System suitability
Sample: *Standard solution*
[NOTE—The retention time for ethyl acetate is about 2–5 min.]
Suitability requirements
Resolution: NLT 1.5 between ethyl acetate and any adjacent peak
Relative standard deviation: NMT 15.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the concentration, in ppm, of ethyl acetate in the portion of Travoprost taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U)$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of ethyl acetate in the *Standard solution* (µg/mL)
C_U = concentration of Travoprost in the *Sample solution* (g/mL)

Acceptance criteria: NMT 5000 ppm

SPECIFIC TESTS
• **OPTICAL ROTATION,** *Specific Rotation* ⟨781S⟩
Sample solution: 20 mg/mL in dehydrated alcohol
Acceptance criteria: +52.0° to +58.0° at 365 nm
• **WATER DETERMINATION,** *Method Ia* ⟨921⟩
Sample: 0.2 g
Solvent: Acetonitrile and methanol (1:1)
Titrant: Use a titrant for which 1 mL is equivalent to 2 mg of water.
Acceptance criteria: NMT 1.0%

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve at –25° to –15° in tight, light-resistant containers under a nitrogen atmosphere.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Travoprost RS

Travoprost Ophthalmic Solution

DEFINITION
Travoprost Ophthalmic Solution is a sterile buffered aqueous solution of Travoprost. It contains NLT 90.0% and NMT 110.0% of the labeled amount of travoprost ($C_{26}H_{35}F_3O_6$). It may contain suitable stabilizers, buffers, and antimicrobial agents.
[**CAUTION**—Great care should be taken when handling the active ingredient to avoid contact with the body.]

IDENTIFICATION
• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Add the following:

▲• **B.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.▲ 2S (USP41)

ASSAY

Change to read:

• **PROCEDURE**
Buffer: 2.18 mg/mL of sodium 1-octanesulfonate in water. Adjust with phosphoric acid to a pH of 3.5.
Mobile phase: Acetonitrile and *Buffer* (17:33)
Standard solution: 0.04 mg/mL of travoprost from USP Travoprost RS in a mixture of acetonitrile and water (3:7)
Sample solution: Use Ophthalmic Solution without dilution.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm. ▲For *Identification B*, use a diode array detector in the range of 190–400 nm.▲ 2S (USP41)
Column: 4.6-mm × 15-cm; ▲5-µm▲ 2S (USP41) packing L1
Flow rate: 2.0 mL/min
Injection volume: 100 µL
System suitability
Sample: *Standard solution*
[NOTE—USP Travoprost RS contains a small percentage of the 5,6-*trans* isomer. The relative retention times for travoprost and the 5,6-*trans* isomer are 1.0 and 1.1, respectively.]
Suitability requirements
Resolution: NLT 1.5 between travoprost and the 5,6-*trans* isomer
▲▲ 2S (USP41)
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of travoprost ($C_{26}H_{35}F_3O_6$) in the portion of Ophthalmic Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of travoprost in the *Standard solution* (mg/mL)
C_U = nominal concentration of travoprost in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

IMPURITIES

Change to read:

• **LIMIT OF TRAVOPROST RELATED COMPOUND A**
Buffer: Add 1.0 mL of phosphoric acid to 1.0 L of water, and adjust with sodium hydroxide to a pH of 3.0.

Tailing factor: NMT 2.0, *Standard solution*
Relative standard deviation: NMT 5.0%, *Standard solution*

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each degradation product in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

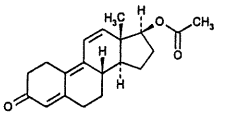
r_U = peak response of each degradation product from the *Sample solution*
r_S = peak response of trazodone from the *Standard solution*
C_S = concentration of USP Trazodone Hydrochloride RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of trazodone in the *Sample solution* (µg/mL)

Acceptance criteria: See *Table 2*.

Table 2

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Triazolopyridinone[a, b]	0.1	—
Chlorophenylpiperazine[a, c]	0.6	—
Hydroxypropyl chlorophenylpiperazine[a, d]	0.7	—
Isotrazodone[a, e]	0.8	—
Trazodone related compound C[a]	0.97	—
Trazodone hydrochloride	1.0	—
Trazodone dimer[a, f]	1.5	—
Trazodone related compound F[a, g]	1.6	—
Bispiperazine analog[a, h]	1.8	—
Bis(3-chlorophenyl)piperazine[a, i]	2.2	—
Any individual unspecified degradation product	—	1.0
Total degradation products	—	2.0

[a] Process impurity included for identification only. Process impurities are controlled in the drug substance, and are not to be reported or included in the total impurities for the drug product.
[b] [1,2,4]Triazolo[4,3-*a*]pyridin-3(2*H*)-one.
[c] 1-(3-Chlorophenyl)piperazine.
[d] 3-[4-(3-Chlorophenyl)piperazin-1-yl]propan-1-ol.
[e] 1-{3-[4-(3-Chlorophenyl)piperazin-1-yl]propyl}-[1,2,4]triazolo[4,3-*a*]pyridin-1-ium-3-olate.
[f] 1,1-Bis{2-chloro-[4-(3-{1,2,4-triazolo[4,3-*a*]pyridin-3-(2*H*)-on-2-yl}propyl)piperazine-1-yl]phenyl}ethane trihydrochloride.
[g] 1-(3-Chlorophenyl)-4-(3-chloropropyl)piperazine.
[h] 1,3-Bis(4-(3-chlorophenyl)piperazin-1-yl)propane.
[i] 1,4-Bis(3-chlorophenyl)piperazine.



ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers. Store at controlled room temperature.

Add the following:

▲• **LABELING:** When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only if *Test 1* is not used. ▲ (RB 1-Apr-2018)

• **USP REFERENCE STANDARDS** ⟨11⟩
USP Trazodone Hydrochloride RS

Tretinoin

$C_{20}H_{28}O_2$ 300.44
Retinoic acid;
all-*trans*-Retinoic acid [302-79-4].

DEFINITION
Tretinoin contains NLT 97.0% and NMT 103.0% of tretinoin ($C_{20}H_{28}O_2$), calculated on the dried basis.
Avoid exposure to strong light, and use low-actinic glassware in the performance of the following procedures.

IDENTIFICATION

Change to read:

• **A. ▲Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: **197M**▲ (CN 1-May-2020)

Change to read:

• **B. ▲Spectroscopic Identification Tests** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
Analytical wavelength: 352 nm
Medium: Dilute 1 mL of 0.01 N hydrochloric acid with isopropyl alcohol to 1000 mL.
Sample solution: 4 µg/mL in *Medium*
Acceptance criteria: Absorptivities do not differ by more than 3.0%, calculated on the dried basis.

ASSAY
• **Procedure**
Sample: 240 mg of Tretinoin
Titrimetric system
Mode: Direct titration
Titrant: 0.1 N sodium methoxide VS
Endpoint detection: Visual
Analysis: Dissolve the *Sample* in 50 mL of dimethylformamide, and add 3 drops of a 1-in-100 solution of thymol blue in dimethylformamide. Titrate with *Titrant* to a greenish endpoint. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N sodium methoxide is equivalent to 30.04 mg of tretinoin ($C_{20}H_{28}O_2$).
Acceptance criteria: 97.0%–103.0% on the dried basis

IMPURITIES
• **Residue on Ignition** ⟨281⟩: NMT 0.1%
• **Limit of Isotretinoin**
Mobile phase: Isooctane, isopropyl alcohol, and glacial acetic acid (99.65: 0.25: 0.1)
System suitability stock solution: 250 µg/mL of USP Tretinoin RS in isooctane prepared as follows. Dissolve a quantity of USP Tretinoin RS in a minimum amount of methylene chloride, and add a suitable amount of isooctane to the known concentration.
Standard stock solution: 250 µg/mL of USP Isotretinoin RS in isooctane prepared as follows. Dissolve a quantity of USP Isotretinoin RS in a minimum amount of methylene chloride, and add a suitable amount of isooctane to the known concentration.
System suitability solution: Transfer 5 mL of *Standard stock solution* into a 100-mL volumetric flask, and add *System suitability stock solution* to volume.
Standard solution: 12.5 µg/mL of USP Isotretinoin RS in isooctane from *Standard stock solution*
Sample solution: Transfer 25 mg of Tretinoin into a 100-mL volumetric flask. Dissolve in a minimum amount of methylene chloride, and add isooctane to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 352 nm
Column: 4.0-mm × 25-cm; packing L3
Flow rate: 1 mL/min
Injection volume: 20 µL
System suitability
Sample: *System suitability solution*
[Note—The relative retention times for isotretinoin and tretinoin are about 0.84 and 1.00, respectively.]
Suitability requirements
Resolution: NLT 2.0 between isotretinoin and tretinoin
Relative standard deviation: NMT 2.0% for the isotretinoin peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of isotretinoin in the portion of Tretinoin taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of isotretinoin from the *Sample solution*
r_S = peak response of isotretinoin from the *Standard solution*
C_S = concentration of USP Isotretinoin RS in the *Standard solution* (µg/mL)
C_U = concentration of Tretinoin in the *Sample solution* (µg/mL)

Acceptance criteria: NMT 5.0%

SPECIFIC TESTS
• **Loss on Drying** ⟨731⟩
Analysis: Dry a sample under vacuum at room temperature for 16 h.
Acceptance criteria: NMT 0.5%

ADDITIONAL REQUIREMENTS
• **Packaging and Storage:** Preserve in tight containers, preferably under an atmosphere of an inert gas, protected from light.
• **USP Reference Standards** ⟨11⟩
USP Isotretinoin RS
USP Tretinoin RS

Tretinoin Cream

DEFINITION
Tretinoin Cream contains NLT 90.0% and NMT 120.0% of the labeled amount of tretinoin ($C_{20}H_{28}O_2$).

IDENTIFICATION
• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
• **Procedure**
Avoid exposure to strong light, and use low-actinic glassware in the performance of the following procedure. Use

www.webofpharma.com

stabilized tetrahydrofuran in the preparation of the *Standard solution* and the *Sample solution*.
Diluted phosphoric acid: Dilute 10 mL of phosphoric acid with water to 100 mL.
Buffer: 1.38 g/L of monobasic sodium phosphate in water. Adjust with *Diluted phosphoric acid* to a pH of 3.0.
Diluent A: Water and *Diluted phosphoric acid* (9:1)
Diluent B: Tetrahydrofuran and *Diluent A* (3:2)
Mobile phase: Tetrahydrofuran and *Buffer* (42:58)
Standard stock solution: 0.4 mg/mL of USP Tretinoin RS in tetrahydrofuran
Standard solution: 4 µg/mL of USP Tretinoin RS in *Diluent B* from *Standard stock solution*
Sample stock solution: Nominally 20 µg/mL of tretinoin in tetrahydrofuran prepared as follows. Transfer a quantity of Cream, equivalent to 1.0 mg of tretinoin, into a 50-mL volumetric flask, and add 20.0 mL of tetrahydrofuran. Shake the flask to disperse the cream, dilute with tetrahydrofuran to volume, mix, and filter if necessary.
Sample solution: 4 µg/mL of tretinoin in *Diluent B* from *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 365 nm
Column: 3.9-mm × 15-cm; 4-µm packing L1
Flow rate: 1 mL/min
Injection volume: 25 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of tretinoin ($C_{20}H_{28}O_2$) in the portion of Cream taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Tretinoin RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of tretinoin in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–120.0%

PERFORMANCE TESTS
• **Minimum Fill** ⟨755⟩**:** Meets the requirements

ADDITIONAL REQUIREMENTS
• **Packaging and Storage:** Preserve in collapsible tubes or in tight, light-resistant containers.
• **USP Reference Standards** ⟨11⟩
USP Tretinoin RS

Tretinoin Gel

DEFINITION
Tretinoin Gel contains NLT 90.0% and NMT 130.0% of the labeled amount of $C_{20}H_{28}O_2$.

IDENTIFICATION
• The retention time of the major peak in the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
• **Procedure**
[Note—Avoid exposure to strong light, and use low-actinic glassware in the performance of the following procedure.]
Mobile phase: Prepare a mixture of acetonitrile and water (17:3). Add 5 mL of glacial acetic acid to each L of the mixture, mix well, filter, and degas.
Standard solution: 0.02 mg/mL of USP Tretinoin RS in methanol. [Note—Sonicate if needed.]
Sample solution: Transfer Tretinoin Gel, equivalent to 2 mg of tretinoin, to a 100-mL volumetric flask. Add about 70 mL of methanol, sonicate with intermittent shaking for 30 min, and dilute with methanol to volume. Centrifuge a portion of this solution at 3000 rpm for 10 min. Use the clear supernatant.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 353 nm
Column: 4.6-mm × 15-cm; 5-µm packing L1
Flow rate: 1.5 mL/min
Injection size: 20 µL
Autosampler temperature: 15°
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 2.0%
Tailing factor: NMT 2.0
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of $C_{20}H_{28}O_2$ in the portion of Gel taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Tretinoin RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of tretinoin in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–130.0%

PERFORMANCE TESTS
• **Minimum Fill** ⟨755⟩**:** Meets the requirements

ADDITIONAL REQUIREMENTS
• **Packaging and Storage:** Preserve in tight containers, protected from light.
• **USP Reference Standards** ⟨11⟩
USP Tretinoin RS

Tretinoin Topical Solution

DEFINITION
Tretinoin Topical Solution is a solution of Tretinoin in a suitable nonaqueous, hydrophilic solvent. It contains NLT 90.0% and NMT 135.0% of the labeled amount of tretinoin ($C_{20}H_{28}O_2$) (w/w).

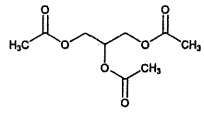
IDENTIFICATION
• **A.**
Sample solution: Mix 5 mL of Topical Solution and 5 mL of water.
Acceptance criteria: A voluminous yellow precipitate is formed.

www.webofpharma.com

• **B.**
Sample solution: Proceed as directed for the *Sample solution* in the *Assay*.
Analysis: Measure the absorbance between 300 and 450 nm.
Acceptance criteria: The *Sample solution* exhibits maxima and minima at the same wavelengths as that of a similar solution of USP Tretinoin RS, concomitantly measured.

ASSAY
• **PROCEDURE**
Avoid exposure to strong light, and use low-actinic glassware.
Acidified isopropyl alcohol: Dilute 1 mL of 0.01 N hydrochloric acid with isopropyl alcohol to make 1000 mL.
Standard solution: 3.75 µg/mL of USP Tretinoin RS in *Acidified isopropyl alcohol*
Sample solution: Nominally 3.75 µg/mL of tretinoin in *Acidified isopropyl alcohol* from Topical Solution
Instrumental conditions
Mode: UV
Analytical wavelength: 352 nm
Cell: 1 cm
Blank: *Acidified isopropyl alcohol*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of tretinoin ($C_{20}H_{28}O_2$) in the portion of Topical Solution taken:

$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times 100$$



A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Tretinoin RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of tretinoin in the *Sample solution* (µg/mL)

Acceptance criteria: 90.0%–135.0%

OTHER COMPONENTS
• **ALCOHOL DETERMINATION** ⟨611⟩**:** 90.0%–110.0% of the labeled amount of alcohol (C_2H_5OH)

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Tretinoin RS

Triacetin

$C_9H_{14}O_6$ 218.21
1,2,3-Propanetriol triacetate;
Triacetin;
Glyceryl triacetate [102-76-1].

DEFINITION
Triacetin contains NLT 97.0% and NMT 102.0% of triacetin ($C_9H_{14}O_6$), calculated on the anhydrous basis.

IDENTIFICATION

www.webofpharma.com

Test solution: 2 mg per mL, in dimethylformamide.
Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 4 hours: it loses not more than 2.0% of its weight.
Residue on ignition ⟨281⟩: 0.5%.

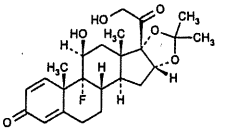
Assay—
Mobile phase—Prepare a degassed solution containing about 60 volumes of methanol and 40 volumes of water such that the retention times for triamcinolone and hydrocortisone are about 5 and 10 minutes, respectively.
Internal standard solution—Dissolve hydrocortisone in *Mobile phase* to obtain a solution having a concentration of about 0.3 mg per mL.
Standard preparation—Transfer about 10 mg of USP Triamcinolone RS, accurately weighed, to a 50-mL volumetric flask, dissolve in *Internal standard solution*, dilute with the same solvent to volume, and mix.
Assay preparation—Using about 10 mg of Triamcinolone, accurately weighed, prepare as directed under *Standard preparation.*
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%, and the resolution factor between triamcinolone and hydrocortisone is not less than 3.0.
Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph by means of a suitable microsyringe or sampling valve, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{21}H_{27}FO_6$ in the portion of Triamcinolone taken by the formula:

$$50C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of USP Triamcinolone RS in the *Standard preparation*, and R_U and R_S are the peak response ratios of triamcinolone to hydrocortisone obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Triamcinolone Tablets

» Triamcinolone Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{21}H_{27}FO_6$.



Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Triamcinolone RS
Identification—Powder a number of Tablets, equivalent to about 25 mg of triamcinolone, and digest with 25 mL of acetone for 15 minutes. Filter through a fine-porosity, sintered-glass filtering funnel into about 100 mL of solvent hexane, swirl the liquid, and allow to stand for 30 minutes. Collect the crystals that form, wash the crystals with three 10-mL portions of water followed by 2 mL of acetone, and dry at 60° for 1 hour: the dried crystals so obtained respond to *Identification* test *A* under *Triamcinolone.*
Dissolution ⟨711⟩—
Medium: 0.01 N hydrochloric acid; 900 mL.
Apparatus 1: 100 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{21}H_{27}FO_6$ dissolved by employing UV absorption at the wavelength of maximum absorbance at about 238 nm on filtered portions of the solution under test, suitably diluted with *Dissolution Medium*, in comparison with a Standard solution having a known concentration of USP Triamcinolone RS in the same *Medium.*
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{21}H_{27}FO_6$ is dissolved in 45 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—
Mobile phase , *Internal standard solution*, *Standard preparation*, and *Chromatographic system*—Prepare as directed in the *Assay* under *Triamcinolone.*
Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 10 mg of triamcinolone, to a suitable container. Add 50.0 mL of *Internal standard solution*, and shake vigorously by mechanical means for 10 minutes. Centrifuge for 10 minutes or until a clear supernatant is obtained.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Triamcinolone.* The relative retention times are about 1.0 for triamcinolone and 1.9 for hydrocortisone. Calculate the quantity, in mg, of $C_{21}H_{27}FO_6$ in the portion of Tablets taken by the formula:

$$50C(R_U/R_S)$$

in which the terms are as defined therein.

Triamcinolone Acetonide

$C_{24}H_{31}FO_6$ 434.50
Pregna-1,4-diene-3,20-dione, 9-fluoro-11,21-dihydroxy-16,17-[(1-methylethylidene)bis(oxy)]-, (11β,16α)-.
9-Fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione cyclic 16,17-acetal with acetone [76-25-5].

» Triamcinolone Acetonide contains not less than 97.0 percent and not more than 102.0 percent of $C_{24}H_{31}FO_6$, calculated on the dried basis.

Packaging and storage—Preserve in well-closed containers. Store at 25°, excursions permitted between 15° and 30°.
USP Reference standards ⟨11⟩—
USP Fluoxymesterone RS
USP Triamcinolone Acetonide RS

www.webofpharma.com

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy, 197K*▲ (CN 1-May-2020): recrystallized from methanol.

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 20 µg per mL.
Medium: methanol.
Specific rotation ⟨781S⟩**:** between +118° and +130°.
Test solution: 5 mg per mL, in dimethylformamide.
Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 4 hours: it loses not more than 1.5% of its weight.

Chromatographic purity—
Mobile phase—Prepare a filtered and degassed mixture of water and acetonitrile (17:8). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Test solution—Transfer about 25 mg of Triamcinolone Acetonide, accurately weighed, to a 50-mL volumetric flask; dissolve in 25 mL of methanol, shake vigorously to aid dissolution; dilute with *Mobile phase* to volume; and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Test solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between triamcinolone acetonide and any impurity peak is not less than 1.0.
Procedure—Inject about 20 µL of the *Test solution* into the chromatograph, record the chromatogram for not less than four times the retention time of triamcinolone acetonide, and measure all of the peak responses. Calculate the percentage of each impurity in the portion of Triamcinolone Acetonide taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the peak response for each impurity; and r_s is the sum of the responses of all the peaks: not more than 0.3% of any individual impurity is found, and not more than 0.8% of total impurities is found.

Assay—
Mobile phase—Prepare a solution of acetonitrile in water containing approximately 30% (v/v) of acetonitrile.
Internal standard solution—Dissolve USP Fluoxymesterone RS in methanol to obtain a solution having a concentration of about 50 µg per mL.
Standard preparation—Dissolve an accurately weighed quantity of USP Triamcinolone Acetonide RS in *Internal standard solution* to obtain a solution having a known concentration of about 75 µg per mL. Mix an accurately measured volume of the resulting solution with an equal volume of *Mobile phase* to obtain a *Standard preparation* containing about 37.5 µg of USP Triamcinolone Acetonide RS per mL.
Assay preparation—Using about 37 mg of Triamcinolone Acetonide, accurately weighed, proceed as directed for *Standard preparation.*
Procedure—Introduce equal volumes (between 15 µL and 25 µL) of the *Assay preparation* and the *Standard preparation* into a high-pressure liquid chromatograph (see *Chromatography* ⟨621⟩) operated at room temperature, by means of a suitable microsyringe or sampling valve. Adjust the operating parameters with *Mobile phase* on the column so that the separation of triamcinolone acetonide and internal standard is optimized, with a retention time of about 14.5 minutes for triamcinolone acetonide. Typically, the apparatus is fitted with a 4-mm × 30-cm column containing packing L1 and is equipped with a UV detector capable of monitoring absorbance at 254 nm, and a suitable recorder. In a suitable chromatogram, the coefficient of variation for five replicate injections of a single specimen is not more than 3.0%; and the resolution factor, *R* (see *Chromatography* ⟨621⟩), between the peaks for triamcinolone acetonide and fluoxymesterone is not less than 2.0. Measure the heights of the internal standard and triamcinolone acetonide peaks at the same retention times obtained from the *Assay preparation* and the *Standard preparation.* Calculate the quantity, in mg, of $C_{24}H_{31}FO_6$ in the portion of Triamcinolone Acetonide taken by the formula:

$$1000C(R_U/R_S)$$

in which *C* is the concentration, in mg per mL, of USP Triamcinolone Acetonide RS in the *Standard preparation;* and R_U and R_S are the ratios of the peak heights of triamcinolone acetonide to the internal standard obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triamcinolone Acetonide Topical Aerosol

» Triamcinolone Acetonide Topical Aerosol is a solution of Triamcinolone Acetonide in a suitable propellant in a pressurized container. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of $C_{24}H_{31}FO_6$.

Packaging and storage—Preserve in pressurized containers, and avoid exposure to excessive heat.
USP Reference standards ⟨11⟩—
USP Triamcinolone Acetonide RS
Identification—Apply 20 µL of a solution prepared as directed for *Assay preparation* in the *Assay* but without the addition of the *Internal standard solution,* and 20 µL of a solution of USP Triamcinolone Acetonide RS in methanol containing 30 µg per mL, to a line parallel to and about 1.5 cm from the bottom edge of a thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Proceed as directed in the *Identification* test under *Triamcinolone Acetonide Cream,* beginning with "Place the plate in a developing chamber." The specified result is obtained.
Microbial enumeration tests ⟨61⟩ **and *Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa.*
Other requirements—It meets the requirements for *Pressure Test, Minimum Fill,* and *Leakage Test* under *Topical Aerosols* ⟨603⟩.

Assay—
Mobile phase—Prepare a degassed solution of water and acetonitrile (70:30).
Internal standard solution—Dissolve fluoxymesterone in methanol to obtain a solution having a concentration of about 25 µg per mL.
Standard preparation—Dissolve an accurately weighed quantity of USP Triamcinolone Acetonide RS in methanol to

www.webofpharma.com

obtain a solution having a concentration of about 100 µg per mL. Transfer 15.0 mL of this solution to a 50-mL volumetric flask, add 25.0 mL of *Internal standard solution*, dilute with methanol to volume, and mix. This solution has a known concentration of about 30 µg per mL.

Assay preparation—Fit the valve of a previously weighed Triamcinolone Acetonide Aerosol container with a suitable tube assembly so that the contents can be sprayed directly into the bulb portion of a 100-mL volumetric flask containing 50.0 mL of *Internal standard solution* and 20 mL of methanol. Spray a portion of the contents, equivalent to about 3 mg of triamcinolone acetonide, into the flask, determining the exact amount sprayed by difference. Place in a sonic bath for about 5 minutes to expel the propellant. Dilute with methanol to volume, and mix. [NOTE—The propellant is extremely flammable. When evaporating, observe proper precautions and work under an explosion-proof hood.]

Procedure—Introduce equal volumes (between 15 µL and 25 µL) of the *Assay preparation* and the *Standard preparation* into a chromatograph (see *Chromatography* ⟨621⟩) operated at room temperature and fitted with a 3.9-mm × 30-cm column, packed with packing L1, and equipped with a 254-nm detector. Adjust the operating parameters and the *Mobile phase* composition such that the separation of triamcinolone acetonide and internal standard is optimized, with a retention time of about 14 minutes for triamcinolone acetonide. In a suitable system, the relative standard deviation for five replicate injections of the *Standard preparation* is not more than 3.0%. Measure the responses of the internal standard and triamcinolone acetonide peaks at the same retention times obtained from the *Assay preparation* and the *Standard preparation*. Calculate the quantity, in µg, of $C_{24}H_{31}FO_6$ in the portion of Topical Aerosol taken by the formula:

$$100C(R_U/R_S)$$

in which C is the concentration, in µg per mL, of USP Triamcinolone Acetonide RS in the *Standard preparation*, and R_U and R_S are the ratios of the peak responses of triamcinolone acetonide to internal standard obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Triamcinolone Acetonide Cream

» Triamcinolone Acetonide Cream is Triamcinolone Acetonide in a suitable cream base. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of $C_{24}H_{31}FO_6$.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—
USP Triamcinolone Acetonide RS

Identification—Place a 2-g quantity of Cream in a conical flask, add 50 mL of chloroform and 15 g of anhydrous sodium sulfate, and swirl to dissolve the specimen. Filter the solution and clarify the filtrate, if necessary, by the further addition of anhydrous sodium sulfate and a second filtration. Evaporate the filtrate to near dryness, and dissolve the residue in chloroform to obtain a solution containing about 100 µg per mL. Apply 10 µL of this solution and 10 µL of a solution of USP Triamcinolone Acetonide RS in chloroform containing 100 µg per mL, on a line parallel to and about 1.5 cm from the bottom edge of a thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Place the plate in a developing chamber containing and equilibrated with a mixture of chloroform, benzene, and methanol (100:40:20). Develop the chromatogram until the solvent front has moved about 12 cm above the line of application. Remove the plate, allow the solvent to evaporate, and spray with a mixture of equal volumes of sodium hydroxide solution (1 in 5) and a 1 in 500 solution of blue tetrazolium in methanol: the intensity of the blue color and the R_F of the spot obtained with the solution under test are similar to those of the spot obtained with the Standard solution.

Microbial enumeration tests ⟨61⟩ **and** ***Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa*.

Minimum fill ⟨755⟩: meets the requirements.

Assay—

Mobile phase—Prepare a solution of acetonitrile in water containing approximately 30% (v/v) of acetonitrile.

Internal standard solution—Dissolve fluoxymesterone in isopropyl alcohol to obtain a solution having a concentration of about 50 µg per mL.

Standard preparation—Dissolve an accurately weighed quantity of USP Triamcinolone Acetonide RS in *Internal standard solution* to obtain a solution having a known concentration of about 75 µg per mL. Mix an accurately measured volume of the resulting solution with an equal volume of *Mobile phase* to obtain a *Standard preparation* containing about 37.5 µg of USP Triamcinolone Acetonide RS per mL.

Assay preparation—Transfer an accurately weighed quantity of Cream, equivalent to about 1.5 mg of triamcinolone acetonide, to a screw-cap tube. Add 20.0 mL of *Internal standard solution*, and cap securely. Heat for 5 minutes at 60°, then swirl vigorously for not less than 30 seconds. Repeat the heating and swirling sequence three times. Cool in a methanol-ice bath for 15 to 20 minutes, then centrifuge for 15 minutes at −5°. Dilute an accurately measured volume of the supernatant with an equal volume of *Mobile phase*. Cool in a methanol-ice bath for 10 to 15 minutes, with occasional agitation. Filter first through a pledget of glass wool or a prefilter disk and then through a 0.45-µm porosity membrane to obtain a clear solution.

Procedure—Introduce equal volumes (between 15 and 25 µL) of the *Assay preparation* and the *Standard preparation* into a high-pressure liquid chromatograph (see *Chromatography* ⟨621⟩), operated at room temperature, by means of a suitable microsyringe or sampling valve. Adjust the operating parameters with *Mobile phase* on the column, such that the separation of triamcinolone acetonide and internal standard is optimized, with a retention time of about 14.5 minutes for triamcinolone acetonide. Typically, the apparatus is fitted with a 30-cm × 4-mm column containing packing L1, and is equipped with a UV detector capable of monitoring absorbance at 254 nm, and a suitable recorder. In a suitable chromatogram, the coefficient of variation for five replicate injections of a single specimen is not more than 3.0%, and the resolution factor, R (see *Chromatography* ⟨621⟩), between the peaks for triamcinolone acetonide and fluoxymesterone is not less than 2.0. Measure the heights of the internal standard and triamcinolone acetonide peaks, at the same retention times obtained from the *Assay preparation* and the *Standard preparation*. Calculate the quantity, in mg, of $C_{24}H_{31}FO_6$ in the portion of Cream taken by the formula:

$$40C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of USP Triamcinolone Acetonide RS in the *Standard preparation*, and

www.webofpharma.com

R_U and R_S are the ratios of the peak heights of triamcinolone acetonide to the internal standard obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Triamcinolone Acetonide Lotion

» Triamcinolone Acetonide Lotion is Triamcinolone Acetonide in a suitable lotion base. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{24}H_{31}FO_6$.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Triamcinolone Acetonide RS
Identification—It responds to the *Identification* test under *Triamcinolone Acetonide Cream.*
Microbial enumeration tests ⟨61⟩ **and *Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa.*
Minimum fill ⟨755⟩: meets the requirements.
Assay—Proceed with Lotion as directed in the *Assay* under *Triamcinolone Acetonide Cream*, except to read "Lotion" in place of "Cream" throughout.

Triamcinolone Acetonide Ointment

» Triamcinolone Acetonide Ointment is Triamcinolone Acetonide in a suitable ointment base. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of $C_{24}H_{31}FO_6$.

Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Triamcinolone Acetonide RS
Identification—Place 2 g of Ointment in a conical flask, add 5.0 mL of chloroform, and shake for 10 minutes. Add 15 mL of alcohol, and shake for an additional 10 minutes. Filter the solution into a centrifuge tube, and evaporate the filtrate to dryness. Dissolve the residue in alcohol to obtain a solution containing about 250 µg per mL. Apply 10 µL of this solution, and 10 µL of a solution of USP Triamcinolone Acetonide RS in alcohol containing 250 µg per mL, on a line parallel to and about 1.5 cm from the bottom edge of a thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Place the plate in a developing chamber containing and equilibrated with a mixture of chloroform, benzene, and methanol (100:40:20). Develop the chromatogram until the solvent front has moved about 12 cm above the line of application. Remove the plate, allow the solvent to evaporate, and spray with a mixture of equal volumes of sodium hydroxide solution (1 in 5) and a 1 in 500 solution of blue tetrazolium in methanol: the intensity of the blue color and the R_F of the spot obtained from the solution under test are similar to those of the spot obtained from the Standard solution.
Microbial enumeration tests ⟨61⟩ **and *Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa.*
Minimum fill ⟨755⟩: meets the requirements.
Assay—Proceed with Ointment as directed in the *Assay* under *Triamcinolone Acetonide Cream*, except to read "Ointment" in place of "Cream" throughout.

Triamcinolone Acetonide Dental Paste

» Triamcinolone Acetonide Dental Paste is Triamcinolone Acetonide in a suitable emollient paste. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of $C_{24}H_{31}FO_6$.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Triamcinolone Acetonide RS
Identification—It responds to the *Identification* test under *Triamcinolone Acetonide Cream.*
Microbial enumeration tests ⟨61⟩ **and *Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus* and *Pseudomonas aeruginosa.*
Minimum fill ⟨755⟩: meets the requirements.

Assay—
Mobile phase—Prepare as directed in the *Assay* under *Triamcinolone Acetonide Cream.*
Internal standard solution and *Standard preparation*—Prepare as directed in the *Assay* under *Triamcinolone Acetonide Cream.*
Assay preparation—Transfer an accurately weighed quantity of Dental Paste, equivalent to about 1.5 mg of triamcinolone acetonide, to a screw-cap tube. Add 20.0 mL of *Internal standard solution*, cap, and place in a sonic bath for 15 to 20 minutes. Place in a water bath at 70° for 5 minutes, then swirl for 1 minute. Repeat the heating and swirling sequence once. Cool in an ice–methanol bath for 15 minutes, then centrifuge for 10 minutes at –5°. Mix an accurately measured volume of the supernatant with an equal volume of *Mobile phase.* Place in an ice–methanol bath for 15 minutes, then centrifuge for 15 minutes. Draw off and discard the upper phase. Filter the lower phase to obtain a clear solution.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Triamcinolone Acetonide Cream.*

Triamcinolone Acetonide Nasal Spray

DEFINITION
Triamcinolone Acetonide Nasal Spray is an aqueous suspension of Triamcinolone Acetonide. It is supplied in a form suitable for nasal administration. It contains NLT 90.0% and NMT 110.0% of the labeled amount of triamcinolone acetonide ($C_{24}H_{31}FO_6$).

IDENTIFICATION
• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay.*

www.webofpharma.com

ASSAY

• **PROCEDURE**

Buffer A: 3.4 g/L of monobasic potassium phosphate prepared as follows. Dissolve 3.4 g of monobasic potassium phosphate in 900 mL of water, adjust with 5 M sodium hydroxide to a pH of 7.0, and dilute with water to 1000 mL.

Buffer B: 3.4 g/L of monobasic potassium phosphate prepared as follows. Dissolve 3.4 g of monobasic potassium phosphate in 900 mL of water, adjust with phosphoric acid to a pH of 3.0, and dilute with water to 1000 mL.

Solution A: Acetonitrile and *Buffer A* (27.5: 72.5)

Solution B: Acetonitrile and *Buffer A* (60:40)

Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	100	0
30	60	40
30.1	0	100
44	0	100
44.1	100	0
52	100	0

Diluent: Acetonitrile and *Buffer B* (27.5: 72.5)

Standard stock solution: 0.4 mg/mL of USP Triamcinolone Acetonide RS in acetonitrile. Sonication for 15 min may be used to aid in dissolution.

Standard solution: 40 µg/mL of USP Triamcinolone Acetonide RS from *Standard stock solution* in *Diluent*

System suitability stock solution: 0.04 mg/mL of USP Triamcinolone Acetonide Related Compound B RS and USP Triamcinolone Acetonide Related Compound C RS in *Diluent*

System suitability solution: 40 µg/mL of USP Triamcinolone Acetonide RS and 0.8 µg/mL each of USP Triamcinolone Acetonide Related Compound B RS and USP Triamcinolone Acetonide Related Compound C RS in suitable volumes of *Standard stock solution* and *System suitability stock solution* in *Diluent*

Sample solution: Nominally 40 µg/mL of triamcinolone acetonide prepared as follows. Transfer a portion of the Nasal Spray, equivalent to 4 mg of triamcinolone acetonide, to a 100-mL volumetric flask. Dissolve in 28 mL of acetonitrile with the aid of sonication. Allow to cool to room temperature and dilute with *Buffer B* to volume. Centrifuge and use the clear supernatant.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 239 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Column temperature: 40°
Flow rate: 0.75 mL/min
Injection volume: 100 µL

System suitability
Samples: *Standard solution* and *System suitability solution*
[NOTE—See *Table 4* for the relative retention times.]
Suitability requirements
Resolution: NLT 3.0 between triamcinolone acetonide related compound C and triamcinolone acetonide related compound B; NLT 3.0 between triamcinolone acetonide related compound B and triamcinolone acetonide, *System suitability solution*
Tailing factor: NMT 1.3 for triamcinolone acetonide, *System suitability solution*
Relative standard deviation: NMT 1.0%, *Standard solution*

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of triamcinolone acetonide ($C_{24}H_{31}FO_6$) in the portion of Nasal Spray taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Triamcinolone Acetonide RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of triamcinolone acetonide in the *Sample solution* (µg/mL)

Acceptance criteria: 90.0%–110.0%

OTHER COMPONENTS

• **CONTENT OF EDETATE DISODIUM**

Perform this test if edetate disodium is a known component in the Nasal Spray.

