Hydrochloride RS in a freshly prepared sodium bisulfite solution (1 in 1000), and dilute

www.webofpharma.com

quantitatively and stepwise with the same sodium bisulfite solution as necessary to obtain a solution having a known concentration of about 34 µg per mL.

Test preparation—Discharge the minimum recommended dose into the sampling apparatus and detach the inhaler as directed. Rinse the apparatus (filter and interior) with two 5.0-mL portions of a freshly prepared sodium bisulfite solution (1 in 500), and transfer the resulting solutions quantitatively to a 50-mL centrifuge tube. Add 10 mL of chloroform, insert the stopper, shake vigorously for 5 minutes and centrifuge. Use the clear supernatant as directed in the *Procedure*.

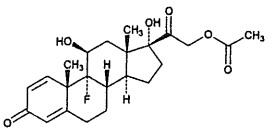
Procedure—Into three separate 25-mL volumetric flasks transfer the *Test preparation*, 10.0 mL of the *Standard preparation*, and 10.0 mL of a freshly prepared sodium bisulfite solution (1 in 1000) to provide the blank. To each flask add 0.5 mL of *Ferro-citrate solution* followed by 5 mL of *Buffer solution*. Dilute with the sodium bisulfite solution (1 in 1000) to volume, mix, and allow the color to develop for 10 minutes. Concomitantly determine the absorbances with a suitable spectrophotometer, in 5-cm cells, of the solutions from the *Test preparation* and the *Standard preparation* relative to the blank at the wavelength of maximum absorbance at about 530 nm. Calculate the quantity, in µg, of $C_{13}H_{21}NO_3 \cdot CH_4O_3S$ contained in the minimum dose taken by the formula:

$$10CN(335.42 / 275.77)(A_U / A_S)$$

in which C is the concentration, in µg per mL, of USP Isoetharine Hydrochloride RS in the *Standard preparation*; N is the number of sprays discharged to obtain the minimum recommended dose; 335.42 and 275.77 are the molecular weights of isoetharine mesylate and isoetharine hydrochloride, respectively; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation*, respectively.

Assay—

Mobile phase and *Standard preparation*—Proceed as directed in the *Assay* under *Isoetharine Mesylate*.



Assay preparation—Weigh 1 Inhalation Aerosol container with contents. Invert the container, and place the outlet tip against the bottom of a 50-mL beaker containing 2.5 mL of 0.01 N hydrochloric acid. Slowly actuate the valve about 90 times (the weight of the assay specimen is approximately 5 g). Raise the unit above the contents of the beaker, and wash the outlet with a few mL of water. Collect the washings in the beaker. Dip the outlet stem in alcohol, shake to remove the solvent completely, air-dry the valve, and then again weigh the Inhalation Aerosol container. Record the weight of the expelled specimen. Transfer the contents of the beaker to a 100-mL volumetric flask with the aid of water, dilute with water to volume, and mix.

Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isoetharine Mesylate*. Calculate the percentage of $C_{13}H_{21}NO_3 \cdot CH_4O_3S$ in the portion of Inhalation Aerosol taken by the formula:

$$0.01(335.42 / 275.77)(C / W)(r_U / r_S)$$

in which W is the weight, in g, of Inhalation Aerosol taken; and the other terms are as defined therein. ▲2S (USP41)

Isoflupredone Acetate

$C_{23}H_{29}FO_6$ 420.47

Pregna-1,4-diene-3,20-dione, 21-(acetyloxy)-9-fluoro-11,17-dihydroxy-, (11β)-.

9-Fluoro-11β,17,21-trihydroxypregna-1,4-diene-3,20-dione 21-acetate [338-98-7].

» Isoflupredone Acetate contains not less than 97.0 percent and not more than 103.0 percent of $C_{23}H_{29}FO_6$, calculated on the dried basis.

Packaging and storage—Preserve in well-closed, light-resistant containers.

Labeling—Label it to indicate that it is intended for veterinary use only. Where it is intended for use in preparing injectable dosage forms, the label states that it is sterile or must be subjected to further processing during the preparation of injectable dosage forms.

USP Reference standards ⟨11⟩—
USP Isoflupredone Acetate RS
USP Prednisolone Acetate RS

Change to read:

▲ ***Spectroscopic Identification Tests*** ⟨197⟩, *Infrared Spectroscopy:* ***197M***▲ (CN 1-May-2020)

Absorptivity—

Test preparation: 25 mg in 2000 mL of alcohol.

Procedure—Proceed as directed under *Ultraviolet-Visible Spectroscopy* ⟨857⟩, and measure the absorbance at 240 nm: the absorptivity is between 35.0 and 38.0.

Specific rotation ⟨781S⟩: between +110° and +120°.

Test solution: 10 mg per mL, in dioxane.

Bacterial Endotoxins Test ⟨85⟩ —Where the label states that Isoflupredone Acetate is sterile or that it must be subjected to further processing during the preparation of injectable dosage forms, it contains not more than 125 USP Endotoxin Units per mg of isoflupredone acetate.

Loss on drying ⟨731⟩—Dry it at 105° for 4 hours: it loses not more than 1.0% of its weight.

Residue on ignition ⟨281⟩: not more than 0.5%.

Chromatographic purity—

Solution A—Prepare a mixture of water, methanol, acetonitrile, and glacial acetic acid (500:350:150:3), and degas.

Solution B—Prepare a mixture of acetonitrile, methanol, and water (550:500:3), and degas.

Mobile phase—Use variable mixtures of *Solution A* and *Solution B* as directed for *Chromatographic system*. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Dissolve accurately weighed quantities of USP Isoflupredone Acetate RS and USP Prednisolone Acetate RS in *Solution A* to obtain a solution having known concentrations of about 0.03 mg of each per mL. Sonicate, if necessary, to dissolve.

Test solution—Dissolve an accurately weighed quantity of Isoflupredone Acetate in *Solution A* to obtain a solution having

www.webofpharma.com

a concentration of about 0.3 mg per mL. Sonicate, if necessary, to dissolve. Use this solution within 16 hours.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains packing L7. The flow rate is about 1 mL per minute. Protect the column from temperature fluctuations. The chromatograph is programmed as follows.

Time (minutes)	*Solution A* (%)	*Solution B* (%)	Elution
0	100	0	equilibration
0–32.5	100	0	isocratic
32.5–47.5	100→0	0→100	linear gradient
47.5–50.5	0	100	isocratic
50.5–51.5	0→100	100→0	linear gradient
51.5–61.5	100	0	isocratic

Chromatograph the *System suitability solution,* and record the peak areas as directed for *Procedure:* the retention time for isoflupredone acetate is between 21 and 26 minutes; the relative retention times are about 1.1 for prednisolone acetate and 1.0 for isoflupredone acetate; the resolution, *R,* between isoflupredone acetate and prednisolone acetate is not less than 1.2; and the column efficiency determined from isoflupredone is not less than 6000 theoretical plates.

Procedure—Inject a volume (about 50 µL) of the *Test solution* into the chromatograph, record the chromatogram, and measure the areas for the major peaks. Calculate the percentage of each impurity in the portion of Isoflupredone Acetate taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the peak response for each impurity; and r_s is the sum of the responses of all the peaks: not more than 1.0% of any individual impurity is found; and not more than 2.0% of total impurities is found, excluding those that are present in amounts less than 0.05%.

Other requirements—Where the label states that it is sterile, it meets the requirements for *Sterility Tests* ⟨71⟩ when tested as directed for *Direct Transfer Method* under *Test Procedures.*

Assay—

Mobile phase—Prepare a mixture of *n*-butyl chloride, water-saturated *n*-butyl chloride, tetrahydrofuran, methanol, and glacial acetic acid (475:475:70:35:30). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Diluent—Use water-saturated chloroform.

Internal standard solution—Dissolve an accurately weighed quantity of fluoxymesterone in *Diluent* to obtain a solution having a known concentration of about 0.9 mg per mL.

Standard preparation—Dissolve about 4 mg of USP Isoflupredone Acetate RS, accurately weighed, in 8.0 mL of *Internal standard solution* and 32.0 mL of *Diluent.*

Assay preparation—Transfer about 4 mg of Isoflupredone Acetate, accurately weighed, to a suitable container. Dissolve in 8.0 mL of *Internal standard solution* and 32.0 mL of *Diluent,* centrifuge, and use the clear chloroform portion.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4-mm × 30-cm column that contains packing L3. The flow rate is about 0.7 mL per minute. Chromatograph the *Standard preparation,* and record the peak areas as directed for *Procedure:* the relative retention times are about 1.0 for isoflupredone acetate and 1.2 for fluoxymesterone; the resolution, *R,* between isoflupredone acetate and fluoxymesterone is not less than 2.0; and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 12 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Calculate the quantity, in mg, of $C_{23}H_{29}FO_6$ in the portion of Isoflupredone Acetate taken by the formula:

$$W_S(R_U/R_S)$$

in which W_S is the weight, in mg, of USP Isoflupredone Acetate RS taken to prepare the *Standard preparation;* and R_U and R_S are the peak area ratios of isoflupredone acetate to fluoxymesterone obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isoflupredone Acetate Injectable Suspension

» Isoflupredone Acetate Injectable Suspension contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of isoflupredone acetate ($C_{23}H_{29}FO_6$).

Packaging and storage—Preserve in single-dose or multiple-dose containers, preferably of Type I glass.

Labeling—Label it to indicate that it is intended for veterinary use only.

USP Reference standards ⟨11⟩—
USP Isoflupredone Acetate RS
USP Prednisolone Acetate RS

Change to read:

▲***Spectroscopic Identification Tests*** ⟨197⟩, *Infrared Spectroscopy:* ***197M***▲ (CN 1-May-2020).

Test specimen—Transfer about 25 mg of Injectable Suspension to a centrifuge tube, add 20 mL of water, and shake well. Centrifuge, and discard the liquid layer. Repeat this washing step with three additional 20-mL portions of water. Dry the material so obtained at 105° for 3 hours.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 125 USP Endotoxin Units per mg of isoflupredone acetate.

Sterility Tests ⟨71⟩ —It meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined.*

pH ⟨791⟩: between 5.0 and 7.5.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

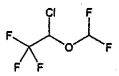
Assay—

Mobile phase, Diluent, Internal standard solution, Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Isoflupredone Acetate*

Assay preparation—Transfer an accurately measured volume of Injectable Suspension, equivalent to about 4 mg of isoflupredone acetate, to a suitable container. Add 8.0 mL of *Internal standard solution* and 32.0 mL of *Diluent,* and swirl to dissolve.

Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isoflupredone Acetate* Calculate the quantity, in mg, of

USP Monographs



www.webofpharma.com

isoflupredone acetate ($C_{23}H_{29}FO_6$) in each mL of Injectable Suspension taken by the formula:

$$(W_S/V)(R_U/R_S)$$

in which V is the volume, in mL, of Injectable Suspension taken to prepare the *Assay preparation;* and the other terms are as defined therein.

Isoflurane

$C_3H_2ClF_5O$ 184.49

Ethane, 2-chloro-2-(difluoromethoxy)-1,1,1-trifluoro-; 1-Chloro-2,2,2-trifluoroethyl difluoromethyl ether [26675-46-7].

DEFINITION

Isoflurane contains NLT 99.9% and NMT 100.0% of isoflurane ($C_3H_2ClF_5O$).

IDENTIFICATION

- **A.** The IR absorption spectrum of Isoflurane, obtained using a gas cell, exhibits maxima only at the same wavelengths as those of a similar preparation of USP Isoflurane RS.

ASSAY

- **PROCEDURE**

Analysis: Using the results from the test for *Organic Impurities,* calculate the percentage of isoflurane ($C_3H_2ClF_5O$) in the sample of Isoflurane taken by subtracting the sum of percentages for the impurities found from 100.0%.

Acceptance criteria: 99.9%–100.0%

IMPURITIES

- **CHLORIDE**

Sample solution: Pipet 10 mL of Isoflurane into a suitable vessel containing 60 mL of isopropyl alcohol and 4 drops of dilute nitric acid (1:1), and stir to dissolve.

Analysis: Titrate potentiometrically with 0.002 N silver nitrate in isopropyl alcohol VS.

Acceptance criteria: NMT 2.11 mL is required (NMT 10 ppm)

- **LIMIT OF FLUORIDE**

Use plasticware throughout this test.

Buffer: Dissolve 110 g of sodium chloride and 1 g of sodium citrate in 700 mL of water in a 2-L volumetric flask. Cautiously add 150 g of sodium hydroxide, and dissolve with shaking. Cool to room temperature, and, while stirring, cautiously add 450 mL of glacial acetic acid to the cooled solution. Cool, add 600 mL of isopropyl alcohol, dilute with water to volume, and mix. The pH of this solution is between 5.0 and 5.5. [NOTE—This solution may be used for 6 weeks if stored at room temperature.]

Solution A: Transfer 55 mg of USP Sodium Fluoride RS, previously dried at 150° for 4 h, to a 25-mL volumetric flask. Add 5 mL of water, and mix to dissolve. Add 1.0 mL of 0.0025 N sodium hydroxide, dilute with water to volume, and mix. Each mL of this solution contains 1 mg of fluoride ion. Store in a tightly closed plastic container. [NOTE—This solution may be used for 2 weeks if stored in a refrigerator.]

Standard stock solution 1: 2.0 µg/mL of fluoride in water from *Solution A*

Standard stock solution 2: 6.0 µg/mL of fluoride in water from *Solution A*

Standard stock solution 3: 10.0 µg/mL of fluoride in water from *Solution A*

Standard stock solution 4: 20.0 µg/mL of fluoride in water from *Solution A*

Standard solution 1: 1.0 µg/mL of fluoride in *Buffer* from *Standard stock solution 1*

Standard solution 2: 3.0 µg/mL of fluoride in *Buffer* from *Standard stock solution 2*

Standard solution 3: 5.0 µg/mL of fluoride in *Buffer* from *Standard stock solution 3*

Standard solution 4: 10.0 µg/mL of fluoride in *Buffer* from *Standard stock solution 4*

Sample solution: Shake 50.0 mL of Isoflurane with 50.0 mL of water for 5 min, and allow the liquids to separate completely. Transfer 25.0 mL of the water layer to a 50-mL volumetric flask, dilute with *Buffer* to volume, and mix.

Analysis

Samples: *Standard solutions 1–4* and *Sample solution* (See *pH* ⟨791⟩.)

Concomitantly measure the potentials in mV, of *Standard solutions 1–4* and the *Sample solution* with a pH meter capable of a minimum reproducibility of ±0.2 mV and equipped with a fluoride ion electrode and a glass-sleeved calomel reference electrode or a double-junction fluoride ion-selective combination electrode. When taking measurements, immerse the electrodes in the solution under test, which has been transferred to a 150-mL beaker containing a polytef-coated stirring bar. Allow to stir on a magnetic stirrer with an insulated top until equilibrium is attained (1–2 min), and record the potential. Rinse and dry the electrodes between measurements, taking care to avoid damaging the crystal of the fluoride ion electrode.

A satisfactory response is achieved if the difference in potential between the potentials obtained with *Standard solution 1* and *Standard solution 4,* having fluoride concentrations of 1.0 and 10.0 µg/mL, respectively, is in the range of 50–60 mV. Plot the logarithm of the fluoride ion concentrations, in µg/mL, of *Standard solutions 1–4* versus potential, in mV. From the measured potential of the *Sample solution* and the standard response line, determine the concentration, in µg/mL, of fluoride in the *Sample solution.*

Acceptance criteria: NMT 5 µg/mL of fluoride in the *Sample solution* [NMT 0.001% (w/v) fluoride in Isoflurane]

- **NONVOLATILE RESIDUE**

Analysis: Transfer 10.0 mL of Isoflurane to a suitable weighed evaporating dish, evaporate with the aid of a current of air or stream of nitrogen to dryness, and dry the residue at 50° for 2 h.

Acceptance criteria: The weight of the residue does not exceed 2.0 mg.

- **ORGANIC IMPURITIES**

Standard stock solution: To a suitable tared vial, fitted with a septum, add 20 mL (29.8 g) of Isoflurane. Seal and reweigh the vial to determine the weight of the Isoflurane added. To this vial sequentially add 20 µL (30 mg) of USP Isoflurane Related Compound A RS, 21 µL (30 mg) of USP Isoflurane Related Compound B RS, and 38 µL (30 mg) of USP Acetone RS. Record the weight after the addition of each impurity and determine the total weight.

Calculate the percentage of each impurity in the *Standard stock solution:*

$$\text{Result} = (W_I/W_T) \times P_I$$

W_I = weight of each impurity added (g)

W_T = total weight of the *Standard stock solution* (g)

www.webofpharma.com

P_I = purity of each impurity added (%)

Standard solution: To a suitable tared vial, fitted with a septum, add 10 mL (15 g) of Isoflurane. Seal and reweigh the vial to determine the weight of the Isoflurane added. To this vial add 300 µL of the *Standard stock solution*, and record the weight to determine the weight of the *Standard stock solution* added and the final weight of the *Standard solution*.

Calculate the spiked concentration (C_S) of each impurity in the *Standard solution*:

$$\text{Result} = (W_I/W_T) \times C_I$$

W_I = weight of the *Standard stock solution* added (g)
W_T = total weight of the *Standard solution* (g)
C_I = concentration of each impurity in the *Standard stock solution* (%)

System suitability solution: To a suitable vial, fitted with a septum, add 10 mL (15 g) of Isoflurane. Seal the vial. To this vial add 100 µL of the *Standard stock solution*.

Sample solution: Isoflurane

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: GC

Detector: Flame ionization

Column: 0.32-mm × 60-m; fused-silica capillary coated with a 1.0-µm film of G16

Carrier gas: Helium

Flow rate: 1.7 mL/min (constant flow mode)

Temperatures

Injection port: 175°

Detector: 200°

Column: See *Table 1*.

Table 1

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold Time at Final Temperature (min)
40	—	40	8
40	10	170	4

Injection volume: 2 µL

Injection type: Split; split ratio, 23:1

System suitability

Samples: *Standard solution* and *System suitability solution*

Suitability requirements

Tailing factor: NMT 1.5 for acetone, *Standard solution*

Relative standard deviation: NMT 5% each for isoflurane related compound A, isoflurane related compound B, and acetone, *Standard solution*

Signal-to-noise ratio: NLT 15 for isoflurane related compound B, *System suitability solution*

Analysis: Injections of Isoflurane used to prepare the *Standard solution* must be made to estimate the amount of known impurities that may be present in the solvent. The final concentration of each impurity is equal to the concentration of the impurity added plus the concentration inherent in the matrix.

Samples: *Standard solution* and *Sample solution*

Calculate the final concentration (C_F) of each impurity in the *Standard solution*:

$$\text{Result} = [r_U/(r_S - r_U) \times C_S] + C_S$$

r_U = peak response of each impurity from the Isoflurane used as the solvent
r_S = peak response of each impurity from the *Standard solution*
C_S = spiked concentration of each impurity in the *Standard solution* (%)

Calculate the percentage of isoflurane related compound A, isoflurane related compound B, and acetone observed in the *Sample solution*, which are also present in the *Standard solution*:

$$\text{Result} = (r_U/r_S) \times C_F$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of each impurity from the *Standard solution*
C_F = final concentration of each impurity in the *Standard solution* (%)

Calculate the percentage of all other impurities:

$$\text{Result} = (r_U/r_S) \times C_S \times (1/F)$$

r_U = peak response of the impurity from the *Sample solution*
r_S = peak response of isoflurane related compound B from the *Standard solution*
C_S = final concentration of USP Isoflurane Related Compound B RS in the *Standard solution* (%)
F = relative response factor relative to isoflurane related compound B (see *Table 2*)

Acceptance criteria: See *Table 2*.

Table 2

Name	Relative Retention Time[a]	Relative Response Factor[b]	Acceptance Criteria, NMT (%)
Dichloroisoflurane[c]	0.41	0.28	0.003
Isoflurane isomer[d]	0.43	0.87	0.003
Isoflurane related compound A	0.46	—	0.01
Isoflurane related compound B	0.56	1.00	0.007
Chloroisoflurane[e]	0.59	0.35	0.003
Acetone	0.79	—	0.008

Isometheptene Mucate, Dichloralphenazone, and Acetaminophen Capsules

DEFINITION
Isometheptene Mucate, Dichloralphenazone, and Acetaminophen Capsules contain NLT 85.0% and NMT 110.0% of the labeled amounts of isometheptene mucate $[(C_9H_{19}N)_2 \cdot C_6H_{10}O_8]$ and dichloralphenazone $(C_{15}H_{18}Cl_6N_2O_5)$, and NLT 90.0% and NMT 110.0% of the labeled amount of acetaminophen $(C_8H_9NO_2)$.

IDENTIFICATION
- **A.** The retention times of the major peaks of the *Sample solution* correspond to those of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Mobile phase: Acetonitrile, 0.07 M monobasic potassium phosphate, 0.007 M sodium 1-decanesulfonate, and diethylamine (250:750:25:15). Adjust with phosphoric acid to a pH of 3.5.
  Sensitivity solution: Empty the contents of 1 Capsule into a 100-mL volumetric flask. Add 80 mL of water, and swirl to dissolve. Dilute with water to volume. Pass a portion of this solution through a glass-fiber filter, discarding the first 5 mL of the filtrate. [NOTE—Prepare this solution, chromatograph it, and evaluate it as directed for *System suitability* before preparing the *Standard solution* and the *Sample solution*.]
  Standard solution: USP Reference Standards in water as listed below
  Acetaminophen: 3.25 mg/mL of USP Acetaminophen RS
  Dichloralphenazone: 3.25*J* mg/mL of USP Dichloralphenazone RS, where *J* is the ratio of the labeled amount, in mg, of dichloralphenazone to the labeled amount of acetaminophen in mg/Capsule
  Isometheptene mucate: 3.25*J′* mg/mL of USP Isometheptene Mucate RS, where *J′* is the ratio of the labeled amount, in mg, of isometheptene mucate to the labeled amount of acetaminophen in mg/Capsule
  Sample solution: Transfer 20 Capsules to a 2000-mL volumetric flask. Add 1900 mL of water, and heat on a steam bath until the Capsules disintegrate. While still warm, shake by mechanical means for 15 min, sonicate for 15 min, and allow to cool to ambient temperature. Dilute with water to volume. Pass a portion of this mixture through a glass-fiber filter, discarding the first 5 mL of the filtrate.

www.webofpharma.com

Analytical wavelength 2: 243 nm until the dichloralphenazone peak has been recorded
Analytical wavelength 3: 190 nm until the isometheptene mucate peak has been recorded
Column: 4.6-mm × 25-cm; 5-µm packing L7
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Samples: *Sensitivity solution* and *Standard solution*
Suitability requirements
Sensitivity: Acetaminophen, dichloralphenazone, and isometheptene mucate detected at acceptable levels of sensitivity, *Sensitivity solution*
Relative standard deviation: NMT 2.0% each for acetaminophen, dichloralphenazone, and isometheptene mucate, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amounts of acetaminophen ($C_8H_9NO_2$), dichloralphenazone ($C_{15}H_{18}Cl_6N_2O_5$), and isometheptene mucate [$(C_9H_{19}N)_2 \cdot C_6H_{10}O_8$] in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

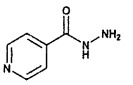
r_U = peak response of acetaminophen, dichloralphenazone, or isometheptene mucate from the *Sample solution*
r_S = peak response of the corresponding peak from the *Standard solution*
C_S = concentration of the corresponding USP Reference Standard in the *Standard solution* (mg/mL)
C_U = nominal concentration of the corresponding analyte in the *Sample solution* (mg/mL)

Acceptance criteria: 85.0%–110.0% of the labeled amounts of isometheptene mucate [$(C_9H_{19}N)_2 \cdot C_6H_{10}O_8$] and dichloralphenazone ($C_{15}H_{18}Cl_6N_2O_5$), and 90.0%–110.0% of the labeled amount of acetaminophen ($C_8H_9NO_2$)

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩
Medium: Water; 900 mL
Apparatus 1: 100 rpm
Time: 60 min
Mobile phase, Sensitivity solution, Chromatographic system, and System suitability: Proceed as directed in the *Assay* except use an *Injection volume* of 100 µL.
Standard solution: USP Reference Standards in water as listed below. Pass through a suitable filter, and use the filtrate.
Acetaminophen: 0.0011*A* mg/mL of USP Acetaminophen RS, where *A* is the labeled amount of acetaminophen in mg/Capsule
Dichloralphenazone: 0.0011*AJ* mg/mL of USP Dichloralphenazone RS, where *A* is the labeled amount of acetaminophen in mg/Capsule and *J* is the ratio of the labeled amount, in mg, of dichloralphenazone to the labeled amount of acetaminophen in mg/Capsule
Isometheptene mucate: 0.0011*AJ′* mg/mL of USP Isometheptene Mucate RS, where *A* is the labeled amount of acetaminophen in mg/Capsule and *J′* is the ratio of the labeled amount, in mg, of isometheptene mucate to the labeled amount of acetaminophen in mg/Capsule
Sample solution: Pass 20 mL of the solution under test through a glass-fiber filter, and discard the first 15 mL of the filtrate.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentages of the labeled amounts of acetaminophen ($C_8H_9NO_2$), dichloralphenazone ($C_{15}H_{18}Cl_6N_2O_5$), and isometheptene mucate [$(C_9H_{19}N)_2 \cdot C_6H_{10}O_8$] dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$



r_U = peak response of acetaminophen, dichloralphenazone, or isometheptene mucate from the *Sample solution*
r_S = peak response of the corresponding peak from the *Standard solution*
C_S = concentration of the corresponding USP Reference Standard in the *Standard solution* (mg/mL)
V = volume of the *Medium*, 900 mL
L = label claim of acetaminophen, dichloralphenazone, or isometheptene mucate (mg/Capsule)

Tolerances: NLT 65% (*Q*) of the labeled amounts of acetaminophen ($C_8H_9NO_2$), dichloralphenazone ($C_{15}H_{18}Cl_6N_2O_5$), and isometheptene mucate [$(C_9H_{19}N)_2 \cdot C_6H_{10}O_8$] is dissolved.
• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in well-closed containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Acetaminophen RS
USP Dichloralphenazone RS
USP Isometheptene Mucate RS

Isoniazid

$C_6H_7N_3O$ 137.14
4-Pyridinecarboxylic acid, hydrazide;
Isonicotinic acid hydrazide [54-85-3].

DEFINITION

Isoniazid contains NLT 98.0% and NMT 102.0% of isoniazid ($C_6H_7N_3O$), calculated on the dried basis.

IDENTIFICATION

Flow rate: 1.5 mL/min
Injection volume: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing: NMT 2.0 for the isoniazid peak
Relative standard deviation: NMT 0.73%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of isoniazid ($C_6H_7N_3O$) in the portion of Isoniazid taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isoniazid from the *Sample solution*
r_S = peak response of isoniazid from the *Standard solution*
C_S = concentration of USP Isoniazid RS in the *Standard solution* (mg/mL)
C_U = concentration of Isoniazid in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the dried basis

IMPURITIES

- **RESIDUE ON IGNITION** ⟨281⟩**:** NMT 0.2%
- **ORGANIC IMPURITIES**

Buffer and **Mobile phase:** Proceed as directed in the *Assay*.
System suitability solution: 1.0 µg/mL each of USP Isoniazid RS, isoniacin, isonicotinamide, picolinohydrazide, and isonicotinonitrile in *Mobile phase*
Standard solution: 1.0 µg/mL of USP Isoniazid RS in *Mobile phase*
Sample solution: 1.0 mg/mL of Isoniazid in *Mobile phase*
Chromatographic system: Proceed as directed in the *Assay*, except for the following.
Detector: UV 266 nm
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 2.0 between any adjacent peak pair, *System suitability solution*
Relative standard deviation: NMT 5.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Isoniazid taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of isoniazid from the *Standard solution*
C_S = concentration of USP Isoniazid RS in the *Standard solution* (mg/mL)
C_U = concentration of Isoniazid in the *Sample solution* (mg/mL)
F = relative response factor (see *Table 1*)

Acceptance criteria: See *Table 1*. Disregard any peak less than 0.05%.

Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Isoniacin[a]	0.50	0.69	0.1
Isoniazid	1.0	1.0	—
Isonicotinamide	1.4	0.70	0.1
Picolinohydrazide[b]	2.1	1.2	0.1
Isonicotinonitrile[c]	3.9	0.74	0.1
Any unspecified impurity	—	1.0	0.10
Total impurities	—	—	2.0

[a] Isonicotinic acid.
[b] 2-Isoniazid.
[c] 4-Cyanopyridine.

SPECIFIC TESTS

- **pH** ⟨791⟩
Sample solution: In a solution (1 in 10)
Acceptance criteria: 6.0–7.5

Analysis: Dry at 105° for 4 h.
Acceptance criteria: NMT 1.0%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers. Store at 25°, excursions permitted between 15° and 30°.
- **USP REFERENCE STANDARDS** ⟨11⟩
USP Isoniazid RS

Isoniazid Injection

DEFINITION

Isoniazid Injection is a sterile solution of Isoniazid in Water for Injection. It contains NLT 90.0% and NMT 110.0% of the labeled amount of isoniazid ($C_6H_7N_3O$).

IDENTIFICATION

- **A.** The retention time exhibited by isoniazid in the *Sample solution* corresponds to that of isoniazid in the *Standard solution*, as obtained in the *Assay*.
- **B.**
Sample stock solution: Nominally 0.1 mg/mL of isoniazid in water prepared as follows. Transfer an equivalent to 50 mg of isoniazid from a volume of Injection to a 500-mL volumetric flask, and dilute with water to volume.
Sample solution: 0.01 mg/mL of isoniazid in water prepared as follows. Transfer 10.0 mL of *Sample stock solution* to a 100-mL volumetric flask, add 2.0 mL of 0.1 N hydrochloric acid, and dilute with water to volume.
Acceptance criteria: The UV absorption spectrum of the *Sample solution* exhibits maxima and minima only at the same wavelengths as that of a similar solution of USP Isoniazid RS, concomitantly measured.

www.webofpharma.com

ASSAY

• **PROCEDURE**

Mobile phase: 4.4 g/L of docusate sodium in a mixture of methanol and water (600:400), and adjust with 2 N sulfuric acid to a pH of 2.5.

Standard solution: 0.32 mg/mL of USP Isoniazid RS in *Mobile phase*

Sample solution: Nominally 0.32 mg/mL of isoniazid in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 254 nm

Column: 4.6-mm × 25-cm; packing L1

Flow rate: 1.5 mL/min

Injection volume: 10 µL

System suitability

Sample: *Standard solution*

Suitability requirements

Column efficiency: NLT 1800 theoretical plates

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of isoniazid ($C_6H_7N_3O$) in the portion of Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isoniazid from the *Sample solution*

r_S = peak response of isoniazid from the *Standard solution*

C_S = concentration of USP Isoniazid RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of isoniazid in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **pH** ⟨791⟩: 6.0–7.0

• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: Contains NMT 0.3 USP Endotoxin Unit/mg of isoniazid

• **OTHER REQUIREMENTS:** It meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in single-dose or multiple-dose containers, preferably of Type I glass, protected from light.

• **LABELING:** Its package label states that if crystallization has occurred, the Injection should be warmed to redissolve the crystals before use.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Isoniazid RS

Isoniazid Oral Solution

DEFINITION

Isoniazid Oral Solution contains, in each 100 mL, NLT 0.93 g and NMT 1.10 g of isoniazid ($C_6H_7N_3O$).

IDENTIFICATION

• **A.**

Sample stock solution: Nominally 0.1 mg/mL of isoniazid in water prepared as follows. Transfer an equivalent to 50 mg of isoniazid from a volume of Oral Solution to a 500-mL volumetric flask, and dilute with water to volume.

Sample solution: 0.01 mg/mL of isoniazid in water prepared as follows. Transfer 10.0 mL of *Sample stock solution* to a 100-mL volumetric flask, add 2.0 mL of 0.1 N hydrochloric acid, and dilute with water to volume.

Acceptance criteria: The UV absorption spectrum of the *Sample solution* exhibits maxima and minima only at the same wavelengths as that of a similar solution of USP Isoniazid RS, concomitantly measured.

ASSAY

• **NITRITE TITRATION** ⟨451⟩

Diluent: Dilute hydrochloric acid (1 in 6)

Sample solution: Nominally 2 mg/mL of isonizid prepared as follows. To a volume of Oral Solution, equivalent to 100 mg of isoniazid, add 50 mL of a mixture of 1 part of potassium bromide in 10 parts of *Diluent*.

Analysis: Proceed as directed in the chapter, beginning with "cool to about 15°". Each mL of 0.1 M sodium nitrite is equivalent to 13.71 mg of isoniazid ($C_6H_7N_3O$).

Acceptance criteria: 0.93–1.10 g in each 100 mL

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Isoniazid RS

Isoniazid Tablets

DEFINITION

Isoniazid Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of isoniazid ($C_6H_7N_3O$).

IDENTIFICATION

• **A.** The retention time of the isoniazid peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

• **B. ULTRAVIOLET ABSORPTION**

Sample stock solution: Nominally 0.1 mg/mL of isoniazid in water prepared from a portion of finely powdered Tablets

Sample solution: Nominally 0.01 mg/mL of isoniazid in water prepared as follows. Transfer 10.0 mL of *Sample stock solution* to a 100-mL volumetric flask, add 2.0 mL of 0.1 N hydrochloric acid, and dilute with water to volume.

Acceptance criteria: The UV absorption spectrum of the *Sample solution* exhibits maxima and minima only at the same wavelengths as that of a similar solution of USP Isoniazid RS, concomitantly measured.

ASSAY

• **PROCEDURE**

Buffer: To 0.1 M monobasic potassium phosphate solution, adjusted with 10 N sodium hydroxide to a pH of 6.9, add sufficient triethanolamine to obtain a solution of 0.2 mM of triethanolamine.

Mobile phase: *Buffer* and methanol (95:5)

Standard solution: 0.32 mg/mL of USP Isoniazid RS in *Mobile phase*

Sample solution: Nominally 0.32 mg/mL of isoniazid in *Mobile phase* prepared as follows. Weigh and finely powder NLT 20 Tablets. Transfer a portion of the powder, equivalent to 32 mg of isoniazid, to a 100-mL volumetric flask. Add 40 mL of *Mobile phase*, and sonicate for 10 min. Cool to room temperature, dilute with *Mobile phase* to volume, and centrifuge for 5 min.

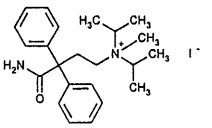
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of isoniazid ($C_6H_7N_3O$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Isoniazid RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of isoniazid in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS
• **DISSOLUTION** ⟨711⟩
Medium: 0.01 N hydrochloric acid; 900 mL
Apparatus 1: 100 rpm
Time: 45 min
Detector: UV 263 nm
Standard solution: USP Isoniazid RS in *Medium*
Sample solution: Dilute with *Medium* to a nominal concentration that is similar to that of the *Standard solution*.
Analysis: Determine the percentage of the labeled amount of isoniazid ($C_6H_7N_3O$) dissolved by using UV absorption on filtered portions of the solution under test, suitably diluted with *Medium*, in comparison with the *Standard solution*.
Tolerances: NLT 80% (*Q*) of the labeled amount of isoniazid ($C_6H_7N_3O$) is dissolved.
• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩
Procedure for content uniformity
Diluent: 0.1 N hydrochloric acid and water (3 in 100)
Standard solution: 10 µg/mL of USP Isoniazid RS prepared as follows. Dissolve a quantity of USP Isoniazid RS in a volume of water corresponding to that used to dissolve a similar amount of isoniazid from the Tablet, and dilute with *Diluent*.
Sample solution: Nominally 10 µg/mL of isoniazid prepared as follows. Transfer 1 finely powdered Tablet to a 500-mL volumetric flask with the aid of 200 mL of water. Shake by mechanical means for 30 min, and add water to volume. Filter, and discard the first 20 mL of the filtrate. Dilute a portion of the filtrate with *Diluent*.
Instrumental conditions
Mode: UV
Analytical wavelength: 263 nm
Cell: 1 cm
Blank: Water
Calculate the percentage of the labeled amount of isoniazid ($C_6H_7N_3O$) in the Tablet taken:



$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Isoniazid RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of isoniazid in the *Sample solution* (µg/mL)

Acceptance criteria: Meet the requirements

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in well-closed, light-resistant containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Isoniazid RS

Isopropamide Iodide

$C_{23}H_{33}IN_2O$ 480.43
Benzenepropanaminium, γ-(aminocarbonyl)-*N*-methyl-*N*,*N*-bis(1-methylethyl)-γ-phenyl-, iodide.
(3-Carbamoyl-3,3-diphenylpropyl) diisopropylmethylammonium iodide [71-81-8].

» Isopropamide Iodide, dried in vacuum at 60° for 2 hours, contains not less than 98.0 percent and not more than 101.0 percent of $C_{23}H_{33}IN_2O$.

Packaging and storage—Preserve in well-closed, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Isopropamide Iodide RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: To 5 mL of a solution (1 in 1000) add 5 mL of sodium carbonate solution (1 in 100), 0.5 mL of bromophenol blue TS, and 10 mL of chloroform, and shake for several minutes: the chloroform layer becomes an intense blue in color.

C: A solution (1 in 1000) responds to the tests for *Iodide* ⟨191⟩.

Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 2 hours: it loses not more than 1.0% of its weight.

Residue on ignition ⟨281⟩: not more than 0.5%, after ignition at 550 ± 25° for 4 hours.

Ordinary impurities ⟨466⟩—
Test solution: methanol.
Standard solution: methanol.
Eluant: a mixture of methanol, glacial acetic acid, and water (8:1:1).
Visualization: 2.

Assay—Dissolve about 750 mg of Isopropamide Iodide, previously dried and accurately weighed, in 60 mL of glacial acetic acid, add 15 mL of mercuric acetate TS and crystal violet TS, and titrate with 0.1 N perchloric acid VS to a blue endpoint. Perform a blank determination, and make any

USP Monographs

www.webofpharma.com

necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 48.04 mg of $C_{23}H_{33}IN_2O$.

Isopropamide Iodide Tablets

» Isopropamide Iodide Tablets contain an amount of isopropamide iodide ($C_{23}H_{33}IN_2O$) equivalent to not less than 93.0 percent and not more than 107.0 percent of the labeled amount of isopropamide ($C_{23}H_{33}N_2O$).

Packaging and storage—Preserve in well-closed containers.

USP Reference standards ⟨11⟩—
USP Isopropamide Iodide RS

Identification—Triturate a portion of powdered Tablets, equivalent to about 10 mg of isopropamide, with 10 mL of water, and filter: the filtrate responds to *Identification*— tests *B:* and *C:* under *Isopropamide Iodide.*

Dissolution ⟨711⟩—
Medium: water; 500 mL.
Apparatus 2: 100 rpm.
Time: 60 minutes.
Procedure—Determine the amount of isopropamide ($C_{23}H_{33}N_2O$) dissolved from UV absorbances at the wavelength of maximum absorbance at about 258 nm of filtered portions of the solution under test, suitably diluted with *Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Isopropamide Iodide RS in the same medium.
Tolerances—Not less than 70% *(Q)* of the labeled amount of $C_{23}H_{33}N_2O$ is dissolved in 60 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—Crush and transfer 1 Tablet to a 100-mL volumetric flask with the aid of about 50 mL of water, and shake by mechanical means for 30 minutes. Dilute with water to volume, mix, and filter, discarding the first 20 mL of the filtrate. Concomitantly determine the absorbances of this solution and a Standard solution of USP Isopropamide Iodide RS in the same medium having a known concentration of about 70 µg per mL, in 5-cm cells at 280 nm and at the wavelength of maximum absorbance at about 258 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of isopropamide ($C_{23}H_{33}N_2O$) in the Tablet taken by the formula:

$$(353.53/480.43)(TC/D)[(A_{U258} - A_{U280})/(A_{S258} - A_{S280})]$$

in which 353.53 and 480.43 are the molecular weights of isopropamide and isopropamide iodide, respectively; T is the labeled quantity, in mg, of isopropamide in the Tablet; C is the concentration, in µg per mL, of USP Isopropamide Iodide RS in the Standard solution; D is the concentration, in µg per mL, of isopropamide in the test solution, based upon the labeled quantity per Tablet and the extent of dilution; and A_U and A_S are the absorbances of the test solution and the Standard solution, respectively, at the wavelengths indicated by the subscripts.

Assay—
Ion-exchange column—Insert a small pledget of glass wool in the bottom of a 6-mm × 240-mm glass tube fitted with a stopcock, fill the tube with water, and add an aqueous slurry of a suitable anion-exchange resin, chloride form (soaked in water for not less than 24 hours prior to use), until a height of about 200 mm is reached. Wash the column with 50 mL of water, and use without delay.
Standard preparation—Transfer about 135 mg of USP Isopropamide Iodide RS, accurately weighed, to a 250-mL volumetric flask, and dissolve in 150 mL of water. Add 5 mL of aluminum chloride solution (1 in 10) and 2 mL of ammonium hydroxide, then dilute with water to volume, mix, and filter, discarding the first 15 mL of the filtrate. Use the subsequent filtrate as directed for *Procedure.*
Assay preparation—Weigh and finely powder not less than 25 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 100 mg of isopropamide, to a 250-mL volumetric flask, add 150 mL of water, and shake by mechanical means for 60 minutes. Add 5 mL of aluminum chloride solution (1 in 10) and 2 mL of ammonium hydroxide, dilute with water to volume, mix, and filter, discarding the first 15 mL of the filtrate. Use the subsequent filtrate as directed for *Procedure.*
Procedure—Pipet 50.0 mL each of the *Standard preparation* and the *Assay preparation*, respectively, onto separate ion-exchange columns, and collect the eluates in separate 200-mL volumetric flasks. Regulate the flow of effluent so that it does not exceed 40 drops per minute, and when the liquid level reaches the top of each column, add successively two 5-mL portions and one 10-mL portion of water to each column, allowing each portion just to enter the column before adding the next portion of water. After the eluates have been collected, dilute the contents of each flask with water to volume, and mix. Concomitantly determine the absorbances of the solutions in 5-cm cells at 280 nm and at the maximum at about 258 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of isopropamide ($C_{23}H_{33}N_2O$) in the portion of Tablets taken by the formula:

$$(353.53/480.43)(0.25C)[(A_{U258} - A_{U280})/(A_{S258} - A_{S280})]$$

in which 353.53 and 480.43 are the molecular weights of isopropamide and isopropamide iodide, respectively; C is the concentration, in µg per mL, of USP Isopropamide Iodide RS in the *Standard preparation*; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation*, respectively, at the wavelengths indicated by the subscripts.

Isopropyl Alcohol

C_3H_8O 60.10
2-Propanol;
Isopropanol [67-63-0].

DEFINITION
Isopropyl Alcohol contains NLT 99.0% of isopropyl alcohol (C_3H_8O).

Run time: 22 min

System suitability

Sample: *System suitability solution*

[NOTE—See *Table 2*.]

Table 2

Name	Relative Retention Time
Ethyl ether	0.7
Acetone	0.9
Isopropyl alcohol	1.0
Diisopropyl ether	1.4
n-Propyl alcohol (1-propanol)	1.5
2-Butanol	2.0

Suitability requirements

Resolution: NLT 1.5 between acetone and isopropyl alcohol

Relative standard deviation: NMT 2.0% for the isopropyl alcohol peak

Tailing factor: NMT 2.0 for the isopropyl alcohol peak

Signal-to-noise ratio: NLT 10 for any of the following peaks: ethyl ether, acetone, isopropyl alcohol, diisopropyl ether, 1-propanol, and 2-butanol

Analysis

Sample: *Sample solution*

Calculate the percentage of isopropyl alcohol (C_3H_8O) in the portion of Isopropyl Alcohol taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of isopropyl alcohol

r_T = sum of all the peak responses

Acceptance criteria: NLT 99.0%

IMPURITIES

• **LIMIT OF VOLATILE IMPURITIES**

System suitability solution, Sample solution, Chromatographic system, and System suitability: Proceed as directed in the *Assay*.

Analysis

Samples: *System suitability solution* and *Sample solution*

Identify each individual impurity peak in the *Sample solution* based on that in the *System suitability solution*.

Calculate the percentage of each individual impurity in the portion of Isopropyl Alcohol taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each individual impurity in the *Sample solution*

r_T = sum of all the peaks in the *Sample solution*

Acceptance criteria: See *Table 3*.

Table 3

Impurity	Percentage (%)
Each individual	NMT 0.1
Total	NMT 1.0

• **LIMIT OF NONVOLATILE RESIDUE**

Sample: 50 mL

Analysis: Evaporate the *Sample* in a tared porcelain dish on a steam bath to dryness, and heat at 105° for 1 h.

Acceptance criteria: NMT 2.5 mg (0.005%)

SPECIFIC TESTS

• **SPECIFIC GRAVITY** ⟨841⟩: 0.783–0.787

• **REFRACTIVE INDEX** ⟨831⟩: 1.376–1.378 at 20°

• **ACIDITY**

Sample solution: To 50 mL of Isopropyl Alcohol add 100 mL of carbon dioxide-free water.

Analysis: To the *Sample solution* add 2 drops of phenolphthalein TS, and titrate with 0.020 N sodium hydroxide to a pink color that persists for 30 s.

Acceptance criteria: NMT 0.70 mL of 0.020 N sodium hydroxide is required for neutralization.

• **WATER DETERMINATION,** *Method I* ⟨921⟩

Sample: 5.0 g

Acceptance criteria: NMT 0.5%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers, and prevent exposure to excessive heat. Protect from light.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP 2-Propanol RS

USP 2-Propanol System Suitability RS

It contains isopropyl alcohol with 0.1% each of ethyl ether, acetone, diisopropyl ether, 1-propanol, and 2-butanol.

www.webofpharma.com

Azeotropic Isopropyl Alcohol

DEFINITION

Azeotropic Isopropyl Alcohol contains NLT 91.0% and NMT 93.0% of isopropyl alcohol, by volume, the remainder consisting of water.

IDENTIFICATION

• **A. Infrared Absorption:** The IR absorption spectrum of a thin film of it exhibits a strong broad band at 3.0 µm; a strong region of absorption between 3.35 and 3.5 µm, with its highest peak at 3.36 µm, and others at 3.41 and 3.47 µm; many weak peaks between 3.6 and 6.0 µm, among the most noticeable being those at 3.68, 3.77, 3.97, 4.17, and 5.26 µm; a broad band at 6.2 µm; a strong region of absorption between 6.7 and 7.8 µm, the most prominent features being the peaks at 6.80, 7.09, 7.25 (the highest), 7.46, and 7.63 µm; a strong region of absorption between 8.5 and 9.2 µm, peaking at 8.6, 8.85, and 9.0 µm; and strong peaks at 10.5 and 12.3 µm.

IMPURITIES

• **Limit of Nonvolatile Residue**

Sample: 50 mL

Analysis: Evaporate the *Sample* in a tared porcelain dish on a steam bath to dryness, and heat at 105° for 1 h.

Acceptance criteria: The weight of the residue does not exceed 2.5 mg (0.005%).

• **Volatile Impurities**

System suitability solution: USP 2-Propanol System Suitability RS

Sample solution: Azeotropic Isopropyl Alcohol (Neat)

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: GC

Detector: Thermal conductivity

Column: 0.25-mm × 60-m, coated with a 1.4-µm film of phase G43

Temperature

Injector: 150°

Detector: 200°

Column: See *Table 1*.

Table 1

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold Time at Final Temperature (min)
35	0	35	5
35	1	45	2
45	10	100	1

Carrier gas: Helium

Linear velocity: 35 cm/s

Injection size: 1 µL

Split ratio: 10:1

Run time: 30 min

System suitability

Sample: *System suitability solution*

[NOTE—Approximate relative retention times for ethyl ether, acetone, isopropyl alcohol, diisopropyl ether, 1-propanol, and 2-butanol are 0.6, 0.7, 1.0, 1.1, 1.3, and 1.5, respectively.]

Suitability requirements

Resolution: NLT 1.5 between acetone and isopropyl alcohol

Signal-to-noise ratio: NLT 10 for any of the following peaks: ethyl ether, acetone, isopropyl alcohol, diisopropyl ether, 1-propanol, and 2-butanol

Tailing factor: NMT 2.0 for the isopropyl alcohol peak

Relative standard deviation: NMT 2.0% for the isopropyl alcohol peak

Analysis

Samples: *Sample solution*

Calculate the ratio of isopropyl alcohol (C_3H_8O) in the portion of Azeotropic Isopropyl Alcohol taken:

$$\text{Result} = (r_I/r_T)$$

r_I = peak area for isopropyl alcohol

r_T = sum of all of the peak areas excluding the peak for water

Acceptance criteria: NLT 0.99

SPECIFIC TESTS

• **Specific Gravity** ⟨841⟩**:** 0.815–0.810, indicating 91.0%–93.0% of isopropyl alcohol (C_3H_8O) by volume

• **Refractive Index** ⟨831⟩**:** 1.376–1.378 at 20°

• **Acidity**

Sample: 50 mL

Analysis: Place the *Sample* in a suitable flask, and add 100 mL of carbon dioxide-free water. Add 2 drops of phenolphthalein TS, and titrate with 0.020 N sodium hydroxide to a pink color that persists for 30 s.

Acceptance criteria: NMT 0.70 mL of 0.020 N sodium hydroxide is required for neutralization.

ADDITIONAL REQUIREMENTS

• **Packaging and Storage:** Preserve in tight containers, remote from heat.

Change to read:

• **USP Reference Standards** ⟨11⟩

USP 2-Propanol System Suitability RS

▲It is a mixture of the following: ethyl ether (0.1%), acetone (0.1%), diisopropyl ether (0.1%), 1-propanol (0.1%), 2-butanol (0.1%), and isopropyl alcohol (99.5%).▲ (ERR 1-Dec-2018)

Isopropyl Rubbing Alcohol

DEFINITION

Isopropyl Rubbing Alcohol contains NLT 68.0% and NMT 72.0% of isopropyl alcohol by volume, with the remainder consisting of water, with or without suitable stabilizers, perfume oils, and color additives certified by the FDA for use in drugs.

ASSAY

• **Procedure**

Sample: 50.0 mL of Isopropyl Rubbing Alcohol

Analysis: Transfer the *Sample* to a 250-mL distilling flask, and add 100 mL of water. Arrange the flask for distillation, distill, and collect 95 mL of distillate in a 100-mL volumetric flask. Dilute with water to volume, and determine the specific gravity of the distillate at 25° (see *Specific Gravity* ⟨841⟩).

Acceptance criteria: The specific gravity is 0.955–0.950, corresponding to 68.0%–72.0% of isopropyl alcohol.

SPECIFIC TESTS

• **Specific Gravity** ⟨841⟩**:** 0.872–0.883 at 20°

www.webofpharma.com

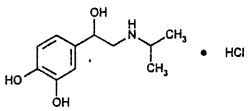
- **LIMIT OF NONVOLATILE RESIDUE**
  Sample: 50 mL of Isopropyl Rubbing Alcohol
  Analysis: Evaporate the *Sample* in a tared porcelain dish on a steam bath to dryness, and dry at 105° for 1 h.
  Acceptance criteria: 0.01%; NMT 5 mg
- **ACIDITY**
  Sample solution: To 50 mL of Isopropyl Rubbing Alcohol add about 75 mL of carbon dioxide-free water.
  Analysis: Transfer the *Sample solution* to a suitable flask, and titrate potentiometrically to a pH of 8.5.
  Acceptance criteria: NMT 1.0 mL of 0.020 N sodium hydroxide is required for neutralization.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers, remote from heat.
- **LABELING:** Label it to indicate that it is flammable.

Isoproterenol Inhalation Solution

» Isoproterenol Inhalation Solution is a sterile solution of Isoproterenol Hydrochloride in Purified Water. It may contain Sodium Chloride. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$).

Packaging and storage—Preserve in small, tight containers that are well-filled or otherwise protected from oxidation. Protect from light.
Labeling—Label it to indicate that the Inhalation Solution is not to be used if its color is pinkish or darker than slightly yellow or if it contains a precipitate.
USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS



Color and clarity—
Standard solution—Transfer 2.0 mL of 0.100 N iodine VS to a 500-mL volumetric flask, dilute with water to volume, and mix.
Procedure—Visually examine a portion of the Inhalation Solution *(Test solution)* in a suitable clear glass test tube against a white background: it is not pinkish and it contains no precipitate. If any yellow color is observed in the *Test solution*, concomitantly determine the absorbances of the *Test solution* and the *Standard solution* in 1-cm cells with a suitable spectrophotometer set at 460 nm: the absorbance of the *Test solution* does not exceed that of the *Standard solution*.
Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that of the *Standard preparation* obtained as directed in the *Assay*.
Sterility Tests ⟨71⟩: meets the requirements.
pH ⟨791⟩: between 2.5 and 5.5.

Assay—
Standard preparation—Prepare as directed in the *Assay* under *Isoproterenol Hydrochloride*.
Assay preparation—Transfer an accurately measured volume of Inhalation Solution, equivalent to about 25 mg of isoproterenol hydrochloride, to a 100-mL volumetric flask, dilute with 0.17 N acetic acid solution to volume, and mix.
Chromatographic system—Proceed as directed in the *Assay* under *Isoproterenol Hydrochloride*.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isoproterenol Hydrochloride*. Calculate the quantity, in mg, of $C_{11}H_{17}NO_3 \cdot HCl$ in each mL of the Inhalation Solution taken by the formula:

$$0.1(C/V)(h_U/h_S)$$

in which V is the volume, in mL, of Inhalation Solution taken; and C, h_U, and h_S are as defined therein.

Isoproterenol Hydrochloride

$C_{11}H_{17}NO_3 \cdot HCl$ 247.72
1,2-Benzenediol, 4-[1-hydroxy-2-[(1-methylethyl)amino] ethyl]-, hydrochloride.
3,4-Dihydroxy-α-[(isopropylamino)methyl]benzyl alcohol hydrochloride [51-30-9].

» Isoproterenol Hydrochloride contains not less than 97.0 percent and not more than 101.5 percent of $C_{11}H_{17}NO_3 \cdot HCl$, calculated on the dried basis.

Packaging and storage—Preserve in tight, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)
Solution: 50 µg per mL.
Medium: water.
Melting range ⟨741⟩: between 165° and 170°.
Loss on drying ⟨731⟩—Dry about 1 g, accurately weighed, in vacuum over phosphorus pentoxide for 4 hours: it loses not more than 1.0% of its weight.
Residue on ignition ⟨281⟩: not more than 0.2%.
Sulfate ⟨221⟩—A 0.10-g portion shows no more sulfate than corresponds to 0.20 mL of 0.020 N sulfuric acid (0.2%).
Limit of isoproterenone—Its absorptivity (see *Ultraviolet-Visible Spectroscopy* ⟨857⟩) at 310 nm, determined in a solution containing 2 mg per mL, is not more than 0.2.
Chloride content—Dissolve about 500 mg, accurately weighed, in 5 mL of water. Add 5 mL of glacial acetic acid and 40 mL of methanol. Add eosin Y TS, and titrate with 0.1 N silver nitrate VS. Each mL of 0.1 N silver nitrate is equivalent to 3.545 mg of Cl. Between 13.9% and 14.6% of Cl is found, calculated on the dried basis.

Assay—
Standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in freshly prepared sodium bisulfite solution (3 in 1000) to obtain a solution having a concentration of about 2.5 mg per mL.

www.webofpharma.com

Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with 0.17 N acetic acid to volume, and mix to obtain a solution having a known concentration of about 250 µg per mL.

Assay preparation—Transfer about 125 mg of Isoproterenol Hydrochloride, accurately weighed, to a 25-mL volumetric flask, dissolve in sodium bisulfite solution (3 in 1000), dilute with sodium bisulfite solution to volume, and mix. Transfer 5.0 mL of this solution to a 100-mL volumetric flask, dilute with 0.17 N acetic acid to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 278-nm detector and a 30-cm × 4-mm stainless steel column that contains packing L1. The mobile phase is 0.17 N acetic acid having a flow rate of about 1.5 mL per minute. Chromatograph five replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 3.0%.

Procedure—Using a microsyringe or sampling valve, chromatograph 10 µL of the *Standard preparation*, and adjust the specimen size and other operating parameters, if necessary, until satisfactory chromatography and peak responses are obtained. Chromatograph equal volumes of the *Standard preparation* and the *Assay preparation*, and measure the peak responses. Calculate the quantity, in mg, of $C_{11}H_{17}NO_3 \cdot HCl$ in the portion of Isoproterenol Hydrochloride taken by the formula:

$$0.5C(h_U/h_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation;* and h_U and h_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Delete the following:

▲Isoproterenol Hydrochloride Inhalation Aerosol

» Isoproterenol Hydrochloride Inhalation Aerosol is a solution of Isoproterenol Hydrochloride in Alcohol in an inert propellant base. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$).

Packaging and storage—Preserve in small, nonreactive, light-resistant aerosol containers equipped with metered-dose valves and provided with oral inhalation actuators.

USP Reference standards ⟨ 11 ⟩ —
USP Isoproterenol Hydrochloride RS

Identification—

A: Place 10 mL of water in a small beaker, and deliver 10 sprays from the Inhalation Aerosol under the surface of the water, actuating the valve by pressing the stem tip against the bottom of the beaker. Filter, place 5 mL of the filtrate in a test tube, and retain the remainder of the solution for *Identification* test *B.* Add 1 drop of 0.2 N sulfuric acid and 0.5 mL of 0.1 N iodine, allow to stand for 5 minutes, and add 1 mL of 0.1 N sodium thiosulfate: a salmon-pink color is produced.

B: Dilute the remainder of the filtrate obtained in *Identification* test *A* with an equal volume of water. Add a few drops of 6 N ammonium hydroxide, filter, acidify the filtrate with nitric acid, and divide into two equal portions. To each portion add a few drops of silver nitrate TS: white precipitates are formed. To one portion add a slight excess of nitric acid: the white precipitate remains. To the other portion add a slight excess of 6 N ammonium hydroxide, and shake: the precipitate dissolves.

Alcohol Determination ⟨611⟩ —Weigh accurately a filled Inhalation Aerosol container, and record the weight. Place the container in a dry ice-alcohol bath, and cool for 60 minutes. Remove the container from the bath, and carefully remove the valve with wire cutters, taking precautions to save all pieces of the valve and cap. With the aid of three 5-mL portions of water, transfer the contents of the container to a beaker previously chilled in the bath. Dry the rinsed empty container and all of its parts in an oven at 105° for 2 hours, cool, and weigh. Calculate the weight of the container contents. Add a few boiling chips to the beaker, and carefully stir to help evaporate the propellant. After the bulk of the propellant has evaporated, transfer the contents of the beaker, with the aid of several mL of water, to a glass-stoppered graduated cylinder, measure the volume, and determine the alcohol content of the *Test solution* thus prepared by the gas-liquid chromatographic procedure, methyl ethyl ketone being used as the internal standard. Calculate the alcohol content of the Inhalation Aerosol taken by the formula:

$$SV/W$$

in which S is the percentage of alcohol (w/v) in the *Test solution;* V is the volume, in mL, of the *Test solution;* and W is the weight, in g, of the container contents: between 28.5% and 38.5% (w/w) of C_2H_5OH is found.

Dose uniformity over the entire contents: meets the requirements for *Metered-Dose Inhalers* under *Aerosols, Nasal Sprays, Metered-Dose Inhalers, and Dry Powder Inhalers* ⟨601⟩.

PROCEDURE FOR DOSE UNIFORMITY—

Ferro-citrate solution and *Buffer solution*—Prepare as directed under *Epinephrine Assay* ⟨391⟩.

Standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in a freshly prepared sodium bisulfite solution (1 in 500), and dilute quantitatively and stepwise with the same sodium bisulfite solution as necessary to obtain a solution having a known concentration of about 6 µg per mL.

Test preparation—Discharge the minimum recommended dose into the sampling apparatus and detach the inhaler as directed. Rinse the apparatus (filter and interior) with four 5.0-mL portions of a freshly prepared sodium bisulfite solution (1 in 500), and transfer the resulting solutions quantitatively to a 50-mL centrifuge tube. Add 10 mL of chloroform, insert the stopper, shake vigorously for 1 minute, and centrifuge. Use the clear supernatant as directed for *Procedure.*

Procedure—Into three separate flasks, transfer the *Test preparation,* 20.0 mL of the *Standard preparation,* and 20.0 mL of water to provide the blank. To each flask add 100 µL of *Ferro-citrate solution* followed by 1.0 mL of *Buffer solution,* and mix. Concomitantly determine the absorbances with a suitable spectrophotometer, in 5-cm cells, of the solutions from the *Test preparation* and the *Standard preparation,* at the wavelength of maximum absorbance at about 530 nm, against the blank. Calculate the quantity, in µg, of $C_{11}H_{17}NO_3 \cdot HCl$ contained in the minimum dose taken by the formula:

$$20CN\,(A_U/A_S)$$

www.webofpharma.com

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation*; N is the number of sprays discharged to obtain the minimum dose; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation*, respectively.

Assay—

Ferro-citrate Solution, *Buffer Solution*, and *Standard preparation*—Prepare as directed under *Unit spray content*.

Assay preparation—Fit the Inhalation Aerosol container with its inhalation actuator, and prime the unit by firing it 10 times. Remove the actuator, and accurately weigh the container with its remaining contents. Invert the container, place the valve stem tip against the bottom of a 100-mL beaker containing 20 mL of chloroform, and deliver under the surface of the chloroform a number of sprays equivalent to about 500 µg of isoproterenol hydrochloride. Raise the unit above the contents of the beaker, and wash the valve stem with about 2 mL of chloroform. Collect the washings in the beaker. Allow the valve stem to dry, and again accurately weigh the Inhalation Aerosol container with its remaining contents. Record the weight of the expelled specimen. Transfer the contents of the beaker to a centrifuge tube with the aid of two 3-mL portions of chloroform, add 10.0 mL of freshly prepared sodium bisulfite solution (1 in 500), and shake vigorously for 1 minute. Centrifuge, and use the clear supernatant as directed for *Procedure*.

Procedure—Into three separate test tubes, pipet 5 mL each of the *Assay preparation*, *Standard preparation*, and water to provide the blank, respectively. To each tube add 100 µL of *Ferro-citrate Solution*, followed by 1.0 mL of *Buffer Solution*, and mix. Determine the absorbances of the *Assay preparation* and the *Standard preparation* at the wavelength of maximum absorbance at about 530 nm, against the blank. Calculate the percentage (w/w) of $C_{11}H_{17}NO_3 \cdot HCl$ in the portion of Inhalation Aerosol taken by the formula:

$$0.001(C / W)(A_U / A_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation*; W is the weight, in g, of Inhalation Aerosol taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation*, respectively. ▲ 2S(USP41)

Isoproterenol Hydrochloride Injection

» Isoproterenol Hydrochloride Injection is a sterile solution of Isoproterenol Hydrochloride in Water for Injection. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$).

Packaging and storage—Preserve in single-dose containers, preferably of Type I glass, protected from light. Store at controlled room temperature.

Labeling—Label it to indicate that the Injection is not to be used if its color is pinkish or darker than slightly yellow or if it contains a precipitate.

USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS

Color and clarity—Using the Injection as the *Test solution*, proceed as directed for *Color and clarity* under *Isoproterenol Inhalation Solution*.

Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 1250.0 USP Endotoxin Units per mg of isoproterenol hydrochloride.

pH ⟨791⟩**:** between 2.5 and 4.5.

Particulate Matter in Injections ⟨788⟩ **:** meets the requirements for small-volume injections.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Mobile phase—Dissolve 1.76 g of sodium 1-heptanesulfonate in 800 mL of water. Add 200 mL of methanol, and adjust with 1 M phosphoric acid to a pH of 3.0 ± 0.1. Pass the solution through a membrane filter having a 1-µm or finer porosity.

Standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in freshly prepared sodium bisulfite solution (1 in 1000) to obtain a solution having a known concentration of about 20 µg per mL.

Resolution solution—Prepare a solution of epinephrine bitartrate in freshly prepared *Mobile phase* containing 1.0% of sodium bisulfite, having a concentration of about 200 µg per mL. Mix 2.0 mL of this solution and 18.0 mL of the *Standard preparation*.

Assay preparation—Quantitatively dilute an accurately measured volume of Injection with freshly prepared sodium bisulfite solution (1 in 1000) to obtain a solution having a concentration of about 20 µg per mL.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 4-mm × 30-cm column that contains packing L1. The flow rate is about 2 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 1.5%. Chromatograph the *Resolution solution:* the relative retention times are about 0.55 for epinephrine and 1.0 for isoproterenol; the resolution, R, for epinephrine and isoproterenol is not less than 3.5; and the tailing factors for the epinephrine and isoproterenol peaks are not more than 2.5.

Procedure—Separately inject equal volumes (about 100 µL) of the *Standard preparation* and the *Assay preparation*, record the chromatograms, and measure the peak responses. Calculate the quantity, in mg, of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$) in each mL of the Injection taken by the formula:

$$C(L/D)(r_U/r_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation*; L is the labeled quantity, in µg per mL, of isoproterenol hydrochloride in the Injection; D is the concentration, in µg per mL, of isoproterenol hydrochloride in the *Assay preparation*, on the basis of the labeled quantity in each mL and the extent of dilution; and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

www.webofpharma.com

Isoproterenol Hydrochloride Tablets

» Isoproterenol Hydrochloride Tablets contain not less than 93.0 percent and not more than 107.0 percent of the labeled amount of $C_{11}H_{17}NO_3 \cdot HCl$.

Packaging and storage—Preserve in well-closed, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS
Identification—Powder a number of Tablets, equivalent to about 50 mg of isoproterenol hydrochloride, digest with 15 mL of hot dehydrated alcohol for 20 minutes, cool, filter, and evaporate the filtrate on a steam bath to dryness: the residue responds to the *Identification*— tests under *Isoproterenol Hydrochloride*.

Dissolution ⟨711⟩—
Medium: water; 900 mL.
Apparatus 2: 50 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{11}H_{17}NO_3 \cdot HCl$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 279 nm of filtered portions of the solution under test, suitably diluted with *Dissolution Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Isoproterenol Hydrochloride RS in the same medium.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{11}H_{17}NO_3 \cdot HCl$ is dissolved in 45 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—Crush 1 Tablet, and transfer it with the aid of 25 mL of water to a 50-mL volumetric flask. Shake gently until no more dissolves, add water to volume, and mix. Filter through a dry filter into a dry flask, rejecting the first 20 mL of the filtrate. Transfer a portion of the filtrate, equivalent to about 2.5 mg of isoproterenol hydrochloride and accurately measured, to a 50-mL volumetric flask, dilute with water to volume, and mix. Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in water, and dilute quantitatively and stepwise with water to obtain a Standard solution having a known concentration of about 50 µg per mL. Concomitantly and without delay, determine the absorbances of both solutions in 1-cm cells at the wavelength of maximum absorbance at about 279 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of $C_{11}H_{17}NO_3 \cdot HCl$ in the Tablet taken by the formula:

$$2.5(C/V)(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the Standard solution; V is the volume, in mL, of the filtrate taken; and A_U and A_S are the absorbances of the solution from the Tablet and the Standard solution, respectively.

Assay—
Mobile phase—Adjust 0.1 M sodium sulfate with phosphoric acid to a pH of 3.0. Mix 90 parts of this solution with 10 parts of methanol.
Standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in 0.1 N sulfuric acid, and dilute quantitatively and stepwise with the same solvent to obtain a solution having a known concentration of about 0.1 mg per mL.
Assay preparation—Weigh and finely powder not less than 20 Tablets. Weigh accurately a portion of the powder, equivalent to about 10 mg of isoproterenol hydrochloride, and transfer with the aid of 50 mL of 0.1 N sulfuric acid to a 100-mL volumetric flask. Shake gently until no more dissolves, dilute with the same solvent to volume, and mix. Filter through a dry filter into a dry flask, rejecting the first 20 mL of the filtrate.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph three replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph by means of a suitable microsyringe or sampling valve, record the chromatograms, and measure the responses for the major peaks. The retention time is about 3.5 minutes for isoproterenol. Calculate the quantity, in mg, of $C_{11}H_{17}NO_3 \cdot HCl$ in the portion of Tablets taken by the formula:

$$100C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

▲Isoproterenol Hydrochloride and Phenylephrine Bitartrate Inhalation Aerosol

» Isoproterenol Hydrochloride and Phenylephrine Bitartrate Inhalation Aerosol is a suspension of microfine Isoproterenol Hydrochloride and Phenylephrine Bitartrate in suitable propellants in a pressurized container. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amounts of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$) and phenylephrine bitartrate ($C_9H_{13}NO_2 \cdot C_4H_6O_6$).

Packaging and storage—Preserve in small, nonreactive, light-resistant aerosol containers equipped with metered-dose valves and provided with oral inhalation actuators.
USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS
USP Phenylephrine Hydrochloride RS

Identification—
A: Place 10 mL of water in a small beaker, and deliver 20 sprays from the Aerosol under the surface of the water, actuating the valve by pressing the tip against the bottom of the beaker. To 5 mL of the solution add 1 drop of dilute sulfuric acid (1 in 200), add 0.5 mL of 0.1 N iodine, allow to stand for 5 minutes, and add 1 mL of 0.1 N sodium thiosulfate: a red-brown color is produced.
B: To the balance of the solution obtained in *Identification* test *A* add 3 mL of *Mercuric sulfate solution*, prepared as

Stop following this

www.webofpharma.com

directed in the test for *Dose uniformity over the entire contents*. Heat on a steam bath for 5 minutes, cool, and add 3 mL of sodium nitrite solution (1 in 80): a deep red color is produced.

Dose uniformity over the entire contents: meets the requirements for *Metered-Dose Inhalers* under *Aerosols, Nasal Sprays, Metered-Dose Inhalers, and Dry Powder Inhalers* ⟨601⟩.

PROCEDURE FOR DOSE UNIFORMITY—

Ferro-citrate solution and *Buffer solution*—Prepare as directed under *Epinephrine Assay* ⟨391⟩.

Mercuric sulfate solution—While stirring a mixture of 15 g of yellow mercuric oxide and 80 mL of water, slowly add 20 mL of sulfuric acid, and stir until completely dissolved.

Isoproterenol hydrochloride standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in dilute sulfuric acid (1 in 1000), and dilute quantitatively and stepwise with the same dilute sulfuric acid as necessary to obtain a solution having a known concentration of about 8 µg per mL.

Phenylephrine hydrochloride standard preparation—Dissolve an accurately weighed quantity of USP Phenylephrine Hydrochloride RS in dilute sulfuric acid (1 in 1000), and dilute quantitatively and stepwise with the same dilute sulfuric acid as necessary to obtain a solution having a known concentration of about 12 µg per mL.

Test preparation for isoproterenol hydrochloride—Discharge the minimum recommended dose into the sampling apparatus, and detach the inhaler as directed. Rinse the apparatus (filter and interior) with four 5.0-mL portions of dilute sulfuric acid (1 in 1000), and transfer the resulting solutions quantitatively to a 50-mL centrifuge tube. Add 10 mL of chloroform, insert the stopper, shake vigorously for 1 minute, and centrifuge for 20 minutes. Use the clear supernatant as directed in the *Procedure for isoproterenol hydrochloride*.