Buffer: Add 990 mL of water into a 1000-mL beaker, followed by 10.0 mL of 1.0 M tetrabutylammonium hydroxide in methanol. Adjust with phosphoric acid to a pH of 7.0.

Mobile phase: Acetonitrile and *Buffer* (15:85)

Solution A: 40 g/L of sodium chloride and 2 g/L of sodium acetate. Adjust with glacial acetic acid to a pH of 5.5.

Solution B: 1.0 g/L of cupric sulfate in water

Diluent: Acetonitrile and water (50:50)

Standard stock solution: 0.5 mg/mL of edetate disodium in water. Sonication may be used to aid in dissolution.

Standard solution: 0.05 mg/mL of edetate disodium. Transfer 5.0 mL of *Standard stock solution* to a 50-mL volumetric flask. Next add 10 mL of *Solution A* and then add 5.0 mL of acetonitrile. Mix the resulting solution and then add 20.0 mL of *Solution B*, dilute with *Diluent* to volume, and mix.

Sample solution: Combine the contents of NLT 5 bottles of Nasal Spray and mix the contents to obtain a composite suspension. Transfer a 5.0-g portion of the Nasal Spray to a 50-mL volumetric flask. Add 10 mL of *Solution A* and 5.0 mL of acetonitrile. Mix and sonicate for 10 min and allow the solution to equilibrate to room temperature. Add 20.0 mL of *Solution B*, and sonicate for 10 min. Allow the sample to equilibrate to room temperature and dilute with *Diluent* to volume. Centrifuge a portion for 15 min, and use the supernatant. [NOTE—Centrifuging at 4000 rpm for 15 min may be suitable.]

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 265 nm
Column: 4.1-mm × 15-cm; 5-µm packing L21
Flow rate: 1 mL/min
Injection volume: 25 µL

System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of edetate disodium ($C_{10}H_{14}N_2Na_2O_8$) in the portion of Nasal Spray taken:

$$\text{Result} = (r_U/r_S) \times C_S \times (V/W) \times 100$$

www.webofpharma.com

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of edetate disodium in the *Standard solution* (mg/mL)
V = volume of the *Sample solution* (mL)
W = weight of Nasal Spray in the *Sample solution* (mg)

Acceptance criteria: 0.045%–0.055%

Change to read:

- **CONTENT OF BENZALKONIUM CHLORIDE**

Perform this test if benzalkonium chloride is a known component in the Nasal Spray.
Buffer: Dissolve 10.8 g of monobasic sodium phosphate dihydrate in 90 mL of water, and adjust with phosphoric acid a pH of 2.5. Dilute with water to 100 mL.
Solution A: Mix 50 mL of *Buffer*, 750 mL of water, and 200 mL of methanol. Add 5 mL of triethylamine. Mix and adjust with phosphoric acid to a pH of 2.5.
Solution B: Methanol and phosphoric acid prepared as follows. Mix 1 L of methanol with 50 mL of phosphoric acid.
Mobile phase: See *Table 2*.

Table 2

Time (min)	Solution A (%)	Solution B (%)
0	55	45
3.0	5	95
3.2	55	45
5.0	55	45

Diluent: 1% (v/v) hydrochloric acid in methanol
System suitability solution: ▲0.04 mg/mL of USP Benzalkonium Chloride RS in *Diluent* prepared as follows. Transfer a suitable volume of USP Benzalkonium Chloride RS to a suitable volumetric flask and dilute with *Diluent* to volume. ▲ (USP 1-May-2019)
Standard stock solution: 0.2 mg/mL of USP Benzalkonium Bromide RS in water. [NOTE—A few drops of methanol may be used to resolve the formation of foam prior to dilution.]
Standard solution: 0.04 mg/mL of USP Benzalkonium Bromide RS. Transfer an aliquot of *Standard stock solution* to a suitable volumetric flask, and add water equal to 30% of the flask volume. Dilute with *Diluent* to volume.
Sample solution: Combine the contents of NLT 5 bottles of Nasal Spray and mix the contents to obtain a composite suspension. Transfer a 5.0-g portion of the Nasal Spray to a 10-mL volumetric flask. Dilute with *Diluent* to volume. Centrifuge and use the supernatant. [NOTE—Centrifuging at 4000 rpm for 15 min may be suitable. Supernatant may be passed through a suitable filter of NMT 0.2-µm pore size.]
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 210 nm
Column: 4.6-mm × 3.0-cm; 2.6-µm packing L1
Column temperature: 50°
Flow rate: 2 mL/min
Injection volume: 100 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—*Table 3* for the relative retention times. The peak due to the C10 analog may not be visible due to its low concentration in the *System suitability solution*▲The *Standard solution* may contain only one peak as it is predominantly the C12 analog.▲ (USP 1-May-2019)]
Suitability requirements
Resolution: NLT 2.5 between the pairs of C12 and C14 homologs and C14 and C16 homologs of benzalkonium, *System suitability solution*
Tailing factor: NMT 2.0, *Standard solution*
Relative standard deviation: NMT 2%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the sum of each corrected benzalkonium peak response (r_U) as follows:

$$\text{Result} = \Sigma(r_U) \times (1/F)$$

r_U = peak response of each benzalkonium homolog from the *Sample solution*
F = relative response factor of the corresponding benzalkonium homolog relative to benzalkonium bromide (see *Table 3*)

Table 3

Benzalkonium Chloride Analog	Relative Retention Time	Relative Response Factor
C10	0.65	1.3
C12	1.0	1.2
C14	1.35	1.0
C16	1.59	0.98

Calculate the percentage of benzalkonium chloride in the portion of Nasal Spray taken:

$$\text{Result} = (\Sigma r_U / r_S) \times C_S \times (V/W) \times 100$$

Σr_U = sum of the corrected peak responses of the benzalkonium homologs from the *Sample solution*
r_S = peak response of benzalkonium from the *Standard solution*
C_S = concentration of USP Benzalkonium Bromide RS in the *Standard solution* (mg/mL)
V = volume of the *Sample solution* (mL)
W = weight of Nasal Spray in the *Sample solution* (mg)

Acceptance criteria: 0.0135%–0.0165%

Triamcinolone Acetonide Injectable Suspension

DEFINITION
Triamcinolone Acetonide Injectable Suspension is a sterile suspension of Triamcinolone Acetonide in a suitable aqueous medium. It contains NLT 90.0% and NMT 115.0% of the labeled amount of $C_{24}H_{31}FO_6$.

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS ⟨197⟩, *Infrared Spectroscopy*: 197K▲** (CN 1-May-2020)

Sample: Extract a volume of Injectable Suspension, equivalent to 50 mg of triamcinolone acetonide, with two 10-mL portions of peroxide-free ether, and discard the ether extracts. Filter with the aid of suction, wash with small portions of water, and dry the precipitate at 105° for 1 h.
Acceptance criteria: Meets the requirements

Change to read:

- **B. ▲SPECTROSCOPIC IDENTIFICATION TESTS ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: 197U▲** (CN 1-May-2020)

Sample solution: 20 µg/mL in methanol, using the triamcinolone acetonide obtained from *Identification* test *A*
Acceptance criteria: Meets the requirements

ASSAY
- **PROCEDURE**

Mobile phase: Acetonitrile and water (30:70)
Internal standard solution: 84 µg/mL of fluoxymesterone in methanol
Standard stock solution: 200 µg/mL of USP Triamcinolone Acetonide RS in methanol
Standard solution: 80 µg/mL of USP Triamcinolone Acetonide RS from the *Standard stock solution* diluted with *Internal standard solution*
Sample stock solution: Dissolve a volume of freshly mixed Injectable Suspension in methanol to obtain a solution containing 200 µg/mL of triamcinolone acetonide.
Sample solution: 80 µg/mL of triamcinolone acetonide from the *Sample stock solution* diluted with *Internal standard solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4-mm × 30-cm; packing L1
Flow rate: 1.0 mL/min
Injection size: 15–25 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 2.0 between triamcinolone acetonide and fluoxymesterone
Relative standard deviation: NMT 3.0% for five replicate injections

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of $C_{24}H_{31}FO_6$ in the portion of Injectable Suspension taken:

$$\text{Result} = (R_U/R_S) \times (C_S/C_U) \times 100$$

R_U = peak response ratio of the triamcinolone acetonide peak to the internal standard peak from the *Sample solution*
R_S = peak response ratio of the triamcinolone acetonide peak to the internal standard peak from the *Standard solution*
C_S = concentration of USP Triamcinolone Acetonide RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of triamcinolone acetonide in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–115.0%

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U▲* (CN 1-May-2020)—

USP Monographs

www.webofpharma.com

Solution: 20 µg per mL.
Medium: dehydrated alcohol.
Absorptivities at 238 nm, calculated on the anhydrous basis, do not differ by more than 3.0%.
Specific rotation ⟨781S⟩: between +39° and +45°.
Test solution: 5 mg per mL, in dimethylformamide.
Water Determination, *Method I* ⟨921⟩: not more than 6.0%.
Residue on ignition ⟨281⟩: not more than 0.5%.

Assay—
0.005 M Monobasic sodium phosphate solution—Dissolve monobasic sodium phosphate in water to obtain a solution containing 690 µg per mL.
Mobile phase—Prepare a mixture of *0.005 M Monobasic sodium phosphate solution*, acetonitrile, and tetrahydrofuran (62:37:1), filter through a 0.45-µm solvent-resistant filter, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Dissolve an accurately weighed quantity of USP Triamcinolone Diacetate RS in *Mobile phase*, and dilute quantitatively with *Mobile phase* to obtain a solution having a known concentration of about 40 µg per mL.
Assay preparation—Transfer about 50 mg of Triamcinolone Diacetate, accurately weighed, to a 50-mL volumetric flask, dissolve in *Mobile phase*, dilute with *Mobile phase* to volume, and mix. Pipet 2 mL of this solution into a second 50-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.
System suitability preparation—Dissolve suitable quantities of USP Triamcinolone Diacetate RS and propylparaben in *Mobile phase* to obtain a solution containing about 40 µg per mL and 15 µg per mL, respectively.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *System suitability preparation*, and record the peak responses as directed for *Procedure:* the relative retention times are 1.0 for triamcinolone diacetate and about 1.1 for propylparaben, the resolution, *R*, between the triamcinolone diacetate and propylparaben peaks is not less than 1.7, and the tailing factor, *T*, for the analyte peak is not more than 1.5. Chromatograph replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%.
Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, and measure the area responses for the major peaks. Calculate the quantity, in mg, of $C_{25}H_{31}FO_8$ in the portion of Triamcinolone Diacetate taken by the formula:

$$1.25C(r_U/r_S)$$

in which *C* is the concentration, in µg per mL, of USP Triamcinolone Diacetate RS in the *Standard preparation*, and r_U and r_S are the peak area responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Triamcinolone Diacetate Oral Solution

» Triamcinolone Diacetate Oral Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of triamcinolone diacetate ($C_{25}H_{31}FO_8$). It contains a suitable preservative.

Packaging and storage—Preserve in tight, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Triamcinolone Diacetate RS
Identification—Transfer a quantity of Oral Solution, equivalent to about 10 mg of triamcinolone diacetate, to a separator, and extract with three 10-mL portions of chloroform. Evaporate the combined chloroform extracts on a steam bath to dryness, and dissolve the residue in 5.0 mL of chloroform. Apply 10 µL each of this solution and a solution of USP Triamcinolone Diacetate RS in chloroform containing 2 mg per mL to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Allow the spots to dry, and develop the chromatogram in a solvent system consisting of a mixture of ethyl acetate and chloroform (9:1) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the spots on the plate by lightly spraying with dilute sulfuric acid (1 in 2) and heating on a hot plate or under a lamp until spots appear: the R_f value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Assay—
0.005 M Monobasic sodium phosphate solution, Mobile phase, Standard preparation, System suitability preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Triamcinolone Diacetate.*
Assay preparation—Quantitatively transfer an accurately measured portion of Oral Solution, equivalent to about 50 mg of triamcinolone diacetate to a 100-mL volumetric flask. Dilute with *Mobile phase* to volume, and mix. Pipet 4 mL of this solution into a 50-mL volumetric flask, dilute with *Mobile phase* to volume, and mix. Transfer about 25 mL of this solution to a 50-mL, glass-stoppered centrifuge tube, and centrifuge at high speed for 10 minutes.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Triamcinolone Diacetate.* Calculate the quantity, in mg, of triamcinolone diacetate ($C_{25}H_{31}FO_8$) in the portion of Oral Solution taken by the formula:

$$1.25C(r_U/r_S)$$

in which *C* is the concentration, in µg per mL, of USP Triamcinolone Diacetate RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triamcinolone Diacetate Injectable Suspension

» Triamcinolone Diacetate Injectable Suspension is a sterile suspension of Triamcinolone Diacetate in a suitable aqueous medium. It contains not less than 90.0 percent and not more than 115.0 percent of the labeled amount of $C_{25}H_{31}FO_8$.

Identification—Filter a volume of Injectable Suspension, equivalent to about 50 mg of triamcinolone diacetate, through a medium-porosity, sintered-glass funnel, wash with water, and dry the crystals in vacuum at 60° for 1 hour. Dissolve 2 mg of the dried crystals in 1 mL of methanol in a small mortar. Evaporate with the aid of gentle heat and a stream of nitrogen to dryness: the crystals so obtained respond to *Identification* test *A* under *Triamcinolone Diacetate.*
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 7.1 USP Endotoxin Units per mg of triamcinolone diacetate.
Uniformity of dosage units ⟨905⟩: meets the requirements.
pH ⟨791⟩: between 4.5 and 7.5.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—
0.005 M Monobasic sodium phosphate solution, Mobile phase, Standard preparation, System suitability preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Triamcinolone Diacetate.*
Assay preparation—Quantitatively transfer an accurately measured portion of Injectable Suspension, equivalent to about 50 mg of triamcinolone diacetate, to a 100-mL volumetric flask. Dilute with *Mobile phase* to volume, and mix. Pipet 2 mL of this solution into a 25-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Triamcinolone Diacetate.* Calculate the quantity, in mg, of $C_{25}H_{31}FO_8$ in the portion of Injectable Suspension taken by the formula:

$$1.25C(r_U/r_S)$$

in which C is the concentration, in µg per mL, of USP Triamcinolone Diacetate RS in the *Standard preparation,* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triamcinolone Hexacetonide

$C_{30}H_{41}FO_7$ 532.64
Pregna-1,4-diene-3,20-dione, 21-(3,3-dimethyl-1-oxobutoxy)-9-fluoro-11-hydroxy-16,17-[(1-methylethylidene)bis(oxy)]-, (11β,16α)-;
9-Fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione cyclic 16,17-acetal with acetone 21-(3,3-dimethylbutyrate) [5611-51-8].

DEFINITION
Triamcinolone Hexacetonide contains NLT 97.0% and NMT 102.0% of $C_{30}H_{41}FO_7$, calculated on the dried basis.

Triamcinolone Hexacetonide Injectable Suspension

DEFINITION
Triamcinolone Hexacetonide Injectable Suspension is a sterile suspension of Triamcinolone Hexacetonide in a suitable aqueous medium. It contains NLT 90.0% and NMT 115.0% of the labeled amount of triamcinolone hexacetonide ($C_{30}H_{41}FO_7$).

IDENTIFICATION

Change to read:

- **▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
  Sample: Place a volume of Injectable Suspension, equivalent to 25 mg of triamcinolone hexacetonide, and 2 mL of water in a membrane filter of 0.20-µm pore size. Apply vacuum to the filter, wash the residue with two 5-mL portions of water, and air-dry the filter and the precipitate. Place the dried filter and precipitate in a small beaker with 5 mL of alcohol, and dissolve the precipitate. Decant the alcohol solution into a small beaker and evaporate with the aid of low heat and a current of air to dryness.
  Acceptance criteria: Meets the requirements

ASSAY
- **PROCEDURE**
  Mobile phase: Methanol and water (3:1)
  System suitability solution: 0.3 mg/mL of amcinonide and 0.4 mg/mL of USP Triamcinolone Hexacetonide RS in methanol
  Standard solution: 0.4 mg/mL of USP Triamcinolone Hexacetonide RS in methanol
  Sample solution: Using a "to contain" pipet, transfer a volume of Injectable Suspension, equivalent to 40 mg of triamcinolone hexacetonide, to a 100-mL volumetric flask. Rinse the pipet with methanol, collecting the rinse in the volumetric flask. Dilute with methanol to volume.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—Transfer a portion of the contents of the Capsules, equivalent to about 0.1 g of triamterene, to a 250-mL volumetric flask. Add 100 mL of methoxyethanol, shake until dissolved, dilute with water to volume, and mix. Transfer 5 mL of this solution to a 200-mL volumetric flask, add 5 mL of formic acid, and dilute with water to volume. Prepare a solution of USP Triamterene RS in the manner described above to obtain a Standard solution with a final concentration of about 10 µg per mL. Determine the UV spectrum from 280 nm to 420 nm.
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

Dissolution ⟨711⟩—
TEST 1—
Medium: 1% w/v of polysorbate 20 in 0.1 N acetic acid; 900 mL.
Apparatus 2: 100 rpm.
Time: 120 minutes.
Procedure—Proceed as directed for *Test 2*.
Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_{12}H_{11}N_7$ is dissolved in 120 minutes.
TEST 2—If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: 0.1 N hydrochloric acid; 900 mL.
Apparatus 1: 100 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{12}H_{11}N_7$ dissolved by employing UV absorption at the wavelength of maximum absorbance at about 357 nm on filtered portions of the solution under test, suitably diluted with *Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Triamterene RS in the same *Medium*.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{12}H_{11}N_7$ is dissolved in 45 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.

Related compounds—
Buffer solution, *Mobile phase*, *System suitability solution* and *Chromatographic system*—Proceed as directed in the *Assay*.
Standard solution—Transfer a known quantity of about 50 mg, accurately weighed, of each of USP Triamterene RS, USP Triamterene Related Compound A RS, USP Triamterene Related Compound B RS, and USP Triamterene Related Compound C RS into a 100-mL volumetric flask. Add approximately 4 mL of acetonitrile, and swirl the flask to wet the contents. Add 4 mL of water and swirl the flask to create a suspension. Add 2 drops (approximately 0.1 mL) of phosphoric acid directly into the suspension, followed by the addition of 50 mL of water. Shake for 15 minutes on a mechanical shaker. Warm the contents of the flask in a hot water bath (not higher than 60°) until the bulk of the material has dissolved (about 3 minutes or longer). Dissolve and dilute

www.webofpharma.com

with water to volume, and mix well. Pass through a 0.45-µm suitable membrane filter. Dilute quantitatively, and stepwise if necessary, with water to obtain a solution having a known concentration of about 0.5 µg per mL of each of the reference standards.

Test solution—Use the *Assay preparation.*

Procedure—Inject equal quantities of about 10 µL of the *Standard solution* and the *Test solution* into the chromatograph, and measure the peak responses. Calculate the percentage of known triamterene related compounds A, B, and C in each Capsule taken by the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of the respective USP Triamterene Related Compound RS in the *Standard solution;* C_U is the concentration, in mg per mL, of triamterene in the *Test solution;* and r_U and r_S are the peak responses of each impurity obtained from the *Test solution* and the *Standard solution*, respectively. Calculate any other unknown impurity in the portion of the Capsule taken using the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of the USP Triamterene RS in the *Standard solution;* C_U is the concentration, in mg per mL, of triamterene in the *Test solution;* r_U is the peak response of any other unknown impurity obtained from the *Test solution;* and r_S is the peak response of the USP Triamterene RS in the *Standard solution:* not more than 0.2% of triamterene related compound A is found; not more than 0.2% of triamterene related compound B is found; not more than 0.2% of triamterene related compound C is found; not more than 0.2% of any other unknown individual impurity is found; and the sum of all impurities is not more than 1.0%.

Assay—

Buffer solution—Dissolve 6.8 g of sodium phosphate monobasic monohydrate (taken in a 1-L flask) in about 900 mL of water. To this solution, add 1.43 g of propylamine hydrochloride, and adjust the pH to 5.5 with 1 M sodium hydroxide. Dilute with water to volume, and mix well.

Mobile phase—Prepare a filtered and degassed mixture of the *Buffer solution* and acetonitrile (80:20). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Blank solution—Place 4 mL of acetonitrile and 4 mL of water in a 100-mL flask. Add 2 drops (approximately 0.1 mL) of phosphoric acid. Dilute with water to volume, and mix well. Pass through a suitable 0.45-µg membrane filter.

System suitability solution—Accurately weigh about 5 mg of USP Triamterene Related Compound C RS and 50 mg of USP Triamterene RS into two separate 100-mL volumetric flasks. Add approximately 4 mL of acetonitrile into each flask to wet the material. Add approximately 4 mL of water into each flask to create a suspension. Add 2 drops (approximately 0.1 mL) of phosphoric acid directly into the suspension in each flask. Add approximately 50 mL of water into each flask. Shake for 15 minutes on a mechanical shaker. Warm the contents of the flasks in a hot water bath (not higher than 60°), until the bulk of the material has dissolved (about 3 minutes or longer). Dissolve and dilute with water to volume, and mix well. Dilute with water appropriate portions of these solutions taken in a suitable volumetric flask, quantitatively and stepwise if necessary, to obtain a solution having a known concentration of 500 µg of USP Triamterene RS and 0.5 µg of USP Triamterene Related Compound C RS. Pass through a suitable 0.45-µm membrane filter.

Standard preparation—Accurately weigh about 50 mg of USP Triamterene RS into a 100-mL volumetric flask. Add approximately 4 mL of acetonitrile, and swirl to wet the material. Add 4 mL of water, and swirl to create a suspension. Add 2 drops of phosphoric acid into the suspension.

[**CAUTION**—Make sure that the phosphoric acid is not just adhering to the sides of the flask.]

Add approximately 50 mL of water into the flask, and shake for 15 minutes on a mechanical shaker. Warm the contents of the flasks in a hot water bath (not higher than 60°) until the bulk of the material has dissolved (about 3 minutes or longer). Dissolve and dilute with water to volume, and mix well. Pass through a suitable 0.45-µm membrane filter.

Assay preparation—Remove, as completely as possible, the contents of not fewer than 10 Capsules, and weigh. Transfer an accurately weighed portion of the powder, equivalent to about 500 mg of triamterene, to a 1000-mL volumetric flask. Wash the empty shells with 40 mL of acetonitrile, and add to the volumetric flask. Swirl the flask to wet the powder. Add 20 mL of water, and swirl the flask to create a suspension. Add 20 drops (approximately 1 mL) of phosphoric acid directly into the suspension. Add approximately 500 mL of water, and mix well. Shake well for 15 minutes on a mechanical shaker. Place in a hot water bath (not higher than 60°), until the bulk of the material has dissolved (about 3 minutes or longer). Cool to room temperature slowly (do not place in cold water bath). Dissolve and dilute with water to volume, and mix well. (The final solution could be slightly cloudy). Pass the solution through a suitable 0.45-µm membrane filter.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 4.0-mm × 300-mm column that contains 5-µm packing L1. The flow rate is about 1.0 mL per minute. Chromatograph the *System suitability solution* and the *Standard preparation,* and record the peak responses as directed for *Procedure:* the resolution between triamterene and triamterene related compound C is not less than 3; the tailing factor for triamterene is not more than 2.5; and the relative standard deviation for replicate injections of the *Standard preparation* is not more than 2.0%.

Procedure—Inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatogram, and measure the peak responses. Calculate the percentage of $C_{12}H_{11}N_7$ in the portion of Tablets taken by the formula:

$$100(r_U/r_S)(C_S/C_U)$$

in which r_U is the peak response of triamterene obtained from the *Assay preparation;* r_S is the response of the corresponding peak in the *Standard preparation;* and C_S and C_U are the concentrations, in mg per mL, of triamterene in the *Standard preparation* and the *Assay preparation,* respectively.

Triamterene and Hydrochlorothiazide Capsules

DEFINITION

Triamterene and Hydrochlorothiazide Capsules contain NLT 90.0% and NMT 110.0% of the labeled amounts of triamterene ($C_{12}H_{11}N_7$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$).

[NOTE—The Capsule and Tablet dosage forms should not be considered bioequivalent. If patients are to be

USP Monographs

www.webofpharma.com

transferred from one dosage form to the other, retitration and appropriate changes in dosage may be necessary.]

ASSAY

Change to read:

- **PROCEDURE**

Buffer: Transfer 6.9 g of monobasic sodium phosphate and 1.43 g of propylamine hydrochloride to a 1-L volumetric flask. Dissolve in 900 mL of water, adjust with 1 N sodium hydroxide to a pH of 5.5, and dilute with water to volume.

Mobile phase: Acetonitrile and *Buffer* (20:80)

▲Diluent: Acetonitrile, glacial acetic acid, and water (10:5:85)▲ (USP 1-Aug-2019)

Standard solution: ▲0.25 mg/mL of USP Hydrochlorothiazide RS and 0.25(*J*) mg/mL of USP Triamterene RS prepared as follows.▲ (USP 1-Aug-2019) Transfer 25 mg of USP Hydrochlorothiazide RS into a 100-mL volumetric flask. Add 25*J* mg of USP Triamterene RS, *J* being the ratio of the labeled amount, in milligrams, of triamterene to the labeled amount, in milligrams, of hydrochlorothiazide/Capsule. Add 10 mL of acetonitrile, 10 mL of water, and 5 mL of glacial acetic acid, sonicating for 2–3 min after each addition. Cool to room temperature, and dilute with water to volume.

▲Diluted standard solution: 0.125 mg/mL of USP Hydrochlorothiazide RS and 0.125(*J*) mg/mL of USP Triamterene RS from *Standard solution* in *Diluent*▲ (USP 1-Aug-2019)

Sample solution: ▲Nominally 0.25 mg/mL of hydrochlorothiazide prepared as follows.▲ (USP 1-Aug-2019) Transfer a portion nominally equivalent to 50 mg of hydrochlorothiazide from NLT 20 Capsules (remove, as completely as possible, the contents of Capsules) to a 200-mL volumetric flask. Add 20 mL of acetonitrile, and sonicate for 10 min. Add 20 mL of boiling water, sonicate for 5 min, and mix. Add 10 mL of acetic acid, sonicate for 10 min, and mix. Add 140 mL of water, mix, and allow to cool to room temperature. Dilute with water to volume, mix, and filter, discarding the first 3 mL of the filtrate.

▲Diluted sample solution: Nominally 0.125 mg/mL of hydrochlorothiazide from *Sample solution* in *Diluent*▲ (USP 1-Aug-2019)

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 280 nm. ▲For *Identification A*, use a diode array detector in the range of 190–400 nm.▲ (USP 1-Aug-2019)

Column: 3.9-mm × 30-cm; ▲10-µm▲ (USP 1-Aug-2019) packing L1

Flow rate: 1 mL/min

Injection volume: 10 µL

▲Run time: NLT 2 times the retention time of triamterene▲ (USP 1-Aug-2019)

System suitability

Sample: *Standard solution*

[NOTE—The relative retention times for hydrochlorothiazide and triamterene are 0.65 and 1.0, respectively.]

Suitability requirements

Resolution: NLT 3.0 between hydrochlorothiazide and triamterene

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution*, ▲*Diluted standard solution*, *Sample solution*, and *Diluted sample solution*. [NOTE—The *Diluted standard solution* and *Diluted sample solution* are used for *Identification A*.]▲ (USP 1-Aug-2019)

Calculate the percentage of the labeled amount of triamterene ($C_{12}H_{11}N_7$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of triamterene or hydrochlorothiazide from the *Sample solution*

r_S = peak response of triamterene or hydrochlorothiazide from the *Standard solution*

C_S = concentration of ▲USP Triamterene RS or USP Hydrochlorothiazide RS▲ (USP 1-Aug-2019) in the *Standard solution* (mg/mL)

C_U = nominal concentration of triamterene or hydrochlorothiazide in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

Change to read:

- **DISSOLUTION** ⟨711⟩

Test 1: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 1*.

Medium: 0.1 M acetic acid containing 1% polysorbate 20; 900 mL

Apparatus 2: 100 rpm

Time: 120 min

Standard solution: A known concentration of USP Triamterene RS and USP Hydrochlorothiazide RS in *Medium*

Sample solution: Pass a portion of the solution under test through a suitable filter. Dilute with water as needed in comparison with the *Standard solution*.

Instrumental conditions

Mode: UV

Analytical wavelengths: 357 nm for triamterene; 271 nm for hydrochlorothiazide (corrected for interference from triamterene on the basis of the absorbances of triamterene at 271 and 357 nm)

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of triamterene ($C_{12}H_{11}N_7$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) dissolved. ▲▲ (USP 1-Aug-2019)

Tolerances: NLT 80% (*Q*) ▲▲ (USP 1-Aug-2019) of the labeled amounts of triamterene ($C_{12}H_{11}N_7$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) are dissolved.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.

Medium: 4.0% tetrasodium ethylenediaminetetraacetate, 2.0% polysorbate 40, and 0.05% pancreatin prepared as follows. Add the polysorbate 40 and tetrasodium ethylenediaminetetraacetate to water, and mix thoroughly. Adjust with phosphoric acid to a pH of 8.0

USP Monographs

www.webofpharma.com

± 0.05. Heat to 37°, and add the pancreatin powder. Mix thoroughly, and transfer immediately to the dissolution vessel; 900 mL
Apparatus 1 (use 10-mesh baskets): 100 rpm
Time: 8 h
Buffer: 0.08 M monobasic sodium phosphate
Mobile phase: Methanol and *Buffer* (25:75)
Standard stock solution: 0.22 mg/mL of USP Triamterene RS and 0.11 mg/mL of USP Hydrochlorothiazide RS prepared as follows. To the triamterene and hydrochlorothiazide in a suitable volumetric flask add methanol to fill about 1/5 of the flask volume, sonicate for 10 min, and heat in a steam bath until completely dissolved. Dilute with *Medium* to volume.
Standard solution: ▲0.055 mg/mL of USP Triamterene RS in *Medium* prepared as follows.▲ (USP 1-Aug-2019) Transfer 25 mL of *Standard stock solution* into a 100-mL volumetric flask, dilute with *Medium* to volume, and mix gently to minimize foaming.
Sample solution: Pass a portion of the solution under test through a suitable filter. [NOTE—Do not use nylon filters.]

USP Reference standards ⟨11⟩—
USP Triazolam RS

Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* obtained as directed in the *Assay* corresponds to that of the *Standard preparation*, relative to the internal standard.

Dissolution ⟨711⟩—
Medium: water; 500 mL.
Apparatus 2: 50 rpm.
Time: 30 minutes.
Stock standard solution—Weigh accurately about 5 mg of USP Triazolam RS, dissolve in and dilute with methanol to 200.0 mL, and mix.
Working standard solution—For each 0.125 mg of the labeled amount of triazolam per Tablet, add 2.0 mL of *Stock standard solution* to a 200-mL volumetric flask. Dilute with water to volume, and mix.
Procedure—After 30 minutes, withdraw a portion of the solution under test, and filter immediately. Inject equal volumes (about 200 µL) of this solution and the *Working standard solution* into a liquid chromatograph (see *Chromatography* ⟨621⟩) equipped with a detector capable of monitoring UV absorbance at 222 nm and a 4.6-mm × 10-cm stainless steel column containing packing L7. The mobile phase is a mixture of water and acetonitrile (60:40). The flow rate is about 1 mL per minute. The relative standard deviation of the peak response for the *Working standard solution* is not more than 3.0%, and the number of theoretical plates is not less than 500. Calculate the percentage of $C_{17}H_{12}Cl_2N_4$ dissolved by the formula:

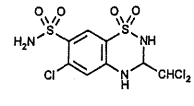
$$50{,}000(r_U/r_S)(C/L)$$

in which r_U and r_S are the peak responses of the solution under test and the *Working standard solution*, respectively, C is the concentration, in mg per mL, of USP Triazolam RS in the *Working standard solution*, and L is the labeled amount, in mg, of triazolam in the Tablet.
Tolerances—Not less than 70% *(Q)* of the labeled amount of $C_{17}H_{12}Cl_2N_4$ is dissolved in 30 minutes.

Change to read:

Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—
Mobile phase and *Chromatographic system*—Proceed as directed ▲ (ERR 1-Jan-2019) in the *Assay* ▲ (ERR 1-Jan-2019).
Internal standard solution—Prepare a solution of alprazolam in acetonitrile having a concentration of about 0.025 mg per mL.
Standard preparation—Dissolve about 3.2 mg of USP Triazolam RS, accurately weighed, in 100.0 mL of *Internal standard solution*, and mix.
Test preparation—Transfer 1 Tablet to a container, add about 0.4 mL of water directly onto the Tablet, allow to stand for about 2 minutes, and swirl the container to disperse the Tablet. For each 0.25 mg of the labeled amount of triazolam in the Tablet, add 10.0 mL of *Internal standard solution* to the container. Shake, and centrifuge if necessary.
Procedure—Proceed as directed ▲ (ERR 1-Jan-2019) in the *Assay* ▲ (ERR 1-Jan-2019). Calculate the quantity, in mg, of $C_{17}H_{12}Cl_2N_4$ in the Tablet taken by the formula:

$$CV(R_U/R_S)$$



in which V is the volume, in mL, of *Internal standard solution* in the *Test preparation*.

Assay—
Mobile phase —Prepare a filtered and degassed mixture of acetonitrile, chloroform, butyl alcohol, water, and glacial acetic acid (850: 80: 50: 20: 0.5). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Internal standard solution—Prepare a solution of alprazolam in acetonitrile, having a concentration of 0.1 mg per mL.
Standard stock solution—Dissolve an accurately weighed quantity of USP Triazolam RS in acetonitrile, and dilute with acetonitrile to obtain a solution having a known concentration of about 0.1 mg per mL.
Standard preparation—Transfer 8.0 mL of *Standard stock solution* to a 200-mL volumetric flask, add 8.0 mL of *Internal standard solution*, dilute with acetonitrile to volume, and mix.
Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed quantity of the powder, equivalent to about 0.8 mg of triazolam, to a 200-mL volumetric flask. Add 2 mL of water, mix, and allow to stand for 10 minutes. Mix vigorously for 10 seconds, and add 8.0 mL of *Internal standard solution*, shake vigorously for 10 minutes, dilute with acetonitrile to volume, and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 30-cm column that contains packing L3. The flow rate is about 2.0 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed under *Procedure*: the relative retention times are 1 for triazolam and about 1.4 for the internal standard, the resolution, R, between the internal standard and triazolam is not less than 2.0, and the relative standard deviation for replicate injections is not more than 2.0%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the area responses for the major peaks. Calculate the quantity, in mg, of $C_{17}H_{12}Cl_2N_4$ in the portion of Tablets taken by the formula:

$$200C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of USP Triazolam RS in the *Standard preparation*, and R_U and R_S are the ratios of the triazolam peak area to the internal standard peak area obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Trichlormethiazide

$C_8H_8Cl_3N_3O_4S_2$ 380.66
2*H*-1,2,4-Benzothiadiazine-7-sulfonamide, 6-chloro-3-(dichloromethyl)-3,4-dihydro-, 1,1-dioxide, (±)-.

www.webofpharma.com

(±)-6-Chloro-3-(dichloromethyl)-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide [133-67-5].

» Trichlormethiazide, dried at 105° for 3 hours, contains not less than 98.0 percent and not more than 102.0 percent of $C_8H_8Cl_3N_3O_4S_2$.

Packaging and storage—Preserve in well-closed containers.

USP Reference standards ⟨11⟩—
USP Benzothiadiazine Related Compound A RS
4-Amino-6-chloro-1,3-benzenedisulfonamide.
$C_6H_8ClN_3O_4S_2$ 285.73
USP Trichlormethiazide RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197M*▲ (CN 1-May-2020).

B: Prepare a solution in a mixture of equal volumes of toluene and alcohol containing 1 mg per mL. Apply 10 µL of this solution and 10 µL of a Standard solution of USP Trichlormethiazide RS in the same medium having a known concentration of 1 mg per mL to a suitable thin-layer chromatographic plate (see *Thin-Layer Chromatography* under *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram, using ethyl acetate as the solvent, until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the spots using short-wavelength UV light: the R_F value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Loss on drying ⟨731⟩—Dry it at 105° for 3 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩: not more than 0.1%.