Test preparation for phenylephrine bitartrate—Proceed as directed for *Test preparation for isoproterenol hydrochloride* and use the clear supernatant as directed in the *Procedure for phenylephrine bitartrate*.

Procedure for isoproterenol hydrochloride—Into three separate flasks transfer the *Test preparation for isoproterenol hydrochloride*, 20.0 mL of the *Isoproterenol hydrochloride standard preparation*, and 20.0 mL of dilute sulfuric acid (1 in 1000) to provide the blank. To each flask add 100 µL of *Ferro-citrate solution* and 1.0 mL of *Buffer solution*, and mix. Concomitantly determine the absorbances of the *Test preparation* and the *Standard preparation* against the blank at the wavelength of maximum absorbance at about 530 nm, in 5-cm cells, with a suitable spectrophotometer. Calculate the quantity, in µg, of $C_{11}H_{17}NO_3 \cdot HCl$ contained in the minimum dose taken by the formula:

$$20CN(A_U / A_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Isoproterenol hydrochloride standard preparation*; N is the number of sprays discharged to obtain the minimum dose; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation*, respectively.

Procedure for phenylephrine bitartrate—Into three separate flasks transfer the *Test preparation for phenylephrine bitartrate*, 20.0 mL of the *Phenylephrine hydrochloride standard preparation*, and 20.0 mL of dilute sulfuric acid (1 in 1000) to provide the blank. To each flask add 3.0 mL of *Mercuric sulfate solution*, and mix. Immerse in a water bath maintained between 35° and 40° for 10 minutes, remove, and allow to stand at room temperature for 30 minutes. Add 0.25 mL of a sodium nitrite solution (1 in 80), mix, and allow to stand, with occasional swirling, for 30 minutes. Concomitantly determine the absorbances of the *Test preparation* and the *Standard preparation* against the blank at the wavelength of maximum absorbance at about 495 nm, in 5-cm cells, with a suitable spectrophotometer. Calculate the quantity, in µg, of $C_9H_{13}NO_2 \cdot C_4H_6O_6$ in the minimum dose taken by the formula:

$$(317.30 / 203.67)(20CN)(A_U / A_S)$$

in which 317.30 and 203.67 are the molecular weights of phenylephrine bitartrate and phenylephrine hydrochloride, respectively; C is the concentration, in µg per mL, of USP Phenylephrine Hydrochloride RS in the *Phenylephrine hydrochloride standard preparation*; N is the number of sprays discharged to obtain the minimum dose; and A_U and A_S are the absorbances of the solutions from the *Test preparation* and the *Standard preparation*, respectively.

Particle size—Prime the valve of the Aerosol by alternately shaking and firing it several times through its oral inhalation actuator, and then actuate one measured spray onto a clean, dry microscope slide held 5 cm from the end of the actuator, perpendicular to the direction of spray. Carefully rinse the slide with about 2 mL of carbon tetrachloride, and allow to dry. Examine the slide under a microscope, equipped with a calibrated ocular micrometer, using 450× magnification. Focus on the particles of 25 fields of view near the center of the sample pattern, and note the size of the great majority of individual particles: they are less than 5 µm in diameter. Record the size of all individual crystalline particles (not agglomerates) more than 10 µm in length measured along the longest axis: not more than 10 such particles are observed.

Assay—

Ferro-citrate solution, *Buffer solution*, and *Mercuric sulfate solution*—Prepare as directed in the test for *Dose uniformity over the entire contents*.

Isoproterenol hydrochloride standard preparation—Transfer about 50 mg of USP Isoproterenol Hydrochloride RS, accurately weighed, to a 100-mL volumetric flask, add dilute sulfuric acid (1 in 1000) to volume, and mix. Transfer 10.0 mL of this solution to a 50-mL volumetric flask, add dilute sulfuric acid (1 in 1000) to volume, and mix. The concentration of USP Isoproterenol Hydrochloride RS in the *Isoproterenol hydrochloride standard preparation* is about 100 µg per mL.

Phenylephrine hydrochloride standard preparation—Transfer about 50 mg of USP Phenylephrine Hydrochloride RS, accurately weighed, to a 100-mL volumetric flask, add dilute sulfuric acid (1 in 1000) to volume, and mix. Transfer 10.0 mL of this solution to a 50-mL volumetric flask, add dilute sulfuric acid (1 in 1000) to volume, and mix. The concentration of USP Phenylephrine Hydrochloride RS in the *Phenylephrine hydrochloride standard preparation* is about 100 µg per mL.

Assay preparation— [NOTE—Valve actuation during sampling is to be performed in a manner that will deliver freely the spray into the solvent in the bottom of the sampling beaker, but with minimal lateral pressure on the valve stem to avoid possible side-of-stem leakage. Any devices and techniques designed to accomplish these objectives may be used (e.g., actuating the valve by pressing the tip into an indentation in the bottom of the beaker or using a special adapter to spray at right angles to the valve held at the bottom of the beaker).] Place 20 mL of chloroform in a suitable 100-mL beaker. Prime the valve of the Aerosol by alternately shaking and firing it 10 times through its oral inhalation actuator. Accurately weigh the Aerosol, shake it, and immediately deliver a single spray under the surface of the chloroform. Raise the Aerosol above the surface of the chloroform, and shake it

www.webofpharma.com

gently preparatory to delivering another spray similarly under the surface of the chloroform. Deliver a total of 6 sprays in this manner. Rinse the valve stem and ferrule with about 2 mL of chloroform, collecting the rinsing with the sample in the beaker. Allow the Aerosol to dry, weigh it, and determine the total weight of the 6 sprays. Transfer the solution to a centrifuge tube with the aid of two 3-mL portions of chloroform, and add 10.0 mL of dilute sulfuric acid (1 in 1000). Insert the stopper, shake vigorously for 1 minute, centrifuge for 20 minutes, and use the clear supernatant.

Procedure for isoproterenol hydrochloride—Transfer 3.0 mL each of the *Isoproterenol hydrochloride standard preparation* and the *Assay preparation* to separate test tubes. To each tube add 0.10 mL of *Ferro-citrate solution* and 1.0 mL of *Buffer solution*, and mix. Concomitantly determine the absorbances of the solutions in 1-cm cells at the wavelength of maximum absorbance at about 530 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of isoproterenol hydrochloride ($C_{11}H_{17}NO_3 \cdot HCl$) in each mL of the Aerosol taken by the formula:

$$(0.01Cd / W)(A_U / A_S)$$

in which C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Isoproterenol hydrochloride standard preparation*; d is the density, in g per mL, of Aerosol taken; W is the weight, in g, of the sample taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Isoproterenol hydrochloride standard preparation*, respectively. [The density, d, is determined as follows. Weigh a known volume (v) of the Aerosol in a suitable 5-mL gas-tight syringe equipped with a linear valve. Calibrate the volume of the syringe by filling to the 5-mL mark with dichlorotetrafluoroethane withdrawn from a plastic-coated glass vial sealed with a neoprene multiple-dose rubber stopper and an aluminum seal, using 1.456 g per mL as the density of the calibrating liquid. Maintain the dichlorotetrafluoroethane, the Aerosol sample, and the syringe (protected from becoming wet) at 25° in a water bath. Obtain the sample, equivalent to the same volume as that obtained during the sampling procedure, from the Aerosol by means of a sampling device consisting of a replaceable rubber septum engaged in the plate threads at one end of a threaded fitting, the opposite end of which contains a sharpened tube capable of puncturing the aerosol container, and a rubber gasket around the tube to prevent leakage of the container contents after puncture.* Calculate the density taken by the formula:

$$w / v$$

in which w is the weight of the volume, v, of Aerosol taken.]

Procedure for phenylephrine bitartrate—Transfer 5.0 mL each of the *Phenylephrine hydrochloride standard preparation*, the *Assay preparation*, and a blank consisting of dilute sulfuric acid (1 in 1000), to separate test tubes. To each tube add 3.0 mL of *Mercuric sulfate solution*, and mix. Immerse in a water bath maintained between 35° and 40° for 10 minutes, remove, and allow to stand at room temperature for 30 minutes. Add 0.25 mL of sodium nitrite solution (1 in 80), mix, and allow to stand, with occasional swirling, for 30 minutes. Concomitantly determine the absorbances of the solutions against the blank in 1-cm cells at the wavelength of maximum absorbance at about 495 nm, with a suitable spectrophotometer. Calculate the quantity, in mg, of phenylephrine bitartrate ($C_9H_{13}NO_2 \cdot C_4H_6O_6$) in each mL of the Aerosol taken by the formula:

$$(317.30 / 203.67)(0.01Cd / W)(A_U / A_S)$$

in which 317.30 and 203.67 are the molecular weights of phenylephrine bitartrate and phenylephrine hydrochloride, respectively; C is the concentration, in µg per mL, of USP Phenylephrine Hydrochloride RS in the *Phenylephrine hydrochloride standard preparation*; d is the density, in g per mL, of Aerosol taken; W is the weight, in g, of the sample taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Phenylephrine hydrochloride standard preparation*, respectively. ▲2S(USP41)

*A suitable sampling system is available from Alltech Associates, 2051 Waukegan Rd., Deerfield, IL 60015.

Isoproterenol Sulfate

$(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4 \cdot 2H_2O$ 556.62
1,2-Benzenediol, 4-[1-hydroxy-2-[(1-methylethyl)amino] ethyl]-, sulfate (2:1) (salt), dihydrate.
3,4-Dihydroxy-α-[(isopropylamino)methyl]benzyl alcohol sulfate (2:1) (salt) dihydrate [6700-39-6].
Anhydrous 520.60
[299-95-6].

» Isoproterenol Sulfate contains not less than 97.0 percent and not more than 103.0 percent of $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$, calculated on the anhydrous basis.

Packaging and storage—Preserve in tight, light-resistant containers.

Assay preparation—Transfer about 125 mg of Isoproterenol Sulfate, accurately weighed, to a 25-mL volumetric flask, dissolve in sodium bisulfite solution (3 in 1000), dilute with sodium bisulfite solution to volume, and mix. Transfer 5.0 mL of this solution to a 100-mL volumetric flask, dilute with 0.17 N acetic acid to volume, and mix.

Chromatographic system—Proceed as directed for *Procedure* in the *Assay*—under *Isoproterenol Hydrochloride.* Calculate the quantity, in mg, of $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$ in the portion of Isoproterenol Sulfate taken by the formula:

$$(260.30/247.72)(0.5C)(h_U/h_S)$$

in which 260.30 is one-half of the molecular weight of anhydrous isoproterenol sulfate, 247.72 is the molecular weight of isoproterenol hydrochloride; and C, h_U, and h_S are as defined therein.

Isoproterenol Sulfate Inhalation Aerosol

» Isoproterenol Sulfate Inhalation Aerosol is a suspension of microfine Isoproterenol Sulfate in fluorochlorohydrocarbon propellants in a pressurized container. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of isoproterenol sulfate $[(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4]$.

Packaging and storage—Preserve in small, nonreactive, light-resistant aerosol containers equipped with metered-dose valves and provided with oral inhalation actuators.

USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS

Identification—

A: Place 10 mL of water in a small beaker, and deliver 10 sprays from the Aerosol under the surface of the water, actuating the valve by pressing the tip against the bottom of the beaker. Filter, and to 5 mL of the filtrate add 1 drop of dilute hydrochloric acid (1 in 120). Add 0.50 mL of 0.10 N iodine, allow to stand for 5 minutes, and add 1.0 mL of 0.10 N sodium thiosulfate: a red-brown color is produced.

B: A portion of the filtrate obtained in *Identification* test *A* responds to the tests for *Sulfate* ⟨191⟩.

Microbial enumeration tests ⟨61⟩ **and** ***Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa.*

Dose uniformity over the entire contents: meets the requirements for *Metered-Dose Inhalers* under *Aerosols, Nasal Sprays, Metered-Dose Inhalers, and Dry Powder Inhalers* ⟨601⟩.

P*ROCEDURE FOR DOSE UNIFORMITY*—

Ferro-citrate solution and *Buffer solution*—Prepare as directed under *Epinephrine Assay* ⟨391⟩.

Standard preparation—Dissolve an accurately weighed quantity of USP Isoproterenol Hydrochloride RS in a freshly prepared sodium bisulfite solution (1 in 500), and dilute quantitatively and stepwise with the same sodium bisulfite solution as necessary to obtain a solution having a known concentration of about 4 µg per mL.

Test preparation—Discharge the minimum recommended dose into the sampling apparatus and detach the inhaler as directed. Rinse the apparatus (filter and interior) with four 5.0-mL portions of a freshly prepared sodium bisulfite solution (1 in 500), and transfer the resulting solutions quantitatively to a 50-mL centrifuge tube. Add 10 mL of chloroform, insert the stopper, shake vigorously for 1 minute, and centrifuge for 5 minutes. Use the clear supernatant as directed in the *Procedure.*

Procedure—Into three separate flasks transfer the *Test preparation,* 20.0 mL of the *Standard preparation,* and 20.0 mL of water to provide the blank. To each flask add 100 µL of *Ferro-citrate solution* and 1.0 mL of *Buffer solution,* and mix. Concomitantly determine the absorbances with a suitable spectrophotometer, in 5-cm cells, of the solutions from the *Test preparation* and the *Standard preparation* at the wavelength of maximum absorbance at about 530 nm, against the blank. Calculate the quantity, in µg, of $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$ contained in the minimum dose taken by the formula:

$$(260.30/247.72)(20CN)(A_U/A_S)$$

in which 260.30 is one-half of the molecular weight of isoproterenol sulfate (anhydrous), and 247.72 is the molecular weight of isoproterenol hydrochloride; C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation; N* is the number of sprays discharged to obtain the minimum recommended dose; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation,* respectively.

Particle size—Prime the valve of the Aerosol by alternately shaking and firing it several times through its oral inhalation actuator, and then actuate one measured spray onto a clean, dry microscope slide held 5 cm from the end of the actuator, perpendicular to the direction of the spray. Carefully rinse the slide with about 2 mL of carbon tetrachloride, and allow to dry. Examine the slide under a microscope, equipped with a calibrated ocular micrometer, using 450 × magnification. Focus on the particles of 25 fields of view near the center of the test specimen pattern, and note the size of the great majority of individual particles: they are less than 5 µm in diameter. Record the number and size of all individual crystalline particles (not agglomerates) more than 10 µm in length measured along the longest axis: not more than 10 such particles are observed.

Assay—

Ferro-citrate solution and *Buffer solution*—Prepare as directed under *Epinephrine Assay* ⟨391⟩.

Standard preparation—Transfer about 50 mg of USP Isoproterenol Hydrochloride RS, accurately weighed, to a 100-mL volumetric flask, add a freshly prepared solution of sodium bisulfite (1 in 500) to volume, and mix. Transfer 10.0 mL of this solution to a second 100-mL volumetric flask, dilute with the sodium bisulfite solution to volume, and mix. The concentration of USP Isoproterenol Hydrochloride RS in the *Standard preparation* is about 50 µg per mL.

Assay preparation— [NOTE—A suitable sampling beaker is one having a small indentation formed in its inside bottom surface having dimensions adequate to accept the aerosol valve stem during actuation, thereby preventing particle entrapment and side-of-stem leakage during the sample delivery.] Place 20 mL of chloroform in a suitable 100-mL beaker. Prime the valve of the Aerosol by alternately shaking and firing it 10 times through its oral inhalation actuator. Accurately weigh the Aerosol, shake it, and immediately deliver a single spray under the surface of the chloroform, actuating the valve by pressing the tip into the indentation in the bottom of the beaker. Raise the Aerosol above the surface of the chloroform, and shake it gently preparatory to delivering another spray similarly under the surface of the

USP Monographs

www.webofpharma.com

chloroform. Deliver a total of 5 sprays in this manner. Rinse the valve stem and ferrule with about 2 mL of chloroform, collecting the rinsing with the sample in the beaker. Allow the Aerosol to dry, weigh it, and determine the total weight of the 5 sprays. Transfer the solution to a centrifuge tube with the aid of two 3-mL portions of chloroform, and add 10.0 mL of freshly prepared sodium bisulfite solution (1 in 500). Insert the stopper, shake vigorously for 1 minute, centrifuge for 5 minutes, and use the clear supernatant as directed in the *Procedure*.

Procedure—Transfer 5.0 mL each of the *Standard preparation* and the *Assay preparation* to separate test tubes. To each tube add 100 µL of *Ferro-citrate solution* and 1.0 mL of *Buffer solution*, and mix. Concomitantly determine the absorbances of the solutions in 1-cm cells at the wavelength of maximum absorbance at about 530 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$ in each mL of the Aerosol taken by the formula:

$$(260.30/247.72)(0.01Cd/W)(A_U/A_S)$$

in which 260.30 is one-half of the molecular weight of isoproterenol sulfate (anhydrous); 247.72 is the molecular weight of isoproterenol hydrochloride; C is the concentration, in µg per mL, of USP Isoproterenol Hydrochloride RS in the *Standard preparation*; d is the density, in g per mL, of the Aerosol; W is the weight, in g, of the portion of Inhalation Aerosol taken; and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation*, respectively. [The density, d, is determined as follows. Weigh a known volume (v) of the Inhalation Aerosol in a suitable, gas-tight, 5-mL syringe equipped with a linear valve. Calibrate the volume of the syringe by filling to the 5-mL mark with dichlorotetrafluoroethane withdrawn from a plastic-coated glass vial sealed with a neoprene multiple-dose rubber stopper and an aluminum seal, using 1.456 g per mL as the density of the calibrating liquid. Maintain the dichlorotetrafluoroethane, the Aerosol assay specimen, and the syringe (protected from becoming wet) in a water bath at 25°. Obtain the specimen equivalent to the same volume as that obtained during the sampling procedure, from the Aerosol by means of a sampling device consisting of a replaceable rubber septum engaged in the plate threads at one end of a threaded fitting, the opposite end of which contains a sharpened tube capable of puncturing the aerosol container, and a rubber gasket around the tube to prevent leakage of the container contents after puncture.* Record the weight of the volume (v) of the Aerosol as w, and calculate the density by the formula w/v.]

Isoproterenol Sulfate Inhalation Solution

» Isoproterenol Sulfate Inhalation Solution is a sterile solution of Isoproterenol Sulfate in Purified Water. It may contain Sodium Chloride. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of isoproterenol sulfate $[(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4]$.

* A suitable sampling system is available from Alltech Associates, 2051 Waukegan Rd., Deerfield, IL 60015.

Packaging and storage—Store in small, tight containers that are well-filled or otherwise protected from oxidation. Protect from light.

Labeling—Label it to indicate that the Inhalation Solution is not to be used if its color is pinkish or darker than slightly yellow or if it contains a precipitate.

USP Reference standards ⟨11⟩—
USP Isoproterenol Hydrochloride RS

Color and clarity—Using the Inhalation Solution as the *Test solution*, proceed as directed for *Color and clarity* under *Isoproterenol Inhalation Solution*.

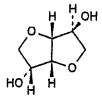
Identification—It meets the requirements for *Identification* tests *C*, *D*, and *E* under *Isoproterenol Sulfate*.

Sterility Tests ⟨71⟩: meets the requirements.

Assay—

Standard preparation—Prepare as directed in the *Assay* under *Isoproterenol Hydrochloride*.

Assay preparation—Transfer an accurately measured volume of Inhalation Solution, equivalent to about 25 mg of isoproterenol sulfate, to a 100-mL volumetric flask, add 50.0 mL of 0.30 N acetic acid, dilute with water to volume, and mix.



Chromatographic system—Proceed as directed in the *Assay* under *Isoproterenol Hydrochloride*.

Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isoproterenol Hydrochloride*. Calculate the quantity, in mg, of $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$ in each mL of the Inhalation Solution taken by the formula:

$$(260.30/247.72)(0.1)(C/V)(h_U/h_S)$$

in which 260.30 is one-half of the molecular weight of anhydrous isoproterenol sulfate; 247.72 is the molecular weight of isoproterenol hydrochloride; V is the volume, in mL, of Inhalation Solution taken; and C, h_U, and h_S are as defined therein.

Isosorbide Concentrate

$C_6H_{10}O_4$ 146.14
D-Glucitol, 1,4:3,6-dianhydro-.
1,4:3,6-Dianhydro-D-glucitol [652-67-5].

» Isosorbide Concentrate is an aqueous solution containing, in each 100 g, not less than 70.0 g and not more than 80.0 g of $C_6H_{10}O_4$.

Packaging and storage—Preserve in tight, light-resistant containers.

Labeling—The label states that this article is not intended for direct administration to humans or animals.

USP Reference standards ⟨11⟩—
USP Isosorbide RS

Identification—

[NOTE—Isosorbide is hygroscopic. Take precautions to protect isolated isosorbide crystals from atmospheric moisture.]

A: Dry a portion of it in an evaporating dish over phosphorus pentoxide at 70° and at a pressure of 50 mm of mercury for 48 hours, changing the phosphorus pentoxide

www.webofpharma.com

after 24 hours. Scratch the bottom of the dish with a glass rod or seed with a crystal of isosorbide, if necessary, to initiate crystallization: the crystals so obtained melt between 60° and 63° when tested by the procedure for *Class I* substances (see *Melting Range or Temperature* ⟨741⟩).

B: The IR absorption spectrum of a potassium bromide dispersion of the crystals obtained as directed in *Identification* test *A* exhibits maxima and minima only at the same wavelengths as that of a similar preparation of USP Isosorbide RS.

Specific rotation ⟨781S⟩: between +44.5° and +47.0°.

Test solution: 80 mg of isosorbide per mL, in water.

Water Determination, *Method I* ⟨921⟩: between 24.0% and 26.0%.

Residue on ignition ⟨281⟩: not more than 0.01%.

Periodate consumption—Dilute about 15 g, accurately weighed, with 25 mL of water, and add 50.0 mL of a solution prepared by dissolving 5.4 g of periodic acid in 100 mL of water and adding 1900 mL of glacial acetic acid. Allow to stand for 1 hour. Add 20 mL of potassium iodide TS, and titrate with 0.1 N sodium thiosulfate VS to the disappearance of the brown color. Add 3 mL of starch TS, and complete the titration. Perform a blank determination, and note the difference in volumes required. If the volume required for the specimen is less than 0.8 of that required for the blank, repeat the procedure with a smaller specimen. The difference in volume corresponds to not more than 0.20 mL of 0.1 N sodium thiosulfate for each g of Concentrate taken.

Acid value—Dilute about 15 g, accurately weighed, with 50 mL of water, and titrate with 0.02 N potassium hydroxide VS to a phenolphthalein endpoint. Perform a blank determination, and make any necessary correction. Calculate the acid value taken by the formula:

$$56.11(AN/W)$$

in which A is the number of mL of potassium hydroxide VS consumed; N is its normality; and W is the weight, in g, of Concentrate taken. The limit is 0.5, calculated on the anhydrous basis.

Methyl ethyl ketone—

Internal standard solution—Prepare a solution in water containing about 1 mg per mL of methyl isobutyl ketone.

Standard preparation—Prepare a solution in water containing an accurately known concentration of methyl ethyl ketone equivalent to about 1 mg per mL. Pipet 5 mL of this solution into a 100-mL volumetric flask, add 5.0 mL of *Internal standard solution*, add water to volume, and mix.

Test preparation—Pipet 5 mL of *Internal standard solution* into a 100-mL volumetric flask, add Concentrate to volume, and mix.

Support—Place about 90 g of unsilanized support S1A in a crystallizing dish, and cover it with chloroform. Stir the mixture thoroughly, and carefully remove the supernatant chloroform with an aspirator. Spread the moist support on a clean surface, and allow it to air-dry. Place the dried support in the crystallizing dish, and cover it with 0.5 N alcoholic potassium hydroxide TS. Allow it to stand for one-half hour with occasional stirring. Carefully pour off the supernatant alcoholic potassium hydroxide solution, and wash the moist support with water until the washing is neutral to phenolphthalein indicator. Spread the moist support on a clean surface, and allow it to air-dry.

Chromatographic system—The gas chromatograph is equipped with a flame-ionization detector and a 0.6-m × 2-mm column packed with 25% liquid phase G16 on unsilanized acid- and base-washed *Support* which has been washed with chloroform, and conditioned as directed (see *Chromatography* ⟨621⟩). The column is maintained at 70°, and nitrogen is used as the carrier gas at a flow rate of about 30 mL per minute. In a suitable chromatogram, the relative standard deviation of five replicate injections is not more than 3.0%, and the resolution is not less than 2.0.

Procedure—Inject about 3 µL of the *Standard preparation* into the gas chromatograph, record the chromatogram, and measure the peak response of each component. [NOTE—Clean the syringe after each injection with pentane. Do not use acetone.] Similarly inject about 3 µL of the *Test preparation*, record the chromatogram, and measure the peak response of each component. Calculate the quantity, in mg, of methyl ethyl ketone in each mL of the Concentrate taken by the formula:

$$(1/0.95)C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of methyl ethyl ketone in the *Standard preparation,* and R_U and R_S are the ratios of the response of the methyl ethyl ketone to the response of the internal standard obtained from the *Test preparation* and the *Standard preparation,* respectively. The limit is 0.05 mg per mL.

Assay—

Internal standard solution—Dissolve a suitable quantity of triethylene glycol in water to obtain a solution containing about 15 mg per mL.

Standard solution—Prepare a solution of USP Isosorbide RS in water containing an accurately known concentration equivalent to about 25 mg of $C_6H_{10}O_4$ per mL.

Standard preparations—Pipet 2-, 3-, 4-, and 5-mL quantities of *Standard solution* into separate 50-mL volumetric flasks, add 5.0 mL of *Internal standard solution* to each, add water to volume, and mix.

Assay preparation—Transfer about 200 mg of Concentrate, accurately weighed, to a 100-mL volumetric flask, add 10.0 mL of *Internal standard solution*, add water to volume, and mix.

Chromatographic system—The gas chromatograph is equipped with a flame-ionization detector and a 3-mm × 0.6-m glass column packed with support S9. The column is maintained at 230°, and nitrogen is used as the carrier gas. The retention time of the isosorbide peak is about 1.5, relative to that of triethylene glycol.

System suitability and *standard curve*—Inject 1-µL portions of each *Standard preparation,* and record each peak response. Plot the ratio of the peak response of isosorbide to that of triethylene glycol versus the concentration, in mg per mL, of isosorbide in the respective *Standard preparation.* The analytical system is suitable for conducting the assay if the correlation coefficient for the Standard curve is greater than 0.980, the resolution, R, is not less than 1.5, and neither tailing factor exceeds 2.0.

Procedure—Inject a 1-µL portion of the *Assay preparation,* record the peak responses for the two major peaks, calculate the ratio of the peak responses, and determine the concentration, C, in mg per mL, of isosorbide in the *Assay preparation* by reference to the *Standard curve.* Calculate the quantity, in mg, of $C_6H_{10}O_4$ in the Concentrate taken by the formula:

$$100C.$$

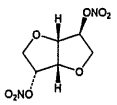
www.webofpharma.com

Isosorbide Oral Solution

» Isosorbide Oral Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of isosorbide ($C_6H_{10}O_4$).

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Isosorbide RS
Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatograms of the *Standard preparations,* as obtained in the *Assay.*

Uniformity of dosage units ⟨905⟩—
FOR ORAL SOLUTION PACKAGED IN SINGLE-UNIT CONTAINERS: meets the requirements.



Deliverable volume ⟨698⟩—
FOR ORAL SOLUTION PACKAGED IN MULTIPLE-UNIT CONTAINERS: meets the requirements.
pH ⟨791⟩**:** between 3.2 and 3.8.

Assay—
Internal standard solution, Standard solution, Standard preparations, Chromatographic system, and *System suitability* and *standard curve*—Proceed as directed in the *Assay* under *Isosorbide Concentrate.*
Assay preparation—Transfer an accurately measured volume of Oral Solution, equivalent to about 450 mg of isosorbide, to a 250-mL volumetric flask, add 25.0 mL of *Internal standard solution,* then add water to volume, and mix.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Isosorbide Concentrate.* Calculate the quantity, in mg, of isosorbide ($C_6H_{10}O_4$) in each mL of the Oral Solution taken by the formula:

$$250(C/V)$$

in which C is the concentration, in mg per mL, of isosorbide in the *Assay preparation* found by reference to the *Standard curve;* and V is the volume, in mL, of Oral Solution taken.

Diluted Isosorbide Dinitrate

$C_6H_8N_2O_8$ 236.14
D-Glucitol, 1,4:3,6-dianhydro-, dinitrate;
1,4:3,6-Dianhydro-D-glucitol dinitrate [87-33-2].

DEFINITION
Diluted Isosorbide Dinitrate is a dry mixture of isosorbide dinitrate ($C_6H_8N_2O_8$) with Lactose, Mannitol, or suitable inert excipients to permit safe handling. It may contain up to 1.0% of a suitable stabilizer, such as Ammonium Phosphate. It contains NLT 95.0% and NMT 105.0% of the labeled amount of isosorbide dinitrate ($C_6H_8N_2O_8$). It usually contains approximately 25% of isosorbide dinitrate.
[**CAUTION**—Exercise proper precautions in handling undiluted isosorbide dinitrate, which is a powerful explosive and can be exploded by percussion or excessive heat. Only exceedingly small amounts should be isolated.]

IDENTIFICATION
• **A.**
Sample solution: Transfer to a medium-porosity, sintered-glass filtering crucible a quantity of Diluted Isosorbide Dinitrate, equivalent to about 50 mg of isosorbide dinitrate, and pass three 5-mL portions of acetone through it. Evaporate the combined extracts at a temperature not exceeding 35°, with the aid of a gentle current of air, and dry the residue under vacuum over calcium chloride at room temperature for 16 h. Prepare a solution (1 in 40) of the residue so obtained, in chloroform.
Standard solution: A similar preparation from the residue obtained from USP Diluted Isosorbide Dinitrate RS
Acceptance criteria: The IR absorption spectrum of the *Sample solution,* determined in a 0.1-mm cell, exhibits maxima only at the same wavelengths as that of the *Standard solution.*
• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution,* as obtained in the *Assay.*

ASSAY
• **PROCEDURE**
Solution A: Methanol and water (6:94)
Solution B: Methanol and water (50:50)
Mobile phase: See *Table 1.*

Table 1

Mode: LC
Detector: UV 214 nm
Column: 4.6-mm × 5-cm; 5-µm packing L1
Column temperature: 30°
Flow rate: 3 mL/min
Injection volume: 75 µL
System suitability
Sample: *Standard solution*

www.webofpharma.com

Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 1.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of isosorbide dinitrate ($C_6H_8N_2O_8$) in the portion of Diluted Isosorbide Dinitrate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isosorbide dinitrate from the *Sample solution*
r_S = peak response of isosorbide dinitrate from the *Standard solution*
C_S = concentration of isosorbide dinitrate from USP Diluted Isosorbide Dinitrate RS in the *Standard solution* (mg/mL)
C_U = concentration of isosorbide dinitrate in the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–105.0%

IMPURITIES

• **ORGANIC IMPURITIES**
Solution A, Solution B, Mobile phase, Diluent, and **Chromatographic system:** Proceed as directed in the *Assay*.
Standard stock solution: 0.3 mg/mL of isosorbide dinitrate prepared as follows. Transfer a suitable portion of USP Diluted Isosorbide Dinitrate RS, equivalent to 30 mg of isosorbide dinitrate, to a 100-mL volumetric flask. Add 10 mL of methanol and sonicate. Dilute with *Diluent* to 60% of the flask volume, sonicate with occasional shaking, and dilute with *Diluent* to volume.
Standard solution: 7.5 µg/mL of isosorbide dinitrate from the *Standard stock solution* in *Diluent*
Sensitivity solution: 0.375 µg/mL of isosorbide dinitrate from the *Standard solution* in *Diluent*
Sample solution: 750 µg/mL of isosorbide dinitrate prepared as follows. Transfer a suitable quantity of Diluted Isosorbide Dinitrate, equivalent to 37.5 mg of isosorbide dinitrate, to a 50-mL volumetric flask. Add 5 mL of methanol, mix, and sonicate. Add *Diluent* to fill 60% of the flask volume, and sonicate with occasional shaking. Allow the solution to equilibrate to room temperature and dilute with *Diluent* to volume.
System suitability
Samples: *Standard solution* and *Sensitivity solution*
[NOTE—See *Table 2* for relative retention times.]
Suitability requirements
Tailing factor: NMT 2.0, *Standard solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Signal-to-noise ratio: NLT 10, *Sensitivity solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Diluted Isosorbide Dinitrate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of isosorbide dinitrate from the *Standard solution*
C_S = concentration of isosorbide dinitrate from USP Diluted Isosorbide Dinitrate RS in the *Standard solution* (µg/mL)
C_U = concentration of isosorbide dinitrate in the *Sample solution* (µg/mL)
F = relative response factor (see *Table 2*)

Acceptance criteria: See *Table 2*. Reporting threshold: 0.05%.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Isosorbide mononitrate related compound A[a]	0.15	0.61	0.15
Isosorbide mononitrate[b]	0.21	0.61	0.15
Isosorbide dinitrate	1.0	—	—
Any individual unspecified impurity	—	1.0	0.10
Total impurities	—	—	1.0

[a] 1,4:3,6-Dianhydro-D-glucitol 2-nitrate.
[b] 1,4:3,6-Dianhydro-D-glucitol 5-nitrate.

SPECIFIC TESTS

• **LOSS ON DRYING** ⟨731⟩
Analysis: Dry under vacuum over calcium chloride at room temperature for 16 h.
Acceptance criteria: NMT 1.0%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Diluted Isosorbide Dinitrate RS

Isosorbide Dinitrate Extended-Release Capsules

» Isosorbide Dinitrate Extended-Release Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_6H_8N_2O_8$.

Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Diluted Isosorbide Dinitrate RS
Identification—The finely powdered contents of the Capsules respond to the *IDENTIFICATION* test under *Isosorbide Dinitrate Tablets*. If separation of interferences is required, transfer a quantity of the finely powdered contents of the Capsules, equivalent to about 20 mg of isosorbide dinitrate, to a glass-stoppered centrifuge tube, add 10 mL of sodium hydroxide solution (1 in 250), shake to wet the powder, add 15 mL of solvent hexane, and shake again. Centrifuge the mixture, and transfer the upper phase to a beaker. Place in a freezer, at a temperature of about −14°, the beaker and a short-stem funnel fitted with a cotton plug that previously has been chloroform-washed and dried. After 30 minutes, filter the solution while still in the freezer. Evaporate the solvent, and dry the residue in vacuum over calcium chloride for 16 hours: the IR absorption spectrum of the residue so obtained, dissolved in 0.4 mL of chloroform and determined with the use of matched 0.1-mm cells, shows all of the significant absorption bands present in the spectrum obtained for a similar preparation from the residue obtained from USP Diluted Isosorbide Dinitrate RS. The major peaks are at about

www.webofpharma.com

1650 cm^{-1}, 1284 cm^{-1} and 1275 cm^{-1} (a doublet), 1106 cm^{-1}, and 844 cm^{-1}.

Dissolution ⟨711⟩—Proceed as directed for *Method B* in *Delayed-Release Dosage Forms* in *Procedure, Apparatus 1 and Apparatus 2,* except to operate the apparatus in the acid medium for 1 hour instead of 2 hours and to use *Acceptance Table 2* in *Extended-Release Dosage Forms* in *Interpretation.*

Apparatus 2: 50 rpm.

Times: 2, 4, and 8 hours.

Determine the amount of $C_6H_8N_2O_8$ dissolved employing the following method.

Mobile phase—Prepare a filtered and degassed mixture of 0.05 M monobasic potassium phosphate and acetonitrile (52:48). Make adjustments, if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 224-nm detector and a 4-mm × 30-cm column that contains packing L1. The flow rate is about 2 mL per minute. Chromatograph a Standard solution of USP Diluted Isosorbide Dinitrate RS in the same medium, and record the chromatograms as directed for *Procedure:* the tailing factor is not more than 2.5; and the relative standard deviation is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of a filtered portion of the solution under test, and record the chromatograms. Determine the amount of $C_6H_8N_2O_8$ dissolved in comparison with a Standard solution of USP Diluted Isosorbide Dinitrate RS in the same medium and similarly chromatographed.

Tolerances—The percentages of the labeled amount of $C_6H_8N_2O_8$ dissolved at the times specified conform to *Acceptance Table 2.* [NOTE—The test times given are cumulative, beginning with the 1 hour in the acid medium.]

Time (hours)	Amount dissolved
2	between 10% and 30%
4	between 40% and 75%
8	not less than 75%

Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—

Buffer solution—Dissolve 15.4 g of ammonium acetate in water, add 11.5 mL of glacial acetic acid, dilute with water to 1000 mL, and mix to obtain a solution having a pH of about 4.7.

Mobile phase—Mix 350 mL of water, 100 mL of *Buffer solution,* and 550 mL of methanol. Cool to room temperature, dilute with water to 1000 mL, mix, degas, and filter. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Internal standard solution—Transfer a quantity of diluted nitroglycerin to a suitable volumetric flask, add about 60% of the flask volume of methanol, sonicate for 5 minutes, and shake for 30 minutes. Dilute with methanol to volume to obtain a solution having a concentration of about 3 mg of nitroglycerin per mL, and mix. Allow any undissolved material to settle, filter, and store the filtrate in an airtight container.

Standard preparation—Transfer about 125 mg of recently mixed USP Diluted Isosorbide Dinitrate RS, accurately weighed, to a 50-mL volumetric flask, add about 30 mL of *Mobile phase,* shake for 30 minutes, dilute with *Mobile phase* to volume, and mix. Pipet 10 mL of the resulting solution into a 25-mL volumetric flask, and add 4.0 mL of *Internal standard solution* and 4 mL of dilute *Buffer solution* (1 in 10). Cool to room temperature, dilute with *Mobile phase* to volume, and mix to obtain a solution having a known concentration of about 0.25 mg of isosorbide dinitrate per mL, based on the quantity of USP Diluted Isosorbide Dinitrate RS weighed and the labeled content of isosorbide dinitrate. Pass a portion of this solution through a 0.45-µm filter.

Assay preparation—Weigh and finely powder the contents of not fewer than 20 Capsules. Transfer an accurately weighed portion of the powder, equivalent to about 12.5 mg of isosorbide dinitrate, to a dry, 50-mL volumetric flask, add about 30 mL of *Mobile phase,* and shake the mixture by hand immediately, to prevent clumping. If clumping persists, disperse with the aid of sonication, or break the aggregates with a stirring rod, or warm on a steam bath while keeping the flask stoppered, or allow the flask to stand until the clumps dissipate. [NOTE—If clumping still continues, discard the mixture, and instead disperse an accurately weighed test portion in 15 mL of a 1 in 10 dilution of *Buffer solution* in water by heating on a steam bath for 1 hour with frequent shaking, then add 15 mL of methanol.] Shake for 30 minutes. Add 8.0 mL of *Internal standard solution,* cool to room temperature, add 8 mL of a 1 in 10 dilution of *Buffer solution* in water, dilute with *Mobile phase* to volume, and mix. Pass a portion through a microporous membrane filter.

Chromatographic system (see Chromatography ⟨621⟩*)*—The liquid chromatograph is equipped with a 220-nm detector and a 4-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure*: the resolution, *R*, between isosorbide dinitrate and nitroglycerin is not less than 2.0; and the relative standard deviation for replicate injections determined from the peak response ratios is not more than 2%. [NOTE—The relative retention times are about 0.75 for isosorbide dinitrate and 1.0 for nitroglycerin. The relative retention times for isosorbide mononitrates, if present, are about 0.38.]

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_6H_8N_2O_8$ in the portion of Capsules taken by the formula:

$$50C(R_U/R_S)$$

in which *C* is the concentration, in mg per mL, of isosorbide dinitrate from the USP Diluted Isosorbide Dinitrate RS taken for the *Standard preparation;* and R_U and R_S are the ratios of the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isosorbide Dinitrate Tablets

DEFINITION

Isosorbide Dinitrate Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of isosorbide dinitrate ($C_6H_8N_2O_8$).

IDENTIFICATION

[NOTE—See *Table 2* for relative retention times.]

Suitability requirements

Relative standard deviation: NMT 2.0%, *Standard solution*

Signal-to-noise ratio: NLT 10, *Sensitivity solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of each degradation product in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each degradation product from the *Sample solution*

r_S = peak response of isosorbide dinitrate from the *Standard solution*

C_S = concentration of isosorbide dinitrate from USP Diluted Isosorbide Dinitrate RS in the *Standard solution* (µg/mL)

C_U = nominal concentration of isosorbide dinitrate in the *Sample solution* (µg/mL)

F = relative response factor (see *Table 2*)

Acceptance criteria: See *Table 2*. The reporting threshold is 0.1%.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Isosorbide mononitrate related compound A[a]	0.15	0.61	0.2
Isosorbide mononitrate[b]	0.21	0.61	0.2
Isosorbide dinitrate	1.0	—	—
Any unspecified degradation product	—	1.0	0.2
Total degradation products	—	—	2.0

[a] 1,4:3,6-Dianhydro-D-glucitol 2-nitrate.

[b] 1,4:3,6-Dianhydro-D-glucitol 5-nitrate. ▲ (USP 1-May-2019)

ADDITIONAL REQUIREMENTS

Change to read:

- **PACKAGING AND STORAGE:** Preserve in well-closed containers. ▲Store at controlled room temperature.▲ (USP 1-May-2019)
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Diluted Isosorbide Dinitrate RS

Isosorbide Dinitrate Chewable Tablets

» Isosorbide Dinitrate Chewable Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_6H_8N_2O_8$.

Packaging and storage—Preserve in well-closed containers.

USP Reference standards ⟨11⟩—
USP Diluted Isosorbide Dinitrate RS

Change to read:

Identification—▲Transfer a suitable quantity of finely powdered Tablets to a glass-stoppered centrifuge tube. Add 10 mL of sodium hydroxide solution (1 in 250), shake to wet the powder, then add 15 mL of solvent hexane, and again shake. Centrifuge the mixture, and transfer the upper phase to a beaker. Evaporate the solvent, and dry the residue in vacuum over anhydrous calcium chloride at room temperature for 16 hours: the IR absorption spectrum of a suitable solution in chloroform of the residue so obtained exhibits maxima only at the same wavelengths as that of a similar preparation from the residue obtained from USP Diluted Isosorbide Dinitrate RS.▲ (ERR 1-May-2018)Where separation of interferences is required, use the technique given under the *Identification* test for *Isosorbide Dinitrate Extended-Release Capsules*.

Uniformity of dosage units ⟨905⟩: meet the requirements.

Change to read:

Assay—

▲*Buffer solution*—Dissolve 15.4 g of ammonium acetate in water, add 11.5 mL of glacial acetic acid, dilute with water to 1000 mL, and mix to obtain a solution having a pH of about 4.7.

Mobile phase—Mix 350 mL of water, 100 mL of *Buffer solution*, and 550 mL of methanol. Cool to room temperature, dilute with water to 1000 mL, mix, degas, and filter. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Internal standard solution—Transfer a quantity of diluted nitroglycerin to a suitable volumetric flask, add about 60% of the flask volume of methanol, sonicate for 5 minutes, and shake for 30 minutes. Dilute with methanol to volume to obtain a solution having a concentration of about 3 mg of nitroglycerin per mL, and mix. Allow any undissolved material to settle, filter, and store the filtrate in an airtight container.

Standard preparation—Transfer about 125 mg of recently mixed USP Diluted Isosorbide Dinitrate RS, accurately weighed, to a 50-mL volumetric flask, add about 30 mL of *Mobile phase*, shake for 30 minutes, dilute with *Mobile phase* to volume, and mix. Pipet 10 mL of the resulting solution into

www.webofpharma.com

a 25-mL volumetric flask, and add 4.0 mL of *Internal standard solution* and 4 mL of dilute *Buffer solution* (1 in 10). Cool to room temperature, dilute with *Mobile phase* to volume, and mix to obtain a solution having a known concentration of about 0.25 mg of isosorbide dinitrate per mL, based on the quantity of USP Diluted Isosorbide Dinitrate RS weighed and the labeled content of isosorbide dinitrate. Pass a portion of this solution through a 0.45-µm filter. ▲(ERR 1-May-2018)

Assay preparation—Weigh and finely powder not fewer than 20 Chewable Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 12.5 mg of isosorbide dinitrate, to a dry, 50-mL volumetric flask, add about 30 mL of *Mobile phase,* and shake the mixture by hand immediately, to prevent clumping. If clumping persists, disperse with the aid of sonication, or break the aggregates with a stirring rod, or warm on a steam bath while keeping the flask stoppered, or allow the flask to stand until the clumps dissipate. [NOTE—If clumping still continues, discard the mixture, and instead disperse an accurately weighed test portion in 15 mL of a 1 in 10 dilution of *Buffer solution* in water by heating on a steam bath for 1 hour with frequent shaking, then add 15 mL of methanol.] Shake for 30 minutes. Add 8.0 mL of *Internal standard solution,* cool to room temperature, add 8 mL of a 1 in 10 dilution of *Buffer solution* in water, dilute with *Mobile phase* to volume, and mix. Pass a portion through a microporous membrane filter.

▲*Chromatographic system* (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector and a 4-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure*: the resolution, *R,* between isosorbide dinitrate and nitroglycerin is not less than 2.0; and the relative standard deviation for replicate injections determined from the peak response ratios is not more than 2%. [NOTE—The relative retention times are about 0.75 for isosorbide dinitrate and 1.0 for nitroglycerin. The relative retention times for isosorbide mononitrates, if present, are about 0.38.]▲(ERR 1-May-2018)

Procedure—▲Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks.▲(ERR 1-May-2018) Calculate the quantity, in mg, of $C_6H_8N_2O_8$ in the portion of Chewable Tablets taken by the formula:

$$50C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of isosorbide dinitrate from the USP Diluted Isosorbide Dinitrate RS taken for the *Standard preparation;* and R_U and R_S are the ratios of the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isosorbide Dinitrate Extended-Release Tablets

» Isosorbide Dinitrate Extended-Release Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_6H_8N_2O_8$.

Packaging and storage—Preserve in well-closed containers.

Labeling—When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only if *Test 1* is not used.

USP Reference standards ⟨11⟩—
USP Diluted Isosorbide Dinitrate RS

Identification—Tablets respond to the *Identification* test under *Isosorbide Dinitrate Tablets.* Where separation of interferences is required, use the technique given under the *Identification* test for *Isosorbide Dinitrate Extended-Release Capsules.*

Dissolution ⟨711⟩—

TEST 1—
Medium: water; 500 mL.
Apparatus 2: 50 rpm.
Times: 1, 2, 4, and 6 hours.

Determine the amount of $C_6H_8N_2O_8$ dissolved, using the following method.

pH 3.0 Buffer solution—Add 6.6 g of ammonium sulfate, accurately weighed, to 500 mL of water. Adjust with 1 N sulfuric acid to a pH of 3.0.

Mobile phase—Prepare a filtered and degassed mixture of methanol and *pH 3.0 Buffer solution* (50:50). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a UV wavelength detector and a 5-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph a Standard solution of USP Diluted Isosorbide Dinitrate RS in the same *Medium,* and record the chromatograms as directed for *Procedure:* the tailing factor is not more than 2.5; and the relative standard deviation is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of a filtered portion of the solution under test, and record the chromatograms. Determine the amount of $C_6H_8N_2O_8$ dissolved in comparison with a Standard solution of USP Diluted Isosorbide Dinitrate RS in the same *Medium,* similarly chromatographed.

Tolerances—The percentages of the labeled amount of $C_6H_8N_2O_8$ dissolved at the times specified conform to *Acceptance Table 2.*

Time (hours)	Amount dissolved
1	between 15% and 30%
2	between 50% and 70%
4	between 65% and 85%
6	not less than 75%

TEST 2—If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 2.*
Medium: pH 1.2 simulated gastric fluid (without pepsin) for the first hour, 900 mL; pH 7.5 simulated intestinal fluid (without enzymes) for the subsequent hours, 900 mL.
Apparatus 2: 50 rpm, with helix sinkers.
Times: 1, 3, 6, and 12 hours.

Determine the amount of isosorbide dinitrate ($C_6H_9NO_6$) dissolved by employing the following method.

Buffer solution and *Mobile phase*—Prepare as directed in the *Assay.*

Standard solution—Prepare two solutions, one in each *Medium.* Dissolve an accurately weighed quantity of USP Diluted Isosorbide Dinitrate RS in *Medium,* and dilute quantitatively, and stepwise if necessary, with *Medium* to

www.webofpharma.com

obtain a solution having a known concentration of about 40 µg per mL.

Test solution—Pass 5 mL of the solution under test through a suitable 10-µm filter. Replace the *Medium* withdrawn at the 3- and 6-hour timepoints.

Chromatographic system (see *Chromatography* ⟨621⟩)—Proceed as directed in the *Assay*. Chromatograph the *Standard solution,* and record the chromatogram as directed for *Procedure:* the tailing factor is not more than 2.0; and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses. Calculate the cumulative percentage of isosorbide dinitrate dissolved at each collection point, corrected for the quantities removed at previous collection points (not applicable for the first hour), as follows:

$$C_U = r_U \times \frac{C_S}{r_S}$$

Percentage released at first hour (see *Formula 1*).
Percentage released at third hour (see *Formula 2*).
Percentage released at sixth hour (see *Formula 3*).
Percentage released at twelfth hour (see *Formula 4*).

in which r_U and r_S are the peak responses for the *Test solution* and the *Standard solution,* respectively; C_U is the sample concentration, in µg per mL, at the indicated collection time point; C_S is the concentration, in µg per mL, of the *Standard solution;* 900 is the volume, in mL, of *Medium;* 1000 is the conversion factor from µg to mg; 100 is the conversion factor to percentage; *LC* is the Tablet label claim, in mg; and 5 is the volume, in mL, of sample withdrawn and of the *Medium* replaced.

Tolerances—The percentages of the labeled amount of $C_6H_8N_2O_8$ dissolved at the times specified conform to *Acceptance Table 2.*

Time (hours)	Amount dissolved
1	between 5% and 25%
3	between 30% and 50%
6	between 50% and 80%
12	not less than 75%

Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—

Buffer solution—Dissolve 15.4 g of ammonium acetate in water, add 11.5 mL of glacial acetic acid, dilute with water to 1000 mL, and mix to obtain a solution having a pH of about 4.7.

Mobile phase—Mix 350 mL of water, 100 mL of *Buffer solution,* and 550 mL of methanol. Cool to room temperature, dilute with water to 1000 mL, mix, degas, and filter. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Internal standard solution—Transfer a quantity of diluted nitroglycerin to a suitable volumetric flask, add about 60% of the flask volume of methanol, sonicate for 5 minutes, and shake for 30 minutes. Dilute with methanol to volume to obtain a solution having a concentration of about 3 mg of nitroglycerin per mL, and mix. Diluted Isosorbide Mononitrate

$C_6H_9NO_6$ 191.14

D-Glucitol, 1,4:3,6-dianhydro-, 5-nitrate.

1,4:3,6-Dianhydro-D-glucitol 5-nitrate [16051-77-7].

» Diluted Isosorbide Mononitrate is a dry mixture of isosorbide mononitrate ($C_6H_9NO_6$) with lactose or other suitable excipients to permit safe handling. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$). [**CAUTION**—Exercise proper precautions in handling undiluted isosorbide mononitrate, which is a powerful explosive and can be exploded by percussion or excessive heat. Only exceedingly small amounts should be isolated.]

Packaging and storage—Preserve in tight containers. Store at a temperature between 20° and 30°.

USP Reference standards ⟨11⟩—

USP Isosorbide RS

[NOTE—The following Reference Standards are dry mixtures of an active component and suitable excipients to permit safe handling. For quantitative applications, calculate the concentration of the active component based on the content stated on the label.]

USP Diluted Isosorbide Dinitrate RS

USP Diluted Isosorbide Mononitrate RS

USP Diluted Isosorbide Mononitrate Related Compound A RS
1,4:3,6-Dianhydro-D-glucitol 2-nitrate.
$C_6H_9NO_6$ 191.14

Identification—

A: Shake a quantity of it, equivalent to about 25 mg of isosorbide mononitrate, with 10 mL of acetone for 5 minutes. Filter, evaporate to dryness at a temperature below 40°, and dry the residue in a vacuum over phosphorus pentoxide for 16 hours: the IR absorption spectrum of a potassium bromide dispersion prepared from the residue so obtained exhibits maxima only at the same wavelengths as that of a similar preparation from the residue obtained from USP Diluted Isosorbide Mononitrate RS.

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Related compounds—

TEST 1—

Adsorbent: 0.25-mm layer of chromatographic silica gel mixture.

Standard solution 1—Weigh accurately a quantity of USP Isosorbide RS, and dilute quantitatively, and stepwise if necessary, with absolute alcohol to obtain a solution having a known concentration of about 0.0125 mg of isosorbide per mL.

Standard solution 2—Weigh accurately a quantity of USP Isosorbide RS, and dilute quantitatively, and stepwise if necessary, with absolute alcohol to obtain a solution having a known concentration of about 0.025 mg of isosorbide per mL.

Standard solution 3—Weigh accurately a quantity of USP Isosorbide RS, and dilute quantitatively, and stepwise if necessary, with absolute alcohol to obtain a solution having a known concentration of about 0.05 mg of isosorbide per mL.

Test solution—Transfer a portion of Diluted Isosorbide Mononitrate, equivalent to about 200 mg of isosorbide mononitrate, accurately weighed, to a suitable container, add 20.0 mL of absolute alcohol, sonicate for 10 minutes, and then centrifuge. Use the supernatant.

Application volume: 20 µL.

Developing solvent system: a mixture of absolute alcohol and toluene (8:2).

Procedure—Proceed as directed for *Thin-Layer Chromatography* under *Chromatography* ⟨621⟩. After developing, dry the plate with warm air for about 10 minutes, dip the plate in a solution prepared by dissolving 1.25 g of potassium permanganate and 10.0 g of sodium hydroxide in 500 mL of water (prepared fresh for each plate), and heat at 105° for 5 minutes. Any spot in the chromatogram obtained from the *Test solution* and corresponding to the R_f value of the spots obtained from the *Standard solutions* is not more intense than the spot in the chromatogram obtained from *Standard solution 3:* not more than 0.5% of any individual impurity is found. If the spot in the chromatogram obtained from the *Test solution* is nearly as intense as the spot obtained from *Standard solution 3,* further dilute the *Test solution* with absolute alcohol (1:1), repeat the test, and compare the intensity of the isosorbide spot in the diluted *Test solution* with the intensity of the spots obtained from the *Standard solutions,* correcting the percentage level for the additional dilution of the *Test solution.*

TEST 2—

Mobile phase, Resolution solution, and *Chromatographic system*—Proceed as directed in the *Assay.*

www.webofpharma.com

Isosorbide mononitrate related compound A standard solution—Prepare as directed for *Isosorbide mononitrate related compound A standard preparation* in the *Assay.*
Isosorbide dinitrate standard stock solution—Dissolve an accurately weighed quantity of USP Diluted Isosorbide Dinitrate RS in methanol, sonicate and warm if necessary, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 0.125 mg of isosorbide dinitrate per mL.
Standard solution—Transfer a quantity of USP Diluted Isosorbide Mononitrate RS, accurately weighed, to a suitable volumetric flask. Dissolve in water, quantitatively add a volume of *Isosorbide mononitrate related compound A standard solution* and a volume of *Isosorbide dinitrate standard stock solution,* and dilute with water to volume to obtain a solution having a known concentration of about 2.0 mg of isosorbide mononitrate per mL, 0.005 mg of isosorbide mononitrate related compound A per mL, and 0.005 mg of isosorbide dinitrate per mL. Filter a portion of the solution, discarding the first few mL of the filtrate.
Test solution—Use the *Assay preparation,* prepared as directed in the *Assay.*
Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Calculate the percentage of isosorbide mononitrate related compound A and isosorbide dinitrate relative to the amount of isosorbide mononitrate in the portion of Diluted Isosorbide Mononitrate taken by the formula:

$$100(CV/W)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of isosorbide mononitrate related compound A or isosorbide dinitrate, as appropriate, in the *Standard solution; V* is the volume, in mL, of the *Test solution; W* is the amount, in mg, of isosorbide mononitrate in the portion of Diluted Isosorbide Mononitrate used to prepare the *Test solution,* based on the label claim; and r_U and r_S are the peak areas of the corresponding components obtained from the *Test solution* and the *Standard solution,* respectively: not more than 0.25% of isosorbide mononitrate related compound A is found; and not more than 0.25% of isosorbide dinitrate is found. Calculate the percentage of each other impurity (other than isosorbide mononitrate related compound A or isosorbide dinitrate) in the portion of Diluted Isosorbide Mononitrate taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the peak area for each other impurity obtained from the *Test solution;* and r_s is the sum of the areas of all the peaks: not more than 0.5% of total impurities is found, including isosorbide mononitrate related compound A and isosorbide dinitrate; and not more than 0.5% of total impurities is found, the results for *Test 1* and *Test 2* being considered.

Assay—
Mobile phase—Prepare a filtered and degassed mixture of water and methanol (95:5). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Transfer an accurately weighed quantity of USP Diluted Isosorbide Mononitrate RS to a suitable volumetric flask, dissolve in water, add a volume of methanol equivalent to 4% of the flask volume, and dilute with water to volume to obtain a solution having a known concentration of about 2.0 mg of isosorbide mononitrate per mL.
Isosorbide mononitrate related compound A standard preparation—Dissolve an accurately weighed quantity of USP Diluted Isosorbide Mononitrate Related Compound A RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 1.0 mg of isosorbide mononitrate related compound A per mL. Quantitatively dilute a portion of this solution with water to obtain a solution having a known concentration of about 0.05 mg per mL.
Resolution solution—Transfer 10.0 mL of *Isosorbide mononitrate related compound A standard preparation,* 1.0 mL of the *Standard preparation,* and 4.0 mL of methanol to a 100-mL volumetric flask, and dilute with water to volume. Filter a portion of the solution, discarding the first few mL of the filtrate.
Assay preparation—Transfer an accurately weighed amount of Diluted Isosorbide Mononitrate, equivalent to 100 mg of isosorbide mononitrate, to a 50-mL volumetric flask, dissolve in about 25 mL of water, add 2 mL of methanol, dilute with water to volume, and mix. Filter a portion of the solution, discarding the first few mL of the filtrate.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector and a 4-mm × 12.5-cm column that contains packing L1. The flow rate is about 1.5 mL per minute, increasing to 3.0 mL per minute at about 8.5 minutes to ensure that the isosorbide mononitrate peak has completely eluted. Chromatograph the *Resolution solution,* and record the peak responses as directed for *Procedure:* the relative retention times are about 0.8 for isosorbide mononitrate related compound A, 1.0 for isosorbide mononitrate, and 4.1 for isosorbide dinitrate; and the resolution, *R,* between isosorbide mononitrate related compound A and isosorbide mononitrate is not less than 2.0. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%.
Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the areas for the isosorbide mononitrate peaks. Calculate the quantity, in mg, of isosorbide mononitrate ($C_6H_9NO_6$) in the portion of Diluted Isosorbide Mononitrate taken by the formula:

$$CV(r_U/r_S)$$

in which C is the concentration, in mg per mL, of isosorbide mononitrate in the *Standard preparation; V* is the volume, in mL, of the *Assay preparation;* and r_U and r_S are the peak areas obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isosorbide Mononitrate Tablets

» Isosorbide Mononitrate Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$).

Packaging and storage—Preserve in tight containers. Store at a temperature between 20° and 30°.
USP Reference standards ⟨11⟩—
USP Isosorbide RS
[NOTE—The following Reference Standards are dry mixtures of an active component and suitable excipients to permit safe

USP Diluted Isosorbide Mononitrate RS
USP Diluted Isosorbide Mononitrate Related Compound A RS
1,4:3,6-Dianhydro-D-glucitol 2-nitrate.
$C_6H_9NO_6$ 191.14

Identification—
A: Thin-Layer Chromatographic Identification Test ⟨201⟩—*Test solution*—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 120 mg of isosorbide mononitrate, to a suitable container, add 50.0 mL of absolute alcohol, sonicate for 10 minutes, and then centrifuge. Quantitatively dilute the supernatant (10 in 50) with absolute alcohol.
Standard solution: a solution of USP Diluted Isosorbide Mononitrate RS in absolute alcohol containing 0.5 mg of isosorbide mononitrate per mL.
Application volume: 20 µL.
Developing solvent system: a mixture of chloroform and methanol (95:5).
Spray reagent—Dissolve 1 g of soluble starch in 100 mL of boiling water. Cool, add 0.5 g of potassium iodide, and mix to dissolve.
Procedure—Examine the plate under short-wavelength UV light, marking any observed spots. Visualize nitrates on the plate by spraying with *Spray reagent* and illuminating with short-wavelength UV light for about 10 minutes. Isosorbide mononitrate and other nitrates appear as a violet spot on a white to light violet background.
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Dissolution ⟨711⟩—
Medium: water; 900 mL, deaerated.
Apparatus 2: 50 rpm.
Time: 15 minutes.
Determine the amount of $C_6H_9NO_6$ dissolved by employing the following method.
Mobile phase—Proceed as directed in the *Assay.*
Standard solution—Transfer 20 mg, accurately weighed, of USP Diluted Isosorbide Mononitrate RS to a 200-mL volumetric flask, dilute with *Medium* to volume, and mix well. Transfer 20.0 mL of this solution to a 100-mL volumetric flask, dilute with *Medium* to volume, and mix well.
Test solution—Pass a portion of the solution under test through a suitable filter having a porosity of 0.45 µm, discarding the first few mL.
Chromatographic system (see *Chromatography* ⟨621⟩)—Proceed as directed in the *Assay.* Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 1.5%.
Procedure—Proceed as directed in the *Assay.* Calculate the percentage of $C_6H_9NO_6$ dissolved by the formula:

$$\frac{r_U \times C_S \times 900 \times 100}{r_S \times LC}$$

in which r_U and r_S are the peak responses for the *Test solution* and the *Standard solution,* respectively; C_S is the concentration, in mg per mL, of the *Standard solution;* 900 is the volume, in mL, of *Medium;* 100 is the conversion factor to percentage; and *LC* is the Tablet label claim, in mg.

Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_6H_9NO_6$ is dissolved in 15 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements for *Content Uniformity.*

Related compounds—
TEST 1—
Adsorbent, Standard solution 1, Standard solution 2, Standard solution 3, Application volume, and *Developing solvent system*—Prepare as directed in *Related compounds, Test 1* under *Diluted Isosorbide Mononitrate.*
Test solution—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 100 mg of isosorbide mononitrate, to a suitable container, add 20.0 mL of absolute alcohol, sonicate for 10 minutes, and then centrifuge. Use the supernatant.
Procedure—Proceed as directed for *Thin-Layer Chromatography* under *Chromatography* ⟨621⟩. After developing, dry the plate with warm air for about 10 minutes, dip the plate in a solution prepared by dissolving 1.25 g of potassium permanganate and 10.0 g of sodium hydroxide in 500 mL of water (prepared fresh for each plate), and heat at 105° for 5 minutes. Any spot in the chromatogram obtained from the *Test solution* and corresponding to the R_F value of the spots obtained from the *Standard solutions* is not more intense than the spot in the chromatogram obtained from *Standard solution 3:* not more than 1.0% of any individual impurity is found. If the spot in the chromatogram obtained from the *Test solution* is nearly as intense as the spot obtained from *Standard solution 3,* further dilute the *Test solution* (1:1) with absolute alcohol, repeat the test, and compare the intensity of the isosorbide spot in the diluted *Test solution* with the intensity of the spots obtained from the *Standard solutions,* correcting the percentage level for the additional dilution of the *Test solution.*
TEST 2—
Mobile phase and *Resolution solution*—Proceed as directed in the *Assay.*
Isosorbide mononitrate related compound A standard stock solution—Dissolve an accurately weighed quantity of USP Diluted Isosorbide Mononitrate Related Compound A RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 0.1 mg of isosorbide mononitrate related compound A per mL.
Isosorbide dinitrate standard stock solution—Dissolve an accurately weighed quantity of USP Diluted Isosorbide Dinitrate RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 0.1 mg of isosorbide dinitrate per mL.
Standard solution—Transfer a quantity of USP Diluted Isosorbide Mononitrate RS, accurately weighed, to a suitable volumetric flask. Dissolve in water, quantitatively add a volume of *Isosorbide mononitrate related compound A standard stock solution* and a volume of *Isosorbide dinitrate standard stock solution,* and dilute with water to volume to obtain a solution having a known concentration of about 0.1 mg of isosorbide mononitrate per mL, 0.0005 mg of isosorbide mononitrate related compound A per mL, and 0.0005 mg of isosorbide dinitrate per mL. Filter a portion of the solution, discarding the first few mL of the filtrate.
Test solution—Use the *Assay preparation,* prepared as directed in the *Assay.*
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1.0 mL per minute. Chromatograph the *Resolution solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between isosorbide

USP Monographs

www.webofpharma.com

mononitrate related compound A and isosorbide mononitrate is not less than 1.5. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 10% for the isosorbide mononitrate related compound A and isosorbide dinitrate peaks.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Compare the peak areas of the corresponding impurity obtained from the *Test solution* and the *Standard solution,* respectively. The average peak area of the impurity in the *Test solution* is less than or equal to the average peak area of the corresponding peak in the *Standard solution:* not more than 0.5% of isosorbide mononitrate related compound A is found; and not more than 0.5% of isosorbide dinitrate is found.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of water and methanol (7:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Resolution solution—Prepare a solution of USP Diluted Isosorbide Mononitrate RS and USP Diluted Isosorbide Mononitrate Related Compound A RS having a concentration of 0.0005 mg of each of isosorbide mononitrate and isosorbide mononitrate related compound A per mL.

Standard preparation—Dissolve an accurately weighed quantity of USP Diluted Isosorbide Mononitrate RS in water, and dilute quantitatively, and stepwise if necessary, with water to obtain a solution having a known concentration of about 0.1 mg of isosorbide mononitrate per mL. Pass a portion of this solution through a filter having a 0.45-µm or finer porosity, and use the filtrate.

Assay preparation—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 20 mg of isosorbide mononitrate, to a 200-mL volumetric flask, add 100 mL of water, and sonicate for about 10 minutes. Dilute with water to volume, and mix. Pass a portion of this solution through a filter having a 0.45-µm or finer porosity, and use the filtrate.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1.0 mL per minute. Chromatograph the *Resolution solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between isosorbide mononitrate related compound A and isosorbide mononitrate is not less than 1.5. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 1.5%.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of isosorbide mononitrate ($C_6H_9NO_6$) in the portion of Tablets taken by the formula:

$$200C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of isosorbide mononitrate in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isosorbide Mononitrate Extended-Release Tablets

DEFINITION

Isosorbide Mononitrate Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$).

IDENTIFICATION

• **A. Thin-Layer Chromatographic Identification Test** ⟨201⟩

Standard solution: 0.5 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS in absolute alcohol

Sample stock solution: To a portion of the powder from NLT 20 Tablets in a suitable container, nominally equivalent to 120 mg of isosorbide mononitrate, add 50.0 mL of absolute alcohol, sonicate for 10 min, and centrifuge.

Sample solution: Transfer 10 mL of supernatant from the *Sample stock solution* to a 50-mL volumetric flask, and dilute with absolute alcohol to volume.

Chromatographic system

Application volume: 20 µL

Developing solvent system: Chloroform and methanol (95:5)

Spray reagent: Dissolve 1 g of soluble starch in 100 mL of boiling water. Cool, and add 0.5 g of potassium iodide.

Analysis

Samples: *Standard solution* and *Sample solution*

Examine the plate under short-wavelength UV light, marking any observed spots. Visualize nitrates on the plate by spraying with *Spray reagent* and illuminating with short-wavelength UV light for 10 min.

Acceptance criteria: Isosorbide mononitrate and other nitrates appear as a violet spot on a white-to-light-violet background.

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution,* as obtained in the *Assay.*

ASSAY

• **Procedure**

Mobile phase: Methanol and water (200:800)

Standard solution A: 0.15 mg/mL of isosorbide mononitrate related compound A from USP Diluted Isosorbide Mononitrate Related Compound A RS in water

Standard solution B: Equivalent to 0.12 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS prepared as follows. Dissolve the sample in water, add methanol equivalent to 20% of the flask volume, then dilute with water to volume.

System suitability solution: Equivalent to 0.12 mg/mL of isosorbide mononitrate and 6 µg/mL of isosorbide mononitrate related compound A prepared as follows. Dissolve a suitable quantity of USP Diluted Isosorbide Mononitrate RS in water in a suitable volumetric flask, add a suitable amount of *Standard solution A* and methanol equivalent to 20% of the flask volume, and dilute with water to volume.

Sample solution: 0.12 mg/mL of isosorbide mononitrate from NLT 20 Tablets finely powdered, prepared as follows. Transfer a portion of the powder, nominally equivalent to 60 mg of isosorbide mononitrate, to a 100-mL volumetric flask. Add 50 mL of methanol, and sonicate for about 30 min with cooling. Warm to ambient temperature, dilute with methanol to volume, and mix. Centrifuge at about 3000 rpm for 10 min. Dilute the supernatant with water, and pass a portion of this solution through a suitable filter of 0.45-µm pore size.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4-mm × 12.5-cm; packing L1
Flow rate: 1.5 mL/min
Injection volume: 20 µL
System suitability
Samples: *Standard solution B* and *System suitability solution*
Suitability requirements
Resolution: NLT 1.5 between isosorbide mononitrate related compound A and isosorbide mononitrate, *System suitability solution*
Tailing factor: NMT 1.5, *Standard solution B*
Relative standard deviation: NMT 1.5%, *Standard solution B*
Analysis
Samples: *Standard solution B* and *Sample solution*
Calculate the percentage of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isosorbide mononitrate from the *Sample solution*
r_S = peak response of isosorbide mononitrate from *Standard solution B*
C_S = concentration of isosorbide mononitrate in *Standard solution B* (mg/mL)
C_U = nominal concentration of isosorbide mononitrate in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

Change to read:

• **DISSOLUTION** ⟨711⟩
Test 1
Medium: Water; 900 mL
Apparatus 2: 50 rpm; Tablets are placed in a metal helix prepared by winding 10 in of a 0.8-mm stainless steel wire around a 9/32-in shaft and pulling the coils to form a helix 1 in long.
Times: 1, 2, 4, 8, and 12 h
Mobile phase: Methanol and water (300:700)
Standard solution: (*L*/1000) of USP Diluted Isosorbide Mononitrate RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Use portions of the solution under test passed through a suitable nylon filter of 0.45-µm pore size, discarding the first 4–6 mL of the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 25-cm; packing L1
Flow rate: 1 mL/min
Injection volume: 25 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 1.5%
Analysis
Samples: *Standard solution* and *Sample solution*
Determine the amount, in mg, of isosorbide mononitrate dissolved at each interval:

$$\text{Result} = (r_U/r_S) \times C_S \times V$$

r_U = peak response of isosorbide mononitrate from the *Sample solution*
r_S = peak response of isosorbide mononitrate from the *Standard solution*
C_S = concentration of isosorbide mononitrate in the *Standard solution* (mg/mL)
V = volume of *Medium* in the vessel at each time point (mL)

Calculate the amount, in mg, of isosorbide mononitrate removed by sampling at the previous time points:

$$\text{Result} = \Sigma AD \times (V_S/V)$$

AD = amount of isosorbide mononitrate dissolved at each time point (mg)
V_S = volume of the sample taken (mL)
V = volume of *Medium* in the vessel at each time point (mL)

Calculate the percentage of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at each time point:

$$\text{Result} = (AD + AR) \times (100/L)$$

AD = amount of isosorbide mononitrate dissolved at each time point (mg)
AR = amount of isosorbide mononitrate removed at the previous time point (mg)
L = label claim (mg/Tablet)

Tolerances: See *Table 1*.