Selenium ⟨291⟩: 0.003%.

Diazotizable substances—

Standard solution—Prepare a solution in a mixture of equal volumes of toluene and alcohol containing 250 µg of USP Benzothiadiazine Related Compound A RS in each mL.

Test solution—Transfer 100.0 mg of Trichlormethiazide, accurately weighed, to a 10-mL volumetric flask, dissolve in 1 mL of acetone, dilute with a mixture of equal volumes of toluene and alcohol to volume, and mix.

Procedure—Apply 5 µL each of the *Standard solution* and of the *Test solution* to a suitable thin-layer chromatographic plate (see *Thin-Layer Chromatography*, under *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram in ethyl acetate until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and locate the spots on the plate by spraying first with a 1 in 20 solution of sodium nitrite in dilute hydrochloric acid (1 in 12), and then with a 1 in 1000 solution of *N*-(1-naphthyl) ethylenediamine dihydrochloride in alcohol: after 3 minutes, any spot from the *Test solution*, occurring at the R_F value corresponding to that produced by the *Standard solution*, is not greater in size or intensity than the spot produced by the *Standard solution*, corresponding to not more than 2.5% of diazotizable substances.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of 0.05 M monobasic potassium phosphate and methanol (7:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Internal standard solution—Transfer about 120 mg of methylparaben to a 50-mL volumetric flask, add methanol to volume, and mix.

Standard preparation—Transfer about 25 mg of USP Trichlormethiazide RS, accurately weighed, to a 50-mL volumetric flask, add 4.0 mL of *Internal standard solution*, dilute with methanol to volume, and mix to obtain a solution having a known concentration of about 0.5 mg of USP Trichlormethiazide RS per mL.

Assay preparation—Transfer about 50 mg of Trichlormethiazide, accurately weighed, to a 100-mL volumetric flask, add 8.0 mL of *Internal standard solution*, dilute with methanol to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 2.3 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between the analyte and internal standard peaks is not less than 2.0, and the relative standard deviation for the response ratios calculated for replicate injections is not more than 2%.

Procedure—Separately inject equal volumes (5 to 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. The relative retention times are about 0.56 for trichlormethiazide and 1.0 for methylparaben. Calculate the quantity, in mg, of $C_8H_8Cl_3N_3O_4S_2$ in the portion of Trichlormethiazide taken by the formula:

$$100C(R_U/R_S)$$

in which *C* is the concentration, in mg per mL, of USP Trichlormethiazide RS in the *Standard preparation*, and R_U and R_S are the peak response ratios obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Delete the following:

▲Trichlormethiazide Tablets

» Trichlormethiazide Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_8H_8Cl_3N_3O_4S_2$.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—
USP Trichlormethiazide RS

Identification—Evaporate 25 mL of the combined ethyl acetate extracts obtained in the *Assay* on a steam bath to dryness, and dissolve the residue in 1 mL of a mixture of equal volumes of benzene and alcohol: a 10-µL portion of this solution responds to *Identification* test *B* under *Trichlormethiazide*.

Dissolution ⟨711⟩—
Medium: water; 900 mL.
Apparatus 2: 50 rpm.
Time: 60 minutes.

www.webofpharma.com

Procedure— [NOTE—Conduct the analysis of the specimen promptly after the specimen aliquot is withdrawn from the vessel, to minimize hydrolysis.] Determine the amount of $C_8H_8Cl_3N_3O_4S_2$ dissolved, employing the procedure set forth in the *Assay*, making any necessary volumetric adjustments.

Tolerances—Not less than 65% (*Q*) of the labeled amount of $C_8H_8Cl_3N_3O_4S_2$ is dissolved in 60 minutes.

Uniformity of dosage units ⟨ 905 ⟩ : meet the requirements.

Assay—

Mobile phase and *Chromatographic system*—Prepare as directed in the *Assay* under *Trichlormethiazide*.

Acidic methanol—Add 2.8 mL of sulfuric acid to 100 mL of water, mix, and cool. Dilute with methanol to 1000 mL, and mix.

Internal standard solution—Transfer about 20 mg of methylparaben to a 200-mL volumetric flask, add *Acidic methanol* to volume, and mix.

Standard preparation—Transfer about 20 mg of USP Trichlormethiazide RS, accurately weighed, to a 50-mL volumetric flask, add *Acidic methanol* to volume, and mix. Transfer 5.0 mL of this solution to a centrifuge tube, add 5.0 mL of *Internal standard solution*, and mix to obtain a solution having a known concentration of about 0.2 mg of USP Trichlormethiazide RS per mL.

Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to 2 mg of trichlormethiazide, to a centrifuge tube. Add 5.0 mL of *Acidic methanol* and 5.0 mL of *Internal standard solution*, and mix to disperse the powder. Insert the stopper in the tube, rotate by mechanical means for 20 minutes, and centrifuge to obtain a clear supernatant.

Procedure—Separately inject equal volumes (5 µL to 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. The relative retention times are about 0.58 for trichlormethiazide and 1.0 for methylparaben. Calculate the quantity, in mg, of $C_8H_8Cl_3N_3O_4S_2$ in the portion of Tablets taken by the formula:

$$10C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of USP Trichlormethiazide RS in the *Standard preparation*, and R_U and R_S are the peak response ratios obtained from the *Assay preparation* and the *Standard preparation*, respectively. ▲ 2S (USP41)

Tricitrates Oral Solution

DEFINITION

Tricitrates Oral Solution is a solution of Sodium Citrate, Potassium Citrate, and Citric Acid in a suitable aqueous medium. It contains, in each 100 mL, NLT 2.23 g and NMT 2.46 g of sodium (Na), equivalent to NLT 9.5 g and NMT 10.5 g of sodium citrate dihydrate ($C_6H_5Na_3O_7 \cdot 2H_2O$); NLT 3.78 g and NMT 4.18 g of potassium (K), equivalent to NLT 10.45 g and NMT 11.55 g of potassium citrate monohydrate ($C_6H_5K_3O_7 \cdot H_2O$); NLT 12.20 g and NMT 13.48 g of citrate ($C_6H_5O_7$) as sodium citrate and potassium citrate; and NLT 6.34 g and NMT 7.02 g of citric acid monohydrate ($C_6H_8O_7 \cdot H_2O$). [NOTE—The sodium and potassium ion contents of Tricitrates Oral Solution are each approximately 1 mEq/mL.]

IDENTIFICATION

• **A. IDENTIFICATION TESTS—GENERAL,** ⟨191⟩
Sample: 2 mL Oral Solution
Acceptance criteria: Meets the requirements for test *A* under *Sodium*

• **B.**
Sample solution: Oral Solution (1 in 20)
Analysis: Add 5 mL of sodium cobaltinitrite TS to 2 mL of *Sample solution*.
Acceptance criteria: A yellow precipitate is formed immediately (presence of potassium).

• **C.** The retention time of the citrate peak of the *Sample solution* corresponds to that of *Standard solution 1*, as obtained in the *Assay* for *Citric Acid*.

ASSAY

• **SODIUM AND POTASSIUM**
Sodium stock solution: Transfer 14.61 g of sodium chloride, previously dried at 105° for 2 h, to a 250-mL volumetric flask, and dilute with water to volume.
Potassium stock solution: Transfer 18.64 g of potassium chloride, previously dried at 105° for 2 h, to a 250-mL volumetric flask, and dilute with water to volume.
Diluent: Transfer 1.04 g of lithium nitrate to a 1000-mL volumetric flask, add a suitable nonionic surfactant, then add water to volume. This solution contains 15 mEq of Li/1000 mL.
Standard solution: Pipet 50 mL of *Sodium stock solution* and 50 mL of *Potassium stock solution* into a 500-mL volumetric flask, and dilute with water to volume. Each mL of this solution contains 0.1 mEq of sodium (Na) and 0.1 mEq of potassium (K). Transfer 50 µL of this solution to a 10-mL volumetric flask, and dilute with *Diluent* to volume.
Sample solution: Transfer a volume of Oral Solution, equivalent to 2 g of combined citrates, to a 100-mL volumetric flask, and dilute with water to volume. Transfer 50 µL of this solution to a 10-mL volumetric flask, and dilute with *Diluent* to volume.
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelengths
Sodium emission line: 589 nm
Potassium emission line: 766 nm
Blank: *Diluent*
Analysis
Samples: *Standard solution*, *Sample solution*, and *Blank*
Calculate the quantity, in g, of sodium (Na) in the portion of Oral Solution taken:

$$\text{Result} = (A_r/M_r) \times (R_{U,Na}/R_{S,Na}) \times (W/F)$$

A_r = atomic weight of sodium, 22.99
M_r = molecular weight of sodium chloride, 58.44
$R_{U,Na}$ = sodium emission reading from the *Sample solution*
$R_{S,Na}$ = sodium emission reading from the *Standard solution*
W = weight of sodium chloride in the *Sodium stock solution*, 14.61 g
F = conversion factor, 25

Calculate the quantity, in g, of potassium (K) in the portion of Oral Solution taken:

$$\text{Result} = (A_r/M_r) \times (R_{U,K}/R_{S,K}) \times (W/F)$$

A_r = atomic weight of potassium, 39.10
M_r = molecular weight of potassium chloride, 74.55
$R_{U,K}$ = potassium emission reading from the *Sample solution*

www.webofpharma.com

$R_{S,K}$ = potassium emission reading from the *Standard solution*
W = weight of potassium chloride in the *Potassium stock solution*, 18.64 g
F = conversion factor, 25

Acceptance criteria: 2.23–2.46 g/100 mL of sodium and 9.5–10.5 g/100 mL of potassium

• **CITRATE**

Mobile phase, Standard solution 1, Chromatographic system, and **System suitability:** Proceed as directed in *Assay for Citric Acid/Citrate and Phosphate* ⟨345⟩.

Sample solution: Transfer an appropriate volume of Oral Solution into a suitable volumetric flask, and proceed as directed in *Assay for Citric Acid/Citrate and Phosphate* ⟨345⟩, *Sample solution (for the assay of citric acid/citrate)*.

Analysis: Proceed as directed in *Assay for Citric Acid/Citrate and Phosphate* ⟨345⟩, *Procedure*.

Calculate the concentration, in g/100 mL, of citrate ($C_6H_5O_7$) in the portion of Oral Solution taken:

$$\text{Result} = [(r_U/r_S) \times (C_S/C_U) - A(M_{r1}/M_{r2})] \times L$$

r_U = citrate peak area from the *Sample solution*
r_S = citrate peak area from *Standard solution 1*
C_S = concentration of citrate in *Standard solution 1* (µg/mL)
C_U = nominal concentration of *Sample solution*
A = concentration of citric acid monohydrate determined in the *Assay* for *Citric Acid* (mg/mL)
M_{r1} = molecular weight of citrate, 189.10
M_{r2} = molecular weight of citric acid monohydrate, 210.14
L = Oral Solution label claim (g/100 mL)

Acceptance criteria: 12.20–13.48 g/100 mL as sodium citrate and potassium citrate

• **CITRIC ACID**

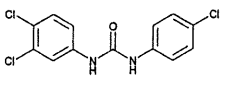
Sample solution: Transfer 15 mL of Oral Solution into a 250-mL volumetric flask, and dilute with water to volume.

Analysis: Transfer 5 mL of the *Sample solution* into a suitable flask, and add 25 mL of water and 5 drops of phenolphthalein TS. Titrate with 0.02 N sodium hydroxide VS to a pink endpoint. Each mL of 0.02 N sodium hydroxide is equivalent to 1.401 mg of citric acid monohydrate ($C_6H_8O_7 \cdot H_2O$).

Acceptance criteria: 6.34–7.02 g/100 mL

SPECIFIC TESTS

• **PH** ⟨791⟩**:** 4.9–5.4



ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Citric Acid RS

Triclocarban

$C_{13}H_9Cl_3N_2O$ 315.58

Urea, *N*-(4-chlorophenyl)-*N*′-(3,4-dichlorophenyl)-; 3,4,4′-Trichlorocarbanilide; 1-(4-Chlorophenyl)-3-(3,4-dichlorophenyl)urea [101-20-2].

DEFINITION

Triclocarban contains NLT 97.0% and NMT 103.0% of triclocarban ($C_{13}H_9Cl_3N_2O$), calculated on the dried basis.

IDENTIFICATION

Change to read:

• **A.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

ASSAY

• **PROCEDURE**

Mobile phase: Acetonitrile, methanol, water, and glacial acetic acid (400: 500: 300: 1.5)

System suitability solution: 0.1 mg/mL each of USP Triclocarban RS, USP Triclocarban Related Compound A RS, and USP Triclocarban Related Compound C RS in acetonitrile

Standard solution: 0.1 mg/mL of USP Triclocarban RS in acetonitrile. The solution is stable for 12 h.

Sample solution: 0.1 mg/mL of Triclocarban in acetonitrile. The solution is stable for 12 h.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 265 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 2 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

[NOTE—The relative retention times for triclocarban related compound A, triclocarban, and triclocarban related compound C are 0.7, 1.0, and 1.6, respectively.]

Suitability requirements

Resolution: NLT 2.0 between triclocarban related compound A and triclocarban, NLT 2.0 between triclocarban and triclocarban related compound C, *System suitability solution*

Relative standard deviation: NMT 2.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of triclocarban ($C_{13}H_9Cl_3N_2O$) in the portion of Triclocarban taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Triclocarban RS in the *Standard solution* (mg/mL)
C_U = concentration of Triclocarban in the *Sample solution* (mg/mL)

Acceptance criteria: 97.0%–103.0% on the dried basis

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase: Acetonitrile, methanol, water, and glacial acetic acid (370:380:250:1)

Internal standard solution: 0.12 mg/mL of *p*-nitrochlorobenzene in methanol

Standard solution: 2 µg/mL each of USP Triclocarban RS, USP Triclocarban Related Compound A RS, USP

USP Monographs

www.webofpharma.com

Triclocarban Related Compound C RS, USP Triclocarban Related Compound D Mixture RS, and 2.4 µg/mL of *p*-nitrochlorobenzene from the *Internal standard solution*. Dissolve and dilute with methanol to volume.

Sample solution: 0.2 mg/mL of Triclocarban and 2.4 µg/mL of *p*-nitrochlorobenzene from the *Internal standard solution*. Dissolve and dilute with methanol to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 254 nm

Column: 4.6-mm × 15-cm; 5-µm packing L1

Column temperature: 40°

Flow rate: 1.3 mL/min

Injection volume: 20 µL

System suitability

Sample: *Standard solution*

Suitability requirements

Signal-to-noise ratio: NLT 10 for triclocarban related compound A, triclocarban related compound C, and triclocarban related compound D mixture

Relative standard deviation: NMT 2.0% for triclocarban

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of each impurity in the portion of Triclocarban taken:

$$\text{Result} = (R_U/R_S) \times (C_S/C_U) \times 100$$

R_U = peak response ratio of each impurity to the internal standard from the *Sample solution*

R_S = peak response ratio of corresponding specified impurity to the internal standard from the *Standard solution* (use the triclocarban peak response ratio to calculate for any individual impurity)

C_S = concentration of each impurity in the *Standard solution* (µg/mL)

C_U = concentration of Triclocarban in the *Sample solution* (µg/mL)

Acceptance criteria: See *Table 1*.

Table 1

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
p-Nitrochlorobenzene[a]	0.45	—
Triclocarban related compound A[b]	0.64	1.0
Triclocarban	1.00	—
Triclocarban related compound C[c]	1.66	1.0
Triclocarban related compound D mixture[d]	2.72 and 3.25	1.0
Any other individual impurity	—	1.0
Total impurities	—	2.0

[a] Internal standard—for information only.

[b] 1,3-Bis(4-chlorophenyl)urea.

[c] 1,3-Bis(3,4-dichlorophenyl)urea.

[d] Consists of two components, triarylbiuret 1 and triarylbiuret 2. Triarylbiuret 1 is [3,5-bis(4-chlorophenyl)-1-(3,4-dichlorophenyl)biuret] with RRT of 2.72. Triarylbiuret 2 is [1,5-bis(4-chlorophenyl)-3-(3,4-dichlorophenyl)biuret] with RRT of 3.25. The acceptance criteria is the sum of triarylbiuret 1 and triarylbiuret 2.

• **CHLOROANILINES**

Dimethylformamide solution: 5% dimethylformamide in 1 N hydrochloric acid

Sodium nitrite solution: 2.5 mg/mL of sodium nitrite in water

Ammonium sulfamate solution: 25 mg/mL of ammonium sulfamate in water

***N*-(1-naphthyl)ethylenediamine dihydrochloride solution:** 10 mg/mL in water

Standard stock solution 1: 560 µg/mL of 3,4-dichloroaniline and 440 µg/mL of *p*-chloroaniline dissolved in 2% of the final volume with the *Dimethylformamide solution*. Dilute with 0.2 N hydrochloric acid to volume.

Standard stock solution 2: 56 µg/mL of 3,4-dichloroaniline and 44 µg/mL of *p*-chloroaniline in 0.2 N hydrochloric acid from *Standard stock solution 1*

Standard stock solution 3: 5.6 µg/mL of 3,4-dichloroaniline and 4.4 µg/mL of *p*-chloroaniline in 0.2 N hydrochloric acid from *Standard stock solution 2*

Standard stock solution 4: 0.56 µg/mL of 3,4-dichloroaniline and 0.44 µg/mL of *p*-chloroaniline in 0.2 N hydrochloric acid from *Standard stock solution 3*

Standard solutions: Prepare *Standard solutions 1–9* as listed in *Table 2*. Transfer the aliquot of the *Standard stock solution* to each individual 25-mL volumetric flask. Place all flasks in an ice bath at 0° to 5° for 10 min. Add to each volumetric flask 1 mL of *Sodium nitrite solution*, shake well, and let the solution stand for 10 min in the ice bath. Add to each flask 1 mL of the *Ammonium sulfamate solution*, shake well, and allow the reaction to take place for 10 min inside the ice bath. Add 2 mL of the *N-(1-naphthyl) ethylenediamine dihydrochloride solution* to each *Standard solution 1–8*, and remove all volumetric flasks from the ice bath. Do not add the *N-(1-naphthyl)ethylenediamine dihydrochloride solution* to *Standard solution 9*. Dilute all solutions with 0.2 N hydrochloric acid to volume. Allow to stand for at least 30 s, and measure the absorbance within 15 min.

Table 2

Standard Solution	Standard Stock Solution Used	Volume of Standard Stock Solution (mL)	Concentration of Total Chloroaniline (ppm)
1	Standard stock solution 4	2	20
2	Standard stock solution 4	5	50
3	Standard stock solution 4	10	100
4	Standard stock solution 4	15	150
5	Standard stock solution 3	2	200
6	Standard stock solution 3	3	300
7	Standard stock solution 3	4	400
8	Standard stock solution 3	5	500
9	Standard stock solution 3	5	0

Sample stock solution: Dissolve 500 mg of Triclocarban with 5 mL of the *Dimethylformamide solution* in a 50-mL beaker, and shake the solution. Continue shaking the solution while adding 15 mL of 0.2 N hydrochloric acid to precipitate the product, and shake for 15 min. Filter the

www.webofpharma.com

suspension into a 50-mL volumetric flask, and dilute with 0.2 N hydrochloric acid to volume.

Sample solution: Transfer 10 mL of the *Sample stock solution* to a 25-mL volumetric flask, and place in an ice bath at 0° to 5° for 10 min. Add 1 mL of the *Sodium nitrite solution*, shake well, and let the solution stand for 10 min in the ice bath. Add 1 mL of the *Ammonium sulfamate solution*, shake well, and allow to stand for 10 min. Add 1 mL of the *N-(1-naphthyl)ethylenediamine dihydrochloride solution*, and remove the solution from the ice bath. Dilute with 0.2 N hydrochloric acid to volume. Allow to stand for at least 30 s, and measure the absorbance within 15 min.

Sample solution blank: Follow the procedure described in the preparation of the *Sample solution* but do not add the *N-(1-naphthyl)ethylenediamine dihydrochloride solution*.

Instrumental conditions

Mode: UV

Analytical wavelength: 552 nm

Analysis

Samples: *Standard solutions* and *Sample solution*

Calibrate the absorbance to zero with *Standard solution 9*. Generate a calibration curve of absorbance against concentration of total chloroaniline using the data from *Standard solutions 1–8*. Determine the concentration, C_S, in µg/mL, of chloroanilines in the *Sample solution* using the calibration curve. Calculate the concentration, in ppm, of chloroanilines in the portion of Triclocarban taken:

$$\text{Result} = (C_S/C_U) \times F$$

C_S = concentration of chloroanilines in the *Sample solution* (µg/mL)

C_U = concentration of Triclocarban in the *Sample solution* (µg/mL)

F = conversion factor to ppm (10^6)

Acceptance criteria: NMT 400 ppm

SPECIFIC TESTS

- **LOSS ON DRYING** ⟨731⟩

Sample: Dry a sample at 110° for 4 h.

Acceptance criteria: NMT 0.2%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed container. Store at ambient temperature and humidity.
- **USP REFERENCE STANDARDS** ⟨11⟩

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

Water Determination, *Method I* ⟨921⟩**:** not more than 0.1%.

Completeness of solution ⟨641⟩—A solution of 1.40 g of Triclosan in 10 mL of acetone is clear.

Related compounds—

Chromatographic system—Proceed as directed in the *Assay*.

Test solution—Use the *Assay preparation*.

Procedure—Inject a volume (about 2.0 µL) of the *Test solution* into the chromatograph, increase the column temperature by 20° per minute to 140°, then increase column temperature by 4° per minute to 240°, maintain this temperature for not less than 5 minutes, record the chromatogram, and measure the peak responses. Calculate the percentage of each impurity in the portion of Triclosan taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the peak response for each impurity; and r_s is the sum of the responses of all of the peaks: not more than 0.1% of any individual impurity is found; and not more than 0.5% of total impurities is found.

Limit of monochlorophenols and 2,4-dichlorophenol —

Phosphate buffer—Transfer about 1.38 g of anhydrous monobasic sodium phosphate and about 1.42 g of dibasic sodium phosphate to a 1-L volumetric flask, dissolve in and dilute with water to volume, and mix.

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and *Phosphate buffer* (1:1). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard solution—Quantitatively dissolve accurately weighed quantities of USP Parachlorophenol RS and USP 2,4-Dichlorophenol RS in acetonitrile, dilute with an equal

USP Monographs

www.webofpharma.com

volume of water, and mix. Transfer a portion of this solution to a suitable container, and dilute quantitatively, and stepwise if necessary, with a mixture of acetonitrile and water (1:1) to obtain a solution having known concentrations of about 0.5 µg of parachlorophenol and 0.1 µg of 2,4-dichlorophenol per mL.

Test solution—Transfer about 250 mg of Triclosan, accurately weighed, to a 25-mL low-actinic volumetric flask, dissolve in 20 mL of acetonitrile, dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a coulometric electrochemical detector with electrode 1 set at 0.45 V and electrode 2 set at 0.75 V, both having a positive (oxidative) polarity and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 9.0% for 2,4-dichlorophenol.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses. The peak responses for parachlorophenol and 2,4-dichlorophenol in the chromatogram of the *Test solution* are not greater than the corresponding peaks in the chromatogram of the *Standard solution.*

Limit of 1,3,7-trichlorodibenzo- *p*-dioxin, 2,8-dichlorodibenzo- *p*-dioxin, 2,8-dichlorodibenzofuran, and 2,4,8-trichlorodibenzofuran—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, water, and glacial acetic acid (70: 30: 0.1). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Test solution—Transfer about 2.0 g of Triclosan, accurately weighed, to a screw-capped centrifuge tube, add 5 mL of 2 N potassium hydroxide, and shake for 10 minutes to dissolve. Add 3 mL of *n*-hexane, shake for 10 minutes, and allow the phases to separate. Transfer the organic layer to a suitable container, add another 3 mL of *n*-hexane to the aqueous layer, shake for 10 minutes, and allow the phases to separate. Transfer the organic layer to the previous extract, discard the aqueous layer, add 3 mL of 2 N potassium hydroxide to the combined organic layers, shake for 10 minutes, and allow the phases to separate. Discard the aqueous layer, add another 3 mL of 2 N potassium hydroxide to the combined organic layers, shake for 10 minutes, and allow the phases to separate. Transfer the organic layer to a suitable container, and evaporate with the aid of a stream of nitrogen to dryness. Dissolve the residue in 1.0 mL of methanol, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the USP Triclosan Related Compounds Mixture A RS, and record the peak responses as directed for *Procedure:* the relative retention times are about 0.59 for 2,8-dichlorodibenzofuran, 0.71 for 2,8-dichlorodibenzo-*p*-dioxin, 0.88 for 2,4,8-trichlorodibenzofuran, and 1.0 for 1,3,7-trichlorodibenzo-*p*-dioxin; and the relative standard deviation for replicate injections is not more than 15.0%, determined from the 2,8-dichlorodibenzo-*p*-dioxin peak.

Procedure—Inject a volume (about 20 µL) of the *Test solution* into the chromatograph, record the chromatogram, and measure the peak responses. Calculate the concentration of each analyte in the portion of Triclosan taken by the formula:

$$(C/W)(r_i/r_s)$$

in which C is the concentration, in µg per mL, of the respective analyte in the USP Triclosan Related Compounds Mixture A RS; W is the weight, in g, of Triclosan taken; and r_i and r_s are the peak responses for the respective analyte obtained from the *Test solution* and the USP Triclosan Related Compounds Mixture A RS, respectively: not more than 0.25 ppm of 2,8-dichlorodibenzofuran is found; not more than 0.5 ppm of 2,4,8-trichlorodibenzofuran is found; not more than 0.25 ppm of 1,3,7-trichlorodibenzo-*p*-dioxin is found; and not more than 0.5 ppm of 2,8-dichlorodibenzo-*p*-dioxin is found.

Limit of 2,3,7,8-tetrachlorodibenzo- *p*-dioxin and 2,3,7,8-tetrachlorodibenzofuran—

[CAUTION—2,3,7,8-tetrachlorodibenzo-p-dioxin and 2,3,7,8-tetrachlorodibenzofuran are extremely toxic substances. Exercise all necessary precautions in the conduct of this procedure.]

Stationary phase A—Transfer about 10 g of silica gel to a suitable container, add about 3 mL of 1 N sodium hydroxide, and mix.

Stationary phase B—Transfer about 60 g of silica gel to a suitable container, add about 74 mL of concentrated sulfuric acid, and mix.

Chromatographic column A—Transfer 5.1 g of *Stationary phase A,* 0.5 g of silica gel, 6.2 g of *Stationary phase B,* and 3.2 g of sodium sulfate to a glass chromatographic column having an internal diameter of 10 mm. Wash the column with 50 mL of *n*-hexane, and discard the eluate.

Chromatographic column B—Transfer 2.5 g of alumina and 2.5 g of sodium sulfate to a glass chromatographic column having an internal diameter of 6 mm. Wash the column with 30 mL of *n*-hexane, and discard the eluate.

Internal standard solution—Transfer accurately measured quantities of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, ^{13}C-labeled, and 2,3,7,8-tetrachlorodibenzofuran, ^{13}C-labeled, in nonane, and dilute quantitatively, and stepwise if necessary, with 2,2,4-trimethylpentane to obtain a solution having known concentrations of about 1.0 pg of each per µL.

Test solution—Transfer about 30 g of Triclosan, accurately weighed, to a separatory funnel, add 30 µL of *Internal standard solution,* dissolve in 200 mL of 1 N sodium hydroxide, extract with four 30-mL portions of *n*-hexane, and combine the extracts. Wash the combined extracts with 20 mL of water, extract the washing with 15 mL of *n*-hexane, and add the extract to the other combined extracts. Add about 3 g of anhydrous sodium sulfate to the combined extracts, allow to stand for 30 minutes, quantitatively transfer to an appropriate round-bottom flask, and distill, using a distillation apparatus with a vigreux column, until about 1 mL remains. Transfer this solution to the top of *Chromatographic column A,* and elute with 50 mL of *n*-hexane. Collect the eluate on top of *Chromatographic column B,* and elute with 30 mL of a mixture of *n*-hexane and methylene chloride (98:2), discarding the eluate. Elute with 40 mL of a mixture of *n*-hexane and methylene chloride (1:1), collecting the eluates in a round-bottom flask. Distill the combined eluates, using a distillation apparatus with a vigreux column, until about 1 mL remains. Further concentrate this solution with the aid of a stream of nitrogen to about 50 µL, evaporate at room temperature to dryness, and dissolve in 10 µL of 2,2,4-trimethylpentane.

Chromatographic system (see *Chromatography* ⟨621⟩ and *Mass Spectrometry* ⟨736⟩)—The gas chromatograph is equipped with a high-resolution mass spectrograph with an electron-impact ionization source and a 0.25-mm × 60-m capillary column coated with phase G48. The carrier gas is

USP Monographs

www.webofpharma.com

helium. The chromatograph is programmed as follows. Initially the temperature of the column is equilibrated at 80°, then, 1 minute after the injection, the temperature is increased at a rate of 20° per minute to 220°, then increased at a rate of 2° per minute to 270°, and maintained at 270° for not less than 20 minutes. The injection port temperature is maintained at 280°. Chromatograph the *Internal standard solution*, and record the peak responses as directed for *Procedure:* the signal-to-noise ratio at a mass-to-charge ratio of 321.89 is not less than 50.

Procedure—Inject a volume (about 1 µL) of the *Test solution* into the chromatograph, record the chromatograms, and measure the peak responses at mass-to-charge ratios of 319.90, 321.89, 331.88, 333.93, 303.90, 305.90, 315.94, and 317.94. The peak response for 2,3,7,8-tetrachlorodibenzo-*p*-dioxin at a mass-to-charge ratio of 319.90 is not more than the peak response of the associated internal standard at a mass-to-charge ratio of 331.88; the peak response for 2,3,7,8-tetrachlorodibenzofuran at a mass-to-charge ratio of 303.90 is not more than the peak response of the associated internal standard at a mass-to-charge ratio of 315.94.

Assay—

Standard preparation—Dissolve an accurately weighed quantity of USP Triclosan RS in ethyl acetate, and dilute quantitatively, and stepwise if necessary, with ethyl acetate to obtain a solution having a known concentration of about 0.4 mg per mL.

Assay preparation—Transfer about 40 mg of Triclosan, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with ethyl acetate to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The gas chromatograph is equipped with a flame-ionization detector and a 0.53-mm × 15-m capillary column with phase G3. The carrier gas is helium maintained at about 6 psi. The injection port temperature is maintained at 34° and is increased rapidly to 200° immediately after the injection, the column temperature is maintained at 34°, and the detector temperature is maintained at 260°. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 2.0 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, increase the column temperature by 20° per minute to 140°, then increase the column temperature by 4° per minute to 240°, maintain this temperature for not less than 5 minutes, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{12}H_7Cl_3O_2$ in the portion of Triclosan taken by the formula:

$$100C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Triclosan RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Trientine Hydrochloride

$C_6H_{18}N_4 \cdot 2HCl$ 219.16

1,2-Ethanediamine, *N,N′*-bis(2-aminoethyl)-, dihydrochloride.
Triethylenetetramine dihydrochloride [38260-01-4].

» Trientine Hydrochloride contains not less than 97.0 percent and not more than 103.0 percent of $C_6H_{18}N_4 \cdot 2HCl$, calculated on the dried basis.

Packaging and storage—Preserve under an inert gas in tight, light-resistant containers, and store in a refrigerator.
USP Reference standards ⟨11⟩—
USP Trientine Hydrochloride RS

Change to read:

Identification, ▲***Spectroscopic Identification Tests*** ⟨197⟩, *Infrared Spectroscopy*: 197M▲ (CN 1-May-2020)
pH ⟨791⟩: between 7.0 and 8.5, in a solution (1 in 100).
Loss on drying ⟨731⟩—Dry it in vacuum at a pressure not exceeding 5 mm of mercury at 40° for 4 hours: it loses not more than 2.0% of its weight.
Residue on ignition ⟨281⟩: not more than 0.15%.
Chromatographic purity—The sum of the intensities of all secondary spots obtained from the *Test preparation* in *Part I* and *Part II* corresponds to not more than 2.0%.

Part I—

Spray reagent—Dissolve 300 mg of ninhydrin in a mixture of 100 mL of butyl alcohol and 3 mL of glacial acetic acid.

Standard preparation A— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of USP Trientine Hydrochloride RS in methanol to obtain a solution containing 10 mg per mL.

Standard preparation B— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of diethylenetriamine in methanol to obtain a solution containing 1.0 mg per mL. Transfer 3.0 mL of this solution to a 100-mL volumetric flask, dilute with methanol to volume, and mix.

Standard preparation C— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of 1-(2-aminoethyl)piperazine in methanol to obtain a solution containing 1.0 mg per mL. Transfer 10.0 mL of this solution to a 100-mL volumetric flask, dilute with methanol to volume, and mix.

Standard preparation D— [NOTE—Use low-actinic glassware.] Transfer 5.0 mL of *Standard preparation C* to a 10-mL volumetric flask, dilute with methanol to volume, and mix.

Test preparation— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of Trientine Hydrochloride in methanol to obtain a solution containing 10 mg per mL.

Procedure—Apply separately 3 µL each of the *Test preparation*, of *Standard preparation B*, and of *Standard preparation C* to a suitable unwashed, high performance thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) having a 1.5-cm preadsorbent zone and coated with a 0.15-mm layer of chromatographic silica gel mixture. To a fourth spot, apply 3 µL each of *Standard preparations A, B,* and *C.* To a fifth spot, apply 3 µL each of *Standard preparations A, B,* and *D.* Allow the spots to dry, place the plate in a chromatographic chamber, and develop the chromatograms in a solvent system consisting of a mixture of isopropyl alcohol and ammonium hydroxide (3:2) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and dry the plate with the aid of a current of air. Spray the plate with *Spray reagent,* dry at 105° for 5 minutes, and observe the plate under long-wavelength UV light. Determine

www.webofpharma.com

the locus of the diethylenetriamine and the 1-(2-aminoethyl) piperazine spots from the chromatograms of *Standard preparations B* and *C*, respectively. Determine the concentration of diethylenetriamine in the *Test preparation* by comparing the size and intensity of any secondary spot from the chromatogram of the *Test preparation* having an R_F value corresponding to the R_F value of diethylenetriamine with the diethylenetriamine spots obtained from the chromatograms of the *Standard preparation* mixtures. Determine the concentration of any other observed impurities in the *Test preparation* by comparing the size and intensity of any other secondary spots from the chromatogram of the *Test preparation* with the 1-(2-aminoethyl)piperazine spots obtained from the chromatograms of the *Standard preparation* mixtures.

Part II—

Spray reagent—Dissolve 200 mg of ninhydrin in 100 mL of alcohol.

Tris (2-aminoethyl)amine stock solution— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of tris(2-aminoethyl)amine in methanol to obtain a solution containing 1.0 mg per mL.

Standard preparation A— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of USP Trientine Hydrochloride RS in methanol to obtain a solution containing 10 mg per mL.

Standard preparation B— [NOTE—Use low-actinic glassware.] Transfer 1.0 mL of *Tris(2-aminoethyl)amine stock solution* to a 10-mL volumetric flask, dilute with methanol to volume, and mix.

Standard preparation C— [NOTE—Use low-actinic glassware.] Transfer 0.5 mL of *Tris(2-aminoethyl)amine stock solution* to a 10-mL volumetric flask, dilute with methanol to volume, and mix.

Test preparation— [NOTE—Use low-actinic glassware.] Dissolve an accurately weighed quantity of Trientine Hydrochloride in methanol to obtain a solution containing 10 mg per mL.

Procedure—Apply separately 3 µL each of the *Test preparation* and of *Standard preparation A* to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture and previously washed with methanol. To a third spot apply 3 µL each of *Standard preparations A* and *B*. To a fourth spot, apply 3 µL each of *Standard preparations A* and *C*. Allow the spots to dry, place the plate in a chromatographic chamber, and develop the chromatograms in a solvent system consisting of a mixture of ammonium hydroxide and alcohol (2:1) at a temperature of 2° to 6° until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and dry the plate with the aid of a current of air. Spray the plate with *Spray reagent*, dry at 105° for 5 minutes, and observe the plate under long-wavelength UV light. Determine the concentration of tris(2-aminoeth yl)amine in the *Test preparation* by comparing the size and intensity of any secondary spot from the chromatogram of the *Test preparation* having an R_F value corresponding to the R_F value of tris(2-aminoethyl)amine with the tris(2-aminoethyl)amine spots obtained from the chromatograms of the *Standard preparation* mixtures.