Table 1

Time (h)	Amount Dissolved (%)
1	15–35
2	28–48
4	43–68
8	65–90
12	NLT 80

The percentages of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.
Test 2: If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 2*.
Medium: Simulated gastric fluid (without enzymes); 500 mL
Apparatus 2: 50 rpm
Times: 1, 2, 6, and 12 h
Mobile phase: Methanol and water (400:600)
Standard stock solution: 1.2 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS diluted in *Medium*
Standard solution: 60 µg/mL of isosorbide mononitrate in *Medium* for Tablets labeled to contain 30 mg, and 120 µg/mL of isosorbide mononitrate in *Medium* for Tablets labeled to contain 60 mg, from the *Standard stock solution*
Sample solution: Pass portions of the solution under test through a suitable filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC

Flow rate: 1 mL/min
Injection volume: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the concentration (C_i), in mg/mL, of isosorbide mononitrate removed at each time point (*i*):

$$\text{Result}_i = (r_{U(i)}/r_S) \times C_S$$

$r_{U(i)}$ = peak response of isosorbide mononitrate from the *Sample solution* at time point *i*
r_S = peak response of isosorbide mononitrate from the *Standard solution*
C_S = concentration of isosorbide mononitrate in the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at each time point (*i*):

$$\text{Result} = \left\{C_i \times \left[V_0 - \left((i-1) \times V_t\right)\right] + \left(\sum_{j=1}^{i-1} C_j V_t\right)\right\} \times (100/L)$$

C_i = concentration of isosorbide mononitrate at time point *i* (mg/mL)
V_0 = initial volume of *Medium* (mL)
V_t = volume of sample removed at each sampling time (mL)
C_j = concentration of isosorbide mononitrate at time *j* (mg/mL)
L = label claim (mg/Tablet)

Tolerances: See *Table 2*.

Table 2

Time (h)	Amount Dissolved (%)
1	25–45
2	35–60
6	65–90
12	NLT 80

The percentages of the labeled amount of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 3: If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 3*.
Medium: Simulated gastric fluid (without enzymes); 500 mL
Apparatus 2: 50 rpm
Times: 1, 2, 6, and 12 h
Buffer: Transfer 15.4 g of ammonium acetate and 11.5 mL of acetic acid to a 1-L volumetric flask containing 500 mL of water. Adjust with acetic acid to a pH of 4.7, and dilute with water to volume.
Mobile phase: Methanol, *Buffer*, and water (300:100:600)
Standard stock solution: 0.12 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS in *Medium*
Standard solution: For Tablets labeled to contain 60 mg, use the *Standard stock solution* with no further dilution (0.12 mg/mL). For Tablets labeled to contain 30 mg, prepare 0.06 mg/mL of isosorbide mononitrate in *Medium* from the *Standard stock solution*.
Sample solution: Pass portions of the solution under test through a suitable filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 15-cm; 5-µm packing L1

Time (h)	Amount Dissolved (%)
1	20–40
2	30–50
6	70–90
12	NLT 85

The percentages of the labeled amount of isosorbide mononitrate dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 4: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 4*.
Medium: 0.2% sodium chloride in 0.1 N hydrochloric acid; 500 mL
Apparatus 2: 50 rpm; sinker baskets (see *Dissolution* ⟨711⟩, *Figure 2a*)

www.webofpharma.com

Times: 1, 2, 6, and 12 h
Mobile phase: Methanol and water (180:820)
Standard solution: (*L*/500) mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Pass portions of the solution under test through a suitable filter.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 15-cm; 5-µm packing L1
Column temperature: 30°
Flow rate: 1 mL/min
Injection volume: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the concentration (C_i) of isosorbide mononitrate ($C_6H_9NO_6$) in the sample withdrawn from the vessel at time point *i*:

$$\text{Result}_i = (r_i/r_S) \times C_S$$

r_i = peak response of isosorbide mononitrate from the *Sample solution* at time point *i*
r_S = peak response of isosorbide mononitrate from the *Standard solution*
C_S = concentration of isosorbide mononitrate in the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amounts of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at each time point (*i*):

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$
$$\text{Result}_2 = \{[C_2 \times (V - V_S)] + (C_1 \times V_S)\} \times (1/L) \times 100$$
$$\text{Result}_3 = (\{C_3 \times [V - (2 \times V_S)]\} + [(C_2 + C_1) \times V_S]) \times (1/L) \times 100$$
$$\text{Result}_4 = (\{C_4 \times [V - (3 \times V_S)]\} + [(C_3 + C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

C_i = concentration of isosorbide mononitrate in the portion of sample withdrawn at time point *i* (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim (mg/Tablet)
V_S = volume of *Sample solution* withdrawn from the *Medium* (mL)

Tolerances: See *Table 4*.

Table 4

Time Point (*i*)	Time (h)	Amount Dissolved (%)
1	1	20–40
2	2	30–55
3	6	60–90
4	12	NLT 85

The percentage of the labeled amount of isosorbide mononitrate dissolved at the times specified conforms to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 5: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 5*.
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 2: 50 rpm; helix sinkers
Times: 1, 2, 4, 6, and 10 h
Mobile phase: Methanol and water (150:850)
System suitability solution: 0.033 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS in *Medium*. Initially add *Medium* to fill 60% of total volume, shake for 30 min, sonicate for 5 min, then dilute with *Medium* to volume.
Standard solution: 0.067 mg/mL of isosorbide mononitrate from USP Diluted Isosorbide Mononitrate RS in *Medium*. Initially add *Medium* to fill 60% of total volume, shake for 30 min, sonicate for 5 min, then dilute with *Medium* to volume.
Sample solution: Pass portions of the solution under test through a suitable filter.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 230 nm
Column: 4-mm × 12.5-cm; 5-µm packing L1
Flow rate: 1 mL/min
Injection volume: 50 µL
System suitability
Sample: *System suitability solution*
Suitability requirements
Relative standard deviation: NMT 2.0%
Tailing factor: NMT 1.5
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the concentration (C_i) of isosorbide mononitrate ($C_6H_9NO_6$) in the sample withdrawn from the vessel at time point *i*:

$$\text{Result}_i = (r_i/r_S) \times C_S$$

r_i = peak response of isosorbide mononitrate from the *Sample solution* at time point *i*
r_S = peak response of isosorbide mononitrate from the *Standard solution*
C_S = concentration of isosorbide mononitrate in the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amounts of isosorbide mononitrate ($C_6H_9NO_6$) dissolved at each time point (*i*):

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$
$$\text{Result}_2 = [(C_2 \times V) + (C_1 \times V_S)] \times (1/L) \times 100$$
$$\text{Result}_3 = \{(C_3 \times V) + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$
$$\text{Result}_4 = \{(C_4 \times V) + [(C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$
$$\text{Result}_5 = \{(C_5 \times V) + [(C_4 + C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of isosorbide mononitrate in the portion of sample withdrawn at time point *i* (mg/mL)
V = volume of *Medium*, 900 mL
L = label claim (mg/Tablet)
V_S = volume of the *Sample solution* withdrawn from *Medium* (mL)

Tolerances: See *Table 5*.

Table 7

Time Point (*i*)	Time (h)	Amount Dissolved (%)
1	1	15–35
2	4	40–60
3	8	60–80
4	12	NLT 80

The percentages of the labeled amount of isosorbide mononitrate dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.▲ (RB 8-Oct-2018)

• **Uniformity of Dosage Units** ⟨905⟩
Procedure for content uniformity: Proceed as directed in the *Assay*, except use 1 Tablet instead of the portion of powdered Tablets used in the *Sample solution*.
Acceptance criteria: Meet the requirements

IMPURITIES

• **Organic Impurities, Procedure 1**
Standard solution A: 0.0125 mg/mL of USP Isosorbide RS in acetonitrile
Standard solution B: 0.025 mg/mL of USP Isosorbide RS in acetonitrile
Standard solution C: 0.05 mg/mL of USP Isosorbide RS in acetonitrile
Sample solution: Equivalent to 5 mg/mL of isosorbide mononitrate from a portion of powdered Tablets (NLT 20) in acetonitrile. Sonicate for 10 min, then centrifuge. Use the supernatant.
Chromatographic system
(See *Chromatography* ⟨621⟩, *General Procedures, Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture
Application volume: 20 µL
Developing solvent system: Toluene, ethyl acetate, and isopropyl alcohol (53:32:15)
Detection solution: Dissolve 1.25 g of potassium permanganate and 10.0 g of sodium hydroxide in 500 mL of water (prepared fresh for each plate), and heat at 105° for 5 min.
Analysis
Samples: *Standard solutions* and *Sample solution*
Proceed as directed in the chapter. After developing, dry the plate with warm air for about 10 min, dip the plate in the *Detection solution*, and heat at 105° for 5 min.
Acceptance criteria: Any spot from the *Sample solution* and corresponding to the R_F value of the spots from the *Standard solutions* is not more intense than the spot from *Standard solution C*; NMT 1% of any individual impurity is found.
If the spot from the *Sample solution* is nearly as intense as the spot from *Standard solution C*, further dilute the *Sample solution* with acetonitrile (1:1), repeat the test, and compare the intensity of the isosorbide spot in the diluted *Sample solution* with the intensity of the spots from the *Standard solutions*, correcting the percentage level for the additional dilution of the *Sample solution*.
[Note—The R_F values of isosorbide and isosorbide mononitrate are about 0.2 and 0.6, respectively.]

• **Organic Impurities, Procedure 2**
Mobile phase: Methanol and water (250:750)
Isosorbide mononitrate related compound A standard stock solution: 0.3 mg/mL of isosorbide mononitrate related compound A from USP Diluted Isosorbide Mononitrate Related Compound A RS in water
Isosorbide dinitrate standard stock solution: 0.15 mg/mL of isosorbide dinitrate from USP Diluted Isosorbide Dinitrate RS in methanol
Standard stock solution: 6.0 µg/mL each of isosorbide mononitrate related compound A and isosorbide dinitrate from *Isosorbide mononitrate related compound A standard stock solution* and *Isosorbide dinitrate standard stock solution*, respectively, diluted with water
System suitability solution: Transfer a quantity of USP Diluted Isosorbide Mononitrate RS, equivalent to 24 mg of isosorbide mononitrate, to a 100-mL volumetric flask. Add 10.0 mL of the *Standard stock solution* and 20 mL of methanol, and dilute with water to volume.
Standard solution: Transfer 10.0 mL of the *Standard stock solution* and 20 mL of methanol to a 100-mL volumetric flask. Dilute with water to volume.
Sample solution: Transfer a portion of powder from NLT 20 Tablets, equivalent to 60 mg of isosorbide mononitrate, to a 50-mL volumetric flask. Add 40 mL of methanol, and sonicate for about 30 min with cooling. Warm to ambient temperature, dilute with methanol to volume, and mix. Centrifuge at about 3000 rpm for 10 min. Dilute 10 mL of the supernatant with water to 50 mL. Pass a portion of this solution through a suitable filter of 0.45-µm pore size, and use the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 25-cm; packing L1
Flow rate: 1 mL/min
Injection volume: 100 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
[Note—The relative retention times for isosorbide mononitrate related compound A, isosorbide mononitrate, and isosorbide dinitrate are about 0.9, 1.0, and 5.6, respectively.]
Suitability requirements
Resolution: NLT 1.0 between isosorbide mononitrate related compound A and isosorbide mononitrate, *System suitability solution*
Relative standard deviation: NMT 10% for the isosorbide mononitrate related compound A and isosorbide dinitrate peaks, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of isosorbide mononitrate related compound A and isosorbide dinitrate in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

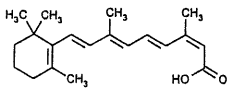
r_U = peak area of isosorbide mononitrate related compound A or isosorbide dinitrate from the *Sample solution*
r_S = peak area of isosorbide mononitrate related compound A or isosorbide dinitrate from the *Standard solution*

USP Monographs

www.webofpharma.com

C_S = concentration of USP Diluted Isosorbide Mononitrate Related Compound A RS or USP Diluted Isosorbide Dinitrate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of isosorbide mononitrate in the *Sample solution* (mg/mL)

Calculate the percentage of each other impurity (other than isosorbide mononitrate related compound A or isosorbide dinitrate) in the portion of Tablets taken:



$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak area of each impurity from the *Sample solution*
r_T = sum of all the peak areas from the *Sample solution*

Acceptance criteria
Individual impurities: NMT 0.25% each of isosorbide mononitrate related compound A and isosorbide dinitrate
Total other impurities: NMT 0.25%
Total impurities: NMT 0.5% including isosorbide mononitrate related compound A and isosorbide dinitrate

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers. Store at a temperature of 20°–30°.
- **LABELING:** When more than one *Dissolution* test is given, the labeling states the test used only if *Test 1* is not used.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Isosorbide RS
  The following Reference Standards are dry mixtures of an active component and suitable excipients to permit safe handling. For quantitative applications, calculate the concentration of the active component based on the content stated on the label.
  USP Diluted Isosorbide Dinitrate RS
  USP Diluted Isosorbide Mononitrate RS
  USP Diluted Isosorbide Mononitrate Related Compound A RS
  1,4:3,6-Dianhydro-D-glucitol 2-nitrate.
  $C_6H_9NO_6$ 191.14

Isotretinoin

$C_{20}H_{28}O_2$ 300.44
Retinoic acid, 13-*cis*-.
3,7-Dimethyl-9-(2,6,6-trimethyl-1-cyclohexen-1-yl)2-*cis*-4-*trans*-6-*trans*-8-*trans*-nonatetraenoic acid [4759-48-2].

» Isotretinoin contains not less than 98.0 percent and not more than 102.0 percent of $C_{20}H_{28}O_2$, calculated on the dried basis.
[**CAUTION**—Isotretinoin is teratogenic. Avoid inhalation and skin contact.]

Packaging and storage—Preserve in tight containers, under an atmosphere of an inert gas, protected from light.
USP Reference standards ⟨11⟩—
USP Isotretinoin RS
USP Tretinoin RS

[NOTE—Avoid exposure to strong light, and use low-actinic glassware in the performance of the following procedures.]

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197M*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)
Solution: 4 µg per mL.
Medium: acidified isopropyl alcohol (prepared by diluting 1 mL of 0.01 N hydrochloric acid with isopropyl alcohol to 1000 mL). Absorptivities at 354 nm do not differ by more than 3.0%.
Loss on drying ⟨731⟩—Dry it in vacuum at room temperature for 16 hours: it loses not more than 0.5% of its weight.
Residue on ignition ⟨281⟩: not more than 0.1%.

Limit of tretinoin—
Mobile phase—Prepare a suitable filtered and degassed mixture of isooctane, isopropyl alcohol, and glacial acetic acid (99.65: 0.25: 0.1).
Standard stock solution—Dissolve an accurately weighed quantity of USP Tretinoin RS in a minimum quantity of methylene chloride, add an amount of isooctane to obtain a solution having a known concentration of about 250 µg per mL, and mix.
Standard solution—Pipet 1 mL of *Standard stock solution* into a 100-mL volumetric flask, add isooctane to volume, and mix.
Test solution—Transfer about 25 mg of Isotretinoin, accurately weighed, to a 100-mL volumetric flask, dissolve in a minimum quantity of methylene chloride, add isooctane to volume, and mix.
System suitability stock solution—Dissolve a quantity of USP Isotretinoin RS in a minimum amount of methylene chloride, add an amount of isooctane to obtain an isotretinoin concentration of about 250 µg per mL, and mix.
System suitability solution—Pipet 1 mL of *Standard stock solution* into a 100-mL volumetric flask, add *System suitability stock solution* to volume, and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 352-nm detector and a 4.0-mm × 25-cm column containing 5-µm packing L3. The flow rate is about 1 mL per minute. Chromatograph about 20 µL of the *System suitability solution*, and record the peak responses as directed for *Procedure*:the relative retention times for isotretinoin and tretinoin are about 0.84 and 1.00, respectively; the resolution, *R*, between isotretinoin and tretinoin is not less than 2.0; and the relative standard deviation determined from the tretinoin peak response in replicate injections is not more than 2.0%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the percentage of tretinoin by the formula:

$$10(C/W)(r_U/r_S)$$

in which C is the concentration, in µg per mL, of USP Tretinoin RS in the *Standard solution*; W is the weight, in mg, of Isotretinoin taken; and r_U and r_S are the tretinoin peak responses obtained from the *Test solution* and the *Standard*

USP Monographs

www.webofpharma.com

solution, respectively. The content of tretinoin is not more than 1.0%.

Assay—Dissolve about 240 mg of Isotretinoin, accurately weighed, in 50 mL of dimethylformamide, add 3 drops of a solution of thymol blue in dimethylformamide (1 in 100), and titrate with 0.1 N sodium methoxide VS to a greenish endpoint. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N sodium methoxide is equivalent to 30.04 mg of $C_{20}H_{28}O_2$.

Isotretinoin Capsules

DEFINITION

Isotretinoin Capsules contain NLT 90.0% and NMT 110.0% of the labeled amount of isotretinoin ($C_{20}H_{28}O_2$).

[**Caution**—Isotretinoin is teratogenic. Avoid inhalation and skin contact.]

Avoid exposure to strong light, and use low-actinic glassware in the performance of the following procedures.

IDENTIFICATION

• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Add the following:

▲• **B.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.▲ 2S (USP41)

ASSAY

Change to read:

• **Procedure**

Protect the *System suitability solution*, *Standard solution*, *Sample stock solution*, and *Sample solution* from direct light.

Diluent: Heat 0.1 N sodium hydroxide to about 60°–70°. Cool to room temperature, purge with helium or nitrogen, and store in a plastic container.

Solution A: 0.5% acetic acid in methanol

Solution B: 0.5% acetic acid in water

Mobile phase: *Solution A* and *Solution B* (71:29)

System suitability solution: 0.04 mg/mL of USP Isotretinoin RS and 0.02 mg/mL of USP Tretinoin RS in *Diluent*

Standard solution: 0.04 mg/mL of USP Isotretinoin RS in *Diluent*

Sample stock solution: Nominally 0.4 mg/mL of isotretinoin in *Diluent*, prepared as follows. Transfer NLT 10 Capsules to a suitable volumetric flask. Add *Diluent* to the volumetric flask to fill about 50% of the volume, sonicate for 1 h with occasional shaking to disperse all of the contents, and dilute with *Diluent* to volume.

Sample solution: Nominally 0.04 mg/mL of isotretinoin in *Diluent* from the *Sample stock solution*. Pass the solution through a suitable membrane filter of 0.45-µm or finer pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 353 nm. ▲For *Identification B*, use a diode array detector in the range of 230–400 nm.▲ 2S (USP41)

Column: 4.6-mm × 25-cm; packing L1

Flow rate: 1.5 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

[Note—The relative retention times for isotretinoin and tretinoin are 1.0 and 1.3, respectively.]

Suitability requirements

Resolution: NLT 2.0 between the isotretinoin and tretinoin peaks, *System suitability solution*

▲▲ 2S (USP41)

Tailing factor: NMT 2.0 for the isotretinoin peak, *System suitability solution*

Relative standard deviation: NMT 2.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of isotretinoin ($C_{20}H_{28}O_2$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak area from the *Sample solution*

r_S = peak area from the *Standard solution*

C_S = concentration of USP Isotretinoin RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of isotretinoin in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

Change to read:

• **Dissolution** ⟨711⟩

▲Protect the solutions containing isotretinoin from light.▲ 2S (USP41)

Test 1

Medium

Stage 1: Simulated gastric fluid with pepsin, prepared fresh and purged with nitrogen

Stage 2: 0.13 N sodium hydroxide (5 g/L of sodium hydroxide in water). Prepare fresh, and purge with nitrogen.

Apparatus (see Disintegration ⟨701⟩)**:** No disks; the apparatus is adjusted so that the bottom of the basket-rack assembly descends to 1.0 ± 0.1 cm from the inside bottom surface of the vessel on the downward stroke; the 10-mesh stainless steel cloth in the basket-rack assembly is replaced with a 40-mesh stainless steel cloth; a 10-mesh stainless-steel cloth is fitted to the top of the basket-rack assembly.

Time: 60 min

Standard solution: Transfer 10 mg of USP Isotretinoin RS to a 200-mL volumetric flask. Add 25.0 mL of *Stage 1 Medium* and about 150 mL of *Stage 2 Medium*, sonicate until completely dissolved (about 20 min), and dilute with *Stage 2 Medium* to volume. Pass 20 mL of this solution through a suitable filter, discarding the first 5 mL. Dilute 5.0 mL of the filtrate with *Stage 2 Medium* to 50 mL.

Sample solutions: Perform a dissolution test on each of 6 Capsules. Place 1 Capsule in one of the tubes in each of six basket-rack assemblies. Place each basket in a 1-L beaker containing 100 mL of *Stage 1 Medium* in a bath having a temperature of 37.0 ± 0.5°. Allow to stand for 30 min. Carefully add 800 mL of *Stage 2 Medium* to each beaker. With the disintegration apparatus operating, connect each basket-rack assembly to the drive rod in a timed sequence. After 60 min, withdraw 20 mL of *Medium* (*Stage 1* and *Stage 2*), and immediately pass the solution through a suitable membrane filter of 0.45-µm pore size.

USP Monographs

www.webofpharma.com

Discard the first 5 mL, and collect the solution in argon-charged glassware. Dilute, if necessary, with *Stage 2 Medium* to obtain a theoretical concentration of 5.5 µg/mL of isotretinoin, assuming complete dissolution, based on the label claim.

Capsule shell correction solution: Empty the contents of 3 Capsules. Wash the Capsule shells in several 20-mL aliquots of chloroform. Allow the Capsule shells to air dry. Place the Capsule shells in a 1-L flask containing 100 mL of *Stage 1 Medium* and 800 mL of *Stage 2 Medium*. Allow the flask to stand for about 1 h in a bath with a temperature of 37.0 ± 0.5°, stirring occasionally. Filter, and dilute as described for the *Sample solutions*.

Analysis

Detector: UV 343 nm

Blank: *Medium* (*Stage 1* and *Stage 2*)

Samples: *Standard solution*, *Sample solutions*, and *Capsule shell correction solution*

Determine the amount of isotretinoin ($C_{20}H_{28}O_2$) dissolved, correcting for the Capsule shell absorbance.

Calculate the percentage of the labeled amount of isotretinoin ($C_{20}H_{28}O_2$) dissolved:

$$\text{Result} = [(A_U - A_C)/A_S] \times (C_S/L) \times D \times 100$$

A_U = absorbance of the *Sample solutions*
A_C = absorbance of the *Capsule shell correction solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Isotretinoin RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
D = dilution factor for the *Sample solutions*

Tolerances: NLT 80% (*Q*) of the labeled amount of isotretinoin ($C_{20}H_{28}O_2$) is dissolved.

Test 2: If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 2*.

Medium: 0.05 M phosphate buffer, pH 7.8, containing 0.5% (w/v) solid *N,N*-dimethyldodecylamine *N*-oxide; 900 mL

Apparatus 1: 20-mesh basket; 100 rpm

Time: 90 min

Buffer solution: 3.4 mg/mL of monobasic potassium phosphate. Adjust with phosphoric acid to a pH of 2.10 ± 0.05.

Mobile phase: Methanol and *Buffer solution* (81:19)

Standard solution: Transfer about 44 mg of USP Isotretinoin RS to a 100-mL volumetric flask. Add 15 mL of 1-propanol, and sonicate for about 15 min. Add 50 mL of *Medium*, and sonicate for 10 min. Dilute with *Medium* to volume. Transfer 5.0 mL of the resulting solution to a 100-mL volumetric flask, and dilute with *Medium* to volume. Dilute this solution with *Medium* to obtain a final concentration of about (*L*/1000) mg/mL, where *L* is the label claim, in mg/Capsule.

Sample solution: Pass a portion of the solution under test through a suitable membrane filter of 0.45-µm pore size.

Chromatographic system

Isoxsuprine Hydrochloride

$C_{18}H_{23}NO_3 \cdot HCl$ 337.84

Benzenemethanol, 4-hydroxy-α-[1-[(1-methyl-2-phenoxyethyl)amino]ethyl]-, hydrochloride, stereoisomer.
p-Hydroxy-α-[1-[(1-methyl-2-phenoxyethyl)amino]ethyl] benzyl alcohol hydrochloride.
(±)-(α*R**)-*p*-Hydroxy-α-[(1*S**)-1-[[(1*S**)-1-methyl-2-phenoxyethyl]amino]ethyl]benzyl alcohol hydrochloride [579-56-6; 34331-89-0].

» Isoxsuprine Hydrochloride contains not less than 97.0 percent and not more than 103.0 percent of $C_{18}H_{23}NO_3 \cdot HCl$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Isoxsuprine Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)
Solution: 50 µg per mL.
Medium: water.

C: To 1 mL of a solution (1 in 100), obtained by heating as necessary, add 3 mL of a 1 in 15 solution of sodium nitrite in 2 N sulfuric acid. Add ammonium hydroxide dropwise: a yellow precipitate is formed and it dissolves upon the addition of sodium hydroxide solution (1 in 5).

D: To 1 mL of a solution (1 in 100) add 1 mL of phosphomolybdic acid solution (1 in 100): a pale yellow to white precipitate is formed.

pH ⟨791⟩: between 4.5 and 6.0, in a solution (1 in 100).
Loss on drying ⟨731⟩—Dry it at 105° for 1 hour: it loses not more than 0.5% of its weight.
Residue on ignition ⟨281⟩: not more than 0.2%.
Related compounds—To 10 mg, accurately weighed in a suitable vial, add 1 mL of N-trimethylsilylimidazole, and heat at 65° for 10 minutes. Add 5 mL of isooctane, wash with one 3-mL portion of water, and allow the layers to separate. Inject a 2-µL portion of the isooctane solution into a gas chromatograph equipped with a 0.3-cm × 2.0-m glass column packed with packing S1A containing 3% liquid phase G2 and a flame-ionization detector. The column temperature is maintained at 215°, and the injection port and detector are maintained at 250°. The carrier gas is nitrogen, flowing at the rate of 25 mL per minute. Adjust the instrument to provide full-scale response for the major component. Inject a second 2-µL portion of the isooctane solution with the attenuator adjusted to an 8-fold increase in sensitivity, and record the chromatogram from 0.5 to 1.5 relative to the retention time of the major peak. Measure the area of all minor peaks, and correct for differences in sensitivity settings. Calculate the percentage of related compounds present taken by the formula:

$$100A/B$$

in which *A* is the sum of the corrected area peaks for all minor peaks, and *B* is the sum of the corrected area peaks for the major and minor peaks. Not more than 2.0% is found.
Assay—Transfer about 50 mg of Isoxsuprine Hydrochloride, accurately weighed, to a 1000-mL volumetric flask, add water to volume, and mix. Concomitantly determine the absorbances of this solution and of a Standard solution of USP Isoxsuprine Hydrochloride RS in the same medium having a known concentration of about 50 µg per mL in 1-cm cells at the wavelengths of maximum absorbance at about 269 and 300 nm, with a suitable spectrophotometer, using water as the blank. Calculate the quantity, in mg, of $C_{18}H_{23}NO_3 \cdot HCl$ in the Isoxsuprine Hydrochloride taken by the formula:

$$C(A_{U269} - A_{U300})/(A_{S269} - A_{S300})$$

in which *C* is the concentration, in µg per mL, of USP Isoxsuprine Hydrochloride RS in the Standard solution; and the parenthetic expressions are the differences in the absorbances of the two solutions at the wavelengths indicated by the subscripts, for the assay solution (*U*) and the Standard solution (*S*), respectively.

Isoxsuprine Hydrochloride Injection

» Isoxsuprine Hydrochloride Injection is a sterile solution of Isoxsuprine Hydrochloride in Water for Injection. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of $C_{18}H_{23}NO_3 \cdot HCl$.

Packaging and storage—Preserve in single-dose or in multiple-dose containers, preferably of Type I glass.
USP Reference standards ⟨11⟩—
USP Isoxsuprine Hydrochloride RS
Identification—To a 60-mL separator transfer 10 mL of pH 9.0 buffer (prepared by mixing equal volumes of 0.1 M monobasic potassium phosphate and 0.1 N sodium hydroxide and, using a pH meter, adjusting to a pH of 9.0 by adding, as necessary, more of either solution) add 1 mL of Injection, and mix. Add 2 mL of chloroform, shake vigorously for 1 minute, filter the chloroform extract through a pledget of cotton, and mix the filtrate with 500 mg of potassium bromide. Evaporate the chloroform, carefully removing the last trace of solvent in a small vacuum flask: the IR absorption spectrum of a potassium bromide dispersion of the isoxsuprine so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Isoxsuprine Hydrochloride RS that has been treated in the same manner.
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 35.70 USP Endotoxin Units per mg of isoxsuprine hydrochloride.
pH ⟨791⟩: between 4.9 and 6.0.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

USP Monographs

www.webofpharma.com

Assay—

pH 4.0 Citrate buffer—Mix equal volumes of 0.5 M citric acid and 0.5 M sodium citrate, and adjust, by the addition of either solution as necessary, the pH of the solution to 4.0 ± 0.2.

Mixed solvent—Shake 40 mL of ether, 160 mL of isooctane, and 10 mL of water in a separator, remove and discard the water phase, and pass the solvent phase through a large pledget of cotton to remove excess water.

Standard preparation—Transfer about 40 mg of USP Isoxsuprine Hydrochloride RS, accurately weighed, to a 50-mL volumetric flask, add 2 N sulfuric acid to volume, and mix. Transfer 10.0 mL of this solution to a 100-mL volumetric flask, dilute with 2 N sulfuric acid to volume, and mix. The concentration of USP Isoxsuprine Hydrochloride RS in the *Standard preparation* is about 80 µg per mL.

Chromatographic column—Proceed as directed in *Chromatography* ⟨621⟩, *General Procedures, Column Chromatography*, packing a chromatographic tube with two segments of packing material. The lower segment is a mixture of 2 g of *Solid Support* and 1 mL of *pH 4.0 Citrate buffer*, and the upper segment is a mixture prepared as directed under *Assay preparation*.

Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 4 mg of isoxsuprine hydrochloride, to a 100-mL beaker, add 1 mL of dimethyl sulfoxide, and allow to stand for about 10 minutes, with occasional swirling. Add 1 mL of *pH 4.0 Citrate buffer* and 3 g of *Solid Support*, mix as directed under *Chromatographic column*, and transfer to the column. Pass 75 mL of *Mixed solvent* through the column, and discard the eluate. Elute the column with a solution prepared by mixing 0.2 mL of bis(2-ethylhexyl)phosphoric acid with 75 mL of *Mixed solvent*, and collect the eluate in a 125-mL separator. Extract the eluate with two 20-mL portions of 2 N sulfuric acid. Transfer the extracts to a 50-mL volumetric flask, dilute with 2 N sulfuric acid to volume, and mix.

Procedure—Concomitantly determine the absorbances of the *Assay preparation* and the *Standard preparation* in 1-cm cells at the wavelength of maximum absorbance at about 275 nm, with a suitable spectrophotometer, using a column blank, prepared with *Mixed solvent*, to set the instrument. Calculate the quantity, in mg, of $C_{18}H_{23}NO_3 \cdot HCl$ in the portion of Injection taken by the formula:

$$0.05C(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Isoxsuprine Hydrochloride RS in the *Standard preparation;* and A_U and A_S are the absorbances of the *Assay preparation* and the *Standard preparation*, respectively.

Isoxsuprine Hydrochloride Tablets

» Isoxsuprine Hydrochloride Tablets contain not less than 93.0 percent and not more than 107.0 percent of the labeled amount of $C_{18}H_{23}NO_3 \cdot HCl$.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—
USP Isoxsuprine Hydrochloride RS

Identification—Transfer a portion of finely powdered Tablets, equivalent to about 10 mg of isoxsuprine hydrochloride, to a 60-mL beaker, add about 20 mL of water, mix, and filter. Transfer the clear filtrate to a 60-mL separator, add 10 mL of pH 9.0 alkaline borate buffer (see *Buffer Solutions* in the section *Reagents, Indicators, and Solutions*), and shake vigorously to mix. Extract with 2 mL of chloroform, filter the extract through a pledget of cotton, and mix the filtrate with 500 mg of potassium bromide. Evaporate the chloroform, carefully removing the last trace of solvent in a small vacuum flask: the IR absorption spectrum of a potassium bromide dispersion of the isoxsuprine so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Isoxsuprine Hydrochloride RS that has been treated in the same manner.

Dissolution ⟨711⟩—

Medium: water; 900 mL.

Apparatus 1: 100 rpm.

Time: 45 minutes.

Procedure—Determine the amount of $C_{18}H_{23}NO_3 \cdot HCl$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 269 nm of filtered portions of the solution under test, suitably diluted with *Dissolution Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Isoxsuprine Hydrochloride RS in the same medium.

Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{18}H_{23}NO_3 \cdot HCl$ is dissolved in 45 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—

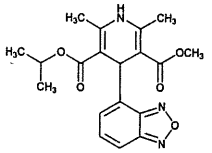
Buffer solution—Transfer about 1.32 g of anhydrous dibasic ammonium phosphate to a 1-liter volumetric flask, add about 950 mL of water, and mix. Adjust with phosphoric acid to a pH of 7.5, dilute with water to volume, and mix.

Mobile phase—Prepare a filtered and degassed mixture of methanol and *Buffer solution* (2:1). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Isoxsuprine Hydrochloride RS in *Mobile phase*, and dilute quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a solution having a known concentration of about 0.4 mg per mL.

Assay preparation—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 20 mg of isoxsuprine hydrochloride, to a 50-mL volumetric flask, and add about 25 mL of *Mobile phase*. Shake by mechanical means for 30 minutes, sonicate for ten minutes to dissolve, dilute with *Mobile phase* to volume, mix, and filter.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 274-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the column efficiency is not less than 1800 theoretical plates, and the relative standard deviation for replicate injections is not more than 2.0%.



Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{18}H_{23}NO_3 \cdot HCl$ in the portion of Tablets taken by the formula:

$$50C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Isoxsuprine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Isradipine

$C_{19}H_{21}N_3O_5$ 371.39

3,5-Pyridinedicarboxylic acid, 4-(4-benzofurazanyl)-1,4-dihydro-2,6-dimethyl-, methyl 1-methylethyl ester, (±)-;
Isopropyl methyl (±)-4-(4-benzofurazanyl)-1,4-dihydro-2,6-dimethyl-3,5-pyridinedicarboxylate [75695-93-1].

DEFINITION

Isradipine contains NLT 98.0% and NMT 102.0% of isradipine ($C_{19}H_{21}N_3O_5$), calculated on the dried basis.

IDENTIFICATION

Change to read:

- **A.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
- **B.** The retention time of the isradipine peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Use low-actinic glassware throughout this procedure, and otherwise protect the test specimen, the Reference Standard, and all solutions containing them from unnecessary exposure to light.

Mobile phase: Methanol, tetrahydrofuran, and water (400:100:500)

Standard solution: 0.2 mg/mL of USP Isradipine RS and 0.01 mg/mL of USP Isradipine Related Compound A RS in *Mobile phase*. If necessary, use sonication and/or add 1 mL of methanol per 20 mL of *Mobile phase* to dissolve the Reference Standards.

Sample solution: 0.2 mg/mL of Isradipine prepared as follows. Transfer 20 mg of Isradipine to a 100-mL volumetric flask. Add sufficient methanol to dissolve, and sonicate if necessary. Dilute with *Mobile phase* to volume.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 326 nm
Column: 4.6-mm × 10-cm; packing L1
Flow rate: 1.7 mL/min
Injection volume: 25 µL

System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 1.5 between isradipine and isradipine related compound A
Relative standard deviation: NMT 1.5%

Analysis
Samples: *Standard solution* and *Sample solution*

Calculate the percentage of isradipine ($C_{19}H_{21}N_3O_5$) in the portion of Isradipine taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isradipine from the *Sample solution*
r_S = peak response of isradipine from the *Standard solution*
C_S = concentration of USP Isradipine RS in the *Standard solution* (mg/mL)
C_U = concentration of Isradipine in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the dried basis

IMPURITIES

- **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%
- **ORGANIC IMPURITIES**

Use low-actinic glassware throughout this procedure, and otherwise protect the test specimen, the Reference Standard, and all solutions containing them from unnecessary exposure to light.

Mobile phase: Prepare as directed in the *Assay*.

System suitability solution: 0.2 mg/mL of USP Isradipine RS and 0.01 mg/mL of USP Isradipine Related Compound A RS in *Mobile phase*. If necessary, use sonication and/or add 1 mL of methanol per 20 mL of *Mobile phase* to dissolve the Reference Standards.

Standard solution: 6 µg/mL of USP Isradipine RS in *Mobile phase*. If necessary, use sonication and/or add 1 mL of methanol per 20 mL of *Mobile phase* to dissolve the Reference Standards.

Sample solution: 2 mg/mL of Isradipine prepared as follows. Transfer 50 mg of Isradipine to a 25-mL volumetric flask, and add 5.0 mL of methanol to dissolve. Sonicate if necessary, and dilute with *Mobile phase* to volume.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 230 nm
Column: 4.6-mm × 10-cm; packing L1
Flow rate: 1.7 mL/min
Injection volume: 25 µL
Run time: NLT 3 times the retention time of isradipine for the *Sample solution*

System suitability
Sample: *System suitability solution*
Suitability requirements
Resolution: NLT 1.5 between isradipine and isradipine related compound A
Relative standard deviation: NMT 1.5%

Analysis
Samples: *Standard solution* and *Sample solution*

Acceptance criteria: The sum of the peak responses, other than that of isradipine, of the *Sample solution* is NMT 4 times the isradipine response from the *Standard solution* (NMT 1.2%); the response of the largest peak, other than that of isradipine, of the *Sample solution* is NMT 1.6 times greater than the isradipine response from the *Standard solution* (NMT 0.5%); no other peak response, other than that of isradipine, is greater than the isradipine response from the *Standard solution* (NMT 0.3%).

SPECIFIC TESTS

- **LOSS ON DRYING** ⟨731⟩

Analysis: Dry at 105° for 4 h.
Acceptance criteria: NMT 0.2%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed, light-resistant containers.
- **USP REFERENCE STANDARDS** ⟨11⟩

USP Isradipine RS
USP Isradipine Related Compound A RS
Isopropyl methyl 4-(4-benzofurazanyl)-2,6-dimethyl-3,5-pyridinedicarboxylate.
$C_{19}H_{19}N_3O_5$ 369.38

Isradipine Capsules

» Isradipine Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of isradipine ($C_{19}H_{21}N_3O_5$).

Packaging and storage—Store in a tight container at controlled room temperature. Protect from light.

USP Reference standards ⟨11⟩—
USP Isradipine RS
USP Isradipine Related Compound A RS
Isopropyl methyl 4-(4-benzofurazanyl)-2,6-dimethyl-3,5-pyridinedicarboxylate.
$C_{19}H_{19}N_3O_5$ 369.38

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Medium: methanol.
Solution—Transfer the contents of 1 Capsule into a suitable volumetric flask, dissolve the contents in the *Medium* by mechanical shaking for 15 minutes, and dilute with *Medium* to obtain a solution containing 25 µg of isradipine per mL.
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Dissolution ⟨711⟩—
Medium: 0.1% aqueous solution of lauryl dimethyl amine oxide (prepared by transferring 500 mL of deaerated water into the dissolution vessel, adding 1.65 mL of 30% lauryl dimethyl amine oxide, and mixing); 500 mL.
Apparatus 2: 50 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{19}H_{21}N_3O_5$ dissolved by employing UV absorption at the wavelength of maximum absorbance at about 328 nm on filtered portions of the solution under test, suitably diluted with *Medium,* if necessary, in comparison with a Standard solution having a known concentration of USP Isradipine RS in the same *Medium.*
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{19}H_{21}N_3O_5$ is dissolved in 45 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.
[NOTE—Isradipine is light sensitive. Throughout the following procedures, protect test or assay specimens, the Reference Standards, and solutions containing them from unnecessary exposure to light. Use low-actinic glassware, unless otherwise directed.]

Chromatographic purity—
Mobile phase, Resolution solution, and *Chromatographic system*—Proceed as directed in the test for *Chromatographic purity* under *Isradipine.*
Standard solution—Dissolve an accurately weighed quantity of USP Isradipine RS in *Mobile phase,* with the aid of sonication if necessary, and dilute quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a solution having a known concentration of about 1 µg per mL. [NOTE—If necessary, use 1 mL of methanol per 20 mL of *Mobile phase* to dissolve the Reference Standard prior to diluting with *Mobile phase.*]
Test solution—Use the *Assay preparation.*
Procedure—Separately inject equal volumes (about 25 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses for all the peaks: the sum of all peak responses, other than that of isradipine, from the *Test solution* is not more than four times the isradipine response obtained from the *Standard solution* (2.0%); and no single peak response is greater than that of the isradipine peak response obtained from the *Standard solution* (0.5%).

Assay—
Mobile phase, Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Isradipine.*
Assay preparation—Remove, as completely as possible, the contents of not fewer than 20 Capsules, and mix the combined contents. Transfer an accurately weighed quantity, equivalent to about 25 mg of isradipine, to a 100-mL volumetric flask. Add 5.0 mL of methanol and 5.0 mL of *Mobile phase,* and sonicate at room temperature for 15 minutes. Shake for 15 minutes in a mechanical shaker. Dilute with *Mobile phase* to volume, mix, and filter, discarding the first 5 mL of the filtrate.
Procedure—Separately inject equal volumes (about 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of isradipine ($C_{19}H_{21}N_3O_5$) in the portion of Capsules taken by the formula:

$$100C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Isradipine RS in the *Standard preparation;* and r_U and r_S are the isradipine peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Isradipine Compounded Oral Suspension

DEFINITION
Isradipine Compounded Oral Suspension contains NLT 90.0% and NMT 110.0% of the labeled amount of isradipine ($C_{19}H_{21}N_3O_5$).

Prepare Isradipine Compounded Oral Suspension 1 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Isradipine capsules[a] or powder,[b] equivalent to	100 mg of isradipine
Glycerin, *USP*	3 mL
Syrup, *NF,* a sufficient quantity to make	100 mL

[a] DynaCirc 5-mg capsules, Sandoz Pharmaceuticals, East Hanover, NJ.
[b] Isradipine powder, Sandoz, East Hanover, NJ.

Calculate the required quantity of each ingredient for the total amount to be prepared. If using *Isradipine capsules,* empty the required number in a suitable mortar, or use *Isradipine powder.* Add sufficient *Glycerin* to wet the powder, and triturate to a fine paste. Add the *Syrup* in small portions. Add increasing volumes of the *Syrup* to make an isradipine liquid that is pourable. Transfer the contents of the mortar, stepwise and quantitatively, to a calibrated bottle. Add enough of the *Syrup* to bring to final volume, and mix well.

ASSAY

• **PROCEDURE**

Mobile phase: Methanol, tetrahydrofuran, and water (42:20:38). Filter, and degas.

Diluent: Prepare a solution of methanol and 95% ethanol (50:50).

Standard stock solution: 1.0 mg/mL of USP Isradipine RS in *Diluent*

Standard solution: Prepare 0.1 mg/mL of isradipine from *Standard stock solution* and *Diluent*, and pass through a filter of 0.22-µm pore size.

Sample solution: Shake thoroughly by hand each bottle of Oral Suspension. Prepare 0.1 mg/mL of isradipine from Oral Suspension and *Diluent*, and pass through a filter of 0.22-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 240 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 1.0 mL/min

Injection volume: 10 µL

System suitability

Sample: *Standard solution*

[NOTE—The retention time for isradipine is about 6.1 min.]

Suitability requirements

Relative standard deviation: NMT 2.0% for replicate injections

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of isradipine ($C_{19}H_{21}N_3O_5$) in the portion of Oral Suspension taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Isradipine RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of isradipine in the *Sample solution* (mg/mL)

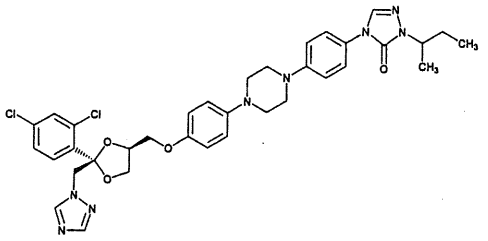
Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **PH** ⟨791⟩: 5.5–6.5

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store in a refrigerator.



• **BEYOND-USE DATE:** NMT 30 days after the date on which it was compounded, when stored in a refrigerator

• **LABELING:** Label it to indicate that it is to be well shaken before use, and to state the *Beyond-Use Date*.

Add the following:

▲Itraconazole Capsules

DEFINITION

Itraconazole Capsules contain NLT 90.0% and NMT 110.0% of the labeled amount of itraconazole ($C_{35}H_{38}Cl_2N_8O_4$).

IDENTIFICATION

- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Solution A: 5.8 g/L of monobasic ammonium phosphate in water. Adjust with phosphoric acid to a pH of 2.0. Pass through a suitable filter of 0.45-µm pore size.
Solution B: Acetonitrile and tetrahydrofuran (90:10)
Mobile phase: *Solution A* and *Solution B* (45:55)
Diluent: Methanol and tetrahydrofuran (50:50)
Standard solution: 0.1 mg/mL of USP Itraconazole RS in *Diluent*. Sonicate, if necessary, to dissolve.
Sample stock solution: Nominally 1 mg/mL of itraconazole in *Diluent* prepared as follows. Transfer an amount nominally equivalent to 100 mg of itraconazole, from the contents of NLT 20 Capsules, to a 100-mL volumetric flask. Add 70 mL of *Diluent*, and sonicate for about 30 min. Dilute with *Diluent* to volume. Pass through a suitable filter of 0.45-µm pore size.
Sample solution: Nominally 0.1 mg/mL of itraconazole in *Diluent* from *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 225 nm. For *Identification B*, use a diode array detector in the range of 200–400 nm.
Column: 4.6-mm × 15-cm; 3-µm packing L1
Column temperature: 30°
Flow rate: 1.5 mL/min
Injection volume: 10 µL
Run time: NLT 2 times the retention time of itraconazole
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of itraconazole ($C_{35}H_{38}Cl_2N_8O_4$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of itraconazole from the *Sample solution*
r_S = peak response of itraconazole from the *Standard solution*
C_S = concentration of USP Itraconazole RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of itraconazole in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

Relative standard deviation: NMT 2.0% for 5 replicate injections
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of itraconazole ($C_{35}H_{38}Cl_2N_8O_4$) released:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times D \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Itraconazole RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL
D = dilution factor for the *Sample solution*, if applicable

Tolerances: NLT 80% (Q) of the labeled amount of itraconazole ($C_{35}H_{38}Cl_2N_8O_4$) is dissolved.

▲Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*. All solutions containing itraconazole should be stored in low-actinic or amber glassware and protected from light.
Medium: Simulated gastric fluid without enzymes, deaerated; 900 mL
Apparatus 2: 100 rpm; with a sinker
Time: 60 min
Standard stock solution: 0.55 mg/mL of USP Itraconazole RS in methanol prepared as follows. Transfer suitable amount of USP Itraconazole RS to a suitable volumetric flask and add about 80% of the flask volume of methanol. Heat the solution to 65° in a water bath, with intermittent stirring, until dissolved. Dilute with methanol to final volume.
Standard solution: 0.022 mg/mL of USP Itraconazole RS in *Medium* from *Standard stock solution*
Sample solution: Pass a portion of the solution under test through a suitable filter and dilute with *Medium*, if necessary.
Blank: *Medium*

Ivermectin

$C_{48}H_{74}O_{14}$ (Component H_2B_{1a}) 875.09

$C_{47}H_{72}O_{14}$ (Component H_2B_{1b}) 861.07

Component H_2B_{1a}:

Avermectin A_{1a}, 5-*O*-demethyl-22,23-dihydro-.

(2a*E*,4*E*,8*E*)-(5′*S*,6*S*,6′*R*,7*S*,11*R*,13*R*,15*S*,17a*R*,20*R*,20a*R*,20b*S*)-6′-(*S*)-*sec*-Butyl-3′,4′,5′,6,6′,7,10,11,14,15,17a,20,20a,20b-tetradecahydro-20,20b-dihydroxy[11,15-methano-2*H*,13*H*,17*H*-furo[4,3,2-*pq*][2,6]benzodioxacyclooctadecin-13,2′-[2*H*]pyran]-7-yl 2,6-dideoxy-4-*O*-(2,6-dideoxy-3-*O*-methyl-α-L-*arabino*-hexopyranosyl)-3-*O*-methyl-α-L-*arabino*-hexopyranoside [70161-11-4].

Component H_2B_{1b}:

Avermectin A_{1a}, 5-*O*-demethyl-25-de(1-methylpropyl)-22,23-dihydro-25-(1-methylethyl)-.

(2a*E*,4*E*,8*E*)-(5′*S*,6*S*,6′*R*,7*S*,11*R*,13*R*,15*S*,17a*R*,20*R*,20a*R*,20b*S*)-3′,4′,5′,6,6′,7,10,11,-oxospiro[11,15-methano-2*H*,13*H*,17*H*-furo[4,3,2-*pq*][2,6]benzodioxacyclooctadecin-13,2′[2*H*]pyran]-7-yl 2,6-dideoxy-4-*O*-(2,6-dideoxy-3-*O*-methyl-α-L-*arabino*-hexopyranosyl)-3-*O*-methyl-α-L-*arabino*-hexopyranoside [70209-81-3].

» Ivermectin is a mixture of avermectin A_{1a}, 5-*O*-demethyl-22,23-dihydro-(component H_2B_{1a}), and avermectin A_{1a}, 5-*O*-demethyl-25-de(1-methylpropyl)-22,23-dihydro-25-(1-methylethyl)-(component H_2B_{1b}). It contains not less than 95.0 percent and not more than 102.0 percent for the sum of component H_2B_{1a} plus component H_2B_{1b}, calculated on the anhydrous and alcohol- and formamide-free basis; and the ratio (calculated by area percentage) of component $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$ is not less than 90.0 percent. It may contain small amounts of suitable antioxidant and chelating agents.

Packaging and storage—Preserve in tight containers. Store between 2° and 8°. Where the use of an antioxidant is allowed, store at 25°, excursions permitted between 15° and 30°.

Labeling—If it is intended for veterinary use only, it is so labeled. Label it to state the name(s) and amount(s) of any added substance(s). Label it also to state that it is for manufacturing, processing, or repackaging.

USP Ivermectin RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K.*▲ (CN 1-May-2020)

B: The retention times of the component H_2B_{1a} peak and the component H_2B_{1b} peak in the chromatogram of the *Assay preparation* correspond to those in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Specific rotation ⟨781S⟩**:** between −17° and −20° measured at 20°, calculated on the water-, alcohol-, and formamide-free basis.

Test solution: 25 mg per mL, in methanol.

Water Determination, *Method I* ⟨921⟩ **:** not more than 1.0%.

Residue on ignition ⟨281⟩**:** not more than 0.1%.

Limit of alcohol and formamide—

Internal standard solution—Dilute 0.5 mL of isopropyl alcohol with water to 100 mL, and mix.

Standard solution 1—Transfer 2.0 mL of dehydrated alcohol to a 100-mL volumetric flask, dilute with water to volume, and mix.

www.webofpharma.com

Standard solution 2—Transfer 1.0 mL of formamide to a 100-mL volumetric flask, dilute with water to volume, and mix.

Standard solution 3—Transfer 5.0 mL of *Standard solution 1* and 5.0 mL of *Standard solution 2* to a 50-mL volumetric flask, dilute with water to volume, and mix to obtain a solution having concentrations of formamide and alcohol of 0.001 and 0.002 mL per mL, respectively. Transfer 2.0 mL of this solution to a 15-mL centrifuge tube, add 2.0 mL of *m*-xylene, insert the stopper, mix, and centrifuge. Remove the upper *m*-xylene layer, and extract it with 2.0 mL of water. Discard the upper layer, combine the two retained lower aqueous layers, add 1.0 mL of *Internal standard solution,* and mix. Each mL of this solution contains about 0.0008 mL of alcohol and 0.0004 mL of formamide.

Standard solution 4—Transfer 10.0 mL of *Standard solution 1* and 10.0 mL of *Standard solution 2* to a 50-mL volumetric flask, dilute with water to volume, and mix to obtain a solution having concentrations of alcohol and formamide of 0.004 and 0.002 mL per mL, respectively. Transfer 2.0 mL of this solution to a 15-mL centrifuge tube, add 2.0 mL of *m*-xylene, insert the stopper, mix, and centrifuge. Remove the upper *m*-xylene layer, and extract it with 2.0 mL of water. Discard the upper layer, combine the two retained lower aqueous layers, add 1.0 mL of *Internal standard solution,* and mix. Each mL of this solution contains about 0.0016 mL of alcohol and 0.0008 mL of formamide.

Test solution—Transfer 120 mg of Ivermectin, accurately weighed, to a 15-mL centrifuge tube, and dissolve in 2.0 mL of *m*-xylene, heating in a water bath at 45 ± 5°, if necessary. Add 2.0 mL of water, mix, and centrifuge. Transfer the *m*-xylene layer to a 15-mL centrifuge tube, and extract with 2.0 mL of water. Discard the upper *m*-xylene layer, combine the two retained lower aqueous layers, add 1.0 mL of *Internal standard solution,* and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The gas chromatograph is equipped with a flame-ionization detector and a 0.53-mm × 30-m fused-silica analytical column coated with a 3-µm G43 stationary phase. The carrier gas is helium, with a 10:1 split ratio and a linear velocity of about 35 cm per second. The chromatograph is programmed as follows. The column temperature is maintained at about 40° for 5 minutes after injection, then increased at a rate of 20° per minute to 180° and maintained at 180° for 2 minutes. The injection port temperature is maintained at about 220°, and the detector temperature is maintained at about 280°.

Procedure—Separately inject equal volumes (about 2 µL) of *Standard solution 3, Standard solution 4,* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses for alcohol, formamide, and isopropyl alcohol. Plot the ratios of the peak responses for alcohol and isopropyl alcohol and for formamide and isopropyl alcohol versus concentrations, in mL per mL, of alcohol and formamide, respectively, obtained from *Standard solution 3* and *Standard solution 4*. From the graphs so obtained, and using the ratios of the peak responses for alcohol and isopropyl alcohol and for formamide and isopropyl alcohol obtained from the chromatogram of the *Test solution,* determine the concentrations, *C,* of alcohol and formamide in the *Test solution.* [NOTE—In the event that the peak responses of the *Test solution* are significantly outside the ranges of peak responses obtained from *Standard solution 3* and *Standard solution 4,* prepare additional *Standard solutions,* and chromatograph them to obtain peak responses bracketing those obtained with the *Test solution.*] Calculate the percentages of alcohol and formamide in the portion of Ivermectin taken by the formula:

$$500{,}000CD/W$$

in which *C* is the concentration of alcohol or formamide, as appropriate, in mL per mL, in the *Test solution; D* is the density of alcohol (0.79) or formamide (1.13); and *W* is the weight, in mg, of Ivermectin taken: not more than 5.0% of alcohol and 3.0% of formamide are found.

Related compounds—

Mobile phase and *Chromatographic system*—Proceed as directed in the *Assay.*

Standard solution—Proceed as directed for *Standard preparation* in the *Assay.*

Test solution—Use the *Assay preparation.*

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatogram of the *Test solution* for a period of time equivalent to twice the retention time of the main peak in the chromatogram obtained from the *Standard solution,* and measure the peak areas. Calculate the percentage of each impurity by the formula:

$$100r_i/(r_s - r_b)$$

in which r_i is the peak area for each individual impurity in the *Test solution* chromatogram; r_s is the sum of all peaks in the *Test solution* chromatogram; and r_b is the total area of all peaks in a blank chromatogram: not more than 2.5% is found for the sum of all peaks with a relative retention time of about 1.3 to 1.4 (corresponding to H_4B_{1a} isomers and $\Delta^{2,3}$ H_2B_{1a}); not more than 1% is found for the peak with a relative retention time of about 0.7 (corresponding to 8a-oxo-H_2B_{1a}); not more than 0.7% is found for the peak with a relative retention time of about 0.5 (corresponding to avermectin B_{1a}); not more than 0.5% is found for any other individual impurity peak; not more than 1% is found for the sum of all unidentified peaks; and not more than 4% is found for the sum of all the peaks, apart from the two main peaks (H_2B_{1a} and H_2B_{1b}). Disregard any peak that is calculated to be less than 0.05%.

Assay—

Mobile phase—Prepare a mixture of acetonitrile, methanol, and water (53: 27.5: 19.5), and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩). Increasing the proportion of water increases the elution times and allows better separation of impurities.

Standard preparation—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol to obtain a solution having a known concentration of about 0.4 mg per mL.

Assay preparation—Transfer about 40 mg of Ivermectin, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with methanol to volume, and mix. Sonicate, if necessary.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative retention times are about 0.75 for component H_2B_{1b} and 1.0 for component H_2B_{1a}; the resolution, *R,* between component H_2B_{1b} and component H_2B_{1a} is not less than 3.0; the column efficiency determined from the component H_2B_{1a} peak is not less than 2000 theoretical plates; the tailing factor for component H_2B_{1a} peak is not more than 2.5; and the relative standard deviation for six replicate injections is not more than 1.0% determined from the component H_2B_{1a} peak.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the peak areas for component H_2B_{1a} and component H_2B_{1b}.

www.webofpharma.com

Calculate the quantity, in mg, of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) and component H_2B_{1b} ($C_{47}H_{72}O_{14}$) in the portion of Ivermectin taken by the formula:

$$DC(r_U/r_S)$$

in which D is the dilution factor, in mL, used to prepare the *Assay preparation;* C is the concentration, in mg per mL, of component H_2B_{1a} or component H_2B_{1b} in the *Standard preparation;* and r_U and r_S are the peak areas for component H_2B_{1a} or component H_2B_{1b} obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Ivermectin Injection

» Ivermectin Injection is a sterile solution of Ivermectin in a suitable vehicle. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of ivermectin, calculated as the sum of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus component H_2B_{1b} ($C_{47}H_{72}O_{14}$). The ratio of the contents, $H_2B_{1a}/(H_2B_{1a}+ H_2B_{1b})$, is not less than 90.0 percent.

Packaging and storage—Preserve in single-dose or in multi-dose containers, preferably of Type I glass or plastic. Store at a temperature of not more than 30°.
Labeling—Label it to indicate that it is for veterinary use only.
USP Reference standards ⟨11⟩—
USP Ivermectin RS

Identification—
A: Thin-Layer Chromatographic Identification Test ⟨201⟩—*Test solution*—Dissolve a volume of the Injection in methanol, dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.5 mg per mL of ivermectin, and filter.
Injection volume: 2 µL.
Developing solvent system: unsaturated chamber, consisting of a freshly prepared and equilibrated mixture of methylene chloride, methanol, and ammonium hydroxide (90:9:1).
Procedure—Remove the plate, allow to air dry, and examine under short- and long-wavelength UV light: the retardation factor, R_F, of the principal spot obtained from the *Test solution* corresponds to that obtained from the *Standard solution.*
B: The retention times of the two principal component peaks of ivermectin in the chromatogram of the *Assay preparation* corresponds to that of the two principal component peaks of ivermectin in the chromatogram of the *Standard preparation,* obtained as directed in the *Assay.*
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 0.016 USP Endotoxin Unit per µg of ivermectin.
Sterility Tests ⟨71⟩ —It meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined.*

Chromatographic purity—
Mobile phase and *Chromatographic system*—Proceed as directed in the *Assay.*
Standard solution—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol and dilute quantitatively, and stepwise if necessary, with methanol to obtain a 0.004 mg per mL solution.
Test solution—Dissolve a volume of the Injection in methanol and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.4 mg of ivermectin per mL of solution, based on the label claim.
Procedure—Inject equal volumes (about 20 µL) of the *Test solution* and the *Standard solution* into the chromatograph, record the chromatograms, and measure all of the peak responses. Calculate the percentage of each impurity in the portion of Injection taken by the formula:

$$100(C_S/C_T)(r_i/r_S)$$

in which C_S is the concentration, in mg per mL, of ivermectin in the *Standard solution;* C_T is the concentration, in mg per mL, of ivermectin in the *Test solution;* r_i is the peak response for each individual peak obtained from the *Test solution;* and r_S is the ivermectin peak response obtained from the *Standard solution.* Not more than 2.7% of the peak with a relative retention time of about 1.3 to 1.5 to that of the principal peak is found; not more than 1.0% of any other impurity is found; and not more than 6.0% of total impurities is found. Disregard any peak below 0.05%.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—
Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, methanol, and water (106:55:39). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol and dilute quantitatively, and stepwise if necessary, with methanol to obtain a 0.4 mg per mL solution.
Assay preparation—Dilute a volume of Injection in methanol and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.4 mg of ivermectin per mL of solution, based on the label claim.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with 245-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the first peak (component H_2B_{1b}) and the second peak (component H_2B_{1a}) is not less than 3.0; and the relative standard deviation for replicate injections is not more than 2.0%, determined from the component H_2B_{1a} peak.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the component H_2B_{1a} plus component H_2B_{1b}. Calculate the percentage of label claim of ivermectin (H_2B_{1a} + H_2B_{1b}) in the portion of Injection taken by the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Ivermectin RS in the *Standard preparation;* C_U is the concentration, in mg per mL, of ivermectin in the *Assay preparation;* r_U is the total peak response of H_2B_{1a} plus H_2B_{1b} peaks obtained from the *Assay preparation;* and r_S is the total peak response of H_2B_{1a} plus H_2B_{1b} peaks obtained from the *Standard preparation.* Calculate the ratio of the contents, in percent, of $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$ in the portion of Injection taken by the formula:

www.webofpharma.com

$$100(r_1/r_U)$$

in which r_1 is the peak response of H_2B_{1a} obtained from the *Assay preparation;* and r_U is as defined above.

Add the following:

▲Ivermectin Compounded Oral Solution, Veterinary

DEFINITION

Ivermectin Compounded Oral Solution, Veterinary contains NLT 90.0% and NMT 110.0% of the labeled amount of ivermectin, calculated as the sum of components $H_2B_{1a}(C_{48}H_{74}O_{14})$ plus $H_2B_{1b}(C_{47}H_{72}O_{14})$.

Prepare Ivermectin Compounded Oral Solution, Veterinary 3 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Ivermectin Injection,[a] equivalent to	30 mg of ivermectin
Polyethylene Glycol 400, a sufficient quantity to make	10 mL

[a] Ivomec Injection 1%, Merial Ltd., Duluth, GA.

Accurately measure the *Ivermectin Injection* and place into a suitable container. Add sufficient *Polyethylene Glycol 400* to bring to final volume. Shake to mix well.

ASSAY

• **PROCEDURE**

Mobile phase: Acetonitrile, methanol, and water (45:40:15)

Standard solution: 0.12 mg/mL of USP Ivermectin RS in methanol

Sample solution: Transfer 1 mL of Oral Solution, Veterinary to a 25-mL volumetric flask, and dilute with methanol to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability.*)

Mode: LC

Detector: UV 245 nm

Column: 4.6-mm × 25-cm; 3.6-µm packing L1

Temperatures

Autosampler: 15°

Column: 20°

Flow rate: 1 mL/min

Injection volume: 25 µL

System suitability

Sample: *Standard solution*

[NOTE—The retention times for component H_2B_{1b} and component H_2B_{1a} are about 23.8 and 31.6 min, respectively.]

Suitability requirements

Resolution: NLT 3.0 between component H_2B_{1b} and component H_2B_{1a}

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0% for replicate injections determined from the component H_2B_{1a} peak

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of ivermectin components $H_2B_{1a}(C_{48}H_{74}O_{14})$ plus $H_2B_{1b}(C_{47}H_{72}O_{14})$ in the portion of Oral Solution, Veterinary taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of H_2B_{1a} plus H_2B_{1b} from the *Sample solution*

r_S = peak response of H_2B_{1a} plus H_2B_{1b} from the *Standard solution*

C_S = concentration of USP Ivermectin RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of ivermectin in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **pH** ⟨791⟩: 5.6–6.6

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store at controlled room temperature.

• **BEYOND-USE DATE:** NMT 90 days after the date on which it was compounded when stored at controlled room temperature.

• **LABELING:** Label to state that it is for veterinary use only and to state the *Beyond-Use Date.*

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Ivermectin RS▲ 25 (USP41)

Ivermectin Paste

DEFINITION

Ivermectin Paste contains NLT 90.0% and NMT 110.0% of the labeled amount of Ivermectin, calculated as the sum of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) and component H_2B_{1b} ($C_{47}H_{72}O_{14}$). The ratio of the contents, $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$, is NLT 90.0%.

IDENTIFICATION

• **A. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Sample solution: 0.5 mg/mL of ivermectin dispersed in methanol from a quantity of Paste. Sonicate if necessary until completely dispersed.

Application volume: 2 µL

Developing solvent system: Methylene chloride, methanol, and ammonium hydroxide (90:9:1)

Analysis: Develop the chromatogram in an unsaturated chamber. Remove the plate, allow to air dry, and examine under short- and long-wavelength UV light.

Acceptance criteria: Meets the requirements

• **B.** The retention times of the two principal component peaks of ivermectin from the *Sample solution* correspond to those of the two principal component peaks of ivermectin from the *Standard solution*, as obtained in the *Assay.*

ASSAY

• **PROCEDURE**

Mobile phase: Acetonitrile, methanol, and water (106:55:39)

Standard solution: 0.4 mg/mL of USP Ivermectin RS in methanol

Sample solution: Disperse a quantity of Paste in methanol, using sonication if necessary, to obtain a solution containing 0.4 mg/mL of ivermectin.

www.webofpharma.com

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability.*)
Mode: LC
Detector: UV 245 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1.5 mL/min
Injection size: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 3.0 between the first peak (component H_2B_{1b}) and the second peak (component H_2B_{1a})
Relative standard deviation: NMT 2.0%, determined from the component H_2B_{1a} peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of ivermectin, component H_2B_{1a} ($C_{48}H_{74}O_{14}$) and component H_2B_{1b} ($C_{47}H_{72}O_{14}$), in the portion of Paste taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = sum of the peak responses for component H_2B_{1a} and component H_2B_{1b} from the *Sample solution*
r_S = sum of the peak responses for component H_2B_{1a} and component H_2B_{1b} from the *Standard solution*
C_S = concentration of USP Ivermectin RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of ivermectin in the *Sample solution* (mg/mL)

Calculate the ratio of the contents, in percentage, of the components, $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$, in the portion of Paste taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of H_2B_{1a} from the *Sample solution*
r_T = sum of the peak responses for component H_2B_{1a} and component H_2B_{1b} from the *Sample solution*

Acceptance criteria: 90.0%–110.0% of the labeled amount of ivermectin, calculated as the sum of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) and component H_2B_{1b} ($C_{47}H_{72}O_{14}$). The ratio of the contents, $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$, is NLT 90.0%.

IMPURITIES
• **ORGANIC IMPURITIES**
Mobile phase, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay.*
Standard solution: 0.004 mg/mL of USP Ivermectin RS in methanol
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Paste taken, disregarding any peak below 0.05%:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response for each impurity from the *Sample solution*
r_S = peak response of the principal peak from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
C_U = nominal concentration of ivermectin in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 3.0% of any peak with a relative retention time of 1.3–1.5, relative to that of the principal peak
Any other impurity: NMT 1.0%
Total impurities: NMT 6.0%

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in well-closed containers. Store at a temperature not higher than 30°.
• **LABELING:** Label it to indicate that it is for oral veterinary use only.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Ivermectin RS

Ivermectin Tablets

» Ivermectin Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of Ivermectin components H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus H_2B_{1b} ($C_{47}H_{72}O_{14}$). They may contain a suitable antioxidant.

Packaging and storage—Preserve in well-closed containers, and store at a temperature below 30°.
USP Reference standards ⟨11⟩—
USP Ivermectin RS
USP 3-*tert*-Butyl-4-hydroxyanisole RS
Identification—The retention times of the H_2B_{1a} and H_2B_{1b} peaks in the chromatogram of the *Assay preparation* correspond to those in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Dissolution ⟨711⟩—
Medium: 0.01 M phosphate buffer, pH 7, with 0.5% of sodium dodecyl sulfate (prepared by dissolving 50 g of sodium dodecyl sulfate in approximately 9 L of water, adding 100 mL of 1 M monobasic sodium phosphate monohydrate, adjusting with sodium hydroxide to a pH of 7, and diluting with water to 10 L); 900 mL.
Apparatus 2: 50 rpm.
Time: 45 minutes.
Determine the amount of $C_{48}H_{74}O_{14}$ (component H_2B_{1a}) plus $C_{47}H_{72}O_{14}$ (component H_2B_{1b}) dissolved by employing the following method.
Mobile phase—Prepare a degassed solution of acetonitrile, methanol, and water (53:35:12).
Standard stock solution—Prepare a 0.13 mg per mL solution of USP Ivermectin RS in *Medium.*
Standard solution—Using the accompanying table, dilute the *Standard stock solution* with *Medium* to volume, and mix.

Tablet Strength (mg per Tablet)	Required Dilution Ratio	Volume of *Standard stock solution* (mL)	Volumetric Flask Size (mL)
3.0	1 in 40	5.0	200
6.0	1 in 20	5.0	100

Test solution—Pass a portion of the solution under test through a suitable filter, and use the filtrate.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 4.6-mm × 10-cm column that contains 5-µm packing L1. The flow rate is about 1.2 mL per minute. The column

USP Monographs

www.webofpharma.com

temperature is maintained at 30°. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the relative retention times are about 0.81 for H_2B_{1b} and 1.0 for H_2B_{1a}; the resolution, *R,* between the H_2B_{1a} and H_2B_{1b} peaks is not less than 1.5; the capacity factor, *k′,* for the H_2B_{1a} peak is not less than 4; the column efficiency determined from both the H_2B_{1a} and H_2B_{1b} peaks is not less than 1500 theoretical plates; the tailing factor for the H_2B_{1a} peak is not more than 2; and the relative standard deviation for replicate injections for the H_2B_{1a} peak is not more than 2.0%.

Procedure—Separately inject equal volumes (about 100 µL) of the *Test solution* and the *Standard solution* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the combined quantities, in percentage, of H_2B_{1a} plus H_2B_{1b} dissolved based on the peak responses obtained from the *Test solution* and the *Standard solution* by the formula:

$$[100(A_U)(W_S)(P)(D_U)]/[(A_S)(D_S)L]$$

in which A_U is the total peak area of H_2B_{1a} plus H_2B_{1b} obtained from the *Test solution;* W_S is the weight, in mg, of the USP Ivermectin RS taken to prepare the *Standard stock solution; P* is the purity of the USP Ivermectin RS (percent [w/w] H_2B_{1a} plus percent [w/w] H_2B_{1b}), expressed as a decimal; D_U is the *Test solution* dilution factor; A_S is the total peak area of H_2B_{1a} plus H_2B_{1b} obtained from the *Standard solution;* D_S is the *Standard solution* dilution factor; and *L* is the label claim of ivermectin, in mg per Tablet.