Assay—Dissolve about 220 mg of Trientine Hydrochloride, accurately weighed, in 150 mL of water in a 250-mL beaker. Adjust with hydrochloric acid to a pH of 2.0; then adjust with ammonium hydroxide to a pH of 9.5 ± 0.5; and then adjust with glacial acetic acid to a pH of 5.0. Heat the solution to 90°, and while hot, titrate with 0.1 N cupric nitrate VS, determining the endpoint potentiometrically, using an electrode system consisting of a cupric ion-selective electrode and a calomel reference electrode with an outer filling solution of 1 M potassium nitrate. Perform a blank determination (see *Titrimetry* ⟨541⟩), and make any necessary correction. Each mL of 0.1 N cupric nitrate is equivalent to 21.92 mg of $C_6H_{18}N_4 \cdot 2HCl$.

Trientine Hydrochloride Capsules

» Trientine Hydrochloride Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_6H_{18}N_4 \cdot 2HCl$.

Packaging and storage—Preserve in tight containers, and store in a refrigerator.

USP Reference standards ⟨11⟩—
USP Trientine Hydrochloride RS

Identification—Triturate an amount of the contents of Capsules, equivalent to about 1.5 mg of trientine hydrochloride, with 0.5 mL of acetone in an agate or mullite mortar. Evaporate in a gentle current of air to dryness. Repeat the acetone addition, trituration, and drying steps: the IR absorption spectrum of a potassium bromide dispersion of the residue so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Trientine Hydrochloride RS.

Dissolution ⟨711⟩—
Medium: water; 500 mL.
Apparatus 2: 50 rpm.
Time: 30 minutes.
pH 8.2 buffer—Prepare as directed under *Assay*.
Copper sulfate reagent—Mix 10 mL of copper sulfate solution (5 g copper sulfate pentahydrate in 100 mL of water) with 40 mL of *pH 8.2 buffer*. [NOTE—The solution must be clear.]

Standard preparation—Dissolve an accurately weighed quantity of USP Trientine Hydrochloride RS in water to obtain a solution having a known concentration of about 0.5 mg per mL.

Procedure—Pipet an aliquot of a filtered portion of the solution under test, estimated to contain about 5 mg of trientine hydrochloride, into a 50-mL centrifuge tube. Into a similar centrifuge tube, pipet an equivalent volume of water to provide a reagent blank, and into a third centrifuge tube pipet 10 mL of *Standard preparation*. Into each tube, pipet 5 mL of *Copper sulfate reagent*, stopper, and mix immediately using a vortex mixer. Determine the absorbances of the solutions from the *Standard preparation* and the test solution at 580 and 410 nm, with a suitable spectrophotometer, against the reagent blank. Calculate the quantity in mg of trientine hydrochloride dissolved by the formula:

$$5000(C/V)[(A_U - A_{UX})/(A_S - A_{SX})]$$

in which C is the concentration, in mg per mL, of USP Trientine Hydrochloride RS in the *Standard preparation*, V is the volume, in mL, of the aliquot of test solution used, A_U and A_S are the absorbances at 580 nm of test and standard solutions, respectively, and A_{UX} and A_{SX} are the absorbances at 410 nm of test and standard solutions, respectively.

Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_6H_{18}N_4 \cdot 2HCl$ is dissolved in 30 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.

www.webofpharma.com

Assay—

Copper reagent—Dissolve 5 g of copper sulfate pentahydrate in water to make 100 mL, and mix.

pH 8.2 buffer—Dissolve 20.74 g of anhydrous dibasic sodium phosphate, 6.72 g of anhydrous citric acid, and 0.535 g of monobasic sodium phosphate in 400 mL of water, adjust with sodium hydroxide solution (1 in 2) to a pH of 8.2 ± 0.05, dilute with water to make 500 mL, and mix.

Standard preparation—Dissolve an accurately weighed quantity of USP Trientine Hydrochloride RS in methanol to obtain a solution having a known concentration of about 2.5 mg per mL. Transfer 5.0 mL of this solution to a glass-stoppered, 50-mL conical flask.

Assay preparation—Remove, as completely as possible, the contents of not less than 20 Capsules. Weigh the contents, and determine the average weight per capsule. Mix the combined contents, and transfer an accurately weighed quantity of the powder, equivalent to about 250 mg of trientine hydrochloride, to a 100-mL volumetric flask. Add about 70 mL of methanol, and shake or sonicate to dissolve. Dilute with methanol to volume, mix, and filter, discarding the first few mL of the filtrate. Transfer 5.0 mL of this solution to a glass-stoppered, 50-mL conical flask.

Procedure—To each of the flasks containing the *Standard preparation* and the *Assay preparation* and to a similar flask containing 5.0 mL of methanol to provide the blank, add 10.0 mL of *pH 8.2 buffer* and 1.0 mL of *Copper reagent*, and mix. Concomitantly determine the absorbances of the solutions at the wavelength of maximum absorbance at about 580 nm, with a suitable spectrophotometer, against the blank. Calculate the quantity, in mg, of $C_6H_{18}N_4 \cdot 2HCl$ in the portion of Capsules taken by the formula:

$$100C(A_U/A_S)$$

in which C is the concentration, in mg per mL, of USP Trientine Hydrochloride RS in the *Standard preparation*, and A_U and A_S are the absorbances of the solutions from the *Assay preparation* and the *Standard preparation*, respectively.

Trifluoperazine Oral Solution

» Trifluoperazine Oral Solution contains an amount of trifluoperazine hydrochloride ($C_{21}H_{24}F_3N_3S \cdot 2HCl$) equivalent to not less than 93.0 percent and not more than 107.0 percent of the labeled amount of trifluoperazine ($C_{21}H_{24}F_3N_3S$).

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Trifluoperazine Hydrochloride RS
[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

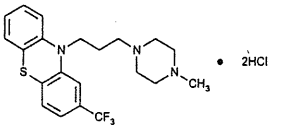
A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—*Solution*: Prepared as directed in the *Assay*.

B: Mix 1 mL of Oral Solution with 5 mL of methanol: a 5-µL portion of this solution meets the requirements of *Identification* test *D* under *Trifluoperazine Hydrochloride*.



pH ⟨791⟩: between 2.0 and 3.2.

Assay— [NOTE—Use low-actinic glassware.] Transfer an accurately measured volume of Oral Solution, equivalent to about 50 mg of trifluoperazine, to a 250-mL separator with the aid of about 100 mL of water. Add 10 mL of sodium hydroxide solution (1 in 10), and extract with three 50-mL portions of cyclohexane. Wash the combined cyclohexane extracts with about 20 mL of water, and discard the water washing. Extract the combined cyclohexane extracts with four 50-mL portions of 0.1 N hydrochloric acid, collecting the aqueous extracts in a 500-mL volumetric flask. Dilute with 0.1 N hydrochloric acid to volume, and mix. Transfer 10.0 mL of this solution to a 100-mL volumetric flask, dilute with 0.1 N hydrochloric acid to volume, and mix. Concomitantly determine the absorbances of this solution and of a Standard solution of USP Trifluoperazine Hydrochloride RS in the same medium having a known concentration of about 12 µg per mL in 1-cm cells at 278 nm and at the wavelength of maximum absorbance at about 255 nm, with a suitable spectrophotometer, using 0.1 N hydrochloric acid as the blank. Calculate the quantity, in mg, of trifluoperazine ($C_{21}H_{24}F_3N_3S$) in each mL of the Oral Solution taken by the formula:

$$(407.51/480.43)(5C/V)(A_{255} - A_{278})_U/(A_{255} - A_{278})_S$$

in which 407.51 and 480.43 are the molecular weights of trifluoperazine and trifluoperazine hydrochloride, respectively; C is the concentration, in µg per mL, of USP Trifluoperazine Hydrochloride RS in the Standard solution; V is the volume, in mL, of Oral Solution taken; and the parenthetic expressions are the differences in the absorbances of the two solutions at the wavelengths indicated by the subscripts, for the assay solution (U) and the Standard solution (S), respectively.

Trifluoperazine Hydrochloride

$C_{21}H_{24}F_3N_3S \cdot 2HCl$ 480.42
10*H*-Phenothiazine, 10-[3-(4-methyl-1-piperazinyl)propyl]-2-(trifluoromethyl)-, dihydrochloride.
10-[3-(4-Methyl-1-piperazinyl)propyl]-2-(trifluoromethyl) phenothiazine dihydrochloride [440-17-5].

» Trifluoperazine Hydrochloride, dried in vacuum at 60° for 4 hours, contains not less than 98.0 percent and not more than 101.0 percent of $C_{21}H_{24}F_3N_3S \cdot 2HCl$.

Packaging and storage—Preserve in tight, light-resistant containers. Store at 25°, excursions permitted between 15° and 30°.

USP Reference standards ⟨11⟩—
USP Trifluoperazine Hydrochloride RS
[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and

USP Monographs

solutions containing them, by conducting the procedures without delay, under subdued light, or by using low-actinic glassware.]

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197M*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 10 µg per mL.
Medium: 0.1 N hydrochloric acid.
Absorptivities at 255 nm, calculated on the dried basis, do not differ by more than 2.0%.

C: A solution (1 in 100) responds to the tests for *Chloride* ⟨191⟩.

D: Prepare a solution in methanol containing 1.2 mg per mL. Apply 5 µL each of this solution and a solution of USP Trifluoperazine Hydrochloride RS in methanol containing 1.2 mg per mL to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Allow the spots to dry, and develop the chromatogram in a solvent system consisting of a mixture of acetone and ammonium hydroxide (200:1) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the spots on the plate by lightly spraying with a solution of iodoplatinic acid prepared by dissolving 100 mg of chloroplatinic acid in 1 mL of 1 N hydrochloric acid, adding 25 mL of potassium iodide solution (1 in 25), diluting with water to 100 mL, and then adding 0.5 mL of formic acid: the R_F value of the principal spot from the test solution corresponds to that from the Standard solution.

pH ⟨791⟩**:** between 1.7 and 2.6, in a solution (1 in 20).

Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 4 hours: it loses not more than 1.5% of its weight.

Residue on ignition ⟨281⟩**:** not more than 0.1%.

Assay—Dissolve about 500 mg of Trifluoperazine Hydrochloride, previously dried and accurately weighed, in 50 mL of glacial acetic acid, and add crystal violet TS and 15 mL of mercuric acetate TS. Titrate with 0.1 N perchloric acid VS to a blue-green endpoint. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 24.02 mg of $C_{21}H_{24}F_3N_3S \cdot 2HCl$.

Trifluoperazine Hydrochloride Injection

» Trifluoperazine Hydrochloride Injection is a sterile solution of Trifluoperazine Hydrochloride in Water for Injection. It contains an amount of trifluoperazine hydrochloride ($C_{21}H_{24}F_3N_3S \cdot 2HCl$) equivalent to not less than 90.0 percent and not more than 110.0 percent of the labeled amount of trifluoperazine ($C_{21}H_{24}F_3N_3S$).

Packaging and storage—Preserve in multiple-dose containers, preferably of Type I glass, protected from light.

USP Reference standards ⟨11⟩—
USP Trifluoperazine Hydrochloride RS
[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—
A: The solution employed for measurement of absorbance in the *Assay* exhibits UV maxima and minima at the same wavelengths as that of a similar solution of USP Trifluoperazine Hydrochloride RS, concomitantly measured.

B: Mix 5 mL of it with 5 mL of methanol: a 5-µL portion of this solution responds to *Identification* test *D* under *Trifluoperazine Hydrochloride.*

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 172.0 USP Endotoxin Units per mg of trifluoperazine.

pH ⟨791⟩: between 4.0 and 5.0.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay— [NOTE—Use low-actinic glassware.] Transfer an accurately measured volume of Injection, equivalent to about 20 mg of trifluoperazine, to a 250-mL separator. Add 10 mL of 4 N sulfuric acid, and extract with three 25-mL portions of carbon tetrachloride. Discard the carbon tetrachloride after each extraction. Add 10 mL of ammonium hydroxide, and extract with five 40-mL portions of cyclohexane. Extract the combined cyclohexane extracts with five 50-mL portions of 0.1 N hydrochloric acid, collecting the aqueous extracts in a 500-mL volumetric flask. Dilute with 0.1 N hydrochloric acid to volume, and mix. Transfer 25.0 mL of this solution to a 100-mL volumetric flask, dilute with 0.1 N hydrochloric acid to volume, and mix. Concomitantly determine the absorbances of this solution and of a Standard solution of USP Trifluoperazine Hydrochloride RS in the same medium having a known concentration of about 12 µg per mL in 1-cm cells at 278 nm and at the maximum at about 255 nm, with a suitable spectrophotometer, using 0.1 N hydrochloric acid as the blank. Calculate the quantity, in mg, of trifluoperazine ($C_{21}H_{24}F_3N_3S$) in each mL of the Injection taken by the formula:

$$(407.51/480.43)(2C/V)(A_{255} - A_{278})_U/(A_{255} - A_{278})_S$$

in which 407.51 and 480.43 are the molecular weights of trifluoperazine and trifluoperazine hydrochloride, respectively, C is the concentration, in µg per mL, of USP Trifluoperazine Hydrochloride RS in the Standard solution, V is the volume, in mL, of Injection taken, and the parenthetic expressions are the differences in the absorbances of the two solutions at the wavelengths indicated by the subscripts, for the assay solution (U) and the Standard solution (S), respectively.

Trifluoperazine Hydrochloride Tablets

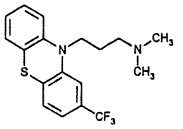
» Trifluoperazine Hydrochloride Tablets contain an amount of trifluoperazine hydrochloride ($C_{21}H_{24}F_3N_3S \cdot 2HCl$) equivalent to not less than 93.0 percent and not more than 107.0 percent of the labeled amount of trifluoperazine ($C_{21}H_{24}F_3N_3S$).

Packaging and storage—Preserve in well-closed, light-resistant containers.

www.webofpharma.com

USP Reference standards ⟨11⟩—
USP Trifluoperazine Hydrochloride RS
[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—
A: The UV absorption spectrum of the solution employed for measurement of absorbance in the *Assay* exhibits maxima and minima at the same wavelengths as that of a similar solution of USP Trifluoperazine Hydrochloride RS, concomitantly measured.
B: Triturate a portion of powdered Tablets, equivalent to about 10 mg of trifluoperazine, with 10 mL of methanol, and centrifuge. A 5-µL portion of this solution responds to *Identification* test *D* under *Trifluoperazine Hydrochloride.*



Dissolution ⟨711⟩—
Medium: 0.1 N hydrochloric acid; 900 mL.
Apparatus 1: 50 rpm.
Time: 30 minutes.
Procedure—Determine the amount of trifluoperazine ($C_{21}H_{24}F_3N_3S$) dissolved from UV absorbances at the wavelength of maximum absorbance at about 255 nm (determine the analytical value to be used for the absorbance at 255 nm by subtracting the absorbance at 278 nm from the observed maximum absorbance at 255 nm), using filtered portions of the solution under test, suitably diluted with 0.1 N hydrochloric acid, in comparison with a Standard solution having a known concentration of USP Trifluoperazine Hydrochloride RS in the same medium.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{21}H_{24}F_3N_3S$ is dissolved in 30 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements for *Content Uniformity.*

Assay—
Mobile phase—To 2.9 g of *dl*-10-camphorsulfonic acid, add 200 mL of water and stir until solution is complete. Adjust with 1 N sodium hydroxide to a pH of 3.0, dilute with methanol to 1000 mL, mix, and filter through a 0.45-µm membrane filter.
Standard preparation—Dissolve an accurately weighed quantity of USP Trifluoperazine Hydrochloride RS in methanol to obtain a solution having a known concentration of about 12 µg of trifluoperazine hydrochloride per mL (10 µg of trifluoperazine per mL).
Assay preparation—Weigh and finely powder not less than 20 Tablets. Weigh accurately a portion of the powder, equivalent to about 20 mg of trifluoperazine, add to a 100-mL volumetric flask, dilute with methanol to volume, and mix. Transfer 5.0 mL of this solution to a second 100-mL volumetric flask, dilute with methanol to volume, and mix. Filter the solution through a 0.45-µm filter.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 262-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%, and the tailing factor for the trifluoperazine peak is not more than 2.0.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{21}H_{24}F_3N_3S$, in the portion of Tablets taken by the formula:

$$2(407.51/480.43)C(r_U/r_S)$$

in which 407.51 and 480.43 are the molecular weights of trifluoperazine and trifluoperazine hydrochloride, respectively, C is the concentration, in mg per mL, of USP Trifluoperazine Hydrochloride RS in the *Standard preparation*, and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Triflupromazine

$C_{18}H_{19}F_3N_2S$ 352.42
10*H*-Phenothiazine-10-propanamine, *N,N*-dimethyl-2-(trifluoromethyl)-.
10-3-(Dimethylamino)propyl-2-(trifluoro methyl) phenothiazine [146-54-3].

» Triflupromazine contains not less than 97.0 percent and not more than 103.0 percent of $C_{18}H_{19}F_3N_2S$.

Packaging and storage—Preserve in tight, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Triflupromazine Hydrochloride RS
[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—
A: It meets the requirements under *Identification—Organic Nitrogenous Bases* ⟨181⟩, USP Triflupromazine Hydrochloride RS being used, and 0.01 N hydrochloric acid being used in place of water to dissolve the specimen.

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 7 µg per mL.
Medium: 0.5 N sulfuric acid.
Absorptivities at 255 nm do not differ by more than 3.0%.
Residue on ignition ⟨281⟩: not more than 0.2%.

Ordinary impurities ⟨466⟩—
Test solution: acetone.
Standard solution: acetone.
Eluant: a mixture of chloroform and methanol (4:1).
Visualization: 1.
Assay—Dissolve about 800 mg of Triflupromazine, accurately weighed, in 100 mL of glacial acetic acid. Add crystal violet TS, and titrate with 0.1 N perchloric acid VS to a blue endpoint. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 35.24 mg of $C_{18}H_{19}F_3N_2S$.

Triflupromazine Oral Suspension

» Triflupromazine Oral Suspension contains an amount of triflupromazine ($C_{18}H_{19}F_3N_2S$) equivalent to not less than 90.0 percent and not more than 110.0 percent of the labeled amount of triflupromazine hydrochloride ($C_{18}H_{19}F_3N_2S \cdot HCl$).

Packaging and storage—Preserve in tight, light-resistant glass containers.

USP Reference standards ⟨11⟩—
USP Triflupromazine Hydrochloride RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the USP Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

A: Transfer about 1.0 mL of Oral Suspension, accurately weighed, to a glass-stoppered, low-actinic 35-mL centrifuge tube; add 10.0 mL of methanol; and shake vigorously by mechanical means for 3 minutes. Centrifuge for 5 minutes, and use the methanol layer for the test. Apply 50 µL of the test solution in streaks 4 to 5 cm in length and 0.2 cm in width and 50 µL of a Standard solution containing 1 mg of USP Triflupromazine Hydrochloride RS per mL of methanol to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Allow the streaks to dry, and develop the chromatogram in a solvent system consisting of a mixture of chloroform and methanol (4:1) until the solvent front has moved about four-fifths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the streaks by viewing the plate under short-wavelength and long-wavelength UV light: the R_F value and fluorescence of the streak obtained from the test solution correspond to those obtained from the Standard solution.

B: The UV absorption spectrum of the solution employed for measurement of absorbance in the *Assay* exhibits maxima and minima at the same wavelengths as that of a similar solution of USP Triflupromazine Hydrochloride RS, concomitantly measured.

Uniformity of dosage units ⟨905⟩—
FOR ORAL SUSPENSION PACKAGED IN SINGLE-UNIT CONTAINERS: meets the requirements.

Deliverable volume ⟨698⟩—
FOR ORAL SUSPENSION PACKAGED IN MULTIPLE-UNIT CONTAINERS: meets the requirements.

Assay—

Mixed solvent—Mix 25 mL of isoamyl alcohol with 10 mL of sodium hydroxide solution (1 in 25) in a separator, shake, and discard the aqueous washing. Add 10 mL of 0.1 N hydrochloric acid, shake, and discard the aqueous washing. Prepare 500 mL of a 3 in 100 solution of the washed isoamyl alcohol in *n*-heptane.

pH 5.6 Acetate buffer—Dissolve 1.4 g of sodium acetate in 100 mL of water, and adjust by the addition of glacial acetic acid to a pH of 5.6 ± 0.1.

Procedure—Transfer an accurately measured volume of well-mixed Oral Suspension, equivalent to about 20 mg of triflupromazine hydrochloride, to a glass-stoppered, 150-mL centrifuge bottle. In a second, similar bottle dissolve about 20 mg of USP Triflupromazine Hydrochloride RS, accurately weighed, in 1.0 mL of water; then add 1.0 mL of sodium hydroxide solution (1 in 25); and mix. To a third, similar bottle add 2 mL of water to provide the blank. Treat the two preparations and the blank as follows. Add 100.0 mL of ether, shake by mechanical means for 15 minutes, and allow the layers to separate. Transfer 50.0 mL of the ether layer to another glass-stoppered, 150-mL centrifuge bottle, and evaporate on a water bath maintained at about 35°, with the aid of a current of air, to dryness. Add 5.0 mL of sodium hydroxide solution (1 in 50), mix, add 100.0 mL of *Mixed solvent,* shake by mechanical means for 10 minutes, and centrifuge. Transfer 20.0 mL of the nonaqueous phase to a glass-stoppered centrifuge tube, add 10.0 mL of *pH 5.6 Acetate buffer,* shake by mechanical means for 5 minutes, and centrifuge. Transfer 2.0 mL of the nonaqueous phase to a glass-stoppered centrifuge tube containing 25.0 mL of 0.5 N sulfuric acid, shake by mechanical means for 5 minutes, and centrifuge. Concomitantly determine the absorbances of the aqueous solutions in 1-cm cells at the wavelength of maximum absorbance at about 255 nm, with a suitable spectrophotometer, using the blank to set the instrument. Calculate the quantity, in mg, of triflupromazine hydrochloride ($C_{18}H_{19}F_3N_2S \cdot HCl$) equivalent to the triflupromazine ($C_{18}H_{19}F_3N_2S$) in each mL of the Oral Suspension taken by the formula:

$$(W/V)(A_U/A_S)$$

in which W is the weight, in mg, of USP Triflupromazine Hydrochloride RS taken; V is the volume, in mL, of Oral Suspension taken; and A_U and A_S are the absorbances of the solution from the Oral Suspension and the Standard solution, respectively.

Triflupromazine Hydrochloride

$C_{18}H_{19}F_3N_2S \cdot HCl$ 388.88

10*H*-Phenothiazine-10-propanamine, *N*,*N*-dimethyl-2-(trifluoromethyl)-, monohydrochloride.
10-[3-(Dimethylamino)propyl]-2-(trifluoromethyl) phenothiazine monohydrochloride [1098-60-8].

» Triflupromazine Hydrochloride contains not less than 97.0 percent and not more than 103.0 percent of $C_{18}H_{19}F_3N_2S \cdot HCl$, calculated on the dried basis.

Packaging and storage—Preserve in well-closed, light-resistant glass containers.

USP Reference standards ⟨11⟩—
USP Triflupromazine Hydrochloride RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or by using low-actinic glassware.]

Identification—

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

www.webofpharma.com

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 10 µg per mL.
Medium: 0.5 N sulfuric acid.
Absorptivities at 255 nm, calculated on the dried basis, do not differ by more than 3.0%.

C: Prepare a solution of Triflupromazine Hydrochloride in methanol containing 10 mg per mL. Apply 10 µL each of this solution and a Standard solution of USP Triflupromazine Hydrochloride RS in methanol containing 10 mg per mL to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram in a solvent system consisting of a mixture of *n*-propyl alcohol, water, and ammonium hydroxide (88:11:1) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the spots on the plate by spraying lightly with dilute methanolic sulfuric acid (4 in 10) and then heating for 15 minutes: the R_F value and color (pink-orange) of the principal spot obtained from the test solution correspond to that obtained from the Standard solution.

Loss on drying ⟨731⟩—Dry it at 100° for 2 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩: not more than 0.1%.

Ordinary impurities ⟨466⟩—
Test solution: acetone.
Standard solution: acetone.
Eluant: a mixture of chloroform and methanol (4:1).
Visualization: 1.

Assay—Dissolve about 800 mg of Triflupromazine Hydrochloride, accurately weighed, in 100 mL of glacial acetic acid. Add 10 mL of mercuric acetate TS and 1 drop of crystal violet TS, and titrate with 0.1 N perchloric acid VS to a blue endpoint. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 38.89 mg of $C_{18}H_{19}F_3N_2S \cdot HCl$.

Triflupromazine Hydrochloride Injection

» Triflupromazine Hydrochloride Injection is a sterile solution of Triflupromazine Hydrochloride in Water for Injection. It contains not less than 90.0 percent and not more than 112.0 percent of the labeled amount of $C_{18}H_{19}F_3N_2S \cdot HCl$.

Packaging and storage—Preserve in single-dose or in multiple-dose containers, preferably of Type I glass, protected from light.

USP Reference standards ⟨11⟩—
USP Triflupromazine Hydrochloride RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

A: Place a volume of Injection, equivalent to about 100 mg of triflupromazine hydrochloride, in a test tube, add 5 mL of 8 N nitric acid, and mix: a peach to amber color develops, quickly turns dark brown, and then changes to a clear solution having a yellow tint.

B: A volume of Injection, equivalent to about 50 mg of triflupromazine hydrochloride, meets the requirements under *Identification—Organic Nitrogenous Bases* ⟨181⟩.

C: The UV absorption spectrum of the *Assay preparation*, prepared as directed in the *Assay*, exhibits maxima and minima at the same wavelengths as that of the *Standard preparation*, prepared as directed in the *Assay*.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 5.8 USP Endotoxin Units per mg of triflupromazine hydrochloride.

pH ⟨791⟩: between 3.5 and 5.2.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Standard preparation—Transfer about 50 mg of USP Triflupromazine Hydrochloride RS, accurately weighed, to a 50-mL volumetric flask, dissolve in 0.5 N sulfuric acid, dilute with 0.5 N sulfuric acid to volume, and mix. Proceed as directed under *Assay preparation*, beginning with "Transfer 10.0 mL of this solution to a 100-mL volumetric flask." The concentration of USP Triflupromazine Hydrochloride RS in the *Standard preparation* is about 5 µg per mL.

Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 50 mg of triflupromazine hydrochloride, to a 50-mL volumetric flask, dilute with 0.5 N sulfuric acid to volume, and mix. Transfer 10.0 mL of this solution to a 100-mL volumetric flask, dilute with the same acid to volume, and mix. Transfer 10.0 mL of this solution to a glass-stoppered, 50-mL centrifuge tube containing 10 mL of ether previously chilled in an ice bath, insert the stopper, shake for 3 minutes, and centrifuge at 1500 rpm for 5 minutes. Transfer 5.0 mL of the aqueous layer to a 100-mL volumetric flask, dilute with 0.5 N sulfuric acid to volume, and mix.

Procedure—Concomitantly determine the absorbances of the *Assay preparation* and the *Standard preparation* in 1-cm cells at the wavelength of maximum absorbance at about 255 nm, with a suitable spectrophotometer, using 0.5 N sulfuric acid as the blank. Calculate the quantity, in mg, of $C_{18}H_{19}F_3N_2S \cdot HCl$ in each mL of the Injection taken by the formula:

$$(10C/V)(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Triflupromazine Hydrochloride RS in the *Standard preparation*, V is the volume, in mL, of Injection taken, and A_U and A_S are the absorbances of the *Assay preparation* and the *Standard preparation*, respectively.

Triflupromazine Hydrochloride Tablets

» Triflupromazine Hydrochloride Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{18}H_{19}F_3N_2S \cdot HCl$.

Packaging and storage—Preserve in well-closed, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Triflupromazine Hydrochloride RS

www.webofpharma.com

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

A: Triturate a portion of powdered Tablets, equivalent to about 50 mg of triflupromazine hydrochloride, with 5 mL of methanol, and centrifuge. A 10-µL portion of the supernatant meets the requirements of *Identification* test *C* under *Triflupromazine Hydrochloride*.

B: The solution prepared from the Tablets for measurement of absorbance in the *Assay* exhibits an absorbance maximum at 255 ± 2 nm.

Dissolution ⟨711⟩—

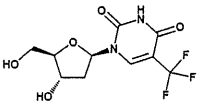
Medium: 0.01 N hydrochloric acid; 900 mL.

Apparatus 1: 100 rpm.

Time: 45 minutes.

Procedure—Determine the amount of $C_{18}H_{19}F_3N_2S \cdot HCl$ dissolved by employing UV absorption at the wavelength of maximum absorbance at about 305 nm on filtered portions of the solution under test, suitably diluted with *Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Triflupromazine Hydrochloride RS in the same *Medium*.

Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{18}H_{19}F_3N_2S \cdot HCl$ is dissolved in 45 minutes.



Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 20 mg of triflupromazine hydrochloride, to a separator, add 10 mL of 0.1 N hydrochloric acid and 20 mL of water, and mix. Add 6 N ammonium hydroxide to render the mixture alkaline to litmus, add 1 mL in excess, and extract with five 50-mL portions of chloroform, passing each extract through anhydrous sodium sulfate into a 250-mL volumetric flask. Dilute with chloroform to volume, and mix. Evaporate 10.0 mL of this solution under reduced pressure to dryness, and dissolve the residue in 0.1 N hydrochloric acid to make 100.0 mL. Concomitantly determine the absorbances of this solution and of a Standard solution of USP Triflupromazine Hydrochloride RS in the same medium having a known concentration of about 8 µg per mL in 1-cm cells at the wavelength of maximum absorbance at about 255 nm, with a suitable spectrophotometer, using 0.1 N hydrochloric acid as the blank. Calculate the quantity, in mg, of $C_{18}H_{19}F_3N_2S \cdot HCl$ in the portion of Tablets taken by the formula:

$$2.5C(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Triflupromazine Hydrochloride RS in the Standard solution, and A_U and A_S are the absorbances of the solution from the Tablets and the Standard solution, respectively.

Trifluridine

$C_{10}H_{11}F_3N_2O_5$ 296.20

Thymidine, α,α,α-trifluoro-;
2′-Deoxy-5-(trifluoromethyl)uridine [70-00-8].

DEFINITION

Trifluridine contains NLT 98.0% and NMT 102.0% of trifluridine ($C_{10}H_{11}F_3N_2O_5$), calculated on the dried basis.

Signal-to-noise ratio: NLT 50, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Trihexyphenidyl Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of each individual unspecified impurity from the *Sample solution*
r_S = peak response of trihexyphenidyl hydrochloride from the *Standard solution*
C_S = concentration of USP Trihexyphenidyl Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Trihexyphenidyl Hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 1*. Disregard any peaks below 0.02%.

Table 1

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Trihexyphenidyl related compound A	0.47	0.5
Trihexyphenidyl	1.0	—
Any individual unspecified impurity	—	0.10
Total impurities	—	0.5

SPECIFIC TESTS
• **LOSS ON DRYING** ⟨731⟩
Analysis: Dry at 105° for 3 h.
Acceptance criteria: NMT 0.5%
• **pH** ⟨791⟩
Sample solution: 10 mg/mL in water
Acceptance criteria: 5.2–6.2

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in tight containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Trihexyphenidyl Hydrochloride RS
USP Trihexyphenidyl Related Compound A RS
1-Phenyl-3-(piperidin-1-yl)propan-1-one hydrochloride.
$C_{14}H_{19}NO \cdot HCl$ 253.77

Trihexyphenidyl Hydrochloride Extended-Release Capsules

» Trihexyphenidyl Hydrochloride Extended-Release Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$).

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—
USP Trihexyphenidyl Hydrochloride RS

Identification—
A: Reduce the contents of a number of Capsules, equivalent to 20 mg of trihexyphenidyl hydrochloride, to a fine powder, and triturate with 25 mL of chloroform. Filter the mixture, and evaporate the filtrate, by gently heating, to about 10 mL. Add the solution to 100 mL of *n*-hexane: a white precipitate is formed. Allow the mixture to stand for 30 minutes, and collect the precipitate on a solvent-resistant membrane filter to 1-µm pore size. Wash the crystals with a small portion of *n*-hexane, and air-dry: the IR absorption spectrum of a potassium bromide dispersion of the crystals so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Trihexyphenidyl Hydrochloride RS.
B: The precipitate obtained in *Identification* test *A* responds to the tests for *Chloride* ⟨191⟩.

Dissolution ⟨711⟩—
Medium: water; 500 mL.
Apparatus 1: 100 rpm.
Times: 3, 6, and 12 hours.
Determine the amount of $C_{20}H_{31}NO \cdot HCl$ dissolved, using the following method.
Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, water, and triethylamine (920: 80: 0.2), and adjust with phosphoric acid to a pH of 4.0.
Standard solution—Dissolve an accurately weighed quantity of USP Trihexyphenidyl Hydrochloride RS in water, and dilute quantitatively and stepwise with water to obtain a solution having a known concentration of about 5 µg per mL.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 210-nm detector and a 4.6-mm × 8.3-cm column that contains packing L1. The flow rate is about 2 mL per minute. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the tailing factor for the trihexyphenidyl peak is not more than 2.8, and the relative standard deviation for replicate injections is not more than 2.0%.
Procedure—Dilute the *Standard solution* and the solution under test with acetonitrile (1:1). Separately inject equal volumes (about 20 µL) of these solutions into the chromatograph, record the chromatograms, and measure the peak responses for trihexyphenidyl. Calculate the percentage of the labeled amount of $C_{20}H_{31}NO \cdot HCl$ dissolved.
Tolerances—The percentages of the labeled amount of $C_{20}H_{31}NO \cdot HCl$ dissolved at the times specified conform to *Acceptance Table 2.*

Time (hours)	Amount dissolved
3	between 20% and 50%
6	between 40% and 70%
12	not less than 70%

Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—
Mobile phase—Prepare a mixture of acetonitrile, water, and triethylamine (920: 80: 0.2), adjust with phosphoric acid to a pH of 4.0, mix, filter, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Dissolve an accurately weighed quantity of USP Trihexyphenidyl Hydrochloride RS in *Mobile phase,* and dilute quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a solution having a known concentration of about 0.2 mg per mL.

www.webofpharma.com

Assay preparation—Fill a 500-mL volumetric flask with *Mobile phase* to volume. Transfer to this flask the accurately weighed contents of a counted number of Capsules, equivalent to about 100 mg of trihexyphenidyl hydrochloride. Mix, sonicate, with occasional shaking for 45 minutes, allow to stand for 15 minutes, and filter, discarding the first 5 mL of the filtrate.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 210-nm detector and a 4.6-mm × 8-cm column that contains 3-µm packing L1. The flow rate is about 2 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure*: the column efficiency determined from the analyte peak is not less than 1300 theoretical plates, the tailing factor for the analyte peak is not more than 3.0, and the relative standard deviation for replicate injections is not more than 1.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$) in each of the Capsules taken by the formula:

$$(500C/N)(r_U/r_S)$$

in which N is the number of Capsules taken, C is the concentration, in mg per mL, of USP Trihexyphenidyl Hydrochloride RS in the *Standard preparation*, r_U and r_S are the trihexyphenidyl peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Trihexyphenidyl Hydrochloride Oral Solution

» Trihexyphenidyl Hydrochloride Oral Solution contains not less than 90.0 percent and not more than 110.0 percent of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$).

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Trihexyphenidyl Hydrochloride RS

Identification—
A: To 50 mL of Oral Solution add 50 mL of water and 50 mL of 1 N sodium hydroxide, and stir. Cool the mixture at 4° to 5° for 30 minutes: a white precipitate or cloudiness is observed. Add 100 mL of water to the cooled mixture, stir, and filter by means of vacuum through a 47-mm membrane filter of 1-µm pore size. Wash the crystals with about 100 mL of water, and allow to air-dry: the IR absorption spectrum of a potassium bromide dispersion of the crystals so obtained exhibits maxima only at the same wavelengths as that of the crystalline base obtained from about 20 mg of USP Trihexyphenidyl Hydrochloride RS, similarly prepared and measured.

B: The retention time exhibited by trihexyphenidyl hydrochloride in the chromatogram of the *Assay preparation* corresponds to that of the *Standard preparation* as obtained in the *Assay*.

pH ⟨791⟩: between 2.0 and 3.0.

Alcohol Determination ⟨611⟩: between 90.0% and 110.0% of the labeled amount of C_2H_5OH.

Assay—
Mobile phase—Prepare a mixture of acetonitrile, water, and triethylamine (920: 80: 0.2), adjust with phosphoric acid to a pH of 4.0, mix, filter, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Trihexyphenidyl Hydrochloride RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 0.08 mg per mL.

Assay preparation—Transfer an accurately measured volume of Oral Solution, equivalent to about 2 mg of trihexyphenidyl hydrochloride, to a 25-mL volumetric flask, dilute with methanol to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 210-nm detector and a 4.6-mm × 8-cm column that contains 3-µm packing L1. The flow rate is about 2 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure*: the column efficiency determined from the analyte peak is not less than 1300 theoretical plates, the tailing factor for the analyte peak is not more than 3.0, and the relative standard deviation for replicate injections is not more than 1.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$) in each mL of the Oral Solution taken by the formula:

$$(25C/V)(r_U/r_S)$$

in which V is the volume, in mL, of Oral Solution taken to prepare the *Assay preparation*, C is the concentration, in mg per mL, of USP Trihexyphenidyl Hydrochloride RS in the *Standard preparation*, r_U and r_S are the trihexyphenidyl peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Trihexyphenidyl Hydrochloride Tablets

DEFINITION
Trihexyphenidyl Hydrochloride Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$).

IDENTIFICATION
- **A.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**

Solution A: 1.4 g/L of monobasic potassium phosphate in water. Adjust with phosphoric acid to a pH of 4.0. Pass the solution through a suitable filter of 0.22-µm pore size.
Solution B: 0.5 mL of phosphoric acid in 1 L of acetonitrile
Mobile phase: See *Table 1*.

www.webofpharma.com

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	95	5
20	60	40
22	60	40
22.1	95	5
24	95	5

Diluent: Methanol and water (80:20)
Standard solution: 0.1 mg/mL of USP Trihexyphenidyl Hydrochloride RS in *Diluent*
Sample stock solution: Nominally 0.5 mg/mL of trihexyphenidyl hydrochloride prepared as follows. Transfer a suitable amount of Tablets (NLT 10), equivalent to 50 mg of trihexyphenidyl hydrochloride, to a 100-mL volumetric flask. Add 10 mL of 0.1 N hydrochloric acid and sonicate. Add another 80 mL of *Solution B* and sonicate again. Dilute with *Solution B* to volume. Centrifuge and use the supernatant.
Sample solution: Nominally 0.1 mg/mL of trihexyphenidyl hydrochloride in *Diluent* from the *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 210 nm. For *Identification* test *A*, use a diode array detector in the range of 190–300 nm.
Column: 2.1-mm × 10-cm; 2.6-µm packing L1
Column temperature: 30°
Flow rate: 0.3 mL/min
Injection volume: 3.0 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 3.0
Relative standard deviation: NMT 1.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of trihexyphenidyl from the *Sample solution*
r_S = peak response of trihexyphenidyl from the *Standard solution*
C_S = concentration of USP Trihexyphenidyl Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of trihexyphenidyl hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **Dissolution** ⟨711⟩
Medium: pH 4.5 acetate buffer, prepared by mixing 3.0 g of sodium acetate and 1.7 mL of glacial acetic acid with water to obtain 1000 mL of solution with a pH of 4.50 ± 0.05; 900 mL
Apparatus 1: 100 rpm
Time: 45 min
Standard solution: A known concentration of USP Trihexyphenidyl Hydrochloride RS in *Medium*
Sample solution: Filtered portion of the solution under test
Bromocresol green solution: Dissolve 250 mg of bromocresol green in a mixture of 15 mL of water and 5 mL of 0.1 N sodium hydroxide, dilute with *Medium* to 500 mL, and mix. Extract 250 mL portions of this solution with two 100 mL portions of chloroform and discard the chloroform extracts.
Instrumental conditions
Mode: UV-Vis
Analytical wavelength: 415 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Transfer an accurately measured volume of the *Sample solution*, estimated to contain about 50 µg of trihexyphenidyl hydrochloride, to a 50-mL centrifuge tube. Transfer an equal, accurately measured volume of the *Standard solution* to a second 50-mL centrifuge tube. Transfer an equal, accurately measured volume of *Medium* to a third 50-mL centrifuge tube to provide a *Blank*. Add 5 mL of the *Bromocresol green solution* and 10.0 mL of chloroform to each tube, insert the stoppers into the tubes, and shake vigorously for NLT 20 s. Centrifuge the mixtures to separate the layers. Aspirate and discard the upper aqueous layers. Filter each chloroform layer through a separate phase-separating filter paper. Determine the amount of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$) dissolved from the absorbance of the filtrate from the *Sample solution* in comparison with that from the *Standard solution*. The filtrate from the *Blank* is used to set the instrument.
Tolerances: NLT 75% (*Q*) of the labeled amount of trihexyphenidyl hydrochloride ($C_{20}H_{31}NO \cdot HCl$) is dissolved.

• **Uniformity of Dosage Units** ⟨905⟩**:** Meet the requirements

IMPURITIES

• **Organic Impurities**
Solution A, Solution B, Mobile phase, Diluent, and **Chromatographic system:** Proceed as directed in the *Assay*.
System suitability solution: 0.1 mg/mL of USP Trihexyphenidyl Hydrochloride RS and 0.01 mg/mL of USP Trihexyphenidyl Related Compound A RS in *Diluent*
Standard solution: 0.001 mg/mL of USP Trihexyphenidyl Hydrochloride RS in *Diluent*
Sample solution: Nominally 1 mg/mL of trihexyphenidyl hydrochloride in *Diluent* prepared as follows. Transfer a suitable amount of Tablets (NLT 10), equivalent to 100 mg of trihexyphenidyl hydrochloride, to a 100-mL volumetric flask. Add 10 mL of 0.1 N hydrochloric acid and sonicate. Add another 80 mL of *Solution B* and sonicate again. Dilute with *Solution B* to volume. Centrifuge and use the supernatant.
System suitability
Samples: *System suitability solution* and *Standard solution*
[Note—See *Table 2* for relative retention times.]
Suitability requirements
Resolution: NLT 2.0, *System suitability solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Signal-to-noise ratio: NLT 50, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of any individual unspecified degradation product in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

www.webofpharma.com

r_U = peak response of each unspecified degradation product from the *Sample solution*
r_S = peak response of trihexyphenidyl from the *Standard solution*
C_S = concentration of USP Trihexyphenidyl Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of trihexyphenidyl hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 2*. Disregard any peak below 0.10%.

Table 2

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Trihexyphenidyl related compound A[a]	0.4	—
Trihexyphenidyl	1.0	—
Any individual unspecified degradation product	—	1
Total degradation products	—	2

[a] This impurity included for identification only and is not to be included in the calculation of total degradation products.

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers. Store at controlled room temperature.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Trihexyphenidyl Hydrochloride RS
  USP Trihexyphenidyl Related Compound A RS
  1-Phenyl-3-(piperidin-1-yl)propan-1-one hydrochloride.
  $C_{14}H_{19}NO \cdot HCl$ 253.77

Trikates Oral Solution

» Trikates Oral Solution is a solution of Potassium Acetate, Potassium Bicarbonate, and Potassium Citrate in Purified Water. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of potassium.

Packaging and storage—Preserve in tight, light-resistant containers.

Identification—

A: Two mL, diluted with water to 12 mL, responds to test *B* under *Identification Tests—General* ⟨191⟩, *Acetate*.

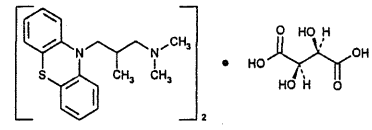
B: It responds to tests for bicorbonate under *Identification Tests—General* ⟨191⟩, *Bicarbonate*.

C: To 5 mL add 1 mL of hydrochloric acid, and heat to near boiling for 5 minutes to evolve carbon dioxide. Cool, add 1 mL of calcium chloride TS, and render just alkaline to bromothymol blue TS with 1 N sodium hydroxide. Boil for 3 minutes with gentle agitation: a white, crystalline precipitate appears that is insoluble in 1 N sodium hydroxide but dissolves in 3 N hydrochloric acid.

Assay—

Potassium stock solution—Dissolve, in water, 191 mg of potassium chloride, previously dried at 105° for 2 hours. Transfer to a 1000-mL volumetric flask, dilute with water to volume, and mix. Transfer 100.0 mL of this solution to a second 1000-mL volumetric flask, dilute with water to volume, and mix. This solution contains 10 µg of potassium per mL.

Standard preparations—To separate 100-mL volumetric flasks transfer 10.0 mL and 13.0 mL, respectively, of the *Potassium stock solution*. To each flask add 2.0 mL of sodium chloride solution (1 in 5) and 1.0 mL of hydrochloric acid, dilute with water to volume, and mix. The *Standard preparations* contain 1.0 µg and 1.3 µg of potassium per mL, respectively.



Assay preparation—Transfer 1.0 mL of Oral Solution to a 100-mL volumetric flask, dilute with water to volume, and mix. Transfer 1.0 mL of this solution to a second 100-mL volumetric flask, dilute with water to volume, and mix. Transfer 10.0 mL of this solution to a third 100-mL volumetric flask, add 2.0 mL of sodium chloride solution (1 in 5) and 1.0 mL of hydrochloric acid, dilute with water to volume, and mix.

Procedure—Concomitantly determine the absorbances of the *Standard preparations* and the *Assay preparation* at the resonance line of 766.5 nm, with a suitable atomic absorption spectrophotometer (see *Atomic Absorption Spectroscopy* ⟨852⟩) equipped with a potassium hollow-cathode lamp and an air–acetylene flame, using water as the blank. Plot the absorbances of the *Standard preparations* versus concentration, in µg per mL, of potassium. From the graph so obtained, determine the concentration, *C*, in µg per mL, of potassium in the *Assay preparation*. Calculate the quantity, in mEq, of potassium in the Oral Solution taken by the formula:

$$100C/39.10$$

in which 39.10 is the atomic weight of potassium.

Trimeprazine Tartrate

$(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6$ 746.98

10*H*-Phenothiazine-10-propanamine *N*,*N*,β-trimethyl-, [*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (2:1).
10-[3-(Dimethylamino)-2-methylpropyl]phenothiazine tartrate (2:1) [4330-99-8; 41375-66-0].

» Trimeprazine Tartrate contains not less than 98.0 percent and not more than 101.0 percent of $(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6$, calculated on the dried basis.

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Trimeprazine Tartrate RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

USP Monographs

www.webofpharma.com

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197M*▲ (CN 1-May-2020).

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation* obtained as directed in the *Assay*.

C: Prepare a solution of it in methanol containing 6 mg in each 5 mL. Proceed as directed under *Thin-layer Chromatographic Identification Test* ⟨201⟩, applying 5 µL of this solution and 5 µL of a similar solution of USP Trimeprazine Tartrate RS, using as the solvent system a mixture of 0.15 mL of ammonium hydroxide and 100 mL of acetone. Locate the spots on the plate by lightly spraying with iodoplatinic acid solution [prepared by dissolving 100 mg of chloroplatinic acid in 1 mL of 1 N hydrochloric acid, adding 25 mL of potassium iodide solution (1 in 25), diluting with water to 100 mL, and adding 0.5 mL of formic acid]: the R_F value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 4 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩: not more than 0.1%.

Ordinary impurities ⟨466⟩—

Test solution: methanol.

Standard solution: methanol.

Eluant: a mixture of ethyl acetate saturated with ammonium hydroxide and ether (1:1).

Visualization: 1.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of 0.005 M sodium 1-heptanesulfonate in methanol, water, and acetic acid (65:34:1). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Trimeprazine Tartrate RS in *Mobile phase*, and dilute quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a solution having a known concentration of about 0.031 mg per mL.

Assay preparation—Transfer about 62 mg of Trimeprazine Tartrate, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with *Mobile phase* to volume. Transfer 5 mL of this solution into a 100-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the capacity factor, *k'*, is not less than 2.0 and not more than 5.0, the column efficiency is not less than 1200 theoretical plates, the tailing factor is not more than 3.5, and the relative standard deviation for replicate injections is not more than 0.6%.

Procedure—Separately inject equal volumes (about 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6$ in the portion of Trimeprazine Tartrate taken by the formula:

$$2000C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Trimeprazine Tartrate RS in the *Standard preparation*, and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Trimeprazine Oral Solution

» Trimeprazine Oral Solution contains an amount of trimeprazine tartrate $[(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6]$ equivalent to not less than 90.0 percent and not more than 110.0 percent of the labeled amount of trimeprazine ($C_{18}H_{22}N_2S$).

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—

USP Trimeprazine Tartrate RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

A: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

B: Mix 10 mL of Oral Solution with about 30 mL of water in a separator, render the solution alkaline with 1 N sodium hydroxide, and extract with two 30-mL portions of ether. Transfer the ether extracts to a beaker, evaporate the ether by warming, and dissolve the residue in 5 mL of methanol: 5 µL of this solution meets the requirements of *Identification* test *C* under *Trimeprazine Tartrate*.

Alcohol Determination ⟨611⟩: between 4.5% and 6.5% of C_2H_5OH.

Limit of trimeprazine sulfoxide—

Mobile phase and *Chromatographic system* —Proceed as directed in the *Assay*.

Standard solution—Transfer about 60.6 mg of USP Trimeprazine Tartrate RS, accurately weighed, to a 50-mL volumetric flask. Add 5 mL of dilute hydrochloric acid (1 in 100) followed by 2 mL of 30 percent hydrogen peroxide, and heat at 60° for 10 minutes. Cool, dilute with 1 M sodium bisulfite to volume, and mix. Transfer 10.0 mL to a 60-mL separator, add 2 mL of sodium hydroxide solution (1 in 2), and mix. Extract with three 30-mL portions of ether. Filter the extracts through ether-wetted anhydrous sodium sulfate into a 250-mL conical flask. Cautiously evaporate the flask to dryness. Dissolve the residue in 10.0 mL of methanol, and filter if necessary. Each mL of this solution contains about 1 mg of trimeprazine sulfoxide. Transfer 1.0 mL of this solution to a 500-mL volumetric flask, dilute with *Mobile phase* to volume, and mix to obtain a solution containing about 0.0024 mg per mL of trimeprazine sulfoxide, expressed as trimeprazine tartrate.

Test solution—Use the *Assay preparation* as directed in the *Assay*.

Procedure—Separately inject equal volumes (about 25 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses for the peaks. The *Test solution* may exhibit a minor peak whose retention time corresponds to the peak exhibited by the *Standard solution* and whose retention time is about 0.6 relative to the main peak. Calculate the concentration, in mg

Supplement 1 ICN

www.webofpharma.com

per mL, of trimeprazine sulfoxide, in the portion of Oral Solution taken by the formula:

$$100(C/V)(596.89/746.98)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of trimeprazine tartrate in the *Standard solution*; V is the volume, in mL, of Oral Solution taken; 596.89 and 746.98 are the molecular weights of trimeprazine and trimeprazine tartrate, respectively, and r_U and r_S are the peak responses obtained from the *Test solution* and the *Standard solution*, respectively. Not more than 0.036 mg per mL is found.

Assay—

Mobile phase, Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Trimeprazine Tartrate.*

Assay preparation—Using a "to contain" pipet, transfer an accurately measured volume of Oral Solution, equivalent to about 2.5 mg of trimeprazine, to a 100-mL volumetric flask containing 50 mL of *Mobile phase.* Rinse the pipet with *Mobile phase,* collecting the rinses in the volumetric flask. Dilute with *Mobile phase* to volume, and mix.

Procedure—Separately inject equal volumes (about 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of trimeprazine ($C_{18}H_{22}N_2S$) in each mL of Oral Solution taken by the formula:

$$100(C/V)(596.89/746.98)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Trimeprazine Tartrate RS in the *Standard preparation*; V is the volume, in mL, of Oral Solution taken; 596.89 and 746.98 are the molecular weights of trimeprazine and trimeprazine tartrate, respectively; and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Trimeprazine Tartrate Tablets

» Trimeprazine Tartrate Tablets contain an amount of trimeprazine tartrate [$(C_{18}H_{22}N_2S)_2 \cdot C_4H_6O_6$] equivalent to not less than 93.0 percent and not more than 107.0 percent of the labeled amount of trimeprazine ($C_{18}H_{22}N_2S$).

Packaging and storage—Preserve in well-closed, light-resistant containers.

USP Reference standards ⟨11⟩—

USP Trimeprazine Tartrate RS

[NOTE—Throughout the following procedures, protect test or assay specimens, the Reference Standard, and solutions containing them, by conducting the procedures without delay, under subdued light, or using low-actinic glassware.]

Identification—

A: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation* obtained as directed in the *Assay.*

B: Triturate a portion of powdered Tablets, equivalent to about 10 mg of trimeprazine, with 10 mL of methanol, and centrifuge: 5 µL of this solution meets the requirements of *Identification* test *C* under *Trimeprazine Tartrate.*

Dissolution ⟨711⟩—

Medium: 0.01 N hydrochloric acid; 500 mL.

Apparatus 1: 100 rpm.

Time: 45 minutes.

Procedure—Determine the amount of $C_{18}H_{22}N_2S$ dissolved by employing UV absorption at the wavelength of maximum absorbance at about 251 nm on filtered portions of the solution under test, suitably diluted with *Medium,* if necessary, in comparison with a Standard solution having a known concentration of USP Trimeprazine Tartrate RS in the same *Medium.*

Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{18}H_{22}N_2S$ is dissolved in 45 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.

Procedure for content uniformity—Transfer 1 Tablet to a 100-mL volumetric flask, add about 50 mL of 0.1 N hydrochloric acid, and shake by mechanical means until the tablet is completely disintegrated. Add 0.1 N hydrochloric acid to volume, mix, and filter, discarding the first 20 mL of the filtrate. Dilute a portion of the subsequent filtrate, quantitatively and stepwise if necessary, with 0.1 N hydrochloric acid to obtain a solution having a known concentration of about 5 µg of trimeprazine per mL. Concomitantly determine the absorbances of this solution and a solution of USP Trimeprazine Tartrate RS in the same medium, having a known concentration of about 6 µg per mL, in 1-cm cells, at 276 nm and at the wavelength of maximum absorbance at about 251 nm, with a suitable spectrophotometer, using 0.1 N hydrochloric acid as the blank. Calculate the quantity, in mg, of trimeprazine in the Tablet by the formula:

$$(T/D)(0.7991C)(A_{251} - A_{276})_U/(A_{251} - A_{276})_S$$

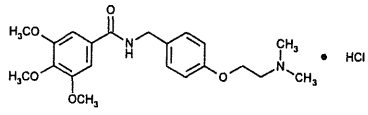
in which T is the labeled quantity, in mg, of trimeprazine in the Tablet, D is the concentration, in µg per mL, of trimeprazine in the test solution, based on the labeled quantity per Tablet and the extent of dilution, C is the concentration, in µg per mL, of USP Trimeprazine Tartrate RS in the Standard solution, 0.7991 is the factor converting trimeprazine tartrate to trimeprazine, and the parenthetic expressions are the differences in the absorbances of the two solutions at the wavelengths indicated by the subscripts, for the solution from the Tablets (U) and the Standard solution (S), respectively.

Assay—

Mobile phase , Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Trimeprazine Tartrate.*

Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 5 mg of trimeprazine, to a 100-mL volumetric flask, dissolve in and dilute with *Mobile phase* to volume, mix, and filter.

Procedure—Separately inject equal volumes (about 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{18}H_{22}N_2S$ in the portion of Tablets taken by the formula:



$$100C(596.89/746.98)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Trimeprazine Tartrate RS in the *Standard preparation,* 596.89 and 746.98 are the molecular weights of trimeprazine and trimeprazine tartrate, respectively, and r_U and r_S are the

www.webofpharma.com

peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Trimethobenzamide Hydrochloride

$C_{21}H_{28}N_2O_5 \cdot HCl$ 424.92
Benzamide, *N*-[[4-[2-(dimethylamino)ethoxy]phenyl] methyl]-3,4,5-trimethoxy-, monohydrochloride.
N-[*p*-[2-(Dimethylamino)ethoxy]benzyl]-3,4,5-trimethoxy benzamide monohydrochloride [554-92-7].

» Trimethobenzamide Hydrochloride, dried at 105° for 4 hours, contains not less than 98.5 percent and not more than 100.5 percent of $C_{21}H_{28}N_2O_5 \cdot HCl$.

Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Trimethobenzamide Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 20 µg per mL.
Medium: 0.1 N hydrochloric acid.
Absorptivities at 258 nm, calculated on the dried basis, do not differ by more than 3.0%.

C: It meets the requirements of the *Thin-layer Chromatographic Identification Test* ⟨201⟩. Prepare the test solution by dissolving 10 mg of Trimethobenzamide Hydrochloride in 10.0 mL of methanol. Apply 10-µL portions of the test solution and the Standard solution to the plate, and develop in a solvent system consisting of a mixture of ethyl acetate, alcohol, and ammonium hydroxide (90:10:5).

D: It meets the requirements of the tests for *Chloride* ⟨191⟩.
Melting range, *Class I* ⟨741⟩: between 186° and 190°.
Loss on drying ⟨731⟩—Dry it at 105° for 4 hours: it loses not more than 0.5% of its weight.
Residue on ignition ⟨281⟩: not more than 0.1%.
Assay—Dissolve about 1.3 g of Trimethobenzamide Hydrochloride, previously dried and accurately weighed, in 80 mL of glacial acetic acid and 15 mL of mercuric acetate TS. Titrate with 0.1 N perchloric acid VS, determining the endpoint potentiometrically using suitable electrodes. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 42.49 mg of $C_{21}H_{28}N_2O_5 \cdot HCl$.

Trimethobenzamide Hydrochloride Capsules

» Trimethobenzamide Hydrochloride Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{21}H_{28}N_2O_5 \cdot HCl$.

Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Trimethobenzamide Hydrochloride RS

Identification—

A: The UV absorption spectrum of the solution employed for measurement of absorbance in the *Assay* exhibits maxima and minima at the same wavelengths as that of the Standard solution.

B: Transfer a portion of the contents of Capsules, equivalent to about 20 mg of trimethobenzamide hydrochloride, to a suitable vessel, dissolve in 15 mL of 0.1 N hydrochloric acid, and filter. Transfer the filtrate to a separator, and add 5 mL of 1 N sodium hydroxide. Extract with 15 mL of chloroform, filtering the chloroform extract through anhydrous sodium sulfate into a suitable vessel, and evaporate to dryness. Allow to cool to room temperature, add a small portion of ether, and evaporate at room temperature to dryness. Dry the residue at 60° for 1 hour: the IR absorption spectrum of a potassium bromide dispersion of the residue so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Trimethobenzamide Hydrochloride RS.

C: Place a portion of the contents of Capsules, equivalent to about 25 mg of trimethobenzamide hydrochloride, in a 10-mL volumetric flask, add methanol to volume, mix, and filter: the filtrate so obtained responds to the *Thin-layer Chromatographic Identification Test* ⟨201⟩, a solvent system consisting of a mixture of ethyl acetate, alcohol, and ammonium hydroxide (90:10:5) being used.

Dissolution ⟨711⟩—
Medium: water; 900 mL.
Apparatus 1: 100 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{21}H_{28}N_2O_5 \cdot HCl$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 258 nm of filtered portions of the solution under test, suitably diluted with *Medium,* if necessary, in comparison with a Standard solution having a known concentration of USP Trimethobenzamide Hydrochloride RS in the same *Medium.*
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{21}H_{28}N_2O_5 \cdot HCl$ is dissolved in 45 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Assay—Transfer, as completely as possible, the contents of not less than 20 Capsules to a suitable tared container, and determine the average weight per Capsule. Mix the combined contents, and transfer an accurately weighed portion of the powder, equivalent to about 50 mg of trimethobenzamide hydrochloride, to a 100-mL volumetric flask. Add 50 mL of dilute hydrochloric acid (1 in 120), shake the mixture for several minutes, then add dilute hydrochloric acid (1 in 120) to volume, and mix. Filter through small retentive filter paper, discarding the first 20 mL of the filtrate. Transfer 4.0 mL of the subsequent filtrate to a 100-mL volumetric flask, add dilute hydrochloric acid (1 in 120) to volume, and mix. Concomitantly determine the absorbances of this solution

www.webofpharma.com

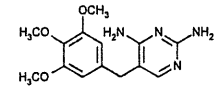
and a Standard solution of USP Trimethobenzamide Hydrochloride RS in the same medium having a known concentration of about 20 µg per mL, in 1-cm cells at the wavelength of maximum absorbance at about 258 nm, with a suitable spectrophotometer, using dilute hydrochloric acid (1 in 120) as the blank. Calculate the quantity, in mg, of $C_{21}H_{28}N_2O_5 \cdot HCl$ in the portion of Capsules taken by the formula:

$$2.5C(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Trimethobenzamide Hydrochloride RS in the Standard solution, and A_U and A_S are the absorbances of the solution from the Capsules and the Standard solution, respectively.

Trimethobenzamide Hydrochloride Injection

» Trimethobenzamide Hydrochloride Injection is a sterile solution of Trimethobenzamide Hydrochloride in Water for Injection. It contains not less than 95.0 percent and not more than 105.0 percent of the labeled amount of $C_{21}H_{28}N_2O_5 \cdot HCl$.



Packaging and storage—Preserve in single-dose or in multiple-dose containers, preferably of Type I glass.
USP Reference standards ⟨11⟩—
USP Trimethobenzamide Hydrochloride RS

Identification—
A: It meets the requirements of *Identification* test *A* under *Trimethobenzamide Hydrochloride Capsules.*
B: Transfer a volume of Injection, equivalent to about 100 mg of trimethobenzamide hydrochloride, to a separator containing 20 mL of water. Add 2 mL of 1 N sodium hydroxide, and proceed as directed in *Identification* test *B* under *Trimethobenzamide Hydrochloride Capsules*, beginning with "Extract with 15 mL of chloroform."
C: Dilute a portion of Injection quantitatively and stepwise with methanol to obtain a solution containing 2.5 mg of trimethobenzamide hydrochloride per mL: this solution meets the requirements of the *Thin-layer Chromatographic Identification Test* ⟨201⟩, a solvent system consisting of a mixture of ethyl acetate, alcohol, and ammonium hydroxide (90:10:5) being used.
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 1.80 USP Endotoxin Units per mg of trimethobenzamide hydrochloride.
pH ⟨791⟩: between 4.5 and 5.5.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.
Assay—Transfer to a suitable separator an accurately measured volume of Injection, equivalent to about 200 mg of trimethobenzamide hydrochloride. Add 5 mL of water and 3 mL of dilute hydrochloric acid (1 in 12), and extract with four 20-mL portions of ether, collecting the ether extracts in a second separator, and transferring the aqueous layer to a 500-mL volumetric flask. Wash the combined ether extracts with one 20-mL portion of water, transfer the aqueous layer to the 500-mL volumetric flask, dilute with water to volume, and mix. Dilute 5.0 mL of the solution with dilute hydrochloric acid (1 in 120) to 100.0 mL, and mix. Concomitantly determine the absorbances of this solution and a Standard solution of USP Trimethobenzamide Hydrochloride RS in the same medium having a known concentration of about 20 µg per mL, in 1-cm cells at the wavelength of maximum absorbance at about 258 nm, with a suitable spectrophotometer, using dilute hydrochloric acid (1 in 120) as the blank. Calculate the quantity, in mg, of $C_{21}H_{28}N_2O_5 \cdot HCl$ in each mL of the Injection taken by the formula:

$$(10C/V)(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Trimethobenzamide Hydrochloride RS in the Standard solution, V is the volume, in mL, of Injection taken, and A_U and A_S are the absorbances of the solution from the Injection and the Standard solution, respectively.

Trimethoprim

$C_{14}H_{18}N_4O_3$ 290.32
2,4-Pyrimidinediamine, 5-[(3,4,5-trimethoxyphenyl)methyl]-.
2,4-Diamino-5-(3,4,5-trimethoxybenzyl)pyrimidine [738-70-5].

» Trimethoprim contains not less than 98.5 percent and not more than 101.0 percent of $C_{14}H_{18}N_4O_3$, calculated on the dried basis.

Packaging and storage—Preserve in tight, light-resistant containers. Store at room temperature.
USP Reference standards ⟨11⟩—
USP Trimethoprim RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197S*▲ (CN 1-May-2020)—
Solution: 1 in 100.
Medium: chloroform.
B: Transfer about 100 mg of it, accurately weighed, to a 100-mL volumetric flask, and dissolve in 25 mL of alcohol. Dilute quantitatively and stepwise with sodium hydroxide solution (1 in 250) to obtain a 1 in 50,000 solution: the UV absorption spectrum of this solution exhibits maxima and minima only at the same wavelengths as that of a similar solution of USP Trimethoprim RS, concomitantly measured; and the respective absorptivities, calculated on the dried basis for the test sample only, at the wavelength of maximum absorbance at about 287 nm do not differ by more than 3.0%.
Melting range ⟨741⟩: between 199° and 203°.
Loss on drying ⟨731⟩—Dry it in vacuum at 105° for 4 hours: it loses not more than 0.5% of its weight.
Residue on ignition ⟨281⟩: not more than 0.1%.

Chromatographic purity—
Buffer solution—Prepare a 10 mM sodium perchlorate solution in water, adjust with phosphoric acid to a pH of 3.6, and mix.

USP Monographs

www.webofpharma.com

Mobile phase—Prepare a filtered and degassed mixture of *Buffer solution* and methanol (7:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Resolution solution—Dissolve accurately weighed quantities of USP Trimethoprim RS and diaveridine; and dilute quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a solution having known concentrations of about 10 µg per mL and 5 µg per mL, respectively.

Test solution—Transfer about 25.0 mg of Trimethoprim, accurately weighed, to a 25-mL volumetric flask, dissolve in and dilute with *Mobile phase* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 4.6-mm × 25-cm column that contains base-deactivated packing L1. The flow rate is 1.3 mL per minute. Chromatograph the *Resolution solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the peaks for trimethoprim and diaveridine is not less than 2.5; and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Inject a volume (about 20 µL) of the *Test solution* into the chromatograph, record the chromatogram for not less than 11 times the retention time of the trimethoprim peak, and measure all of the peak responses. Calculate the percentage of each impurity in the portion of Trimethoprim taken by the formula:

$$100\{Fr_i/[\Sigma(Fr_i) + Fr_T]\}$$

in which F is a relative response factor, and is equal to 0.5 for any peak having a relative retention time of 0.9, 2.3, 2.7, or 10.3, and is equal to 1.0 for all other peaks; r_i is the peak response for each impurity; and r_T is the peak response for trimethoprim obtained from the *Test solution:* not more than 0.1% of any individual impurity is found; and not more than 0.2% of total impurities is found.

Assay—Transfer about 300 mg of Trimethoprim, accurately weighed, to a conical flask, add 60 mL of glacial acetic acid, and titrate with 0.1 N perchloric acid VS, determining the endpoint potentiometrically. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 29.03 mg of $C_{14}H_{18}N_4O_3$.

Trimethoprim Tablets

» Trimethoprim Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{14}H_{18}N_4O_3$.

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Trimethoprim RS

Identification—Triturate a quantity of finely powdered Tablets, equivalent to about 100 mg of trimethoprim, with 2.5 mL of methanol. Add 2.5 mL of chloroform, triturate again, and centrifuge. Apply 25 µL of this test solution and 25 µL of a Standard solution of USP Trimethoprim RS in a mixture of methanol and chloroform (1:1) containing 20 mg per mL to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram in an unsaturated chamber with a solvent system consisting of a mixture of chloroform, methanol, and ammonium hydroxide (95: 7.5: 1), until the solvent front has moved approximately 15 cm from the origin. Remove the plate from the developing chamber, mark the solvent front, and allow the solvent to evaporate. Locate the spots on the plate by viewing under short-wavelength UV light: the R_F value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Dissolution ⟨711⟩—
Medium: 0.01 N hydrochloric acid; 900 mL.
Apparatus 2: 50 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{14}H_{18}N_4O_3$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 271 nm of filtered portions of the solution under test, suitably diluted with 0.01 N hydrochloric acid to a concentration of about 20 µg per mL, in comparison with a Standard solution having a known concentration of USP Trimethoprim RS in the same *Medium.*
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{14}H_{18}N_4O_3$ is dissolved in 45 minutes.

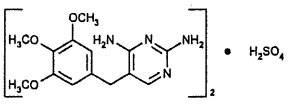
Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—
Mobile phase—Prepare a filtered and degassed mixture of 1% glacial acetic acid in water (v/v) and acetonitrile (21:4). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Using an accurately weighed quantity of USP Trimethoprim RS, prepare a solution in methanol having a known concentration of about 0.2 mg per mL.

Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 100 mg of trimethoprim, to a 100-mL volumetric flask, add 50 mL of methanol, and sonicate for 5 minutes, with intermittent swirling. Dilute with methanol to volume, and mix. Centrifuge, pipet 10 mL of the supernatant into a 50-mL volumetric flask, dilute with methanol to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.2-mm × 25-cm column that contains packing L1. The flow rate is about 2 mL per minute. Chromatograph five replicate injections of the *Standard preparation,* and measure the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%.



Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the analyte peak. Calculate the quantity, in mg, of $C_{14}H_{18}N_4O_3$, in the portion of Tablets taken by the formula:

$$500C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Trimethoprim RS in the *Standard preparation,* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

www.webofpharma.com

Trimethoprim Sulfate

$(C_{14}H_{18}N_4O_3)_2 \cdot H_2SO_4$ 678.71

2,4-Pyrimidinediamine, 5-[(3,4,5-trimethoxyphenyl)methyl]-, sulfate (2:1) (salt).

2,4-Diamino-5-[(3,4,5-trimethoxybenzyl)pyrimidine]-, sulfate (2:1) (salt) [56585-33-2].

» Trimethoprim Sulfate contains not less than 98.5 percent and not more than 101.0 percent of $(C_{14}H_{18}N_4O_3)_2 \cdot H_2SO_4$, calculated on the anhydrous basis.

Packaging and storage—Preserve in well-closed containers. Store at 25°, excursions permitted between 15° and 30°.

USP Reference standards ⟨11⟩—
USP Trimethoprim RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—*Solution*—Transfer about 100 mg of it, accurately weighed, to a 100-mL volumetric flask, dissolve in 25 mL of alcohol, dilute with 0.1 N sodium hydroxide to volume, and mix. *Medium*—Dilute the *Solution* quantitatively and stepwise with 0.1 N sodium hydroxide to obtain a solution containing a known concentration of about 20 µg per mL.

Absorptivity, at about 287 nm, calculated on the anhydrous basis, is between 83.0% and 86.4% of USP Trimethoprim RS.

B: It responds to the tests for *Sulfate* ⟨191⟩.

Melting range ⟨741⟩**:** between 210° and 215°.

pH ⟨791⟩**:** between 7.5 and 8.5, in a solution (0.5 mg per mL).

Water Determination, *Method I* ⟨921⟩ **:** not more than 3.0%.

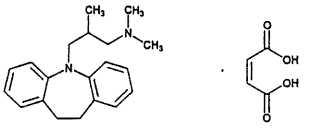
Chromatographic purity—

Adsorbent: 0.25-mm layer of chromatographic silica gel mixture.

Diluent—Prepare a mixture of chloroform and methanol (9:1).

Test solution—Transfer about 20 mg of Trimethoprim Sulfate, accurately weighed, to a 10-mL volumetric flask, add 4 mL of glacial acetic acid, and swirl to dissolve. Dilute with *Diluent* to volume, and mix.

Standard solution—Dissolve an accurately weighed quantity of USP Trimethoprim RS in *Diluent.* Dilute an accurately measured volume of this solution quantitatively, and stepwise if necessary, with *Diluent* to obtain a solution having a known concentration of 0.02 mg per mL.



Application volume: 10 µL.

Developing solvent system: a mixture of chloroform, methanol, and 6 N ammonium hydroxide (95: 7.5: 1).

Procedure—Proceed as directed for *Thin-Layer Chromatography* under *Chromatography* ⟨621⟩. Spray the plate with a freshly prepared mixture of 1.9 g of ferric chloride in 20 mL of water and 0.5 g of potassium ferricyanide in 10 mL of water. Compare the intensities of any secondary spots observed in the chromatogram of the *Test solution* with that of the principal spot in the chromatogram of the *Standard solution:* no secondary spot in the chromatogram obtained from the *Test solution* is larger or more intense than the principal spot obtained from the *Standard solution* (0.1%); and the sum of the intensities of the secondary spots obtained from the *Test solution* corresponds to not more than 0.5%.

Assay—Transfer about 800 mg of Trimethoprim Sulfate, accurately weighed, to a 50-mL conical flask, add about 60 mL of glacial acetic acid, and titrate with 0.1 N perchloric acid VS, determining the endpoint potentiometrically. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N perchloric acid is equivalent to 67.87 mg of $(C_{14}H_{18}N_4O_3)_2 \cdot H_2SO_4$.