Tolerances—Not less than 80% (*Q*) of the labeled amount of $C_{48}H_{74}O_{14}$ (H_2B_{1a}) plus $C_{47}H_{72}O_{14}$ (H_2B_{1b}) is dissolved in 45 minutes.

Uniformity of dosage units ⟨905⟩**:** meet the requirements for *Content uniformity.*

PROCEDURE FOR CONTENT UNIFORMITY—

Mobile phase—Prepare as directed in the *Assay.*

Standard solution A—Use the *Standard preparation* from the *Assay.*

Standard solution B—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol to obtain a solution containing 0.125 mg per mL.

Stock sensitivity solution (1%)—Use the *Stock sensitivity solution (1%)* from the *Assay.*

Sensitivity solution (0.2%)—Use the *Sensitivity solution (0.2%)* from the *Assay.*

Test solution—Transfer 1 Tablet into each of ten 25-mL volumetric flasks. Add 5.0 mL of water, and sonicate for 10 minutes. Add approximately 15 mL of methanol, sonicate for 5 minutes, and mix. Allow the solution to cool to room temperature. Dilute with methanol to volume, and mix. Pass a portion of each solution through a 1.0- to 1.2-µm chemically resistant filter prior to analysis.

Chromatographic system (see *Chromatography* ⟨621⟩)—Proceed as directed in the *Assay.*

Procedure—Separately inject equal volumes (about 10 µL) of *Standard solution A* (for the 6 mg per Tablet dose) or *Standard solution B* (for the 3 mg per Tablet dose), the *Sensitivity solution (0.2%),* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses of the ivermectin peaks. Calculate the quantity as a percentage of the label claim of ivermectin per Tablet taken by the formula:

$$[100(A_U)(W_S)(P)(D_U)]/[(A_S)(D_S)L]$$

in which A_U is the peak area of H_2B_{1a} plus the peak area of H_2B_{1b} obtained from the *Test solution;* W_S is the weight, in mg, of the USP Ivermectin RS taken to prepare *Standard solution A* or *Standard solution B; P* is the purity of USP Ivermectin RS (percent [w/w] H_2B_{1a} plus percent [w/w] H_2B_{1b}), expressed as a decimal; D_U is the *Test solution* dilution factor; A_S is the peak area of H_2B_{1a} plus the peak area of H_2B_{1b} obtained from *Standard solution A* or *Standard solution B;* D_S is the *Standard solution A* or *Standard solution B* dilution factor; and *L* is the label claim of ivermectin, in mg per Tablet.

Limit of 8a-oxo-H_2B_{1a}—

Mobile phase—Proceed as directed in the *Assay.*

BHA Working Standard solution—Dissolve an accurately weighed quantity of USP 3-*tert*-Butyl-4-hydroxyanisole RS in methanol, and dilute quantitatively, and stepwise if necessary, to obtain a solution having a known concentration of about 0.96 µg per mL.

Test solution—Use the *Assay preparation.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The column temperature is maintained at 30°. The flow rate is about 1.2 mL per minute. Chromatograph the *BHA Working Standard solution* and the *Test solution,* and record the peak responses as directed for *Procedure:* the relative retention times at 280 nm are about 0.24 for BHA, 0.77 for 8a-oxo-H_2B_{1a}, and 1.0 for H_2B_{1a}.

Procedure—Separately inject equal volumes (about 10 µL) of the *BHA Working Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the percentage of 8a-oxo-H_2B_{1a} as a percentage of the label claim of ivermectin in the portion of Tablets taken by the formula:

$$[100(A_D)(W_S)(P)(D_U)(C_F)]/[(A_S)(D_S)(N)(L)(F)]$$

in which A_D is the peak area of 8a-oxo-H_2B_{1a} obtained from the *Test solution;* W_S is the weight of USP 3-*tert*-Butyl-4-hydroxyanisole RS, in mg, taken to prepare the *BHA Working Standard solution; P* is the purity of USP 3-*tert*-Butyl-4-hydroxyanisole RS, expressed as a decimal; D_U is the *Test solution* dilution factor; C_F is the correction factor (equal to 0.98) used to convert mg of 8a-oxo-H_2B_{1a} to mg of ivermectin; A_S is the peak area of BHA obtained from the *BHA Working Standard solution;* D_S is the *BHA Working Standard* solution dilution factor; *N* is the number of Tablets taken to prepare the *Test solution; L* is the label claim of ivermectin, in mg per Tablet; and *F* is the relative response factor (equal to 1.0): not more than 2.0% of 8a-oxo-H_2B_{1a} is found. The correction factor, C_F, (equal to 0.98) is calculated by the following formula:

$$[0.90\ (\text{molecular weight of } H_2B_{1a}) + 0.10\ (\text{molecular weight of } H_2B_{1b})]/(\text{molecular weight of 8a-oxo-}H_2B_{1a}) = 873.10/889.10 = 0.98]$$

Assay—

Mobile phase—Prepare a mixture of acetonitrile, methanol, and water (53:35:12). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol to obtain a solution containing 0.25 mg per mL.

Stock sensitivity solution (1%)—Quantitatively prepare a 1 in 100 dilution of the *Standard solution* in methanol.

Sensitivity solution (0.2%)—Quantitatively prepare a 1 in 5 dilution of the *Stock sensitivity solution (1%)* in methanol.

www.webofpharma.com

Assay preparation—Transfer the appropriate number of Tablets into a 250-mL volumetric flask according to the accompanying table:

Tablet Strength (mg per Tablet)	Number of Tablets
3.0	20
6.0	10

Add approximately 25 mL of water, and sonicate for 10 minutes. Add methanol to fill the flask three-quarters full, sonicate for 5 minutes or until the Tablets are completely disintegrated, and shake until mixed well. Allow the solution to cool to room temperature. Dilute with methanol to volume, add a magnetic stirrer, and mix until no lumps are present in the solution. Pass a portion of this solution through a 1.0- to 1.2-µm chemically resistant filter prior to injection.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.2 mL per minute. The column temperature is maintained at 30°. Chromatograph the *Sensitivity solution (0.2%)* and the *Standard preparation* at 245-nm detection, and record the peak responses as directed for *Procedure:* the signal-to-noise ratio for the ivermectin peak obtained from the *Sensitivity solution (0.2%)* is not less than 10; obtained from the *Standard preparation,* the relative retention times are about 0.82 and 1.0 for components H_2B_{1b} and H_2B_{1a}, respectively; the capacity factor, *k'*, for the component H_2B_{1b} is not less than 3; the column efficiency for component H_2B_{1a} is not less than 1500 theoretical plates; the tailing factor for component H_2B_{1a} is not more than 2; and the relative standard deviation for the area response for total ivermectin (H_2B_{1a} plus H_2B_{1b}) for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the peak areas for component H_2B_{1a} plus component H_2B_{1b}. Calculate the percentage of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus component H_2B_{1b} ($C_{47}H_{72}O_{14}$) as a percentage of the label claim of ivermectin per Tablet taken by the formula:

$$[100(A_U)(W_S)(P)(D_U)]/[(A_S)(D_S)(N)(L)]$$

in which A_U is the total peak response of H_2B_{1a} plus H_2B_{1b} obtained from the *Assay preparation*; W_S is the weight of the USP Ivermectin RS, in mg, taken to prepare the *Standard preparation*; P is the purity of the USP Ivermectin RS (percent [w/w] H_2B_{1a} plus percent [w/w] H_2B_{1b}), expressed as a decimal; D_U is the sample dilution factor; A_S is the total peak area of H_2B_{1a} plus H_2B_{1b} obtained from the *Standard preparation*; D_S is the Standard dilution factor; N is the number of Tablets taken to prepare the *Assay preparation*; and L is the label claim of ivermectin, in mg per Tablet.

Ivermectin Topical Solution

» Ivermectin Topical Solution is a topical solution in a suitable vehicle. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of Ivermectin, calculated as the sum of component H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus component H_2B_{1b} ($C_{47}H_{72}O_{14}$). The ratio of the contents, $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$, is not less than 90.0 percent.

Packaging and storage—Preserve in well-closed containers. Store at a temperature not more than 30°.
Labeling—Label it to indicate that it is for veterinary use only.
USP Reference standards ⟨11⟩—
USP Ivermectin RS

Identification—

A: Thin-Layer Chromatographic Identification Test ⟨201⟩—*Test solution*—Dissolve a volume of Topical Solution in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.5 mg per mL of ivermectin, and filter.
Injection volume: 2 µL.
Developing solvent system: unsaturated chamber, freshly prepared and equilibrated mixture of methylene chloride, methanol, and ammonium hydroxide (90:9:1).
Procedure—Remove the plate, allow to air dry, and examine under short- and long-wavelength UV light: the retardation factor, R_F, of the principal spot obtained from the *Test solution* corresponds to that obtained from the *Standard solution.*

B: The retention times of the two principal component peaks of ivermectin in the chromatogram of the *Assay preparation* corresponds to that of the two principal component peaks of ivermectin in the chromatogram of the *Standard preparation,* obtained as directed in the *Assay.*

Chromatographic purity—

Mobile phase and *Chromatographic system*—Proceed as directed in the *Assay.*
Standard solution—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a 0.004 mg per mL solution.
Test solution—Dissolve a quantity of Topical Solution in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.4 mg of ivermectin per mL of solution, based on the label claim.
Procedure—Inject equal volumes (about 20 µL) of the *Test solution* and the *Standard solution* into the chromatograph, record the chromatograms, and measure all of the peak responses. Calculate the percentage of each impurity in the portion of Topical Solution taken by the formula:

$$100(C_S/C_T)(r_i/r_S)$$

in which C_S is the concentration, in mg per mL, of ivermectin in the *Standard solution*; C_T is the concentration, in mg per mL, of ivermectin in the *Test solution*; r_i is the peak response for each impurity from the *Test solution;* and r_S is the ivermectin peak response obtained from *Standard solution.* Not more than 2.7% of the peak with a relative retention time of about 1.3 to 1.5 to that of the principal peak is found; not more than 1.0% of any other impurity is found; and not more than 6.0% of total impurities is found. Disregard any peak below 0.05%.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, methanol, and water (106:55:39). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Dissolve an accurately weighed quantity of USP Ivermectin RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to

www.webofpharma.com

obtain a solution having a known concentration of about 0.4 mg per mL.

Assay preparation—Dilute a volume of Topical Solution, quantitatively, and stepwise if necessary, with methanol to obtain a solution containing 0.4 mg of ivermectin per mL of solution, based on the label claim.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the first peak (component H_2B_{1b}) and the second peak (component H_2B_{1a}) is not less than 3.0; and the relative standard deviation for replicate injections is not more than 2.0%, determined from the H_2B_{1a} peak.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the component H_2B_{1a} plus component H_2B_{1b}. Calculate the percentage of label claim of ivermectin (H_2B_{1a} + H_2B_{1b}) in the portion of Topical Solution taken by the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Ivermectin RS in the *Standard preparation;* C_U is the concentration, in mg per mL, of ivermectin in the *Assay preparation;* r_U is the total peak response of H_2B_{1a} plus H_2B_{1b} peaks obtained from the *Assay preparation;* and r_S is the total peak response of H_2B_{1a} plus H_2B_{1b} peaks obtained from the *Standard preparation.* Calculate the ratio of the contents, in percent, of $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$ in the portion of Topical Solution taken by the formula:

$$100(r_1/r_U)$$

in which r_1 is the peak response of H_2B_{1a} obtained from the *Assay preparation;* and r_U is as described above.

Ivermectin and Clorsulon Injection

» Ivermectin and Clorsulon Injection is a sterile solution of Ivermectin and Clorsulon in a suitable vehicle. It contains not less than 95.0 percent and not more than 110.0 percent of the labeled amount of ivermectin [component B_{1a} ($C_{48}H_{74}O_{14}$) plus component B_{1b} ($C_{47}H_{72}O_{14}$)] and not less than 95.0 percent and not more than 105.0 percent of the labeled amount of clorsulon ($C_8H_8Cl_3N_3O_4S_2$).

Packaging and storage—Preserve in single-dose or multi-dose containers, preferably of Type I glass or plastic. Store at a temperature not higher than 30°.

Labeling—Label it to indicate that it is for veterinary use only.

USP Reference standards ⟨11⟩—
USP Clorsulon RS
USP Ivermectin RS

Identification—

A: Thin-Layer Chromatographic Identification Test ⟨201⟩—*Test solution:* about 0.5 mg of ivermectin and 5 mg of clorsulon per mL in methanol.
Application volume: 2 µL.
Developing solvent system: a mixture of methylene chloride, methanol, and ammonium hydroxide (90:9:1).
B: The retention times of the two major peaks in the chromatogram of the *Assay preparation* correspond to those in the chromatogram of the *Standard preparation,* as obtained in the *Assay for ivermectin.* The retention time of the major clorsulon peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay for clorsulon.*
[NOTE—The two major ivermectin components are not separated by this method.]

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 2.3 USP Endotoxin Units per mg of combined ivermectin and clorsulon.

Sterility Tests ⟨71⟩ **:** meets the requirements.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay for ivermectin—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, methanol, and water (530:350:70). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩). Increasing the proportion of water increases the resolution.

Standard preparation—Prepare a solution of USP Ivermectin RS in methanol having a known concentration of about 0.3 mg per mL.

Assay preparation—Transfer an accurately measured portion of Injection, equivalent to about 30 mg of ivermectin, to a 100-mL volumetric flask, dissolve in and dilute with methanol to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.2 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure* [NOTE—The relative retention times are about 0.8 for component B_{1b} and 1.0 for component B_{1a}.] : the resolution, *R,* between component B_{1b} and component B_{1a} is not less than 2.0; the column efficiency determined from the component B_{1a} peak is not less than 2000 theoretical plates; and the relative standard deviation for replicate injections determined for the component B_{1a} peak is not more than 1.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the area responses for the major peaks. Calculate the quantity, in mg, of ivermectin component B_{1a} ($C_{48}H_{74}O_{14}$) plus ivermectin component B_{1b} ($C_{47}H_{72}O_{14}$) in the portion of Injection taken by the formula:

$$CP(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Ivermectin RS in the *Standard preparation; P* is the designated percentage of the sum of component B_{1a} plus component B_{1b} in USP Ivermectin RS; and r_U and r_S are the sums of the peak area responses for ivermectin component B_{1a} plus ivermectin component B_{1b} obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Assay for clorsulon—

Mobile phase—Prepare a filtered and degassed mixture of chloroform, methanol, and water (900:100:1). Make

www.webofpharma.com

adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Prepare a solution of USP Clorsulon RS in methanol having a known concentration of about 2.4 mg per mL. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with chloroform to volume, and mix.

Assay preparation—Transfer an accurately measured portion of Injection, equivalent to about 240 mg of clorsulon, to a 100-mL volumetric flask, dilute with methanol to volume, and mix. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with chloroform to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L3. The flow rate is about 0.8 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure* [NOTE—The relative retention times are about 0.6 for ivermectin (the major components of ivermectin co-elute) and 1.0 for clorsulon.] : the column efficiency determined from the clorsulon peak is not less than 4000 theoretical plates; the tailing factor for the clorsulon peak is not more than 2.0; and the relative standard deviation for replicate injections determined for the clorsulon peak is not more than 1.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the area responses for the major peaks. Calculate the quantity, in mg, of clorsulon ($C_8H_8Cl_3N_3O_4S_2$) in the portion of Injection taken by the formula:

$$1000C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Clorsulon RS in the *Standard preparation;* and r_U and r_S are the clorsulon peak area responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Ivermectin and Pyrantel Pamoate Tablets

» Ivermectin and Pyrantel Pamoate Tablets contain not less than 90.0 percent and not more than 115.0 percent of the labeled amount of ivermectin components H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus H_2B_{1b} ($C_{47}H_{72}O_{14}$) and not less than 90.0 percent and not more than 110.0 percent of the labeled amount of pyrantel pamoate ($C_{34}H_{30}N_2O_6S$).

Packaging and storage—Preserve in tight containers, protected from light, at a temperature not exceeding 30°, and avoid freezing.

Labeling—Label Tablets to indicate that they are intended for veterinary use only. Tablets that can be chewed are so labeled.

USP Reference standards ⟨11⟩—
USP Ivermectin RS
USP Pyrantel Pamoate RS

Identification—The retention times of the two major ivermectin peaks in the chromatogram of the *Assay preparation* correspond to those in the chromatogram of the *Standard preparation,* obtained as directed in the *Assay for ivermectin.* The retention time of the pyrantel peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* obtained as directed in the *Assay for pyrantel pamoate.*

Microbial enumeration tests ⟨61⟩ and ***Tests for specified microorganisms*** ⟨62⟩—The total aerobic microbial count does not exceed 1000 cfu per g, and the total combined molds and yeasts count does not exceed 100 cfu per g. Tablets meet the requirements of the test for absence of *Escherichia coli.*

Uniformity of dosage units ⟨905⟩: The requirements for dosage uniformity are met if the amount of ivermectin and pyrantel pamoate in each of the 10 dosage units as determined from the Content Uniformity method lies within the range of 75.0% to 125.0% of the label claim, and the RSD is less than or equal to 7%.

If not more than 3 units are outside the range of 75.0% to 125.0% of label claim, and no unit is outside the range of 75.0% to 135.0% of label claim, or if the RSD is greater than 7%, or if both conditions prevail, test 20 additional units. The requirements are met if not more than 3 units of the 30 are outside the range of 75.0% to 125.0% of label claim, and no unit is outside the range of 75.0% to 135.0% of label claim and the RSD of the 30 dosage units does not exceed 9%.

pH ⟨791⟩: between 4 and 6, in a solution prepared as follows. Grind about 15 g of Tablets in a blender. Transfer 10 g of the coarse powder thus obtained to a blender jar, add 250 mL of water, previously adjusted to a pH of 7.0 with 0.01 N sodium hydroxide or 0.01 N hydrochloric acid, and blend for about 5 minutes. Allow to settle, and filter a portion of the supernatant. Determine the pH of the filtrate.

Assay for ivermectin—

Mobile phase—Prepare a mixture of acetonitrile, methanol, 0.05 M monobasic sodium phosphate, and water (1130:670:200:5), adjust with phosphoric acid to a pH of 3.0, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Diluent—Prepare a mixture of methanol and water (95:5).

Alumina column—Add about 30 mL of water to about 500 g of neutral alumina, and shake for about 2 hours on a reciprocating shaker. Add about 4 g of the resulting suspension to a 10-mm × 10-cm chromatographic tube fitted with a stopcock, tapping the sides of the column to facilitate settling of the alumina to a height of between 5 and 6 cm. Prepare a separate column for each solution to be tested.

Standard stock solution—Prepare a solution of USP Ivermectin RS in methanol having a known concentration of about 0.28 mg of USP Ivermectin RS per mL. Transfer 4.0 mL of this solution and 5.0 mL of water to a 100-mL volumetric flask, dilute with methanol to volume, and mix. Transfer 5.0 mL of this solution to a second 100-mL volumetric flask, dilute with *Diluent* to volume, and mix. This solution contains about 0.56 µg of USP Ivermectin RS per mL.

Standard preparation—Transfer 15.0 mL of the *Standard stock solution* to a 50-mL centrifuge tube, add 4.0 mL of water, and mix on a vortex mixer. Extract this solution with 10 mL of hexanes by shaking for about 10 minutes. Centrifuge, and discard the hexanes layer. Repeat the extraction with 5 mL of hexanes by shaking for 5 minutes. Centrifuge, and discard the hexanes layer. Add the aqueous layer to the *Alumina column,* and allow to elute. Discard the first 2 mL of eluant, and collect the next 5 mL of eluant in a stoppered tube.

Assay stock solution—Grind an accurately weighed Tablet until it is completely broken up and free from lumps and transfer to a screw-capped, wide-mouth, amber bottle of appropriate volume. Add an accurately measured volume of *Diluent* to the bottle to obtain the estimated concentration of ivermectin of about 0.55 µg per mL. Cap the bottle, and mix on a vortex mixer for about 1 minute. Ultrasonicate for 15 minutes then mechanically shake for an additional 30 minutes. Centrifuge a portion of the suspension thus obtained for about 5 minutes.

USP Monographs

www.webofpharma.com

Assay preparation—Transfer 15.0 mL of the *Assay stock solution* to a 50-mL centrifuge tube, add 4.0 mL of water, and mix on a vortex mixer. Proceed as directed under *Standard preparation,* beginning with "Extract this solution." The solution thus obtained is the *Assay preparation.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 245-nm detector and a 4.6-mm × 25-cm column that contains 5-µm packing L1. The flow rate is about 1.2 mL per minute. The column temperature is maintained at about 30°. Chromatograph the *Standard preparation,* and record the peak areas as directed for *Procedure:* the relative retention times are about 0.8 for component H_2B_{1b} and 1.0 for component H_2B_{1a}; the resolution, *R*, between the component H_2B_{1b} peak and the component H_2B_{1a} peak is not less than 2.5; the column efficiency determined from the component H_2B_{1a} peak is not less than 2000 theoretical plates; the tailing factor at 5.0% of peak height for the H_2B_{1a} peak is not more than 2.2; and the relative standard deviation for replicate injections determined from the sum of the component H_2B_{1b} peak and the component H_2B_{1a} peak is not more than 2.0%. [NOTE—After the column has been used, if the system suitability requirements are not met, regenerate the column as follows. Wash the column with 50 mL of water, slowly increasing the flow rate to 1 mL per minute. Make at least seven 100-µL injections of a dimethyl sulfoxide and water solution (1:1) at 5-minute intervals using water as a mobile phase. Purge the column with 100 mL of methanol, 200 mL of methylene chloride, and again with 100 mL of methanol, slowly increasing the flow rate to 1 mL per minute after each solvent changeover. Finally, purge the column with *Mobile phase,* increasing the flow rate to that used for the analysis.]

Procedure—Separately inject equal volumes (about 100 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the percentage of label claim of ivermectin [component H_2B_{1a} ($C_{48}H_{74}O_{14}$) plus component H_2B_{1b} ($C_{47}H_{72}O_{14}$)] in the Tablet taken by the formula:

$$100(P(C_S/C_U))(r_U/r_S)$$

in which C_S is the concentration, in µg per mL, of USP Ivermectin RS in the *Standard stock solution;* C_U is the nominal concentration, in µg per mL, of ivermectin in the *Assay stock solution;* *P* is the purity of the USP Ivermectin RS [percent (w/w) H_2B_{1a} plus percent (w/w) H_2B_{1b}], expressed as a decimal; and r_U and r_S are the sums of the peak areas for component H_2B_{1a} and component H_2B_{1b} obtained from the *Assay preparation* and the *Standard preparation,* respectively.

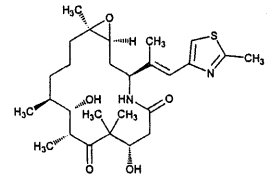
Assay for pyrantel pamoate— [NOTE—Use amber glassware in preparing solutions of pyrantel pamoate, and otherwise protect the solutions from unnecessary exposure to bright light. Complete the *Assay for pyrantel pamoate* without prolonged interruption.]

Extraction solvent—Prepare a mixture of tetrahydrofuran and trifluoroacetic acid (94:6).

Mobile phase—Prepare a degassed mixture of acetonitrile, water, acetic acid, and triethylamine (940:25: 25:10). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩). [NOTE—Increasing the amount of acetonitrile in the *Mobile phase* increases retention times.]

Standard preparation—Prepare a solution of USP Pyrantel Pamoate RS in *Extraction solvent* having a known concentration of about 1.7 mg per mL. Transfer 4.0 mL of this solution to a 25-mL volumetric flask, dilute with tetrahydrofuran to volume, and mix. This solution contains about 0.27 mg of USP Pyrantel Pamoate RS per mL. [NOTE—Stable for 72 hours if stored at room temperature in a dark area.]

Assay preparation—Grind an accurately weighed Tablet until it is completely broken up and free from lumps and transfer to a 300-mL stock bottle, add 50.0 mL of *Extraction solvent,* mix, sonicate for about 15 minutes, and shake by mechanical means for about 1 hour. Allow to settle, and decant the supernatant into a second 300-mL bottle. Add a second 50-mL portion of *Extraction solvent* to the stock bottle, and shake by mechanical means for about 1 hour. Allow to settle, and decant the supernatant to the second 300-mL bottle. Add a third 50-mL portion of *Extraction solvent* to the stock bottle, and shake by mechanical means for about 1 hour. Transfer the contents of the second 300-mL bottle to the stock bottle. Rinse the second bottle with 50.0 mL of *Extraction solvent,* and transfer this rinsing to the stock bottle. Sonicate the stock bottle for about 10 minutes, and centrifuge a portion of the liquid. Transfer an accurately measured volume of the clear supernatant, equivalent to about 6.5 mg of pyrantel pamoate, to a 25-mL volumetric flask, dilute with tetrahydrofuran to volume, and mix.



Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 313-nm detector and a 4.6-mm × 25-cm column that contains packing L3. The flow rate is about 2 mL per minute. Chromatograph the *Standard preparation,* and record the peak areas as directed for *Procedure:* the column efficiency determined from the pyrantel peak is not less than 8000 theoretical plates; the tailing factor is not more than 1.3; and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the percentage of label claim of pyrantel pamoate ($C_{34}H_{30}N_2O_6S$) in the Tablet taken by the formula:

$$100\ (C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Pyrantel Pamoate RS in the *Standard preparation;* C_U is the nominal concentration of pyrantel pamoate in the *Assay preparation;* and r_U and r_S are the pyrantel peak areas obtained from the *Assay preparation* and the *Standard preparation,* respectively. [NOTE—Where the test for *Uniformity of dosage units* has been performed using the *Assay for pyrantel pamoate* procedure as a test for *Content uniformity,* use the average of these determinations as the *Assay for pyrantel pamoate* value.]

Ixabepilone

$C_{27}H_{42}N_2O_5S$ 506.70

17-Oxa-4-azabicyclo[14.1.0]heptadecane-5,9-dione, 7,11-dihydroxy-8,8,10,12,16-pentamethyl-3-[(1*E*)-1-methyl-2-(2-methyl-4-thiazolyl)ethenyl]-, (1*S*,3*S*,7*S*,10*R*,11*S*,12*S*,16*R*)-;

www.webofpharma.com

(1*S*,3*S*,7*S*,10*R*,11*S*,12*S*,16*R*)-7,11-Dihydroxy-8,8,10,12,16-pentamethyl-3-[(*E*)-1-(2-methylthiazol-4-yl)prop-1-en-2-yl]-17-oxa-4-azabicyclo[14.1.0]heptadecane-5,9-dione. [219989-84-1].

DEFINITION

Ixabepilone contains NLT 97.5% and NMT 102.0% of ixabepilone ($C_{27}H_{42}N_2O_5S$), calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

- **A. ▲Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: 197A or 197K▲ (CN 1-May-2020)
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **Procedure**

Buffer stock solution: 100 mM tris(hydroxymethyl) aminomethane in water prepared as follows. Dissolve 12.1 g of tris(hydroxymethyl)aminomethane in 1 L of water and adjust to a pH of 8.5.

Buffer: 5 mM tris(hydroxymethyl)aminomethane in water, from *Buffer stock solution*

Solution A: Acetonitrile and *Buffer* (10:90)

Solution B: Acetonitrile and *Buffer* (90:10)

Mobile phase: See *Table 1*. Return to original conditions and re-equilibrate the system for 6 min.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	70	30
2.5	70	30
10	60.6	39.4
20	35	65
22	12.5	87.5
25	12.5	87.5

Standard solution: 1.0 mg/mL of USP Ixabepilone RS in acetonitrile. Sonicate to assist the dissolution.

Sample solution: 1.0 mg/mL of Ixabepilone in acetonitrile. Sonicate to assist the dissolution.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 240 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Autosampler temperature: 4°

Flow rate: 1.8 mL/min

Injection volume: 10 µL

System suitability

Sample: *Standard solution*

Suitability requirements

Tailing factor: 0.8–1.5

Relative standard deviation: NMT 1.0% for six injections

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of ixabepilone ($C_{27}H_{42}N_2O_5S$) in the portion of Ixabepilone taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Ixabepilone RS in the *Standard solution* (mg/mL)

C_U = concentration of Ixabepilone in the *Sample solution* (mg/mL)

Acceptance criteria: 97.5%–102.0% on the anhydrous basis

IMPURITIES

- **Organic Impurities**

Mobile phase, Standard solution, Sample solution, and **Chromatographic system:** Proceed as directed in the *Assay*.

System suitability solution: 1.0 mg/mL of USP Ixabepilone System Suitability Mixture RS in acetonitrile. Sonicate to assist the dissolution.

Sensitivity solution: 0.3 µg/mL of USP Ixabepilone RS in acetonitrile from *Standard solution*

System suitability

Samples: *System suitability solution* and *Sensitivity solution*

Suitability requirements

Resolution: NLT 1.0 between ixabepilone oxazine analog and desmethyl ixabepilone peaks, *System suitability solution*

Signal-to-noise ratio: NLT 10, *Sensitivity solution*

Analysis

Sample: *Sample solution*

Calculate the percentage of each impurity in the portion of Ixabepilone taken:

$$\text{Result} = r_U/\{\Sigma[r_U \times (1/F)] + r_T\} \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*

F = relative response factor for each individual impurity (see *Table 2*)

r_T = peak response of ixabepilone from the *Sample solution*

Acceptance criteria: See *Table 2*. Disregard any impurity peak less than 0.03%.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Ixabepilone diol	0.47	1.0	0.15
Ixabepilone oxazine analog	0.79	1.0	0.15
Desmethyl ixabepilone	0.85	1.0	0.4
Ixabepilone	1.0	—	—
(*Z*)-Ixabepilone	1.19	0.83	0.15
Any individual unspecified impurity	—	1.0	0.1
Total impurities	—	—	0.8

SPECIFIC TESTS

- **Water Determination** ⟨921⟩, *Method I, Method Ic*: NMT 0.2%
- **Bacterial Endotoxins Test** ⟨85⟩: It contains NMT 0.32 USP Endotoxin Units/mg of ixabepilone.

USP Monographs

www.webofpharma.com

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers. Protect from light and store at 2°–8°.
- **USP REFERENCE STANDARDS** ⟨11⟩

USP Endotoxin RS

USP Ixabepilone RS

USP Ixabepilone System Suitability Mixture RS

It contains ixabepilone and small amounts of:

Ixabepilone diol;

Chloral hydrate, 924
Chloramphenicol, 928
Chlordiazepoxide hydrochloride, 941
Chlordiazepoxide hydrochloride and clidinium bromide, 943
Chlorpheniramine maleate extended-release, 970
Chlorpheniramine maleate and pseudoephedrine hydrochloride extended-release, 972
Cholecalciferol, 986
Clindamycin hydrochloride, 1065
Clofazimine, 1085
Clofibrate, 1088
Clomipramine hydrochloride, 1093
Cloxacillin sodium, 1129
Cod liver oil, 4910
Crypthecodinium cohnii oil, 4925
Curcuminoids, 4929
Cyclobenzaprine hydrochloride extended-release capsules, 1197
Cycloserine, 1211
Cyclosporine, 1213
Danazol, 1234
Dantrolene sodium, 1236
Diazoxide, 1333
Dicloxacillin sodium, 1358
Dicyclomine hydrochloride, 1360
Didanosine delayed-release, 1364
Digitalis, 1380
Dihydrotachysterol, 1392
Diltiazem hydrochloride extended-release, 1399
Diphenhydramine hydrochloride, 1425
Diphenhydramine hydrochloride and ibuprofen, 1431
Diphenhydramine and pseudoephedrine, 1435
Disopyramide phosphate, 1450
Disopyramide phosphate extended-release, 1450
Divalproex sodium delayed-release, 1454
Docusate calcium, 1476
Docusate potassium, 1478
Docusate sodium, 1479
Doxepin hydrochloride, 1509
Doxycycline, 1519
Doxycycline extended-release, 1521
Doxycycline hyclate, 1534
Doxycycline hyclate delayed-release, 1536
Dronabinol, 1549
Duloxetine delayed-release, 1559
Echinacea species, 4966
Echinacea species dry extract, 4960
Efavirenz, 1588
Eleuthero root and rhizome dry extract, 4972
Eleuthero root and rhizome powder, 4976
Ephedrine sulfate, 1642
Ergocalciferol, 1666
Ergoloid mesylates, 1670
Erythromycin delayed-release, 1686
Erythromycin estolate, 1693
Esomeprazole magnesium delayed-release, 1716
Ethchlorvynol, 1766
Ethosuximide, 1774
Etodolac, 1786
Etoposide, 1794
Evening primrose oil, 4980
Fenofibrate, 1834
Fenoprofen calcium, 1845
Ferrous gluconate, 1859
Fexofenadine hydrochloride, 1870
Fish oil containing omega-3 acids, 4994
Fish oil containing omega-3 acids, delayed-release, 4997
Flax seed oil, 4999
Flucytosine, 1916
Fluoxetine, 1958
Fluoxetine delayed-release, 1959
Flurazepam hydrochloride, 1978
Flutamide, 1984
Fluvastatin, 2020
Gabapentin, 2058
Galantamine extended-release, 2074
Gemfibrozil, 2097