Trimipramine Maleate

$C_{20}H_{26}N_2 \cdot C_4H_4O_4$ 410.51

5*H*-Dibenz[*b,f*]azepine-5-propanamine, 10,11-dihydro-*N,N,β*-trimethyl-, *(Z)*-2-butenedioate (1:1).

5-[3-(Dimethylamino)-2-methylpropyl]-10,11-dihydro-5*H*-dibenz[*b,f*]azepine maleate (1:1) [521-78-8].

» Trimipramine Maleate contains not less than 98.0 percent and not more than 102.0 percent of $C_{20}H_{26}N_2 \cdot C_4H_4O_4$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers, and store at room temperature.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

Loss on drying ⟨731⟩—Dry it at 105° to constant weight: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩**:** not more than 0.1%.

Related compounds—

Mobile phase and *Standard stock preparation*—Prepare as directed in the *Assay.*

Impurity stock solution—Dissolve accurately weighed quantities of USP Imipramine Hydrochloride RS and USP Iminodibenzyl RS in a suitable volume of *Mobile phase* to obtain a solution having a known concentration of about 50 µg per mL of iminodibenzyl and 56.5 µg per mL of imipramine hydrochloride.

www.webofpharma.com

Trimipramine related compound A solution—Dissolve a suitable quantity of USP Trimipramine Related Compound A RS in *Mobile phase* to obtain a solution having a concentration of about 50 µg per mL.

Trimipramine stock solution—Quantitatively dilute the *Standard stock preparation* with *Mobile phase* to obtain a solution having a known concentration of about 70 µg per mL of trimipramine maleate.

System suitability solution—Transfer about 7 mg of USP Trimipramine Maleate RS to a 10-mL volumetric flask, dissolve in a small amount of *Mobile phase,* add 0.1 mL each of the *Impurity stock solution* and the *Trimipramine related compound A solution,* and dilute with *Mobile phase* to volume.

Standard solution—Transfer 5.0 mL each of the *Impurity stock solution* and the *Trimipramine stock solution* with *Mobile phase* to a 50-mL volumetric flask, and dilute with *Mobile phase* to volume. Dilute the resulting solution quantitatively, and stepwise if necessary, with *Mobile phase* to obtain a final solution having a known concentration of about 0.5 µg per mL each of iminodibenzyl, imipramine (free base), and trimipramine (free base). [NOTE—This solution is stable for one day at room temperature. The concentration of imipramine (free base), in µg per mL, can be calculated using the molecular weights of imipramine (282.41) and imipramine hydrochloride (318.88). The concentration of trimipramine (free base), in µg per mL, can be calculated using the molecular weights of trimipramine (294.43) and trimipramine maleate (410.51).]

Test solution—Use the *Assay stock preparation.*

Chromatographic system—Prepare as directed in the *Assay.* Chromatograph about 10 µL of the *System suitability solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between imipramine and trimipramine related compound A is not less than 1.5. [NOTE—For identification purposes, the approximate relative retention times of the specified impurities are given in *Table 1.*]

Procedure—Separately inject about 10 µL of the *Standard solution* and the *Test solution* into the chromatograph, and record the chromatogram for three times the retention time for trimipramine. Identify the components based on their relative retention times in *Table 1.* Measure the peak areas of all the peaks in the *Test solution.* Calculate the percentage of imipramine and iminodibenzyl in the portion of Trimipramine Maleate taken by the formula:

$$100(C_S/C_T)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of any given impurity (free base) in the *Standard solution;* C_T is the concentration of Trimipramine Maleate, in mg per mL, in the *Test solution;* r_U is the individual peak response of the given impurity obtained from the *Test solution;* and r_S is the corresponding response for the same impurity obtained from the *Standard solution.* Calculate the percentage of trimipramine related compound A in the portion of Trimipramine Maleate taken by the formula:

$$100(1/3.6)(C_S/C_T)(r_U/r_S)$$

in which 3.6 is the relative response factor for trimipramine related compound A; C_S is the concentration, in mg per mL, of trimipramine (free base) in the *Standard solution;* C_T is the concentration of Trimipramine Maleate, in mg per mL, in the *Test solution;* r_U is the peak response for trimipramine related compound A obtained from the *Test solution;* and r_S is the peak response of trimipramine obtained from the *Standard solution.* Calculate the percentage of each unknown impurity in the portion of Trimipramine Maleate taken by the formula:

$$100(C_S/C_T)(r_i/r_S)$$

in which C_S is the concentration, in mg per mL, of trimipramine (free base) in the *Standard solution;* C_T is the concentration of Trimipramine Maleate, in mg per mL, in the *Test solution;* r_i is the individual peak response of the given impurity obtained from the *Test solution;* and r_S is the response for trimipramine obtained from the *Standard solution:* the limits of the related compounds are given in *Table 1.* [NOTE—Disregard any peak due to the maleate counterion eluting at a relative retention time of about 0.13.]

Table 1

Assay—

Buffer solution—Dissolve about 1.4 g of anhydrous dibasic sodium phosphate in 1 L of water. Adjust with phosphoric acid to a pH of 7.7.

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile, methanol, and *Buffer solution* (18:12:10). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard stock preparation—Dissolve an accurately weighed quantity of USP Trimipramine Maleate RS in a suitable volume of *Mobile phase* to obtain a solution having a known concentration of about 0.7 mg per mL.

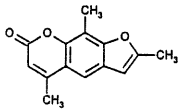
Standard preparation—Transfer 3 mL of the *Standard stock preparation* to a 10-mL volumetric flask, and dilute with *Mobile phase* to volume to obtain a final solution having a known concentration of about 0.21 mg per mL of trimipramine maleate.

Assay stock preparation—Dissolve an accurately weighed quantity of Trimipramine Maleate in a suitable volume of *Mobile phase* to obtain a solution having a known concentration of about 0.7 mg per mL.

Assay preparation—Transfer 3 mL of the *Assay stock preparation* to a 10-mL volumetric flask, and dilute with *Mobile phase* to volume to obtain a final solution having a known concentration of about 0.21 mg per mL of trimipramine maleate.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector

www.webofpharma.com



and a 4.6-mm × 25-cm column that contains 5-µm packing L7. The flow rate is about 1.0 mL per minute. The column temperature is maintained at 30°. Chromatograph about 20 µL of the *Standard preparation,* and record the peak responses as directed for *Procedure:* the tailing factor for the trimipramine maleate peak is not more than 2.0; and the relative standard deviation for replicate injections of the *Standard preparation* is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms for up to 1.5 times the retention time of trimipramine maleate, and measure the responses for the trimipramine maleate peak. Calculate the percentage of $C_{20}H_{26}N_2 \cdot C_4H_4O_4$, in the portion of Trimipramine Maleate taken by the formula:

$$100(C_S/C_U)(r_U/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Trimipramine Maleate RS in the *Standard preparation;* C_U is the concentration, in mg per mL, of Trimipramine Maleate in the *Assay preparation;* and r_U and r_S are the trimipramine peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Trioxsalen

$C_{14}H_{12}O_3$ 228.24

7H-Furo[3,2-*g*]1]benzopyran-7-one, 2,5,9-trimethyl-. 2,5,9-Trimethyl-7*H*-furo[3,2-*g*]1]benzopyran-7-one [3902-71-4].

» Trioxsalen contains not less than 97.0 percent and not more than 103.0 percent of $C_{14}H_{12}O_3$, calculated on the dried basis.
[**CAUTION**—Avoid exposing the skin to Trioxsalen.]

Packaging and storage—Preserve in well-closed, light-resistant containers.

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 5 µg per mL.
Medium: chloroform.

C: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that of the *Standard preparation* as obtained in the *Assay.*

Loss on drying ⟨731⟩—Dry it at 105° for 6 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩: not more than 0.5%.

Related compounds—In the chromatogram obtained from the *Assay preparation* in the *Assay,* the sum of the responses of any peaks detected, other than the major peak due to trioxsalen, is not more than 2.0% of the total of all the peak responses and the response of the peak occurring at retention time relative to trioxsalen of about 0.75 is not more than 1.5% of the total of all responses.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of methanol and water (70:30). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Trioxsalen RS in tetrahydrofuran to obtain a solution having a known concentration of about 1 mg per mL. Transfer 5.0 mL of this solution to a 100-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.

Assay preparation—Transfer about 100 mg of Trioxsalen, accurately weighed, to a 100-mL volumetric flask, dissolve in tetrahydrofuran, dilute with tetrahydrofuran to volume, mix, and filter. Transfer 5.0 mL of this solution to a 100-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the tailing factor for the trioxsalen peak is not more than 2.0, and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{14}H_{12}O_3$ in the portion of Trioxsalen taken by the formula:

$$2000C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Trioxsalen RS in the *Standard preparation,* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

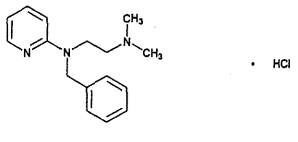
Trioxsalen Tablets

» Trioxsalen Tablets contain not less than 93.0 percent and not more than 107.0 percent of the labeled amount of $C_{14}H_{12}O_3$.

Packaging and storage—Preserve in well-closed, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Trioxsalen RS
Identification—Triturate an amount of finely powdered Tablets, equivalent to about 10 mg of trioxsalen, with 100 mL of chloroform, and filter. Apply 5 µL each of this solution and a Standard solution of USP Trioxsalen RS in chloroform having a known concentration of 100 µg per mL to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel. Allow the spots to dry, and develop the chromatogram, using methanol as the solvent, until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and allow the

USP Monographs

www.webofpharma.com



solvent to evaporate. Locate the spots on the plate by viewing under an UV lamp: the R_F value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Dissolution ⟨711⟩—
Apparatus 2: 100 rpm.
Time: 60 minutes.
Dilute simulated intestinal fluid—Prepare a 1 in 12 solution of simulated intestinal fluid TS and water.
Procedure—Assemble the apparatus, adding 225 mL of *Dilute simulated intestinal fluid* to each vessel, and operate the apparatus for 40 minutes. At the end of the 40 minutes, immediately add 675 mL of dehydrated alcohol to each of the vessels. Continue to operate the apparatus for an additional 20 minutes. Determine the amount of $C_{14}H_{12}O_3$ dissolved from UV absorbance determined at the wavelength of maximum absorbance at about 252 nm, filtered portions of the solution under test, in comparison with a Standard solution having a known concentration of USP Trioxsalen RS in the same medium.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{14}H_{12}O_3$ is dissolved in 60 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Assay—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 5 mg of trioxsalen, to a separator containing 25 mL of water. Extract with three 25-mL portions of chloroform, filtering each extract into a 100-mL volumetric flask. Wash the filter with chloroform, dilute with chloroform to volume, and mix. Transfer 10.0 mL of this solution to a second 100-mL volumetric flask, dilute with chloroform to volume, and mix. Concomitantly determine the absorbances of this solution and a solution of USP Trioxsalen RS in the same medium having a known concentration of about 5 µg per mL in 1-cm cells at the wavelength of maximum absorbance at about 252 nm, with a suitable spectrophotometer, using chloroform as the blank. Calculate the quantity, in mg, of $C_{14}H_{12}O_3$ in the portion of Tablets taken by the formula:

$$C(A_U/A_S)$$

in which C is the concentration, in µg per mL, of USP Trioxsalen RS in the Standard solution, and A_U and A_S are the absorbances of the solution from the Tablets and the Standard solution, respectively.

Tripelennamine Hydrochloride

$C_{16}H_{21}N_3 \cdot HCl$ 291.82
1,2-Ethanediamine, *N,N*-dimethyl-*N'*-(phenylmethyl)-*N'*-2-pyridinyl-, monohydrochloride;
2-[Benzyl[2-(dimethylamino)ethyl]amino]pyridine monohydrochloride [154-69-8].

DEFINITION
Tripelennamine Hydrochloride contains NLT 98.0% and NMT 102.0% of tripelennamine hydrochloride ($C_{16}H_{21}N_3 \cdot HCl$), calculated on the dried basis.

USP Tripelennamine Hydrochloride RS

Tripelennamine Hydrochloride Injection

» Tripelennamine Hydrochloride Injection is a sterile solution of Tripelennamine Hydrochloride in Water for Injection. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of tripelennamine hydrochloride ($C_{16}H_{21}N_3 \cdot HCl$).

Packaging and storage—Preserve in tight, single-dose or multiple-dose containers as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging*. Store at a controlled room temperature, and protect from light.
Labeling—Label it to indicate that it is for veterinary use only.
USP Reference standards ⟨11⟩—
USP Tripelennamine Hydrochloride RS

Identification—

A: *Identification—Organic Nitrogenous Bases* ⟨181⟩.

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay*.

Bacterial Endotoxins Test ⟨85⟩—It contains not more than 4.6 USP Endotoxin Units per mg of tripelennamine hydrochloride.
Sterility Tests ⟨71⟩—It meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined*.
pH ⟨791⟩: between 6.0 and 7.0.
Particulate Matter in Injections ⟨788⟩: meets the requirements for small-volume injections.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Mobile phase—Dissolve 4.8 g of monobasic potassium phosphate in 880 mL of water in a 2-liter cylinder. Add 720 mL of methanol and 400 mL of acetonitrile, mix, filter, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Tripelennamine Hydrochloride RS quantitatively in water to obtain a solution having a known concentration of about 0.02 mg per mL. Protect this solution from light.

Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 4 mg of tripelennamine hydrochloride, to a 200-mL volumetric flask, dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector, a 3.9-mm × 30-mm guard column that contains packing L1, and a 3.9-mm × 30-cm analytical column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the tripelennamine peaks. Calculate the quantity, in mg, of tripelennamine hydrochloride ($C_{16}H_{21}N_3 \cdot HCl$) in each mL of the Injection taken by the formula:

$$200(C/V)(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Tripelennamine Hydrochloride RS in the *Standard preparation; V* is the volume, in mL, of Injection taken to prepare the *Assay preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

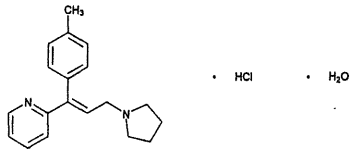
Tripelennamine Hydrochloride Tablets

» Tripelennamine Hydrochloride Tablets contain not less than 95.0 percent and not more than 105.0 percent of the labeled amount of $C_{16}H_{21}N_3 \cdot HCl$.

Packaging and storage—Preserve in well-closed containers.
USP Reference standards ⟨11⟩—
USP Tripelennamine Hydrochloride RS

USP Monographs

www.webofpharma.com



Identification—Tablets meet the requirements under *Identification—Organic Nitrogenous Bases* ⟨181⟩.

Dissolution ⟨711⟩—
Medium: water; 900 mL.
Apparatus 1: 100 rpm.
Time: 45 minutes.
Procedure—Determine the amount of $C_{16}H_{21}N_3 \cdot HCl$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 306 nm of filtered portions of the solution under test, suitably diluted with *Dissolution Medium*, if necessary, in comparison with a Standard solution having a known concentration of USP Tripelennamine Hydrochloride RS in the same medium.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{16}H_{21}N_3 \cdot HCl$ is dissolved in 45 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Assay—Proceed with Tablets as directed under *Salts of Organic Nitrogenous Bases* ⟨501⟩, determining the absorbance at 313 nm. Calculate the quantity, in mg, of $C_{16}H_{21}N_3 \cdot HCl$ in the portion of Tablets taken by the formula:

$$50C(A_U/A_S)$$

in which C is the concentration, in mg per mL, calculated on the dried basis, of USP Tripelennamine Hydrochloride RS in the *Standard Preparation*.

Triprolidine Hydrochloride

$C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$ 332.87
$C_{19}H_{22}N_2 \cdot HCl$ 314.86
Pyridine, 2-[1-(4-methylphenyl)-3-(1-pyrrolidinyl)-1-propenyl]-, monohydrochloride, monohydrate, (*E*)-; (*E*)-2-[3-(1-Pyrrolidinyl)-1-*p*-tolylpropenyl]pyridine monohydrochloride monohydrate [6138-79-0].
Anhydrous [550-70-9].

DEFINITION
Triprolidine Hydrochloride contains NLT 98.0% and NMT 102.0% of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl$), calculated on the anhydrous basis.

ASSAY
- **PROCEDURE**

Mobile phase: Acetonitrile, formic acid, and water (200:1:800) prepared as follows. Mix 200 mL of acetonitrile with 800 mL of water, add 1 mL of formic acid, and sonicate.
Diluent: Acetonitrile and water (20:80)
System suitability solution: 0.01 mg/mL each of USP Triprolidine Hydrochloride RS and USP Triprolidine Hydrochloride *Z*-Isomer RS in *Diluent*
Standard solution: 0.1 mg/mL of USP Triprolidine Hydrochloride RS in *Diluent* prepared as follows. Transfer a suitable amount of USP Triprolidine Hydrochloride RS to a suitable volumetric flask and dissolve, by sonication, in about 60% of the flask volume of *Diluent*. Dilute with *Diluent* to volume.
Sample solution: 0.1 mg/mL of Triprolidine Hydrochloride in *Diluent* prepared as follows. Transfer a suitable amount of Triprolidine Hydrochloride to a suitable volumetric flask and dissolve, by sonication, in about 60% of the flask volume of *Diluent*. Dilute with *Diluent* to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 25.0-cm; 5-µm packing L1
Column temperature: 45°
Flow rate: 1 mL/min
Injection volume: 20 µL
Run time: 20 min
System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—See *Table 1* for the relative retention times.]
Suitability requirements
Resolution: NLT 5.0 between triprolidine hydrochloride and triprolidine hydrochloride *Z*-isomer, *System suitability solution*
Tailing factor: NMT 2.0, *Standard solution*
Relative standard deviation: NMT 1.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl$) in the portion of Triprolidine Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Triprolidine Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Triprolidine Hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the anhydrous basis

IMPURITIES
- **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%
- **ORGANIC IMPURITIES**

Mobile phase, Diluent, and **Chromatographic system:** Proceed as directed in the *Assay*.
Standard solution: 10 µg/mL each of USP Triprolidine Hydrochloride RS and USP Triprolidine Hydrochloride *Z*-Isomer RS in *Diluent*
Sample solution: 0.5 mg/mL of Triprolidine Hydrochloride in *Diluent* prepared as follows. Transfer a suitable amount of Triprolidine Hydrochloride to a suitable volumetric flask and dissolve, by sonication, in about 60% of the flask volume of *Diluent*. Dilute with *Diluent* to volume.
System suitability
Sample: *Standard solution*
[NOTE—See *Table 1* for the relative retention times.]

USP Monographs

Suitability requirements
Resolution: NLT 5.0 between triprolidine hydrochloride and triprolidine hydrochloride *Z*-isomer
Relative standard deviation: NMT 1.8% for each peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of triprolidine hydrochloride *Z*-isomer in the portion of Triprolidine Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of triprolidine hydrochloride *Z*-isomer from the *Sample solution*
r_S = peak response of triprolidine hydrochloride *Z*-isomer from the *Standard solution*
C_S = concentration of USP Triprolidine Hydrochloride *Z*-Isomer RS in the *Standard solution* (mg/mL)
C_U = concentration of Triprolidine Hydrochloride in the *Sample solution* (mg/mL)

Calculate the percentage of any individual unspecified impurity in the portion of Triprolidine Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of any unspecified impurity from the *Sample solution*
r_S = peak response of triprolidine hydrochloride from the *Standard solution*
C_S = concentration of USP Triprolidine Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Triprolidine Hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 1*.

Table 1

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Triprolidine	1.0	—
Triprolidine hydrochloride *Z*-isomer	1.5	2.0
Any individual unspecified impurity	—	0.10
Total impurities	—	3.0

$C_{19}H_{22}N_2 \cdot HCl$ 314.85

Triprolidine Hydrochloride Oral Solution

» Triprolidine Hydrochloride Oral Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$).

Packaging and storage—Preserve in tight, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Triprolidine Hydrochloride RS

Identification—
A: Transfer a volume of Oral Solution, equivalent to about 12 mg of triprolidine hydrochloride, to a 125-mL separator, add 25 mL of water, then add 4 mL of sodium hydroxide solution (1 in 2), and mix. Add 10 mL of cyclohexane, shake, allow the phases to separate completely, and discard the aqueous layer. Transfer 8 mL of the cyclohexane solution to a glass-stoppered, 25-mL conical flask, evaporate on a steam bath with the aid of a current of air to dryness, and continue to heat the flask for about 1 minute after the solvent has completely evaporated. Cool, add 2 mL of cyclohexane, and mix: the IR absorption spectrum of the cyclohexane solution so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Triprolidine Hydrochloride RS.
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.
pH ⟨791⟩: between 5.6 and 6.6.
Alcohol Determination, *Method II* ⟨611⟩: between 3.0% and 5.0% of C_2H_5OH.

Assay—
Mobile phase—Prepare a suitable degassed and filtered mixture of alcohol and ammonium acetate solution (1 in 250) (17:3).
Standard preparation—Dissolve an accurately weighed quantity of USP Triprolidine Hydrochloride RS in 0.01 N hydrochloric acid, and dilute quantitatively and stepwise with 0.01 N hydrochloric acid to obtain a solution having a known concentration of about 0.05 mg of anhydrous USP Triprolidine Hydrochloride RS per mL.
Assay preparation—Transfer an accurately measured volume of Oral Solution, equivalent to about 2.5 mg of triprolidine hydrochloride, to a 50-mL volumetric flask, dilute with 0.01 N hydrochloric acid to volume, and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.2-mm × 25-cm column that contains packing L3. The flow rate is about 1.5 mL per minute. Chromatograph five replicate injections of the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%; and the tailing factor is not more than 1.5.
Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) in the portion of Oral Solution taken by the formula:

$$(332.88/314.86)(50C)(r_U/r_S)$$

www.webofpharma.com

in which 332.88 and 314.86 are the molecular weights of triprolidine hydrochloride monohydrate and anhydrous triprolidine hydrochloride, respectively; *C* is the concentration, in mg per mL, calculated on the anhydrous basis, of USP Triprolidine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triprolidine Hydrochloride Tablets

» Triprolidine Hydrochloride Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of $C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$.

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Triprolidine Hydrochloride RS

Identification—

A: Weigh and finely powder not less than 20 Tablets. Transfer a portion of the powder, equivalent to about 20 mg of triprolidine hydrochloride, to a glass-stoppered test tube, add 20 mL of water, and shake for 3 minutes. Add 2 mL of 1 N sodium hydroxide, mix, then add 3 mL of cyclohexane, shake for 3 minutes, and centrifuge for 5 minutes: the IR absorption spectrum of the clear supernatant so obtained exhibits maxima only at the same wavelengths as that of a similar preparation of USP Triprolidine Hydrochloride RS.

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation* as obtained in the *Assay.*

Dissolution ⟨711⟩—

Medium: pH 4.0 ± 0.05 acetate buffer, prepared by mixing 4.9 g of glacial acetic acid and 2.45 g of sodium acetate trihydrate with water to obtain 1000 mL of solution; 500 mL.

Apparatus 1: 50 rpm.

Time: 30 minutes.

Procedure—Determine the amount of $C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$ dissolved from UV absorbances at the wavelength of maximum absorbance at about 277 nm of filtered portions of the solution under test, in comparison with a Standard solution having a known concentration of USP Triprolidine Hydrochloride RS in the same medium.

Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$ is dissolved in 30 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.

Procedure for content uniformity—Transfer 1 Tablet to a 100-mL volumetric flask, add 70 mL of water, and sonicate, swirling the flask intermittently, until the tablet is dissolved. Dilute with water to volume, mix, and filter, discarding the first 50 mL of the filtrate. Dilute a portion of the filtrate quantitatively and stepwise with 0.1 N sulfuric acid to obtain a solution having a concentration of about 1.25 µg of triprolidine hydrochloride per mL. Concomitantly determine the fluorescence intensities of this solution and a similarly prepared Standard solution having a known concentration of about 1.25 µg of USP Triprolidine Hydrochloride RS per mL, at the excitation wavelength of 300 nm with a slit width of 2 mm, and an emission wavelength of 460 nm with a slit width of 2 mm, with a suitable spectrophotometer, using 0.1 N sulfuric acid as the blank. Calculate the quantity, in mg, of $C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$ in the Tablet taken by the formula:

$$(332.88/314.86)(TC/D)(I_U/I_S)$$

in which 332.88 and 314.86 are the molecular weights of the monohydrate and anhydrous forms of triprolidine hydrochloride, respectively; *T* is the labeled quantity, in mg, of triprolidine hydrochloride in the Tablet; *C* is the concentration, in µg per mL, of USP Triprolidine Hydrochloride RS in the Standard solution; *D* is the concentration, in µg per mL, of triprolidine hydrochloride in the solution from the Tablet, on the basis of the labeled quantity per Tablet and the extent of dilution, and I_U and I_S are the fluorescence intensities of the solution from the Tablet and the Standard solution, respectively.

Assay—

Mobile phase and *Standard preparation*—Prepare as directed in the *Assay* under *Triprolidine Hydrochlorides Oral Solution.*

Assay preparation—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 5.0 mg of triprolidine hydrochloride, to a 100-mL volumetric flask. Add about 10 mL of 0.01 N hydrochloric acid, and sonicate for 10 minutes. Cool to room temperature. Dilute with 0.01 N hydrochloric acid to volume, mix, and filter.

Chromatographic system and *Procedure*—Proceed as directed in the *Assay* under *Triprolidine Hydrochlorides Oral Solution,* except to calculate the quantity, in mg, of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) in the portion of Tablets taken by the formula:

$$(332.88/314.86)(100C)(r_U/r_S)$$

in which 332.88 and 314.86 are the molecular weights of triprolidine hydrochloride monohydrate and anhydrous triprolidine hydrochloride, respectively; *C* is the concentration, in mg per mL, calculated on the anhydrous basis, of USP Triprolidine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triprolidine and Pseudoephedrine Hydrochlorides Oral Solution

» Triprolidine and Pseudoephedrine Hydrochlorides Oral Solution contains not less than 90.0 percent and not more than 110.0 percent of the labeled amounts of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) and pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$).

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Triprolidine Hydrochloride RS
USP Pseudoephedrine Hydrochloride RS

Identification—

A: The retention times of the major peaks in the chromatogram of the *Assay preparation* correspond to those in the chromatogram of the *Standard preparation,* as obtained in the *Assay.*

www.webofpharma.com

B: Transfer 10 mL of Oral Solution to a suitable glass-stoppered tube, add 10 mL of ether and 2 mL of 1 N sodium hydroxide, shake for 5 minutes, and allow the layers to separate. The ether layer is the test solution. Prepare a Standard solution in water of USP Pseudoephedrine Hydrochloride RS and USP Triprolidine Hydrochloride RS having known concentrations of 6 mg per mL and 250 µg per mL, respectively. Separately apply 10-µL portions of the test solution and the Standard solution to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram in a solvent system consisting of a mixture of butyl alcohol, glacial acetic acid, and water (8:2:2) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate, mark the solvent front, allow the solvent to evaporate, and examine the plate under short-wavelength and long-wavelength UV light: the R_F values of the principal spots obtained from the test solution correspond to those obtained from the Standard solution.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of alcohol and 0.40% ammonium acetate solution (17:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve accurately weighed quantities of USP Pseudoephedrine Hydrochloride RS and USP Triprolidine Hydrochloride RS in 0.01 N hydrochloric acid, and dilute quantitatively and stepwise with 0.01 N hydrochloric acid to obtain a solution having known concentrations of about 1.2 mg of USP Pseudoephedrine Hydrochloride RS per mL and about 0.05 mg of anhydrous USP Triprolidine Hydrochloride RS per mL, and filter.

Assay preparation—Transfer an accurately measured volume of Oral Solution, equivalent to about 60 mg of pseudoephedrine hydrochloride, to a 50-mL volumetric flask, dilute with 0.01 N hydrochloric acid to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 25-cm column that contains packing L3. The flow rate is about 1.5 mL per minute. Chromatograph replicate injections of the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%; and the resolution factor between triprolidine and pseudoephedrine is not less than 2.0. The tailing factor for the triprolidine peak is not more than 2.0, and the pseudoephedrine peak is not more than 2.0.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. The relative retention times are about 0.68 for pseudoephedrine hydrochloride and 1.0 for triprolidine hydrochloride. Calculate the quantity, in mg, of pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$) in the portion of Oral Solution taken by the formula:

$$50C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Pseudoephedrine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses for pseudoephedrine hydrochloride obtained from the *Assay preparation* and the *Standard preparation,* respectively. Calculate the quantity, in mg, of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) in the portion of Oral Solution taken by the formula:

$$(332.88/314.86)(50C)(r_U/r_S)$$

in which 332.88 and 314.86 are the molecular weights of triprolidine hydrochloride monohydrate and anhydrous triprolidine hydrochloride, respectively; C is the concentration, in mg per mL, calculated on the anhydrous basis, of USP Triprolidine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses for triprolidine hydrochloride obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Triprolidine and Pseudoephedrine Hydrochlorides Tablets

» Triprolidine and Pseudoephedrine Hydrochlorides Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amounts of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) and pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$).

USP Reference standards ⟨11⟩—
USP Triprolidine Hydrochloride RS
USP Pseudoephedrine Hydrochloride RS

Identification—

A: The retention times of the major peaks in the chromatogram of the *Assay preparation* correspond to those of the *Standard preparation* as obtained in the *Assay.*

B: Transfer 1 Tablet to a suitable glass-stoppered tube, add 10 mL of water, shake for 5 minutes, and allow the solids to settle. Prepare a Standard solution in water of USP Pseudoephedrine Hydrochloride RS and USP Triprolidine Hydrochloride RS having known concentrations of 6 mg per mL and 250 µg per mL, respectively. Separately apply 10-µL portions of the test solution and the Standard solution to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Allow the spots to dry, and develop the chromatogram in a solvent system consisting of a mixture of butyl alcohol, glacial acetic acid, and water (8:2:2) until the solvent front has moved about three-fourths of the length of the plate. Remove the plate, mark the solvent front, allow the solvent to evaporate, and examine the plate under short- and long-wavelength UV light: the R_F values of the principal spots obtained from the test solution correspond to those obtained from the Standard solution.

Dissolution, *Procedure for a Pooled Sample* ⟨711⟩—
Medium: water; 900 mL.
Apparatus 2: 50 rpm.
Time: 45 minutes.

Determine the amounts of pseudoephedrine hydrochloride and triprolidine hydrochloride dissolved using the following method.

Mobile phase and *Chromatographic system*—Proceed as directed in the *Assay* under *Triprolidine and Pseudoephedrine Hydrochlorides Oral Solution.*

Procedure—Inject an accurately measured volume (about 200 µL) of a filtered portion of the solution under test into the chromatograph by means of a microsyringe or a sampling valve, record the chromatogram, and measure the responses for the major peaks. Calculate the quantities of pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$) and

USP Monographs

www.webofpharma.com

triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) dissolved in comparison with a Standard solution having known concentrations of USP Pseudoephedrine Hydrochloride RS and USP Triprolidine Hydrochloride RS in the same medium and similarly chromatographed.

Tolerances—Not less than 75% *(Q)* of the labeled amounts of $C_{10}H_{15}NO \cdot HCl$ and $C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$ is dissolved in 45 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements for *Content Uniformity* with respect to triprolidine hydrochloride and to pseudoephedrine hydrochloride.

Assay—

Mobile phase and *Standard preparation*—Prepare as directed in the *Assay* under *Triprolidine and Pseudoephedrine Hydrochlorides Oral Solution*.

Assay preparation—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 120 mg of pseudoephedrine hydrochloride, to a 100-mL volumetric flask. Add about 10 mL of 0.01 N hydrochloric acid, and sonicate for 10 minutes. Cool to room temperature. Dilute with 0.01 N hydrochloric acid to volume, mix, and filter.

Chromatographic system (see *Chromatography* ⟨621⟩) and *Procedure*—Proceed as directed in the *Assay* under *Triprolidine and Pseudoephedrine Hydrochlorides Oral Solution*, except to calculate the quantity, in mg, of pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$) in the portion of Tablets taken by the formula:

$$100C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Pseudoephedrine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses for pseudoephedrine hydrochloride obtained from the *Assay preparation* and the *Standard preparation*, respectively. Calculate the quantity, in mg, of triprolidine hydrochloride ($C_{19}H_{22}N_2 \cdot HCl \cdot H_2O$) in the portion of Tablets taken by the formula:

$$(332.88/314.86)(100C)(r_U/r_S)$$

in which 332.88 and 314.86 are the molecular weights of triprolidine hydrochloride monohydrate and anhydrous triprolidine hydrochloride, respectively; C is the concentration, in mg per mL, calculated on the anhydrous basis, of USP Triprolidine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses for triprolidine hydrochloride obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Trisulfapyrimidines Oral Suspension

» Trisulfapyrimidines Oral Suspension contains, in each 100 mL, not less than 3.0 g and not more than 3.7 g of sulfadiazine ($C_{10}H_{10}N_4O_2S$), sulfamerazine ($C_{11}H_{12}N_4O_2S$), and sulfamethazine ($C_{12}H_{14}N_4O_2S$). It may contain either Sodium Citrate or Sodium Lactate, and it may contain a suitable antimicrobial agent.

Packaging and storage—Preserve in tight containers, at a temperature above freezing.

Labeling—Its label indicates the presence and proportion of any sodium citrate or sodium lactate and any antimicrobial agent.

USP Reference standards ⟨11⟩—
USP Sulfadiazine RS
USP Sulfamerazine RS
USP Sulfamethazine RS

Identification—The retention times of the three individual sulfapyrimidines obtained in the *Assay* correspond to the retention times of the respective USP Reference Standards.

FOR ORAL SUSPENSION PACKAGED IN MULTIPLE-UNIT CONTAINERS: meets the requirements.

Assay—

Mobile phase—Prepare a suitable degassed solution of water, acetonitrile, and glacial acetic acid (86:13:1) such that the relative retention times of sulfadiazine, sulfamerazine, and sulfamethazine are approximately 0.6, 0.8, and 1.0, respectively. (If the retention times are excessive, the concentration of acetonitrile may be increased.)

Standard preparation—Transfer 33 mg each of USP Sulfadiazine RS, USP Sulfamerazine RS, and USP Sulfamethazine RS, accurately weighed, to a 100-mL volumetric flask, dissolve in 25 mL of 0.1 N sodium hydroxide, dilute with water to volume, and mix. Pipet 3 mL into a 25-mL volumetric flask, dilute with water to volume, and mix to obtain a *Standard preparation* having a known concentration of about 40 µg of each USP Reference Standard per mL.

Assay preparation—Determine the specific gravity of the Oral Suspension, using a tared, 50-mL volumetric flask, by weighing 50 mL of Oral Suspension that previously has been shaken in the original container to ensure homogeneity, allowed to stand long enough for entrapped air to rise, and finally inverted carefully just prior to transfer to the volumetric flask. Transfer an accurately weighed quantity of Oral Suspension, well-shaken and free from entrapped air, equivalent to about 100 mg of total sulfapyrimidines, to a 100-mL volumetric flask, add 25 mL of 0.1 N sodium hydroxide, and swirl for several minutes to dissolve the sulfapyrimidines. Dilute with water to volume, and mix. Filter the mixture, discarding the first several mL of the filtrate. Pipet 3 mL of the clear filtrate into a 25-mL volumetric flask, dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 2 mL per minute. Chromatograph five replicate injections of the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2.0%, and the resolution factors between sulfadiazine and sulfamerazine and between sulfamerazine and sulfamethazine are each not less than 3.0.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. The relative retention times for sulfadiazine, sulfamerazine, and sulfamethazine are approximately 0.6, 0.8, and 1.0, respectively. Calculate the quantity, in mg, of sulfadiazine in the portion of Oral Suspension taken by the formula:

$$0.833C(R_U/R_S)$$

in which C is the concentration, in µg per mL, of USP Sulfadiazine RS in the *Standard preparation;* and R_U and R_S are

USP Monographs

www.webofpharma.com

the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively. Similarly measure the responses of the sulfamerazine and sulfamethazine peaks, and calculate the quantity, in mg, of each in the portion of Oral Suspension taken.

Trisulfapyrimidines Tablets

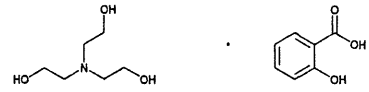
» Trisulfapyrimidines Tablets contain not less than 95.0 percent and not more than 105.0 percent of the labeled amount of each of the sulfapyrimidines, consisting of equal amounts of sulfadiazine ($C_{10}H_{10}N_4O_2S$), sulfamerazine ($C_{11}H_{12}N_4O_2S$), and sulfamethazine ($C_{12}H_{14}N_4O_2S$).

Packaging and storage—Preserve in well-closed containers.

USP Reference standards ⟨11⟩—
USP Sulfadiazine RS
USP Sulfamerazine RS
USP Sulfamethazine RS

Identification—The Tablets respond to the *Identification* test under *Trisulfapyrimidines Oral Suspension.*

Dissolution ⟨711⟩—
Medium: 0.01 N hydrochloric acid; 900 mL.
Apparatus 2: 50 rpm.
Time: 60 minutes.
Procedure—Determine the amount of total sulfapyrimidines dissolved by employing UV absorption at the wavelength of maximum absorbance at about 254 nm on filtered portions of the solution under test, suitably diluted with 0.01 N sodium hydroxide, in comparison with a Standard solution having approximately equal, known, concentrations of USP Sulfadiazine RS, USP Sulfamerazine RS, and USP Sulfamethazine RS in the same media.
Tolerances—Not less than 70% *(Q)* of the labeled amount of total sulfapyrimidines is dissolved in 60 minutes.



Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—
Mobile phase , *Standard preparation,* and *Chromatographic system*—Proceed as directed in the *Assay* under *Trisulfapyrimidines Oral Suspension.*
Assay preparation—Weigh and finely powder not less than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 250 mg of total sulfapyrimidines, to a 250-mL volumetric flask, add 50 mL of 0.1 N sodium hydroxide, swirl for several minutes to dissolve the sulfapyrimidines, dilute with water to volume, and mix. Filter the mixture, discarding the first several mL of the filtrate. Pipet 3 mL of the clear filtrate into a 25-mL volumetric flask, dilute with water to volume, and mix.
Procedure—Proceed as directed for *Procedure* in the *Assay* under *Trisulfapyrimidines Oral Suspension.* Calculate the quantity, in mg, of sulfadiazine in the portion of Tablets taken by the formula:

$$2.08C(R_U/R_S)$$

in which C is the concentration, in µg per mL, of USP Sulfadiazine RS in the *Standard preparation,* and R_U and R_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively. Similarly measure the responses of the sulfamerazine and sulfamethazine peaks, and calculate the quantity, in mg, of each in the portion of Tablets taken.

Trolamine Salicylate

$C_{13}H_{21}NO_6$ 287.31
Triethanolamine salicylate [2174-16-5].

DEFINITION
Trolamine Salicylate is a compounded mixture of Trolamine and Salicylic Acid in propylene glycol. It contains NLT 95.0% and NMT 105.0% of the labeled amount of trolamine salicylate ($C_{13}H_{21}NO_6$).

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
Sample solution: 1 mg/mL. The *Sample solution* and the *Standard solution* contain the equivalent of 1 mg/mL of salicylic acid in *Medium.*
Medium: Methanol
Cell: 0.1 cm
Acceptance criteria: Absorptivities do not differ by more than 1.0%.

ASSAY
• **PROCEDURE**
Mobile phase: Acetonitrile and water (3:7)
Standard solution: 48 µg/mL of USP Salicylic Acid RS in methanol
Sample solution: Transfer an amount equivalent to 300 mg of salicylic acid from a portion of Trolamine Salicylate, into a 250-mL volumetric flask, and dilute with methanol to volume. Transfer 2 mL of this solution to a 50-mL volumetric flask, and dilute with methanol to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability.*)
Mode: LC
Detector: UV 308 nm
Column: 4.0-mm × 12.5-cm; packing L7
Flow rate: 1 mL/min
Column temperature: 30°
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Column efficiency: NLT 8000 theoretical plates
Tailing factor: NMT 1.5
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of trolamine salicylate ($C_{13}H_{21}NO_6$) in the portion of Trolamine Salicylate taken:

$$\text{Result} = (r_U/r_S) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*

Acceptance criteria: 95.0%–105.0%

Analysis: Dry at 105° for 3 h.

Acceptance criteria: NMT 1.0%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers.

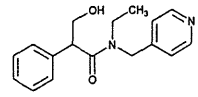
• **USP REFERENCE STANDARDS** ⟨11⟩

USP Tromethamine RS

Tromethamine for Injection

» Tromethamine for Injection is a sterile, lyophilized mixture of tromethamine with Potassium Chloride and Sodium Chloride. It contains not less than 93.0 percent and not more than 107.0 percent of the labeled amount of tromethamine ($C_4H_{11}NO_3$), and not less than 90.0 percent and not more than 110.0 percent of the labeled amounts of potassium chloride (KCl) and of sodium chloride (NaCl).

Packaging and storage—Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*.



Constituted solution—At the time of use, it meets the requirements for *Injections and Implanted Drug Products* ⟨1⟩, *Specific Tests, Completeness and clarity of solutions*.

www.webofpharma.com

Identification—
A: The IR absorption spectrum of a mineral oil dispersion of it exhibits maxima only at the same wavelengths as that of a similar preparation of USP Tromethamine RS.
B: A solution, prepared as directed in the labeling, responds to the tests for *Chloride* ⟨191⟩, for *Sodium* ⟨191⟩, and for *Potassium* ⟨191⟩.
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 0.03 USP Endotoxin Unit per mg of tromethamine.
pH ⟨791⟩: between 10.0 and 11.5, in a solution prepared as directed in the labeling.
Water Determination, *Method I* ⟨921⟩—Add 5 mL of glacial acetic acid prior to the titration: the content is not more than 1.0%.
Particulate Matter in Injections ⟨788⟩: meets the requirements for small-volume injections.

Potassium chloride content—
Standard solutions—Prepare five standard solutions (*1*, *2*, *3*, *4*, and *5*) each containing 0.60 mEq of sodium (35 mg of sodium chloride) per liter, and to the solutions add, respectively, 0-, 2-, 4-, 6-, and 8-mg supplements of potassium, in the form of the chloride, per L. If necessary, because of changes in the sensitivity of the photometer, vary the levels of concentration of the potassium, keeping the ratios between solutions approximately as given.
Standard graph—Set a suitable flame photometer for maximum emittance at a wavelength of 766 nm to 767 nm. (The exact wavelength setting will vary slightly with the instrument.) Adjust the instrument to zero emittance with solution *1*. Then adjust the instrument to 100% emittance with solution *5*. Read the percentage emittance of solutions *2*, *3*, and *4*. Plot the observed emittance of solutions *2*, *3*, *4*, and *5* as the ordinate and the concentration, in µg per mL, of potassium as the abscissa on arithmetic coordinate paper.
Procedure—Dissolve the entire contents of 1 container of Tromethamine for Injection in sufficient water, and dilute quantitatively and stepwise with water to obtain a solution containing about 4 µg of potassium per mL, or a quantity corresponding to the concentration of the *Standard solutions*. Adjust the instrument to zero emittance with solution *1* and to 100% emittance with solution *5*. Read the percentage emittance of the test solution. By reference to the *Standard graph*, determine the concentration, in µg per mL, of potassium in the test solution, apply the dilution factor, and calculate the quantity, in mg, of potassium in the container of Tromethamine for Injection. Each mg of potassium is equivalent to 1.907 mg of potassium chloride (KCl).
Sodium chloride content—Proceed as directed under *Potassium chloride content*, with the following modifications: (1) Prepare the *Standard solutions* to contain 0, 2, 4, 6, and 8 mg of sodium, in the form of the chloride, per 1000 mL, without added potassium; (2) prepare the *Standard graph* with the flame photometer set at 588 nm to 589 nm; and (3) under *Procedure* read "sodium" for "potassium" throughout. Each mg of sodium is equivalent to 2.542 mg of sodium chloride (NaCl).
Other requirements—It meets the requirements for *Sterility Tests* ⟨71⟩, *Uniformity of Dosage Units* ⟨905⟩, and *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*.
Assay for tromethamine—Dissolve the entire contents of 1 container of Tromethamine for Injection in sufficient water, diluting with water to an accurately measured volume to obtain a solution containing about 36 mg of tromethamine per mL. Transfer to a beaker an accurately measured volume of the solution, equivalent to about 180 mg of tromethamine, dilute with water to about 100 mL, add bromocresol purple TS, and titrate with 0.1 N hydrochloric acid VS to a yellow endpoint. Each mL of 0.1 N hydrochloric acid is equivalent to 12.11 mg of $C_4H_{11}NO_3$.

Tropicamide

$C_{17}H_{20}N_2O_2$ 284.35
Benzeneacetamide, *N*-ethyl-α-(hydroxymethyl)-*N*-(4-pyridinylmethyl)-, (±)-;
N-Ethyl-3-hydroxy-2-phenyl-*N*-(pyridin-4- ylmethyl) propanamide [1508-75-4].

DEFINITION
Tropicamide contains NLT 98.0% and NMT 102.0% of tropicamide ($C_{17}H_{20}N_2O_2$), calculated on the dried basis.

Tropicamide Ophthalmic Solution

DEFINITION

Tropicamide Ophthalmic Solution is a sterile, aqueous solution of Tropicamide. It contains NLT 95.0% and NMT 105.0% of the labeled amount of tropicamide ($C_{17}H_{20}N_2O_2$). It contains a suitable antimicrobial agent, and may contain suitable substances to increase its viscosity.

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
  Sample: Extract 10 mL of Ophthalmic Solution with 25 mL of chloroform, pass the chloroform extract through dry, folded filter paper, and evaporate the filtrate to dryness.
  Acceptance criteria: The residue so obtained meets the requirements.
- **B.** The UV absorption spectrum of the solution used for measurement of absorbance in the *Assay* exhibits maxima and minima at the same wavelengths as that of a similar solution of USP Tropicamide RS, concomitantly measured.

ASSAY

- **PROCEDURE**
  Standard solution: 30 µg/mL of USP Tropicamide RS in dilute sulfuric acid (1 in 6)
  Sample solution: Transfer a volume of Ophthalmic Solution, nominally equivalent to 30 mg of tropicamide, to a 100-mL volumetric flask, and add water to volume. Transfer 10.0 mL of this solution to a separator, add 2 mL of sodium carbonate solution (1 in 10), extract with four 20-mL portions of chloroform, and combine the extracts in a second separator. Wash the combined extracts with a 25-mL portion of pH 6.5 phosphate buffer (see *Reagents, Indicators, and Solutions—Buffer Solutions*), and transfer to another separator. Wash the aqueous layer with 10 mL of chloroform, and add it to the extracts. Extract the chloroform solution with four 20-mL portions of dilute sulfuric acid (1 in 6), combine the acid extracts in a 100-mL volumetric flask, and add the dilute acid to volume.
  Instrumental conditions
  Mode: UV
  Analytical wavelength: At the wavelength of maximum absorbance at about 253 nm
  Cell: 1 cm
  Blank: Dilute sulfuric acid (1 in 6)
  Analysis
  Samples: *Standard solution*, *Sample solution*, and *Blank*

  Calculate the percentage of the labeled amount of tropicamide ($C_{17}H_{20}N_2O_2$) in the portion of Ophthalmic Solution taken:

$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Tropicamide RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of tropicamide in the *Sample solution* (µg/mL)

Acceptance criteria: 95.0%–105.0%

- **PROCEDURE**
  Mobile phase: Acetonitrile, triethylamine, phosphoric acid, and water (300:1:3:700)
  System suitability solution: 0.01 mg/mL of USP Trospium Chloride RS and 0.003 mg/mL each of USP Trospium Chloride Related Compound A RS and USP Trospium Chloride Related Compound B RS in *Mobile phase*

www.webofpharma.com

Standard solution: 0.6 mg/mL of USP Trospium Chloride RS in *Mobile phase*
Sample solution: 0.6 mg/mL of Trospium Chloride in *Mobile phase*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 215 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1. (Alternatively, a 4.6-mm × 25-cm column that contains 5-µm packing L7 may be used.)
Column temperature: 40°
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 3 between trospium chloride related compound B and trospium, *System suitability solution*
Relative standard deviation: NMT 0.85% for six replicate injections, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of trospium chloride ($C_{25}H_{30}ClNO_3$) in the portion of Trospium Chloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Trospium Chloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Trospium Chloride in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the dried basis

IMPURITIES

• **Residue on Ignition** ⟨281⟩
Sample: 1 g
Acceptance criteria: NMT 0.1%

• **Organic Impurities**
Mobile phase: Proceed as directed in the *Assay*.
Standard solution: 0.01 mg/mL of USP Trospium Chloride RS and 0.003 mg/mL each of USP Trospium Chloride Related Compound A RS and USP Trospium Chloride Related Compound B RS in *Mobile phase*
Sample solution: 3.0 mg/mL of Trospium Chloride in *Mobile phase*
Chromatographic system: Proceed as directed in the *Assay*, except for the following parameters.
Injection volume: 20 µL
Run time: NLT 3 times the retention time of trospium
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 3 between trospium chloride related compound B and trospium
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of trospium chloride related compound A and trospium chloride related compound B in the portion of Trospium Chloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of trospium chloride related compound A or trospium chloride related compound B from the *Sample solution*
r_S = peak response of trospium chloride related compound A or trospium chloride related compound B from the *Standard solution*
C_S = concentration of trospium chloride related compound A or trospium chloride related compound B in the *Standard solution* (mg/mL)
C_U = concentration of Trospium Chloride in the *Sample solution* (mg/mL)

Calculate the percentage of any other individual impurity in the portion of Trospium Chloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of each individual impurity from the *Sample solution*
r_S = peak response of trospium chloride related compound B from the *Standard solution*
C_S = concentration of USP Trospium Chloride Related Compound B RS in the *Standard solution* (mg/mL)
C_U = concentration of Trospium Chloride in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 1*. The reporting level for impurities is 0.05%.

Table 1

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Trospium chloride related compound B[a]	0.7–0.8	0.15
Trospium	1.0	—
Benzilic acid (trospium chloride related compound A)	1.9–2.8	0.15
Any other individual impurity	—	0.10
Total impurities	—	0.5

[a] (1*R*,3*r*,5*S*)-8-Azabicyclo[3.2.1]octan-3-yl hydroxydiphenylacetate.

• **Limit of Trospium Chloride Related Compound C**
Mobile phase: Acetonitrile, anhydrous formic acid, and water (20: 0.2: 80)
Diluent: Water
Standard solution: 0.1 mg/mL of USP Trospium Chloride Related Compound C RS in *Diluent*, using sonication to dissolve
Sample solution: 100.0 mg/mL of Trospium Chloride in *Diluent*, using sonication to dissolve. [Note—The solution is stable for 12 h.]
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)

Trospium Chloride Tablets

DEFINITION

Trospium Chloride Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of trospium chloride ($C_{25}H_{30}ClNO_3$).

IDENTIFICATION

- **A.** The retention time and UV spectrum of the major peak of the *Sample solution* correspond to those of the major peak of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**
  Mobile phase: Acetonitrile, triethylamine, phosphoric acid, and water (350:1:3:650)
  Standard solution: 0.1 mg/mL of USP Trospium Chloride RS in *Mobile phase*
  Sample solution: Weigh and finely powder NLT 20 Tablets. Transfer a portion of the powder, equivalent to 100 mg of trospium chloride, to a 100-mL volumetric flask. Add 75 mL of *Mobile phase*, and sonicate for about 30 min. Dilute with *Mobile phase* to volume. Further dilute with *Mobile phase* to obtain a solution having a nominal concentration of 0.1 mg/mL of trospium chloride. Pass through a suitable filter of 0.45-µm pore size, and use the filtrate.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 215 nm
  Column: 4.6-mm × 25-cm; 5-µm packing L1
  Flow rate: 1.0 mL/min
  Column temperature: 40°
  Injection volume: 20 µL
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.0
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of trospium chloride ($C_{25}H_{30}ClNO_3$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of trospium chloride from the *Sample solution*
r_S = peak response of trospium chloride from the *Standard solution*
C_S = concentration of USP Trospium Chloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of trospium chloride in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩
  Test 1
  Medium: 0.1 N hydrochloric acid; 1000 mL
  Apparatus 2: 50 rpm
  Time: 30 min
  Mobile phase: Acetonitrile, triethylamine, phosphoric acid, and water (350:1:3:650)
  Standard stock solution: 0.5 mg/mL of USP Trospium Chloride RS in *Mobile phase*
  Standard solution: 0.02 mg/mL in *Medium* from the *Standard stock solution*
  Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 215 nm
  Column: 4.6-mm x 25-cm; 5-µm packing L1
  Flow rate: 1.0 mL/min
  Column temperature: 40°
  Injection volume: 50 µL
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.0
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of trospium chloride ($C_{25}H_{30}ClNO_3$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*

www.webofpharma.com

C_S = concentration of the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 1000 mL

Tolerances: NLT 80% (Q) of the labeled amount of trospium chloride is dissolved.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: 0.1 N hydrochloric acid; 1000 mL
Apparatus 2: 50 rpm
Time: 30 min
Mobile phase: Acetonitrile, triethylamine, phosphoric acid, and water (300:1:3:700)
Standard stock solution: 0.2 mg/mL of USP Trospium Chloride RS in *Medium*
Standard solution: 0.02 mg/mL in *Medium* from the *Standard stock solution*
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 215 nm
Columns
Guard: 4.0-mm × 4-cm; 5-µm packing L7
Analytical: 4.0-mm × 12.5-cm; 4-µm packing L7
Flow rate: 1.0 mL/min
Column temperature: 40°
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of trospium chloride ($C_{25}H_{30}ClNO_3$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 1000 mL

Tolerances: NLT 75% (Q) of the labeled amount of trospium chloride is dissolved.

• **Uniformity of Dosage Units** ⟨905⟩: Meet the requirements

IMPURITIES

• **Organic Impurities**
Mobile phase: Acetonitrile, triethylamine, phosphoric acid, and water (300:1:3:700)
System suitability solution: 0.01 mg/mL of USP Trospium Chloride RS, 0.003 mg/mL of USP Trospium Chloride Related Compound A RS, and 0.015 mg/mL of USP Trospium Chloride Related Compound B RS in *Mobile phase*
Standard solution: 0.003 mg/mL of USP Trospium Chloride RS in *Mobile phase*
Sample solution: Finely powder NLT 20 Tablets. Transfer a portion of the powder, equivalent to 150 mg of trospium chloride, to a 50-mL volumetric flask. Add 30 mL of *Mobile phase*, and sonicate for about 30 min. Dilute with *Mobile phase* to volume. Pass through a suitable filter of 0.45-µm pore size, and use the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 215 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7
Flow rate: 1.0 mL/min
Column temperature: 40°
Injection volume: 20 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 3 between trospium chloride related compound B and trospium, *System suitability solution*
Relative standard deviation: NMT 5%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of any impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each individual impurity from the *Sample solution*
r_S = peak response of trospium chloride from the *Standard solution*
C_S = concentration of USP Trospium Chloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of trospium chloride in the *Sample solution* (mg/mL)
F = relative response factor (see *Table 1*)

Acceptance criteria: See *Table 1*.

Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Nortropane benzilate (trospium chloride related compound B)	0.7	1.0	0.2
Trospium	1.0	—	—
Benzilic acid (trospium chloride related compound A)	1.9	1.7	0.2
Any other individual impurity	—	1.0	0.1
Total impurities	—	—	0.5

ADDITIONAL REQUIREMENTS

• **Packaging and Storage:** Preserve in tight containers, protected from light. Store at controlled room temperature.
• **Labeling:** When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only if *Test 1* is not used.
• **USP Reference Standards** ⟨11⟩

USP Trospium Chloride Related Compound A RS
Benzilic acid.
$C_{14}H_{12}O_3$ 228.24
[76-93-7.].
USP Trospium Chloride Related Compound B RS
Nortropane benzilate; (1*R*,3*r*,5*S*)-8-azabicyclo [3.2.1] octan-3-yl hydroxydiphenylacetate.
$C_{21}H_{23}NO_3$ 337.41

USP Monographs

www.webofpharma.com

Crystallized Trypsin

» Crystallized Trypsin is a proteolytic enzyme crystallized from an extract of the pancreas of healthy bovine or porcine animals, or both. When assayed as directed herein, it contains not less than 2500 USP Trypsin Units in each mg, calculated on the dried basis, and not less than 90.0 percent and not more than 110.0 percent of the labeled potency.
[NOTE—Determine the suitability of the substrates and check the adjustment of the spectrophotometer by performing the *Assay* using USP Crystallized Trypsin Reference Standard.]

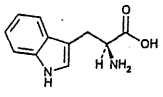
Packaging and storage—Preserve in tight containers, and avoid exposure to excessive heat.
USP Reference standards ⟨11⟩—
USP Trypsin Crystallized RS
Solubility test—An amount, equivalent to 500,000 USP Trypsin Units, is soluble in 10 mL of water and in 10 mL of saline TS.
Microbial enumeration tests ⟨61⟩ **and *Tests for specified microorganisms*** ⟨62⟩—It meets the requirements of the tests for absence of *Staphylococcus aureus*, *Pseudomonas aeruginosa*, and *Salmonella* species.
Loss on drying ⟨731⟩—Dry it in vacuum at 60° for 4 hours: it loses not more than 5.0% of its weight.
Residue on ignition ⟨281⟩: not more than 2.5%.

Limit of chymotrypsin—
0.067 M Phosphate buffer , pH 7.0—Dissolve 4.54 g of monobasic potassium phosphate in water to make 500 mL of solution. Dissolve 4.73 g of anhydrous dibasic sodium phosphate in water to make 500 mL of solution. Mix 38.9 mL of the monobasic potassium phosphate solution with 61.1 mL of dibasic sodium phosphate solution. Adjust dropwise, if necessary, with dibasic sodium phosphate solution to a pH of 7.0.
Substrate solution—Dissolve 23.7 mg of N-acetyl-L-tyrosine ethyl ester, suitable for use in determining chymotrypsin, in about 50 mL of *0.067 M Phosphate buffer, pH 7.0* with warming. When cool, dilute with additional pH 7.0 buffer to 100 mL. (*Substrate solution* may be stored in the frozen state and used after thawing; it is important, however, to freeze immediately after preparation.)
Crystallized Trypsin solution—Dissolve a sufficient quantity of Crystallized Trypsin, accurately weighed, in 0.0010 N hydrochloric acid to obtain a solution containing 650 USP Trypsin Units per mL.
Procedure—Conduct the test in a suitable spectrophotometer equipped to maintain a temperature of 25 ± 0.1° in the cell compartment. Determine the temperature in the reaction cell before and after the measurement of absorbance to ensure that the temperature does not change by more than 0.5°. Pipet 200 µL of 0.0010 N hydrochloric acid and 3.0 mL of the *Substrate solution* into a 1-cm cell. Place this cell in the spectrophotometer, and adjust the instrument so that the absorbance reads 0.200 at 237 nm. Pipet 200 µL of *Crystallized Trypsin solution* into another 1-cm cell, add 3.0 mL of the *Substrate solution*, and place the cell in the spectrophotometer. [NOTE—This order of addition is to be followed.] At the time the *Substrate solution* is added, start a stopwatch, and read the absorbance at 30-second intervals for not less than 5 minutes. Repeat the procedure on the same dilution at least once. Absolute absorbance values are of less importance than the constancy of the rate of change of absorbance. If the rate of change does not remain constant for at least 3 minutes, repeat the run, and if necessary, use a lower concentration. The duplicate run at the same dilution should match the first run in rate of absorbance change. Determine the average absorbance change per minute, using only the values within the 3-minute portion of the curve where the rate of absorbance is constant. Plot a curve of absorbance against time. One USP Chymotrypsin Unit is the activity causing a change in absorbance of 0.0075 per minute under the conditions specified in this test. Calculate the number of USP Chymotrypsin Units per mg of Crystallized Trypsin taken by the formula:

$$(A_2 - A_1)/(0.0075TW)$$

in which A_2 is the absorbance straight-line initial reading, A_1 is the absorbance straight-line final reading, T is the elapsed time, in minutes, between the initial and final readings, and W is the weight, in mg, of Crystallized Trypsin in the volume of solution used in determining the absorbance. Not more than 50 USP Chymotrypsin Units per 2500 USP Trypsin Units is found, indicating the presence of not more than approximately 5% of chymotrypsin.

Assay—
0.067 M Phosphate buffer , pH 7.6—Dissolve 4.54 g of monobasic potassium phosphate in water to make 500 mL of solution. Dissolve 4.73 g of anhydrous dibasic sodium phosphate in water to make 500 mL of solution. Mix 13 mL of the monobasic potassium phosphate solution with 87 mL of the anhydrous dibasic sodium phosphate solution.
Substrate solution—Dissolve 85.7 mg of N-benzoyl-L-arginine ethyl ester hydrochloride, suitable for use in assaying Crystallized Trypsin (see NOTE), in water to make 100 mL. Dilute 10 mL of this solution with *0.067 M Phosphate buffer, pH 7.6* to 100 mL. Determine the absorbance of this solution, in a 1-cm cell, at 253 nm, in a suitable spectrophotometer equipped with thermospacers to maintain a temperature of 25 ± 0.1°, using water as the blank. By the addition of *0.067 M Phosphate buffer, pH 7.6*, or of the *Substrate solution* before dilution, adjust the absorbance so that it measures not less than 0.575 and not more than 0.585. Use this *Substrate solution* within 2 hours.
Crystallized Trypsin solution—Dissolve a sufficient quantity of Crystallized Trypsin, accurately weighed, in 0.0010 N hydrochloric acid to obtain a solution containing about 50 to 60 USP Trypsin Units per mL.
Procedure—Pipet 200 µL of 0.0010 N hydrochloric acid and 3.0 mL of the *Substrate solution* into a 1-cm cell. Place this cell in a spectrophotometer, and adjust the instrument so that the absorbance reads 0.050 at 253 nm. Pipet 200 µL of *Crystallized Trypsin solution*, containing 10 to 12 USP Trypsin Units, into another 1-cm cell, add 3.0 mL of *Substrate solution*, and place the cell in the spectrophotometer. At the time the *Substrate solution* is added, start a stopwatch, and read the absorbance at 30-second intervals for 5 minutes. Repeat the procedure on the same dilution at least once. Plot a curve of absorbance against time, and use only those values that form a straight line to determine the activity of the Crystallized Trypsin. If the rate of change does not remain constant for at least 3 minutes, repeat the run, and if necessary, use a lower concentration. One USP Trypsin Unit is the activity causing a change in absorbance of 0.003 per minute under the conditions specified in this *Assay*. Calculate the number of USP Trypsin Units per mg taken by the formula:



$$(A_1 - A_2)/(0.003TW)$$

in which A_1 is the absorbance straight-line final reading, A_2 is the absorbance straight-line initial reading, T is the elapsed

www.webofpharma.com

time, in minutes, between the initial and final readings, and *W* is the weight, in mg, of Crystallized Trypsin in the volume of solution used in determining the absorbances.

Tryptophan

$C_{11}H_{12}N_2O_2$ 204.23
L-Tryptophan [73-22-3].

DEFINITION
Tryptophan contains NLT 98.5% and NMT 101.5% of $C_{11}H_{12}N_2O_2$, as L-tryptophan, calculated on the dried basis.

IDENTIFICATION

Change to read:

▲• **SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

ASSAY
• **PROCEDURE**
Sample solution: Place 200 mg of Tryptophan in a 125-mL flask. Dissolve in a mixture of 3 mL of formic acid and 50 mL of glacial acetic acid.
Analysis: Titrate with 0.1 N perchloric acid VS, determining the endpoint potentiometrically. Perform a blank determination, and make any necessary correction (see *Titrimetry* ⟨541⟩). Each mL of 0.1 N perchloric acid is equivalent to 20.42 mg of $C_{11}H_{12}N_2O_2$.
Acceptance criteria: 98.5%–101.5% on the dried basis

IMPURITIES
INORGANIC IMPURITIES
• **Residue on Ignition** ⟨281⟩: NMT 0.1%
• **Chloride and Sulfate,** *Chloride* ⟨221⟩: A 0.73-g portion shows no more chloride than corresponds to 0.50 mL of 0.020 N hydrochloric acid (0.05%). [NOTE—Gently heat the sample preparation to dissolve, if necessary.]
• **Chloride and Sulfate,** *Sulfate* ⟨221⟩: A 0.33-g portion shows no more sulfate than corresponds to 0.10 mL of 0.020 N sulfuric acid (0.03%). [NOTE—Gently heat the sample preparation to dissolve, if necessary.]
• **Iron** ⟨241⟩: NMT 30 ppm
ORGANIC IMPURITIES
• **Procedure 1**
Solution A: Trifluoroacetic acid in water (1 mL/L)
Solution B: Trifluoroacetic acid in an acetonitrile and water solution (80:20) (1 mL/L trifluoroacetic acid solution)
Standard solution: 1.0 mg/L each of USP Tryptophan Related Compound A RS and USP Tryptophan Related Compound B RS in water
Sample solution: 10.0 mg/mL of tryptophan in water
System suitability solution: 1.0 mg/L of USP Tryptophan Related Compound B RS in water
Mobile phase: See the gradient table below.

Time (min)	Solution A (%)	Solution B (%)
0	95	5
2	95	5
37	35	65
42	0	100
47	0	100

Injection size: 20 µL
System suitability
Sample: *System suitability solution*
Suitability requirement
Relative standard deviation: NMT 5.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each unspecified impurity in the portion of Tryptophan taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak area of each unspecified impurity in the *Sample solution*
r_S = peak area of tryptophan related compound B in the *Standard solution*
C_S = concentration of USP Tryptophan Related Compound B RS in the *Standard solution* (µg/mL)
C_U = concentration of Tryptophan in the *Sample solution* (µg/mL)

Acceptance criteria
Total impurities 1: NMT 0.01% of the total impurities eluting prior to the tryptophan peak
Total impurities 2: NMT 0.03% of the total impurities eluting after the tryptophan peak. [NOTE—Exclude the peak for tryptophan related compound B.]
Tryptophan related compound A: If a peak for tryptophan related compound A is observed in the *Sample solution*, then perform the test for *Procedure 2: Limit of Tryptophan Related Compound A*, below.
• **Procedure 2: Limit of Tryptophan Related Compound A**
Solution A: 18 mM monobasic sodium phosphate, filtered and degassed (pH 2.5), and acetonitrile (9:1)
Solution B: 10 mM monobasic sodium phosphate, filtered and degassed (pH 2.5), and acetonitrile (1:1)
Solution C: Acetonitrile in water (7:3)
Standard solution: 0.1 mg/L of USP Tryptophan Related Compound A RS in water
Sample solution: 10.0 mg/mL of Tryptophan in water
Mobile phase: See the gradient table below.

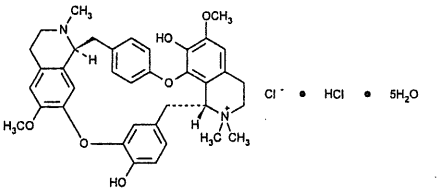
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 216 nm
Column: 3.9-mm × 15-cm; 5-µm packing L1
Column temperature: 30°
Flow rate: 1 mL/min
Injection size: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirement
Relative standard deviation: NMT 5.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of tryptophan related compound A in the portion of Tryptophan taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$



r_U = peak area of tryptophan related compound A in the *Sample solution*
r_S = peak area of tryptophan related compound A in the *Standard solution*
C_S = concentration of USP Tryptophan Related Compound A RS in the *Standard solution* (µg/mL)
C_U = concentration of Tryptophan in the *Sample solution* (µg/mL)

Acceptance criteria: NMT 10 ppm

SPECIFIC TESTS
- **OPTICAL ROTATION,** *Specific Rotation* ⟨781S⟩**:** −29.4° to −32.8°
  Sample solution: 10 mg/mL, in water. [NOTE—Heat gently to dissolve, if necessary.]
- **pH** ⟨791⟩**:** 5.5–7.0, in a solution (1 in 100)
- **LOSS ON DRYING** ⟨731⟩**:** Dry a sample at 105° for 3 h: it loses NMT 0.3% of its weight.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in well-closed containers.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP L-Tryptophan RS
  USP Tryptophan Related Compound A RS
  3,3′-[Ethylidenebis(1*H*-indole-1,3-diyl)]bis[2*S*)-2-aminopropanoic]acid.
  $C_{24}H_{26}N_4O_4$ 432.49
  USP Tryptophan Related Compound B RS
  2-Acetamido-3-(1*H*-indol-3-yl)propanoic acid.
  $C_{13}H_{14}N_2O_3$ 246.3

Tubocurarine Chloride

$C_{37}H_{41}ClN_2O_6 \cdot HCl \cdot 5H_2O$ 771.72
Tubocuraranium, 7′,12′-dihydroxy-6,6′-dimethoxy-2,2′,2′-trimethylchloride, hydrochloride, pentahydrate.
(+)-Tubocurarine chloride hydrochloride pentahydrate [6989-98-6].
Anhydrous 681.66
[57-94-3].

» Tubocurarine Chloride contains not less than 95.0 percent and not more than 105.0 percent of $C_{37}H_{41}ClN_2O_6 \cdot HCl$, calculated on the anhydrous basis.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Tubocurarine Chloride RS
Clarity of alcohol solution—A solution of 100 mg in 10 mL of alcohol is clear.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: The chromatogram of the *Assay preparation* obtained as directed in the *Assay* exhibits a major peak, the retention time of which corresponds to that exhibited in the chromatogram of the *Standard preparation*.

C: A solution (1 in 100) responds to the tests for *Chloride* ⟨191⟩.

Specific rotation ⟨781S⟩: between +210° and +224°.
Test solution: 10 mg per mL, in water, allowed to stand for 3 hours.
Water Determination, *Method I* ⟨921⟩: not more than 12.0%.
Residue on ignition ⟨281⟩: not more than 0.25%.
Related compounds—In the chromatogram obtained from the *Assay preparation* in the *Assay*, the sum of the responses of any peaks detected, other than the peak due to tubocurarine, is not more than 5.0% of the total of all peak responses.
Chloride content—Dissolve about 300 mg, accurately weighed, in 5 mL of water, warming slightly to effect solution. Add 5 mL of glacial acetic acid and 50 mL of methanol, and cool to room temperature. Add 1 drop of eosin Y TS, and titrate with 0.1 N silver nitrate VS. Each mL of 0.1 N silver nitrate is equivalent to 3.545 mg of Cl. Not less than 9.9% and not more than 10.7% of Cl is found, calculated on the anhydrous basis.

Assay—
Mobile phase—Mix 3 volumes of acetonitrile and 2 volumes of methanol, and allow the mixture to attain room temperature. To 270 mL of this solution in a 1-liter graduated cylinder add 20.0 mL of 25% tetramethylammonium hydroxide solution in methanol, and add water to make 1 L. Adjust with phosphoric acid to a pH of 4.0, filter, and degas.

www.webofpharma.com

Standard preparation—Dissolve an accurately weighed quantity of USP Tubocurarine Chloride RS in *Mobile phase* to obtain a solution having a known concentration of about 0.3 mg per mL.

Assay preparation—Transfer 30 mg of Tubocurarine Chloride, accurately weighed, to a 100-mL volumetric flask. Dissolve in *Mobile phase*, dilute with *Mobile phase* to volume, and mix.

System suitability preparation—Dissolve suitable quantities of tubocurarine chloride and phenol in *Mobile phase* to obtain a solution containing about 0.30 mg and 0.50 mg per mL, respectively.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 220-nm detector, and a 4-mm × 25-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *System suitability preparation*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between the two major peaks is not less than 2.0, and the tailing factor, *T*, for tubocurarine chloride is not more than 2.0. The relative standard deviation for replicate injections of the *Standard preparation* is not more than 2.0%. The relative retention times are about 0.50 and 1.0 for tubocurarine chloride and phenol, respectively.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{37}H_{41}ClN_2O_6 \cdot HCl$ in the portion of Tubocurarine Chloride taken by the formula:

$$100C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Tubocurarine Chloride RS in the *Standard preparation*, and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Tubocurarine Chloride Injection

» Tubocurarine Chloride Injection is a sterile solution of Tubocurarine Chloride in Water for Injection. It contains not less than 93.0 percent and not more than 107.0 percent of the labeled amount of $C_{37}H_{41}ClN_2O_6 \cdot HCl \cdot 5H_2O$.

Packaging and storage—Preserve in single-dose or in multiple-dose containers.

USP Reference standards ⟨11⟩—
USP Tubocurarine Chloride RS

Identification—

A: It responds to *Identification* test *C* under *Tubocurarine Chloride*.

B: The chromatogram of the *Assay preparation* obtained as directed in the *Assay* exhibits a major peak, the retention time of which corresponds to that exhibited in the chromatogram of the *Standard preparation*.