General chapters

Applications of mass spectrometry ⟨1736⟩, 8508
Radiopharmaceuticals—preparation, compounding, dispensing, and repackaging ⟨825⟩, 7109
Acetic acid in peptides ⟨503⟩, 6741
Acid-neutralizing capacity ⟨301⟩, 6661
Acoustic emission ⟨1005⟩, 7230
Alcohol determination ⟨611⟩, 6848
Alginates assay ⟨311⟩, 6662
Alternative microbiological sampling methods for nonsterile inhaled and nasal products ⟨610⟩, 6846
Aluminum ⟨206⟩, 6605
4-Aminophenol in acetaminophen-containing drug products ⟨227⟩, 6637
Analysis of biological assays ⟨1034⟩, 7351
Analytical data—interpretation and treatment ⟨1010⟩, 7233
Analytical instrument qualification ⟨1058⟩, 7522
Analytical methodologies based on scattering phenomena—electrophoretic light scattering (determination of zeta potential) ⟨1430.4⟩, 8389
Analytical methodologies based on scattering phenomena—general ⟨1430⟩, 8376
Analytical methodologies based on scattering phenomena—light diffraction measurements of particle size ⟨1430.2⟩, 8386
Analytical methodologies based on scattering phenomena—small angle x-ray scattering and small angle neutron scattering ⟨1430.5⟩, 8392
Analytical methodologies based on scattering phenomena—static light scattering ⟨1430.1⟩, 8379
Analytical procedures for recombinant therapeutic monoclonal antibodies ⟨129⟩, 6565
Ancillary materials for cell, gene, and tissue-engineered products ⟨1043⟩, 7381
Animal drugs for use in animal feeds ⟨1152⟩, 7952
Antibiotics—microbial assays ⟨81⟩, 6488
Anti-factor Xa and anti-factor IIa assays for unfractionated and low molecular weight heparins ⟨208⟩, 6611
Antimicrobial agents—content ⟨341⟩, 6664
Antimicrobial effectiveness testing ⟨51⟩, 6449
Apparent intrinsic dissolution—dissolution testing procedures for rotating disk and stationary disk ⟨1087⟩, 7681
Applications of nuclear magnetic resonance spectroscopy ⟨1761⟩, 8529
Application of water activity determination to nonsterile pharmaceutical products ⟨1112⟩, 7820
Arsenic ⟨211⟩, 6621
Articles of botanical origin ⟨561⟩, 6774
Assay for citric acid/citrate and phosphate ⟨345⟩, 6668
Assay for steroids ⟨351⟩, 6669
Assessment of drug product performance—bioavailability, bioequivalence, and dissolution ⟨1090⟩, 7695
Assessment of drug product leachables associated with pharmaceutical packaging/delivery systems ⟨1664⟩, 8455
Assessment of extractables associated with pharmaceutical packaging/delivery systems ⟨1663⟩, 8442
Atomic absorption spectroscopy ⟨852⟩, 7142
Atomic absorption spectroscopy—theory and practice ⟨1852⟩, 8632
Auxiliary packaging components ⟨670⟩, 6916
Bacterial endotoxins test ⟨85⟩, 6508
Balances ⟨41⟩, 6449
Bioburden control of nonsterile drug substances and products ⟨1115⟩, 7827
The biocompatibility of materials used in drug containers, medical devices, and implants ⟨1031⟩, 7313
Biological assay chapters—overview and glossary ⟨1030⟩, 7300
Biological assay validation ⟨1033⟩, 7337
Biological indicators—resistance performance tests ⟨55⟩, 6452
Biological indicators for sterilization ⟨1229.5⟩, 8216
Biological reactivity tests, in vitro ⟨87⟩, 6514
Biological reactivity tests, in vivo ⟨88⟩, 6516
Biologics ⟨1041⟩, 7379
Biotechnology-derived articles—amino acid analysis ⟨1052⟩, 7481
Biotechnology-derived articles—isoelectric focusing ⟨1054⟩, 7499
Biotechnology-derived articles—peptide mapping ⟨1055⟩, 7501
Biotechnology-derived articles—polyacrylamide gel electrophoresis ⟨1056⟩, 7508
Biotechnology-derived articles—total protein assay ⟨1057⟩, 7515
Botanical extracts ⟨565⟩, 6798
Bovine serum ⟨1024⟩, 7260
Bulk density and tapped density of powders ⟨616⟩, 6850
Bulk pharmaceutical excipients—certificate of analysis ⟨1080⟩, 7647
Bulk powder sampling procedures ⟨1097⟩, 7732
Calcium pantothenate assay ⟨91⟩, 6536
Capillary electrophoresis ⟨1053⟩, 7492
Capsules—dissolution testing and related quality attributes ⟨1094⟩, 7725
Cellular and tissue-based products ⟨1046⟩, 7400
Characterization of crystalline and partially crystalline solids by X-ray powder diffraction (XRPD) ⟨941⟩, 7201
Characterization of crystalline solids by microcalorimetry and solution calorimetry ⟨696⟩, 6931
Chemometrics ⟨1039⟩, 7363
Chloride and sulfate ⟨221⟩, 6636
Chromatography ⟨621⟩, 6853
Cleaning glass apparatus ⟨1051⟩, 7481
Collagenase I ⟨89.1⟩, 6524
Collagenase II ⟨89.2⟩, 6529
Color and achromicity ⟨631⟩, 6865
Color—instrumental measurement ⟨1061⟩, 7553
Completeness of solution ⟨641⟩, 6866
Compounding for phase I investigational studies ⟨1168⟩, 7985
Conductivity of solutions ⟨644⟩, 6868
Congealing temperature ⟨651⟩, 6874
Container content for injections ⟨697⟩, 6934
Containers—glass ⟨660⟩, 6881
Containers—performance testing ⟨671⟩, 6922
Cotton ⟨691⟩, 6929
Cryopreservation of cells ⟨1044⟩, 7389
Crystallinity ⟨695⟩, 6931
Deliverable volume ⟨698⟩, 6935
Density of solids ⟨699⟩, 6938
Depyrogenation ⟨1228⟩, 8176
Depyrogenation by filtration ⟨1228.3⟩, 8184
Depyrogenation by Rinsing ⟨1228.4⟩, 8187
Design, evaluation and characterization of viral clearance procedures ⟨1050.1⟩, 7472
Design and analysis of biological assays ⟨111⟩, 6543
Design and development of biological assays ⟨1032⟩, 7320
Detection of irradiated dietary supplements ⟨2250⟩, 8722
Dexpanthenol assay ⟨115⟩, 6547
Dimethylaniline ⟨223⟩, 6636
Diphtheria antitoxin potency testing for human immune globulins ⟨162⟩, 6582
Disinfectants and antiseptics ⟨1072⟩, 7608
Disintegration ⟨701⟩, 6940
Disintegration and dissolution of dietary supplements ⟨2040⟩, 8711
Dissolution ⟨711⟩, 6945
The dissolution procedure: development and validation ⟨1092⟩, 7707
Distilling range ⟨721⟩, 6955
Drug release ⟨724⟩, 6957
Dry heat depyrogenation ⟨1228.1⟩, 8181
Dry heat sterilization ⟨1229.8⟩, 8225
Elastomeric closures for injections ⟨381⟩, 6669
Elemental contaminants in dietary supplements ⟨2232⟩, 8719
Elemental impurities—limits ⟨232⟩, 6641
Elemental impurities—procedures ⟨233⟩, 6645
Endotoxin indicators for depyrogenation ⟨1228.5⟩, 8190
Enzymes used as ancillary materials in pharmaceutical manufacturing ⟨89⟩, 6521
4-Epianhydrotetracycline ⟨226⟩, 6636
Epinephrine assay ⟨391⟩, 6676
Erythropoietin bioassays ⟨124⟩, 6557
Ethylene glycol, diethylene glycol, and triethylene glycol in ethoxylated substances ⟨469⟩, 6733
Ethylene oxide and dioxane ⟨228⟩, 6639
Evaluation of plastic packaging systems and their materials of construction with respect to their user safety impact ⟨1661⟩, 8434
Evaluation of screening technologies for assessing medicine quality ⟨1850⟩, 8626
Evaluation of the inner surface durability of glass containers ⟨1660⟩, 8429
Excipient biological safety evaluation guidelines ⟨1074⟩, 7613
Excipient performance ⟨1059⟩, 7528

Neohesperidin dihydrochalcone, 5896
Neomycin
  boluses, 3102
  and colistin sulfates and hydrocortisone acetate otic suspension, 1150
  for injection, 3102
  penicillin G, polymyxin B, hydrocortisone acetate, and hydrocortisone sodium succinate topical suspension, 3430
  and polymyxin B sulfates, bacitracin, and hydrocortisone acetate ointment, 3116
  and polymyxin B sulfates, bacitracin, and hydrocortisone acetate ophthalmic ointment, 3116
  and polymyxin B sulfates, bacitracin, and lidocaine ointment, 3117
  and polymyxin B sulfates and bacitracin ointment, 3115
  and polymyxin B sulfates and bacitracin ophthalmic ointment, 3115
  and polymyxin B sulfates, bacitracin zinc, and hydrocortisone ointment, 3118
  and polymyxin B sulfates, bacitracin zinc, and hydrocortisone ophthalmic ointment, 3119
  and polymyxin B sulfates, bacitracin zinc, and hydrocortisone acetate ophthalmic ointment, 3120
  and polymyxin B sulfates, bacitracin zinc, and lidocaine ointment, 3120
  and polymyxin B sulfates and bacitracin zinc ointment, 3118
  and polymyxin B sulfates and bacitracin zinc ophthalmic ointment, 3118
  and polymyxin B sulfates cream, 3114
  and polymyxin B sulfates and dexamethasone ophthalmic ointment, 3121
  and polymyxin B sulfates and dexamethasone ophthalmic suspension, 3122
  and polymyxin B sulfates and gramicidin cream, 3122
  and polymyxin B sulfates, gramicidin, and hydrocortisone acetate cream, 3123
  and polymyxin B sulfates and gramicidin ophthalmic solution, 3123
  and polymyxin B sulfates and hydrocortisone ophthalmic suspension, 3123
  and polymyxin B sulfates and hydrocortisone otic solution, 3124
  and polymyxin B sulfates and hydrocortisone otic suspension, 3124
  and polymyxin B sulfates and hydrocortisone acetate cream, 3125
  and polymyxin B sulfates and hydrocortisone acetate ophthalmic suspension, 3125
  and polymyxin B sulfates and lidocaine cream, 3126
  and polymyxin B sulfates ophthalmic ointment, 3114
  and polymyxin B sulfates ophthalmic solution, 3115
  and polymyxin B sulfates, penicillin G procaine, and hydrocortisone acetate topical suspension, 3448
  and polymyxin B sulfates and pramoxine hydrochloride cream, 3126
  and polymyxin B sulfates and prednisolone acetate ophthalmic suspension, 3127
  and polymyxin B sulfates solution for irrigation, 3114
  sulfate, 3102
  sulfate and bacitracin ointment, 3104
  sulfate and bacitracin zinc ointment, 3104
  sulfate cream, 3103
  sulfate and dexamethasone sodium phosphate cream, 3104
  sulfate and dexamethasone sodium phosphate ophthalmic ointment, 3105
  sulfate and dexamethasone sodium phosphate ophthalmic solution, 3106
  sulfate and fluocinolone acetonide cream, 3107
  sulfate and fluorometholone ointment, 3107
  sulfate and flurandrenolide cream, 3107
  sulfate and flurandrenolide lotion, 3108
  sulfate and flurandrenolide ointment, 3108
  sulfate and gramicidin ointment, 3108
  sulfate and hydrocortisone cream, 3109
  sulfate and hydrocortisone ointment, 3109
  sulfate and hydrocortisone otic suspension, 3109
  sulfate and hydrocortisone acetate cream, 3110
  sulfate and hydrocortisone acetate lotion, 3110
  sulfate and hydrocortisone acetate ointment, 3110
  sulfate and hydrocortisone acetate ophthalmic suspension, 3110
  sulfate, isoflupredone acetate, and tetracaine hydrochloride ointment, 3111
  sulfate, isoflupredone acetate, and tetracaine hydrochloride topical powder, 3112
  sulfate and methylprednisolone acetate cream, 3113
  sulfate, nystatin, gramicidin, and triamcinolone acetonide cream, 3222
  sulfate, nystatin, gramicidin, and triamcinolone acetonide ointment, 3222
  sulfate, nystatin, thiostrepton, and triamcinolone acetonide cream, 3223
  sulfate, nystatin, thiostrepton, and triamcinolone acetonide ointment, 3223
  sulfate ointment, 3103
  sulfate ophthalmic ointment, 3103
  sulfate and prednisolone acetate ophthalmic suspension, 3128

Naphazoline hydrochloride, 3076
Naphazoline hydrochloride and pheniramine maleate, 3076
Neomycin and polymyxin B sulfates, 3115
Neomycin and polymyxin B sulfates and gramicidin, 3123
Neomycin sulfate and dexamethasone sodium phosphate, 3106
Ofloxacin, 3231
Olopatadine hydrochloride, 3249
Oxymetazoline hydrochloride, 3350
Phenylephrine hydrochloride, 3519
Physostigmine salicylate, 3536
Pilocarpine hydrochloride, 3543
Pilocarpine nitrate, 3545
Polymyxin B sulfate and trimethoprim, 3592
Prednisolone sodium phosphate, 3668
Proparacaine hydrochloride, 3739
Scopolamine hydrobromide, 4013
Silver nitrate, 4041
Sodium chloride, 4068
Sulfacetamide sodium, 4143
Tetracaine hydrochloride, 4299
Tetrahydrozoline hydrochloride, 4315
Timolol maleate, 4389
Tobramycin, 4408
Travoprost, 4471
Tropicamide, 4541
Voriconazole compounded, veterinary, 4645
Zinc sulfate, 4693

Ophthalmic suspension

Brinzolamide, 594
Chloramphenicol and hydrocortisone acetate for, 932
Dexamethasone, 1287
Fluorometholone, 1952
Gentamicin and prednisolone acetate, 2107
Natamycin, 3096
Neomycin and polymyxin B sulfates and dexamethasone, 3122
Neomycin and polymyxin B sulfates and hydrocortisone, 3123
Neomycin and polymyxin B sulfates and hydrocortisone acetate, 3125
Neomycin and polymyxin B sulfates and prednisolone acetate, 3127
Neomycin sulfate and hydrocortisone acetate, 3110
Neomycin sulfate and prednisolone acetate, 3128
Oxytetracycline hydrochloride and hydrocortisone acetate, 3363
Prednisolone acetate, 3663
Rimexolone, 3887
Sulfacetamide sodium and prednisolone acetate, 4145
Tetracycline hydrochloride, 4310
Tobramycin and dexamethasone, 4411
Tobramycin and fluorometholone acetate, 4412

Opium, 3273

Oral powder

Containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 54
Levothyroxine sodium, 2618
Sodium bicarbonate, 4061

Oral solution

Abacavir, 19
Acacia syrup, 5597
Acetaminophen, 41
Containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 56
Acetaminophen and codeine phosphate, 54

www.webofpharma.com

Oral solution *(continued)*
Acetaminophen, dextromethorphan hydrobromide, doxylamine succinate, and pseudoephedrine hydrochloride, 67
Acetaminophen for effervescent, 42
Amantadine hydrochloride, 212
Aminocaproic acid, 236
Aminophylline, 245
Amprolium, 331
Aromatic elixir, 5624
Ascorbic acid, 384
Ascorbic acid compounded, 385
Aspirin effervescent tablets for, 395
Atenolol, 407
Beclomethasone dipropionate compounded, 484
Benzaldehyde elixir, compound, 5634
Betamethasone, 542
Bethanechol chloride, 563
Bromodiphenhydramine hydrochloride, 599
Bromodiphenhydramine hydrochloride and codeine phosphate, 600
Brompheniramine maleate, 602
Brompheniramine maleate and pseudoephedrine sulfate, 603
Butabarbital sodium, 642
Caffeine citrate, 663
Calcium glubionate syrup, 695
Captopril, 734
C 13 for, urea, 767
Cetirizine hydrochloride, 912
Cherry syrup, 5709
Chloral hydrate, 924
Chloramphenicol, 930
Chlorpheniramine maleate, 971
Chlorpheniramine maleate and pseudoephedrine hydrochloride, 973
Chlorpromazine hydrochloride syrup, 976
Chocolate syrup, 5716
Citalopram, 1034
Clindamycin hydrochloride, 1066
clindamycin hydrochloride compounded, 1066
Clindamycin palmitate hydrochloride for, 1068
Cloxacillin sodium for, 1130
Codeine phosphate, 1138
Codeine sulfate, 1141
Cyclosporine, 1216
Cyproheptadine hydrochloride, 1219
Dexamethasone, 1288
Dexamethasone elixir, 1286
Dexbrompheniramine maleate and pseudoephedrine sulfate, 1298
Dexchlorpheniramine maleate, 1301
Dextromethorphan hydrobromide, 1321
Diclofenac potassium for, 1344
Dicyclomine hydrochloride, 1361
Didanosine for, 1366
Digoxin, 1385
Dihydrotachysterol, 1392
Diltiazem hydrochloride, 1405
Dimenhydrinate, 1410
Diphenhydramine hydrochloride, 1429
Diphenoxylate hydrochloride and atropine sulfate, 1438
Docusate sodium syrup, 1481
Dolasetron mesylate, 1485
Doxepin hydrochloride, 1510
Doxylamine succinate, 1546
Dyphylline, 1573
Dyphylline and guaifenesin, 1575
Entecavir, 1636
Ephedrine sulfate, 1644
Ergocalciferol, 1667
Ergoloid mesylates, 1671
Escitalopram, 1706
Ethosuximide, 1776
Ferric ammonium citrate for, 290
Ferrous gluconate, 1860
Ferrous sulfate, 1863
Ferrous sulfate syrup, 1863
Fluoxetine, 1961
Fluphenazine hydrochloride, 1973
Fluphenazine hydrochloride elixir, 1971
Folic acid, compounded, 2027
Furosemide, 2055
Galantamine, 2079
Glycerin, 2134
Guaifenesin, 2171
Guaifenesin and codeine phosphate, 2172
Haloperidol, 2189
Hydralazine hydrochloride, 2215
Hydromorphone hydrochloride, 2252
Hydroxyzine hydrochloride, 2266
Hyoscyamine sulfate, 2277
Hyoscyamine sulfate elixir, 2276
Ipecac, 2397
Isoniazid, 2426
Isosorbide, 2440
Ivermectin compounded, veterinary, 2473
Lamivudine, 2526
Leucovorin calcium compounded, 2570
Levetiracetam, 2583
Levocarnitine, 2600
Levofloxacin, 2608
Lincomycin, 2632
Lithium, 2648
Loperamide hydrochloride, 2661
Lopinavir and ritonavir, 2666
Loratadine, 2674
Magnesium carbonate, citric acid, and potassium citrate for, 2711
Magnesium carbonate and citric acid for, 2710
Manganese chloride for, 2732
Magnesium citrate, 2714
Magnesium citrate for, 2715
Meperidine hydrochloride, 2784
Metaproterenol sulfate, 2813
Methadone hydrochloride, 2838
Methylcellulose, 2876
Metoclopramide, 2910
Metoprolol tartrate, 2925
Mibolerone, 2945
Neomycin sulfate, 3103
Nortriptyline hydrochloride, 3216
Ondansetron, 3266
Orange syrup, 5915
Oxybutynin chloride, 3328
Oxycodone hydrochloride, 3337
Paromomycin, 3409
Penicillin G potassium for, 3439
Penicillin V potassium for, 3456
Phenobarbital, 3498
Piperazine citrate syrup, 3575
Polyethylene glycol 3350 and electrolytes for, 3587
Potassium bicarbonate effervescent tablets for, 3596
Potassium bicarbonate and potassium chloride for effervescent, 3597
Potassium bicarbonate and potassium chloride effervescent tablets for, 3597
Potassium bicarbonate, potassium chloride, and potassium citrate effervescent tablets for, 3609
Potassium bromide, veterinary, 3600
Potassium chloride, 3604
Potassium chloride for, 3605
Potassium citrate and citric acid, 3617
Potassium gluconate, 3619
Potassium gluconate and potassium chloride, 3621
Potassium gluconate and potassium chloride for, 3621
Potassium gluconate and potassium citrate, 3622
Potassium gluconate, potassium citrate, and ammonium chloride, 3622
Potassium iodide, 3624
Potassium and sodium bicarbonates and citric acid effervescent tablets for, 3598
Prednisolone, 3661
Prednisolone sodium phosphate compounded, 3667
Prednisone, 3671
Prochlorperazine, 3697
Promazine hydrochloride, 3713
Promazine hydrochloride syrup, 3713
Promethazine and phenylephrine hydrochloride, 3721
Promethazine and phenylephrine hydrochloride and codeine phosphate, 3724
Promethazine hydrochloride, 3717
Pseudoephedrine hydrochloride, 3762
Pseudoephedrine hydrochloride, carbinoxamine maleate, and dextromethorphan hydrobromide, 3767
Pyridostigmine bromide, 3780
Ranitidine, 3846
Risperidone, 3905
Ritonavir, 3917
Saccharin sodium, 3967
Senna, 4026
Sertraline hydrochloride, 4032
Sodium benzoate compounded, 4056
Sodium bromide, veterinary, 4063
Sodium citrate and citric acid, 4069
Sodium fluoride, 4072
Sodium phosphates, 4090
Stavudine for, 4122
Sulfaquinoxaline, 4169
Syrup, 6087
Terpin hydrate, 4284
Terpin hydrate and codeine, 4284
Theophylline, 4325
Theophylline and guaifenesin, 4332
Theophylline sodium glycinate, 4334
Thiamine hydrochloride, 4338
Thiamine mononitrate, 4341
Thioridazine hydrochloride, 4354
Thiothixene hydrochloride, 4361
Tolu balsam syrup, 6090
Triamcinolone diacetate, 4491
Tricitrates, 4504
Trifluoperazine, 4511
Trihexyphenidyl hydrochloride, 4519
Trikates, 4521
Trimeprazine, 4522
Triprolidine hydrochloride, 4533
Triprolidine and pseudoephedrine hydrochlorides, 4534
Valproic acid, 4574
Vancomycin hydrochloride for, 4590
Vancomycin hydrochloride compounded, 4589
Vehicle for, 5913
Vehicle for, sugar free, 5913
Verapamil hydrochloride, 4609
Vigabatrin for, 4619
Vitamins with minerals, oil-soluble, 5372

Ipecac oral, 2397
Ipratropium bromide and albuterol sulfate inhalation, 2399
Isoniazid oral, 2426
Isosorbide oral, 2440
Ivermectin topical, 2476
Lactulose, 2522
Lead, standard, 6236
Levalbuterol inhalation, 2576
Levobunolol hydrochloride ophthalmic, 2595
Levocarnitine oral, 2600
Levofloxacin oral, 2608
Lidocaine hydrochloride topical, 2627
Lincomycin oral, 2632
Lithium oral, 2648
Locke-Ringer's, 6231
Loperamide hydrochloride oral, 2661
Loratadine oral, 2674
Mafenide acetate for topical, 2704
Magnesium carbonate and citric acid for oral, 2710
Magnesium carbonate, citric acid, and potassium citrate for oral, 2711
Manganese chloride for oral, 2732
Magnesium citrate for oral, 2715
Magnesium citrate oral, 2714
Maltitol, 5871
Meperidine hydrochloride oral, 2784
Metaproterenol sulfate oral, 2813
Methadone hydrochloride oral, 2838
Methoxsalen topical, 2865
Methylcellulose ophthalmic, 2876
Methylcellulose oral, 2876
Metoclopramide oral, 2910
Metoprolol tartrate oral, 2925
Mibolerone oral, 2945
Minoxidil topical, 2975
Mometasone furoate topical, 3005
Moxifloxacin ophthalmic, 3034
Myrrh topical, 3057
Naphazoline hydrochloride ophthalmic, 3076
Naphazoline hydrochloride and pheniramine maleate ophthalmic, 3076
Neomycin and polymyxin B sulfates and gramicidin ophthalmic, 3123
Neomycin and polymyxin B sulfates and hydrocortisone otic, 3124
Neomycin and polymyxin B sulfates for irrigation, 3114
Neomycin and polymyxin B sulfates ophthalmic, 3115
Neomycin sulfate and dexamethasone sodium phosphate ophthalmic, 3106
Neomycin sulfate oral, 3103
Nickel standard TS, 6232
Nitrofurazone topical, 3183
Nitromersol topical, 3190
Nortriptyline hydrochloride oral, 3216
Ofloxacin ophthalmic, 3231
Olopatadine hydrochloride ophthalmic, 3249
Ondansetron, oral, 3266
Oral, containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 56
Oxybutynin chloride oral, 3328
Oxycodone hydrochloride oral, 3337
Oxymetazoline hydrochloride ophthalmic, 3350
Papain tablets for topical, 3396
Paromomycin oral, 3409
Penicillin G potassium for oral, 3439
Penicillin V potassium for oral, 3456
Phenobarbital oral, 3498
Phenol, topical, camphorated, 3502
Phenylephrine hydrochloride ophthalmic, 3519
Physostigmine salicylate ophthalmic, 3536
Pilocarpine hydrochloride ophthalmic, 3543
Pilocarpine nitrate ophthalmic, 3545
Podophyllum resin topical, 3582
Polyethylene glycol 3350 and electrolytes for oral, 3587
Polymyxin B sulfate and hydrocortisone otic, 3592
Polymyxin B sulfate and trimethoprim ophthalmic, 3592
Potassium bicarbonate effervescent tablets for oral, 3596
Potassium bicarbonate and potassium chloride for effervescent oral, 3597
Potassium bicarbonate and potassium chloride effervescent tablets for oral, 3597
Potassium bicarbonate, potassium chloride, and potassium citrate effervescent tablets for oral, 3609
Potassium bromide oral, veterinary, 3600
Potassium chloride for oral, 3605
Potassium chloride oral, 3604
Potassium citrate and citric acid oral, 3617
Potassium gluconate and potassium chloride for oral, 3621
Potassium gluconate and potassium chloride oral, 3621
Potassium gluconate, potassium citrate, and ammonium chloride oral, 3622
Potassium gluconate and potassium citrate oral, 3622
Potassium gluconate oral, 3619
Potassium iodide oral, 3624
Potassium nitrate, 3626
Potassium and sodium bicarbonates and citric acid effervescent tablets for oral, 3598
Povidone–iodine cleansing, 3635
Povidone–iodine topical, 3636
Prednisolone oral, 3661
Prednisolone sodium phosphate compounded oral, 3667
Prednisolone sodium phosphate ophthalmic, 3668
Prednisone oral, 3671
Prochlorperazine oral, 3697
Promazine hydrochloride oral, 3713
Promethazine and phenylephrine hydrochloride and codeine phosphate oral, 3724
Promethazine and phenylephrine hydrochloride oral, 3721
Promethazine hydrochloride oral, 3717
Proparacaine hydrochloride ophthalmic, 3739
Protein standard (8 g/dL), 6194
Pseudoephedrine hydrochloride, carbinoxamine maleate, and dextromethorphan hydrobromide oral, 3767
Pseudoephedrine hydrochloride oral, 3762
Pyridostigmine bromide oral, 3780
Ranitidine oral, 3846
Risperidone oral, 3905
Saccharin sodium oral, 3967
Scopolamine hydrobromide ophthalmic, 4013
Senna oral, 4026
Silver nitrate ophthalmic, 4041
Sodium acetate, 4055
Sodium bromide oral, veterinary, 4063
Sodium chloride, isotonic, 6202
Sodium chloride ophthalmic, 4068
Sodium chloride tablets for, 4069
Sodium citrate and citric acid oral, 4069
Sodium fluoride and acidulated phosphate topical, 4074
Sodium fluoride oral, 4072
Sodium hypochlorite, 4076, 6235, 6235
Sodium hypochlorite topical, 4077
Sodium lactate, 4078
Sodium phosphates oral, 4090
Sodium phosphates rectal, 4090
Sorbitol, 4101
Sorbitol noncrystallizing, 6036
Sorbitol sorbitan, 6038
Stavudine for oral, 4122
Sulfacetamide sodium ophthalmic, 4143
Sulfaquinoxaline oral, 4169
Terpin hydrate and codeine oral, 4284
Terpin hydrate oral, 4284
Tetracaine hydrochloride ophthalmic, 4299
Tetracaine hydrochloride topical, 4299
Tetracycline hydrochloride for topical, 4309
Tetrahydrozoline hydrochloride ophthalmic, 4315
Tetramethylammonium hydroxide, in methanol, 6211
Theophylline and guaifenesin oral, 4332
Theophylline oral, 4325
Theophylline sodium glycinate oral, 4334
Thiamine hydrochloride oral, 4338
Thiamine mononitrate oral, 4341
Thimerosal topical, 4347
Thioridazine hydrochloride oral, 4354
Thiothixene hydrochloride oral, 4361

Penicillin G procaine and dihydrostreptomycin sulfate injectable, 3444
Penicillin G procaine, dihydrostreptomycin sulfate, and prednisolone injectable, 3447
Penicillin G procaine, neomycin and polymyxin B sulfates, and hydrocortisone acetate topical, 3448
Penicillin G procaine injectable, 3443
Penicillin G procaine for injectable, 3443
Penicillin V benzathine oral, 3454
Penicillin V for oral, 3452
Perflutren protein-type A microspheres injectable, 3475
Pergolide, oral, veterinary, 3478
Phenoxybenzamine hydrochloride compounded oral, 3504
Phenytoin oral, 3526
Piroxicam compounded oral, 3579
Prednisolone acetate injectable, 3663
Prednisolone acetate ophthalmic, 3663
Prednisolone compounded oral, veterinary, 3664
Prednisone injectable, 3672
Prednisolone tebutate injectable, 3670
Primidone oral, 3684
Progesterone injectable, 3706
Psyllium hydrophilic mucilloid for oral, 3771
Pyrantel pamoate oral, 3774
Pyrvinium pamoate oral, 3789
Quinidine sulfate oral, 3814
Ractopamine hydrochloride, 3826
Resorcinol and sulfur topical, 3862
Rifampin oral, 3877
Rimexolone ophthalmic, 3887
Selenium sulfide topical, 4023
Simethicone oral, 4045
Sodium polystyrene sulfonate, 4092
Spectinomycin for injectable, 4108
Spironolactone compounded oral, 4111
Structured vehicle, 6086
Structured vehicle, sugar-free, 6087
Sulfacetamide sodium and prednisolone acetate ophthalmic, 4145
Sulfacetamide sodium topical, 4143
Sulfadimethoxine oral, 4153
Sulfamethizole oral, 4158
Sulfamethoxazole oral, 4161
Sulfamethoxazole and trimethoprim oral, 4163
Sulfisoxazole acetyl oral, 4175
Sumatriptan succinate oral, 4188
Temozolomide oral, 4257
Testosterone injectable, 4287
Tetracycline hydrochloride ophthalmic, 4310
Tetracycline hydrochloride oral, 4310
Tetracycline oral, 4302
Thiabendazole oral, 4335
Tobramycin and dexamethasone ophthalmic, 4411
Tobramycin and fluorometholone acetate ophthalmic, 4412
Topiramate compounded oral, 4436
Triamcinolone acetonide injectable, 4490
Triamcinolone diacetate injectable, 4491
Triamcinolone hexacetonide injectable, 4493
Trifluprom azine oral, 4514
Trisulfapyrimidines oral, 4536
Vehicle for oral, 5913
Verapamil hydrochloride oral, 4609
Zinc sulfide topical, 4695

Suspension structured vehicle, 6086
sugar-free, 6087
Suture
absorbable surgical, 4189
nonabsorbable surgical, 4191
Sutures
diameter ⟨861⟩, 7175

Tablet friability ⟨1216⟩, 8137

Tablets

Abacavir, 6066
Abiraterone acetate, 26
Acarbose, 31
Acepromazine maleate, 38
Acetaminophen, 45
Containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 58
Acetaminophen and aspirin, 48
Acetaminophen, aspirin, and caffeine, 49
Acetaminophen and caffeine, 51
Acetaminophen, chlorpheniramine maleate, and dextromethorphan hydrobromide, 60
Acetaminophen and codeine phosphate, 66
Acetaminophen and diphenhydramine citrate, 69
Acetaminophen, diphenhydramine hydrochloride, and pseudoephedrine hydrochloride, 70
Acetaminophen extended-release, 47
Acetaminophen and hydrocodone bitartrate, 2224
Acetaminophen and pseudoephedrine hydrochloride, 72
Acetazolamide, 76
Acetohydroxamic acid, 79
Acyclovir, 92
Albendazole, 103
Albuterol, 105
Albuterol extended-release, 106
Alendronate sodium, 120
Alfuzosin hydrochloride extended-release, 125
Allopurinol, 134
Almotriptan, 138
Alosetron, 142
Alprazolam, 146
Alprazolam extended-release, 148
Alprazolam orally disintegrating, 152
Alumina and magnesia, 167
Alumina, magnesia, and calcium carbonate chewable, 169
Alumina, magnesia, calcium carbonate, and simethicone chewable, 170
Alumina, magnesia, and simethicone chewable, 174
Alumina and magnesium carbonate, 177
Alumina, magnesium carbonate, and magnesium oxide, 178
Alumina and magnesium trisilicate, 180
Aluminum hydroxide gel, dried, 190
Aluminum sulfate and calcium acetate for topical solution, 195
Amiloride hydrochloride, 223
Amiloride hydrochloride and hydrochlorothiazide, 224
Aminocaproic acid, 237
Aminopentamide sulfate, 240
Aminophylline, 248
Aminophylline delayed-release, 250
Amiodarone hydrochloride, 257
Amitriptyline hydrochloride, 263
amlodipine and atorvastatin, 265
Amlodipine and olmesartan medoxomil, 272
Amlodipine and valsartan, 275
Amlodipine besylate, 286
Amlodipine, valsartan and hydrochlorothiazide, 279
Ammonium chloride delayed-release, 288
Amodiaquine hydrochloride, 294
Amoxapine, 297
Amoxicillin, 304
Amoxicillin and clavulanic acid extended-release, 310
Amoxicillin and clavulanate potassium, 308
Amphetamine sulfate, 313
Ampicillin, 325
Anastrozole, 337
Anileridine hydrochloride, 341
Apomorphine hydrochloride, 358
Arginine, 4764
Aripiprazole, 375
Aripiprazole orally disintegrating, 377
Ascorbic acid, 385
Aspirin, 392
Aspirin, alumina, and magnesia, 397
Aspirin, alumina, and magnesium oxide, 399
Aspirin, buffered, 393
Aspirin and codeine phosphate, 403
Aspirin, codeine phosphate, alumina, and magnesia, 404
Aspirin delayed-release, 394
Aspirin effervescent, for oral solution, 395
Aspirin extended-release, 396
Atenolol, 407
Atenolol and chlorthalidone, 409
Atorvastatin calcium, 418
Azatadine maleate, 438
Azathioprine, 441
Azithromycin, 457
Baclofen, 473
Barium sulfate, 483
Belladonna extract, 487
Benazepril hydrochloride, 491
Bendroflumethiazide, 497
benzphetamine hydrochloride, 530
Benztropine mesylate, 533
Betaxolol, 559
Bethanechol chloride, 564
Bicalutamide, 567
Biotin, 571
Bisacodyl delayed-release, 574
Bismuth subsalicylate, 583
Bisoprolol fumarate, 586
Bisoprolol fumarate and hydrochlorothiazide, 587
Black cohosh, 4823
Bromocriptine mesylate, 597
Brompheniramine maleate, 603
Bumetanide, 608
Buprenorphine and naloxone sublingual, 616
Bupropion hydrochloride, 620
Bupropion hydrochloride extended-release, 621
Buspirone hydrochloride, 637
Busulfan, 640
Butabarbital sodium, 643
Butalbital, acetaminophen, and caffeine, 646
Butalbital and aspirin, 646
Butalbital, aspirin, and caffeine, 649
Cabergoline, 659
Calcium acetate, 682
Calcium carbonate, 687
Calcium carbonate, magnesia, and simethicone chewable, 689
Calcium citrate, 4835
Calcium gluconate, 701
Calcium L-5-methyltetrahydrofolate, 4842
Calcium lactate, 703
Calcium and magnesium carbonates, 691
Calcium pantothenate, 707
Calcium phosphate, dibasic, 712
Calcium with vitamin D, 4843
Calcium and vitamin D with minerals, 4845
Candesartan cilexetil, 717
Candesartan cilexetil and hydrochlorothiazide, 719
Capecitabine, 723
Captopril, 735
Captopril and hydrochlorothiazide, 737
Carbamazepine, 743
Carbamazepine extended-release, 746
Carbenicillin indanyl sodium, 749
Carbidopa and levodopa, 751
Levodopa and carbidopa extended-release, 753
Carbidopa and levodopa orally disintegrating, 759
Carbinoxamine maleate, 763
Calcium carbonate and magnesia chewable, 688
Carboxymethylcellulose sodium, 774
Carisoprodol, 777
Carisoprodol, aspirin, and codeine phosphate, 780
Carisoprodol and aspirin, 778
Carprofen, 786
Carteolol hydrochloride, 790
Carvedilol, 793
Cascara, 800
Cat's claw, 4858
Cefaclor extended-release, 811
Cefadroxil, 817
Cefixime, 838
Cefpodoxime proxetil, 864
Cefprozil, 870
Cefuroxime axetil, 889
Cephalexin, 899
Cephalexin, for oral suspension, 899
Cephradine, 909
Cetirizine hydrochloride, 913
Cetirizine hydrochloride orally disintegrating, 915
Cetrizine hydrochloride and pseudoephedrine hydrochloride extended-release, 917
Chlorambucil, 926
Chloramphenicol, 932
Chlordiazepoxide, 937
Chlordiazepoxide and amitriptyline hydrochloride, 938
Chloroquine phosphate, 961
Chlorothiazide, 964
Chlorpheniramine maleate, 971
Chlorpromazine hydrochloride, 977
Chlorpropamide, 978
Chlortetracycline hydrochloride, 987
Chlorthalidone, 983
Chlorzoxazone, 984
Cholecalciferol, 988
Chondroitin sulfate sodium, 4897
Chromium picolinate, 4902
Cilostazol, 1004
Cimetidine, 1007
Ciprofloxacin, 1015
Ciprofloxacin extended-release, 1017