Angular rotation ⟨781⟩: between +0.32° and +0.48° for each mg of tubocurarine chloride per mL claimed on the label, determined in a suitable polarimeter tube and the observed reading being multiplied by the factor 200/*L*, in which *L* is the length, in mm, of the tube.

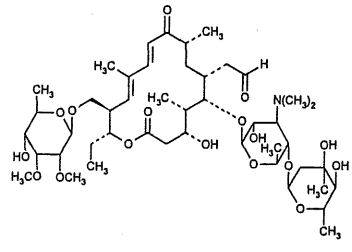
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 10.0 USP Endotoxin Units per mg of tubocurarine chloride.

pH ⟨791⟩: between 2.5 and 5.0.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Mobile phase, Standard preparation, System suitability preparation, and *Chromatographic system*—Prepare as directed in the *Assay* under *Tubocurarine Chloride*.



Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 15 mg of tubocurarine chloride, to a 50-mL volumetric flask, dilute with *Mobile phase* to volume, and mix.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{37}H_{41}ClN_2O_6 \cdot HCl \cdot 5H_2O$ in each mL of the Injection taken by the formula:

$$50C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Tubocurarine Chloride RS in the *Standard preparation*, and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Tylosin

$C_{46}H_{77}NO_{17}$ 916.10

(10*E*,12*E*)-(3*R*,4*S*,5*S*,6*R*,8*R*,14*S*,15*R*)-14-[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxymethyl]-5-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-ribo-hexopyranosyl)-3-dimethylamino-β-D-glucopyranosyl]oxy]-6-formylmethyl-3-hydroxy-4,8,12-trimethyl-9-oxoheptadeca-10,12-dien-15-olide.

Tylosin A [1401-69-0].

» Tylosin is the macrolide antibiotic substance, or the mixture of such substances, produced by the growth of *Streptomyces fradiae*, or by any other means. Its potency is not less than 900 µg of tylosin per mg, calculated on the dried basis.

Packaging and storage—Preserve in well-closed containers, protected from light, moisture, and excessive heat.

Labeling—Label it to indicate that it is for use in animals only.

USP Reference standards ⟨11⟩—
USP Tylosin RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020).

www.webofpharma.com

Acid solution—Transfer about 50 mg of Tylosin, accurately weighed, to a 100-mL volumetric flask, add 10 mL of 2 N hydrochloric acid, dilute with water to volume, and mix. Transfer 5.0 mL of this solution to a second 100-mL volumetric flask, dilute with water to volume, and mix. Absorptivity at 290 nm is 22.5 ± 2.5, calculated on the dried basis.
Alkaline solution—To 10.0 mL of the final *Acid solution* add 1.0 mL of 2 N sodium hydroxide, and heat on a water bath for 20 minutes. Cool to room temperature: an absorption maximum is observed at about 332 nm.

B: The retention time of the major peak for tylosin A in the chromatogram of the *Test solution* corresponds to that in the chromatogram of the *Standard solution*, as obtained in the test for *Content of tylosins*.

Loss on drying ⟨731⟩—Dry about 1 g, accurately weighed, in vacuum at a pressure of not more than 5 mm of mercury at 60° for 3 hours: it loses not more than 5% of its weight.

Residue on ignition ⟨281⟩: not more than 3.0%, the charred residue being moistened with 2 mL of nitric acid and 5 drops of sulfuric acid.

Limit of tyramine—Transfer 100 mg of it to a 25-mL volumetric flask, add 5.0 mL of 0.03 M phosphoric acid, and swirl to dissolve *(Test solution)*. Transfer 5.0 mL of a solution containing 70 µg of tyramine per mL in 0.03 M phosphoric acid to a 25-mL volumetric flask *(Standard solution)*. Transfer 5 mL of 0.03 M phosphoric acid to a 25-mL volumetric flask to provide the blank. Concurrently add to each flask 1.0 mL of a mixture of pyridine and 2.0 mL of filtered ninhydrin solution (1 in 25). Cover the flasks lightly with glass or aluminum foil caps, and heat in a water bath at 85° for not less than 20 minutes. Cool rapidly to room temperature, dilute with water to volume, and mix. Promptly determine the absorbances of the solutions from the *Test solution* and the *Standard solution* at the wavelength of maximum absorbance at about 570 nm, using the solution from the blank to zero the instrument. The absorbance of the solution from the *Test solution* is not greater than that of the solution from the *Standard solution* (0.35% of tyramine). In a valid test the solution from the *Standard solution* exhibits a dark blue color.

Content of tylosins—

Mobile phase—Prepare a mixture of filtered 2 M sodium perchlorate, previously adjusted with 1 N hydrochloric acid to a pH of 2.5 ± 0.1, and acetonitrile (60:40). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard solution—Transfer about 30 mg of USP Tylosin RS, accurately weighed, to a 100-mL volumetric flask, add 10 mL of methanol, and swirl to dissolve. Dilute with water to volume, and mix.

Test solution—Transfer about 30 mg of Tylosin, accurately weighed, to a 100-mL volumetric flask, add 10 mL of methanol, and swirl to dissolve. Dilute with water to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector, a 4.6-mm × 20-cm column that contains 5-µm packing L1. The flow rate is about 0.7 mL per minute. Chromatograph the *Standard solution*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between the tylosin D peak and the tylosin A peak is not less than 2, the tailing factor is not more than 1.5, and the relative standard deviation for replicate injections is not more than 2%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms over a period of time 1.5 times the elution time of the main tylosin A peak, and measure the peak areas for all the peaks. The relative retention times are about 0.5 for tylosin C, 0.7 for tylosin B, 0.9 for tylosin D, and 1.0 for tylosin A. Calculate the percentages of tylosin A, tylosin B, tylosin C, and tylosin D in the Tylosin taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the area of the tylosin A peak, the tylosin B peak, tylosin C peak, or the tylosin D peak, as appropriate, in the chromatogram obtained from the *Test solution*, and r_s is the sum of the areas of all of the peaks in the chromatogram obtained from the *Test solution:* the content of tylosin A is not less than 80% and the sum of the contents of tylosin A, tylosin B, tylosin C, and tylosin D is not less than 95%.

Assay—Proceed as directed for Tylosin under *Antibiotics—Microbial Assays* ⟨81⟩. Prepare the *Test Dilution* as follows. Transfer about 250 mg of Tylosin, accurately weighed, to a 500-mL volumetric flask, add 50 mL of methanol, and swirl to dissolve. Dilute with *Buffer B.3* to volume, and mix. Transfer 4.0 mL of this solution to a second 500-mL volumetric flask, dilute with a mixture of *Buffer B.3* and methanol (1:1), and mix. This solution contains about 4 µg of tylosin per mL.

Tylosin Granulated

» Tylosin Granulated contains tylosin phosphate mixed with suitable carriers and inactive ingredients. It contains not less than 80.0 percent and not more than 120.0 percent of the labeled amount of tylosin.

Packaging and storage—Preserve in well-closed, polyethylene-lined or polypropylene-lined containers, protected from moisture and excessive heat.
Labeling—Label it to indicate that it is for animal use only. Label it also to indicate that it is for manufacturing, processing, or repackaging.
USP Reference standards ⟨11⟩—
USP Tylosin RS

Identification—

A: The chromatogram of the *Test solution*, obtained as directed in the test for *Content of tylosins*, exhibits a major peak for tylosin A, the retention time of which corresponds to that exhibited in the chromatogram of the *Standard solution* obtained as directed in the test for *Content of tylosins*.

B: Transfer 2 g of Tylosin Granulated to a test tube, add 10 mL of water, and shake for 5 minutes. Filter the resulting suspension, and if necessary adjust the pH of the filtrate to a pH between 6 and 8 with 0.1 N sodium hydroxide or 0.1 N hydrochloric acid. This solution responds to the tests for *Phosphate* ⟨191⟩.

Loss on drying ⟨731⟩—Dry about 1 g of it, accurately weighed, in vacuum at a pressure of not more than 5 mm of mercury at 60° for 5 hours: it loses not more than 12.0% of its weight.

Powder fineness ⟨811⟩: not less than 99% passes a No. 20 sieve, and not more than 10% passes a No. 80 sieve.

Content of tylosins—

Mobile phase , *Standard solution*, and *Chromatographic system*—Proceed as directed in the test for *Content of tylosins* under *Tylosin*.

pH 7.0 buffer—Dissolve 13.6 g of monobasic potassium phosphate in 1000 mL of water, and adjust with 12 N sodium hydroxide to a pH of 7.0.

Test solution—Transfer about 1.4 g of Tylosin Granulated, accurately weighed, to a 250-mL volumetric flask, add

www.webofpharma.com

100 mL of *pH 7.0 buffer*, and shake by mechanical means for about 30 minutes. Dilute with water to volume, mix, and filter. Transfer 10.0 mL of the filtrate to a 50-mL volumetric flask, dilute with water to volume, and mix. Filter a portion of this solution through a filter having a porosity of 0.5 µm or finer, and use the filtrate as the *Test solution*.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solutions* and the *Test solution* into the chromatograph, record the chromatograms over a period of time that is about twice the elution time of the main tylosin A peak, and measure the areas for all the major peaks: the relative retention times are about 0.5 for tylosin C, 0.7 for tylosin B, 0.9 for tylosin D, and 1.0 for tylosin A. Calculate the percentages of tylosin A, tylosin B, tylosin C, and tylosin D in the Tylosin taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the area of the tylosin A peak, tylosin B peak, tylosin C peak, or tylosin D peak, as appropriate, in the chromatogram obtained from the *Test solution*, and r_s is the sum of the areas of all of the peaks in the chromatogram obtained from the *Test solution:* the content of tylosin A is not less than 80%, and the sum of the contents of tylosin A, tylosin B, tylosin C, and tylosin D is not less than 95%.

Assay—Proceed as directed for Tylosin under *Antibiotics—Microbial Assays* ⟨81⟩. Prepare the *Test Dilution* as follows. Transfer about 2 g of Tylosin Granulated, accurately weighed, to a suitable container, add 200.0 mL of a mixture of *Buffer B.3* and methanol (1:1), seal to prevent evaporation, and shake by mechanical means for about 60 minutes. Filter the suspension so obtained, discarding the first 5 mL of the filtrate. Dilute an accurately measured portion of the filtrate quantitatively and stepwise with a mixture of *Buffer B.3* and methanol (1:1) to obtain a *Test Dilution* having an estimated concentration of about 4 µg of tylosin per mL.

Tylosin Injection

» Tylosin Injection is a sterile solution of tylosin in a suitable vehicle. It contains not less than 85.0 percent and not more than 115.0 percent of the labeled amount of tylosin.

Packaging and storage—Preserve in single-dose or multiple-dose containers, Type I or Type II amber glass, and store at a temperature not to exceed 22°.

Labeling—Label to indicate that it is for veterinary use only.

USP Reference standards ⟨11⟩—
USP Tylosin RS

Identification—The retention time of the major peak for tylosin A in the chromatogram of the *Test solution* corresponds to the major peak for tylosin A in the chromatogram of the *Standard solution,* as obtained in the test for *Content of tylosins.*

Bacterial Endotoxins Test ⟨85⟩—It contains no more than 0.28 USP Endotoxin Unit per mg of tylosin.

Sterility Tests ⟨71⟩ : meets the requirements.

pH ⟨791⟩: between 8.0 and 9.5.

Particulate Matter in Injections ⟨788⟩—Use the procedure in *Method 2—Microscopic Particle Count Test:* not more than 50 particles per mL that are equal to or greater than 10 µm in effective spherical diameter are found, and not more than 5 particles per mL that are equal to or greater than 25 µm in effective spherical diameter are found.

Content of tylosins—

Sodium perchlorate solution—Prepare a 184 g per L solution.

Mobile phase—Prepare a mixture of *Sodium perchlorate solution* and acetonitrile (3:2). Adjust with 1 N hydrochloric acid to a pH of 2.5 ± 0.1, and filter. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Diluent—Prepare a mixture of methanol and water (1:9).

Standard solution—Dissolve an accurately weighed quantity of USP Tylosin RS in *Diluent* to obtain a solution having a known concentration of about 0.3 mg per mL.

Test solution—Dilute an accurately measured volume of Injection with *Diluent* to obtain a solution having a known concentration of about 0.25 mg per mL.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector and a 4.6-mm × 20-cm column that contains 5-µm packing L1. The flow rate is about 0.7 mL per minute. The column temperature is maintained at 25°. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the order of elution is tylosin C, tylosin B, tylosin D, and tylosin A, with relative retention times of about 0.5, 0.6, 0.8, and 1.0 minutes, respectively; the resolution, *R,* of the peaks for tylosin D and tylosin A is not less than 2.8; and the tailing factor for the tylosin A peak is not more than 1.5.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms over a period equivalent to 1.5 times the elution time of the main tylosin A peak, and measure all the peak areas. Calculate the percentages of tylosin A, tylosin B, tylosin C, and tylosin D in the portion of Injection taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the area of the tylosin A peak, the tylosin B peak, the tylosin C peak, or the tylosin D peak, as appropriate, in the chromatogram obtained from the *Test solution;* and r_s is the sum of the areas of all the peaks in the chromatogram obtained from the *Test solution:* the content of tylosin A is not less than 75%; and the sum of the contents of tylosin A, tylosin B, tylosin C, and tylosin D is not less than 85%.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—Proceed as directed for *Tylosin* under *Antibiotics—Microbial Assays* ⟨81⟩. Prepare the *Test Dilution* as follows. Transfer an accurately measured volume of Injection, equivalent to about 250 mg of tylosin, to a 500-mL volumetric flask, add 50 mL of methanol, and swirl to dissolve. Dilute with *Buffer B.3*to volume, and mix. Transfer 4.0 mL of this solution to a second 500-mL volumetric flask, dilute with a mixture of *Buffer B.3* and methanol (1:1), and mix. This solution contains about 4 µg of tylosin per mL.

Tylosin Tartrate

(10*E*,12*E*)-(3*R*,4*S*,5*S*,6*R*,8*R*,14*S*,15*R*)-14-[(6-deoxy-2,3-di-*O*-methyl-B-D-allopyranosyl)oxymethyl]-5-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-C-methyl-α-L-ribo-hexopyranosyl)-3-dimethylamino-B-D-glucopyranosyl]oxy]-6-formylmethyl-3-hydroxy-4,8,12-trimethyl-9-oxoheptadeca-10,12-dien-15-olide.

Tylosin A (Tylosin) 916.10
[1401-69-0].

USP Monographs

www.webofpharma.com

» Tylosin Tartrate is a tartrate of a mixture of macrolide antibiotic substances, or the mixture of such substances, produced by the growth of *Streptomyces fradiae,* or by any other means. Its potency is not less than 800 µg of tylosin per mg, calculated on the dried basis.

Packaging and storage—Preserve in well-closed containers, protected from light, moisture, and excessive heat. Store at 25°, excursions permitted between 15° and 30°.
Labeling—Label it to indicate that it is for veterinary use only.

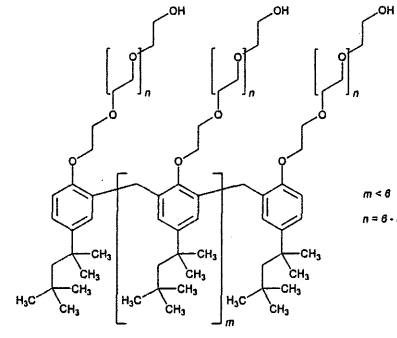
USP Tylosin Tartrate RS

Change to read:



Identification—
A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy*: 197K▲ (CN 1-May-2020)
B: The retention time of the major peak for tylosin A in the chromatogram of the *Test solution* corresponds to that in the chromatogram of the *Standard solution,* as obtained in the test for *Content of tylosins.*
C: It meets the requirements of the test for *Tartrate* ⟨191⟩.
pH ⟨791⟩**:** between 5.0 and 7.2 in a solution prepared by dissolving 0.25 g in 10 mL of carbon dioxide-free water.
Loss on drying ⟨731⟩—Dry about 1 g, accurately weighed, in vacuum at a pressure not exceeding 5 mm of mercury at 60° for 3 hours: it loses not more than 4.5% of its weight.
Residue on ignition ⟨281⟩**:** not more than 2.5%, the charred residue being moistened with 2 mL of nitric acid and 5 drops of sulfuric acid.
Limit of tyramine—In a 25-mL volumetric flask, dissolve 50.0 mg of tylosin in 5.0 mL of a 3.4 g per L solution of phosphoric acid. Add 1.0 mL of pyridine and 2.0 mL of a saturated solution of ninhydrin (about 40 g per L). Close the flask with aluminum foil, and heat in a water bath at 85° for 30 minutes. Cool the solution rapidly to room temperature, and dilute with water to volume. Mix, and measure immediately the absorbance (see *Ultraviolet-Visible Spectroscopy* ⟨857⟩) of the solution at 570 nm against a blank solution prepared in a similar manner. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg per L solution of tyramine in a 3.4 g per L solution of phosphoric acid. If intended for use in the manufacture of parenteral dosage forms, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg per L solution of tyramine in a 3.4 g per L solution of phosphoric acid.

Content of tylosins—
Mobile phase—Prepare a mixture of filtered 200 g per L of sodium perchlorate, previously adjusted with 1 N hydrochloric acid to a pH of 2.5 ± 0.1, and acetonitrile (60:40). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard solution—Dissolve an accurately weighed quantity of USP Tylosin RS in a mixture of acetonitrile and water (1:1) to obtain a solution having a known concentration of about 0.2 mg per mL. [NOTE—Prepare the *Standard solution* immediately before use.]
Test solution—Dissolve an accurately weighed quantity of Tylosin in a mixture of acetonitrile and water (1:1) to obtain a solution having a known concentration of about 0.2 mg per mL. [NOTE—Prepare the *Test solution* immediately before use.]
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 290-nm detector and a 4.6-mm × 20-cm column that contains 5-µm packing L1. The flow rate is about 1.0 mL per minute and the column temperature is maintained at 35°. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the order of elution is tylosin C, tylosin B, tylosin D, and tylosin A with relative retention times of about 0.5, 0.6, 0.8, and 1.0 minutes, respectively; the resolution of the peaks representing tylosin D and tylosin A is not less than 2.0; the tailing factors are not more than 1.5; and the relative standard deviation for replicate injections is not more than 2.0%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms over a period of time equivalent to 1.5 times the elution time of the main tylosin A peak, and measure the peak areas for all the peaks. Calculate the percentages of tylosin A, tylosin B, tylosin C, and tylosin D in the Tylosin taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the area of the tylosin A peak, the tylosin B peak, the tylosin C peak, or the tylosin D peak, as appropriate, in the chromatogram obtained from the *Test solution;* and r_s is the sum of the areas of all the peaks in the chromatogram obtained from the *Test solution:* the content of tylosin A is not less than 80%; and the sum of the contents of tylosin A, tylosin B, tylosin C, and tylosin D is not less than 95%.
Assay—Proceed as directed for Tylosin under *Antibiotics—Microbial Assays* ⟨81⟩. Prepare the *Test Dilution* as follows. Transfer an accurately weighed quantity of Tylosin Tartrate, equivalent to about 250 mg of tylosin, to a 500-mL volumetric flask, add 50 mL of methanol, and swirl to dissolve. Dilute with *Buffer B.3* to volume, and mix. Transfer 4.0 mL of this solution to a second 500-mL volumetric flask, dilute with a mixture of *Buffer B.3* and methanol (1:1), and mix. This solution contains about 4 µg of tylosin per mL.

Tyloxapol

Phenol, 4-(1,1,3,3-tetramethylbutyl)-, polymer with formaldehyde and oxirane;
p-(1,1,3,3-Tetramethylbutyl)phenol polymer with ethylene oxide and formaldehyde [25301-02-4].

DEFINITION
Tyloxapol is a nonionic liquid polymer of the alkyl aryl polyether alcohol type. [NOTE—Precautions should be exercised to prevent contact of Tyloxapol with metals.]

USP Monographs

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197F** ▲ (CN 1-May-2020)
Analysis: On the undried specimen
Acceptance criteria: Meets the requirements

IMPURITIES

• **RESIDUE ON IGNITION** ⟨281⟩: NMT 1.0%

• **LIMIT OF ANIONIC DETERGENTS**
Standard solution: Transfer 50 mL of water and 1 mL of a solution of sodium lauryl sulfate containing 150 µg/mL to a 125-mL separator.
Sample solution: Mix 20 mL of a solution containing 10 mg/mL of Tyloxapol with 30 mL of water in a 125-mL separator.
Analysis: To both separators add 2 drops of 3 N hydrochloric acid, 1 drop of methylene blue solution (1 in 25), and 25 mL of chloroform. Shake both separators gently for 2 min, allow to stand for 10 min, and transfer the chloroform layers to individual separators. Wash the chloroform extracts with separate 25-mL portions of water, transfer the chloroform solutions to matched 50-mL color-comparison tubes, and view downward over a white surface.
Acceptance criteria: The chloroform solution from the *Sample solution* is not darker than that from the *Standard solution*, corresponding to NMT 0.075% of anionic detergents (as sodium lauryl sulfate).

• **LIMIT OF ETHYLENE OXIDE**
Standard solution
[**CAUTION**—Ethylene oxide is toxic and flammable. Prepare in a well-ventilated hood, using great care.]
Transfer 25 mL of dimethylformamide to a 50-mL volumetric flask and weigh. Add 0.5 mL of ethylene oxide. Reweigh to obtain the weight of ethylene oxide by difference. Dilute with dimethylformamide to volume. Dilute a portion of this solution with dimethylformamide to obtain a solution having a concentration of 10 µg/g of ethylene oxide.
Sample solution: Transfer 1 g of Tyloxapol into a glass-stoppered, 5-mL graduated cylinder. Dilute with dimethylformamide to 2.0 mL.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: GC
Detector: Flame ionization
Column: 1.8-m × 2-mm glass column containing 5% phase G16 on support S12
Temperatures
Injection port: 200°
Detector: 250°
Column: See *Table 1*.

Table 1

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold at Final Temperature (min)
50	0	50	3
50	25	200	5

Carrier gas: Helium
Flow rate: 25 mL/min
Injection volume: 3 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 10%
Analysis
Samples: *Standard solution and Sample solution*
Calculate the quantity of ethylene oxide in the portion of Tyloxapol taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U)$$

r_U = peak response of ethylene oxide from the *Sample solution*
r_S = peak response of ethylene oxide from the *Standard solution*
C_S = concentration of ethylene oxide in the *Standard solution* (µg/mL)
C_U = concentration of Tyloxapol taken in the *Sample solution* (g/mL)

Acceptance criteria: NMT 10 µg/g

• **LIMIT OF FORMALDEHYDE**
Diluent: Isopropyl alcohol and water (4 in 10)
Standard solution: Transfer 750 µL of a solution containing 27 µg/mL of formaldehyde to a 25-mL volumetric flask containing 5 mL of *Diluent*.
Sample solution: Prepare a solution containing 200 mg/mL of Tyloxapol in *Diluent*. Transfer 500 µL of this solution to a 25-mL volumetric flask containing 5 mL of *Diluent*.
Instrumental conditions
(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)
Mode: Vis
Analytical wavelength: 520 nm
Cell: 1 cm
Analysis
Samples: *Standard solution, Sample solution,* and blank
To the *Standard solution*, the *Sample solution*, and a blank (prepared by placing 5 mL of *Diluent* in a 25-mL volumetric flask) add 500 µL of phenylhydrazine hydrochloride solution (7.5 in 100). Mix, and allow to stand for 10 ± 1 min. Add 300 µL of potassium ferricyanide solution (50 mg/mL) to each flask, mix, and allow to stand for 5 min ± 30 s. Then add 2.0 mL of 2.5 N sodium hydroxide to each. Mix, and allow to stand for 4 ± 1 min. Dilute each flask with *Diluent* to volume, mix, and read the absorbances after 10 ± 3 min.
Acceptance criteria: NMT 0.0075%; the absorbance of the *Sample solution* does not exceed that of the *Standard solution*.

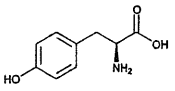
• **FREE PHENOL**
Sample solution: 10 mg/mL
Analysis: To 10 mL of *Sample solution* add 1 mL of bromine TS, and mix.
Acceptance criteria: No cloudiness or precipitation is observed immediately.

• **ABSENCE OF CATIONIC DETERGENTS**
Sample solution: 10 mg/mL
Analysis: Place 10 mL of the *Sample solution* in a glass-stoppered, 50-mL graduated cylinder, and make distinctly alkaline to litmus with sodium carbonate TS (about 1 mL). Add 4 mL of aqueous bromophenol blue solution (0.4 mg/mL), mix, and add 10 mL of a 1-in-10 solvent mixture of ethylene dichloride in toluene. Shake gently, and allow the layers to separate.
Acceptance criteria: No blue color is observed in the organic solvent layer.

SPECIFIC TESTS

• **CLOUD POINT**
Sample solution: Transfer 1.0 g of Tyloxapol, previously mixed, to a 150-mL beaker. Add 100.0 mL of water, and mix until dissolved. Warm the solution while mixing.

USP Monographs



www.webofpharma.com

Analysis: Transient turbidity may be observed as the solution is warmed. Determine the temperature at which the mixture becomes completely turbid.
Acceptance criteria: The cloud point is between 92° and 97°.

• **pH** ⟨791⟩
Sample solution: 50 mg/mL
Acceptance criteria: 4.0–7.0

ADDITIONAL REQUIREMENTS
• **Packaging and Storage:** Preserve in tight containers.
• **USP Reference Standards** ⟨11⟩
USP Tyloxapol RS

Tyrosine

$C_9H_{11}NO_3$ 181.19
L-Tyrosine [60-18-4].

DEFINITION
Tyrosine contains NLT 98.5% and NMT 101.5% of L-tyrosine ($C_9H_{11}NO_3$), calculated on the dried basis.

IDENTIFICATION

Change to read:

• **A. ▲Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

ASSAY
• **Procedure**
Sample: 180 mg of Tyrosine
Blank: Mix 6 mL of formic acid and 50 mL of glacial acetic acid.
Titrimetric system
(See *Titrimetry* ⟨541⟩.)
Mode: Direct titration
Titrant: 0.1 N perchloric acid VS
Endpoint detection: Potentiometric
Analysis: Dissolve the *Sample* in 6 mL of formic acid and 50 mL of glacial acetic acid, and titrate with the *Titrant*. Perform the *Blank* determination.
Calculate the percentage of tyrosine ($C_9H_{11}NO_3$) in the *Sample* taken:

$$\text{Result} = \{[(V_S - V_B) \times N \times F]/W\} \times 100$$

V_S = volume of *Titrant* consumed by the *Sample* (mL)
V_B = volume of *Titrant* consumed by the *Blank* (mL)
N = actual normality of the *Titrant* (mEq/mL)
F = equivalency factor, 181.2 mg/mEq
W = *Sample* weight (mg)

Acceptance criteria: 98.5%–101.5% on the dried basis

IMPURITIES
• **Residue on Ignition** ⟨281⟩: NMT 0.4%
• **Chloride and Sulfate,** *Chloride* ⟨221⟩
Standard solution: 0.20 mL of 0.020 N hydrochloric acid
Sample: 0.35 g of Tyrosine. [Note—If necessary, dissolve the *Sample* by heating to near boiling and adding 1 mL of nitric acid.]
Acceptance criteria: NMT 0.04%
• **Chloride and Sulfate,** *Sulfate* ⟨221⟩
Standard solution: 0.50 mL of 0.020 N sulfuric acid
Sample: 1.2 g of Tyrosine. [Note—If necessary, dissolve the *Sample* by adding 6 mL of diluted hydrochloric acid.]
Acceptance criteria: NMT 0.04%
• **Iron** ⟨241⟩: NMT 30 ppm. [Note—If necessary, use 2 mL of hydrochloric acid to dissolve the *Sample*.]
• **Related Compounds**
Diluted ammonia solution: Dilute 16 mL of concentrated ammonia with water to 100 mL.
System suitability solution: Dissolve 10 mg of USP L-Tyrosine RS and 10 mg of USP L-Phenylalanine RS in 1 mL of *Diluted ammonia solution*, and dilute with water to 25.0 mL.
Standard solution: In a suitable flask, dissolve a quantity of USP L-Tyrosine RS in 1 mL of *Diluted ammonia solution*. Dilute with water to volume to obtain a solution of 0.05 mg/mL. [Note—This solution has a concentration equivalent to 0.5% of that of the *Sample solution*.]
Sample solution: Transfer 0.1 g of Tyrosine into a 10-mL volumetric flask, add sufficient *Diluted ammonia solution* to dissolve, and dilute with water to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture
Application volume: 5 µL
Developing solvent system: Isopropyl alcohol and ammonium hydroxide (7:3)
Spray reagent: 2 mg/mL of ninhydrin in a mixture of butyl alcohol and 2 N acetic acid (95:5)
System suitability
Suitability requirements: The chromatogram of the *System suitability solution* exhibits two clearly separated spots.
Analysis
Samples: *System suitability solution*, *Standard solution*, and *Sample solution*
Dry the plate between 100° and 105° until the ammonia disappears completely. Spray with *Spray reagent*, and heat between 100° and 105° for 15 min. Examine the plate under white light.
Acceptance criteria: Any secondary spot of the *Sample solution* is not larger or more intense than the principal spot of the *Standard solution*.
Any individual impurity: NMT 0.5%
Total impurities: NMT 2.0%

SPECIFIC TESTS
• **Optical Rotation,** *Specific Rotation* ⟨781S⟩
Sample solution: 50 mg/mL in 1 N hydrochloric acid
Acceptance criteria: −9.8° to −11.2°
• **Loss on Drying** ⟨731⟩: Dry a sample at 105° for 3 h: it loses NMT 0.3% of its weight.

ADDITIONAL REQUIREMENTS
• **Packaging and Storage:** Preserve in well-closed containers.
• **USP Reference Standards** ⟨11⟩
USP L-Phenylalanine RS
USP L-Tyrosine RS

www.webofpharma.com

Tyrothricin

» Tyrothricin is an antibacterial substance produced by the growth of *Bacillus brevis* Dubos (Fam. *Bacteriaceae*). It consists principally of gramicidin and tyrocidine, the tyrocidine usually being present as the hydrochloride. It contains not less than 900 µg and not more than 1400 µg of tyrothricin per mg.

Packaging and storage—Preserve in tight containers.
USP Reference standards ⟨11⟩—
USP Gramicidin RS
Identification—Add about 5 mg to 5 mL of *p*-dimethylaminobenzaldehyde TS, and shake for 2 minutes. Add 2 drops of sodium nitrite solution (1 in 150) and 5 mL of water, and mix: a blue color is produced.
Loss on drying ⟨731⟩—Dry about 100 mg, accurately weighed, in a capillary-stoppered bottle in vacuum at a pressure not exceeding 5 mm of mercury at 60° for 3 hours: it loses not more than 5.0% of its weight.
Assay—Proceed as directed for gramicidin under *Antibiotics—Microbial Assays* ⟨81⟩, using a suitable, accurately weighed portion of Tyrothricin dissolved quantitatively in alcohol to yield a stock solution of convenient concentration. Dilute an accurately measured volume of this solution quantitatively and stepwise with alcohol to obtain a *Test Dilution* having a concentration of tyrothricin assumed to be 5.0 times the median dose level of the gramicidin Standard. Multiply the result of the gramicidin assay by 5.0 to obtain the amount of tyrothricin, in µg, in each mL of the *Test Dilution*.

Undecylenic Acid

$C_{11}H_{20}O_2$ 184.28
10-Undecenoic acid.
10-Undecenoic acid [112-38-9].

» Undecylenic Acid contains not less than 97.0 percent and not more than 100.5 percent of $C_{11}H_{20}O_2$.

Packaging and storage—Preserve in tight, light-resistant containers.

Identification—
A: To 1 mL add potassium permanganate TS, dropwise: the permanganate color is discharged.
B: Place 3 mL of it and 3 mL of freshly distilled aniline in a tall test tube, and heat for 10 minutes at a rate such that the ring of condensate remains just below the mouth of the tube. Cool, add 10 mL of alcohol and 10 mL of ether, and transfer to a separator. Wash the ether solution with four 20-mL portions of water, and discard the water washings. Heat on a steam bath until the odor of ether no longer is perceptible, then add a few mg of activated carbon, mix, and filter. Evaporate the filtrate nearly to dryness, and recrystallize the residue from 70 percent alcohol: the anilide so obtained melts between 66° and 67.5°.

Specific gravity ⟨841⟩: between 0.910 and 0.913.
Congealing range ⟨651⟩: not lower than 21°.
Refractive index ⟨831⟩: between 1.447 and 1.448.
Residue on ignition ⟨281⟩: not more than 0.15%.
Water-soluble acids—Shake 5 mL with 5 mL of water, and filter the water layer through a filter paper previously moistened with water. Add 1 drop of methyl orange TS, and titrate with 0.01 N sodium hydroxide VS: not more than 1.0 mL of 0.010 N sodium hydroxide is required to match the color produced by 1 drop of methyl orange TS in 5 mL of water.
Iodine value ⟨401⟩: between 131 and 138.
Assay—Dissolve about 750 mg of Undecylenic Acid, accurately weighed, in 50 mL of alcohol, add 3 drops of phenolphthalein TS, and titrate with 0.1 N sodium hydroxide VS to the first pink color that persists for not less than 30 seconds. Perform a blank determination, and make any necessary correction. Each mL of 0.1 N sodium hydroxide is equivalent to 18.43 mg of $C_{11}H_{20}O_2$.

Compound Undecylenic Acid Ointment

» Compound Undecylenic Acid Ointment contains undecylenic acid, calcium undecylenate, copper undecylenate, or zinc undecylenate, individually or in any combination, in a suitable ointment base. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of total undecylenic acid ($C_{11}H_{20}O_2$).

Packaging and storage—Preserve in tight containers, and avoid prolonged exposure to temperatures exceeding 30°.
USP Reference standards ⟨11⟩—
USP Undecylenic Acid RS

Assay for zinc undecylenate—
Standard preparations—Prepare a solution of freshly ignited zinc oxide in dilute hydrochloric acid (1 in 60) to obtain the equivalent of 1.0 mg of zinc per mL. Dilute quantitatively with water to obtain separate solutions containing the equivalent of 15 and 30 µg of zinc per mL.
Assay preparation—Transfer about 1.0 g of Ointment, accurately weighed, to a 100-mL beaker. Add 25 mL of dilute hydrochloric acid (1 in 20), swirl, and heat carefully until the mixture is liquefied. Cool, and transfer the mixture to a 250-mL separator. Complete the transfer of the waxy residue by thoroughly rinsing the beaker with 50 mL of water and two 50-mL portions of chloroform and adding the rinsings to the separator. Equilibrate the mixture, and transfer the chloroform extract to a 500-mL separator. Extract the aqueous phase with another 100-mL portion of chloroform, combine the second chloroform extract with the main extract in the 500-mL separator, and transfer the aqueous phase to a 200-mL volumetric flask. Wash the combined chloroform extracts with three 25-mL portions of water, add the aqueous washings to the 200-mL volumetric flask, dilute with water to volume, and mix to obtain a specimen stock solution. [NOTE—Retain the chloroform extract for the *Assay for undecylenic acid*.] Transfer 15.0 mL or other suitable volume (see *Procedure*) of this specimen stock solution to a 100-mL volumetric flask, dilute with water to volume, and mix.
Procedure—Aspirate each *Standard preparation* and the *Assay preparation* into the flame of a suitable atomic absorption spectrophotometer, and determine the absorbances of the solutions at 214 nm. Typically, an

www.webofpharma.com

acetylene–air mixture is adjusted to obtain a blue flame about 7 mm in height with a suitable burner that is rotated to a position perpendicular to the light path. [NOTE—If the absorbance of the *Assay preparation* is outside the central 70% of the range between the absorbances of the *Standard preparations*, discard the *Assay preparation* and prepare another by diluting the specimen stock solution quantitatively as necessary to obtain a suitable absorbance.] Calculate the percentage of zinc undecylenate in the Ointment taken by the formula:

$$(M_r/A_r)(0.2/W)C_{S2}+\frac{(C_{S1}-C_{S2})(A_U-A_{S2})}{(A_{S1}-A_{S2})}$$

in which M_r is the molecular weight of zinc undecylenate, 431.94; A_r is the atomic weight of zinc, 65.39; W is the weight, in g, of Ointment taken; A_U, A_{S1}, and A_{S2} are the absorbances of the *Assay preparation* and the high- and low-concentration *Standard preparations*, respectively; and C_{S1} and C_{S2} are the concentrations, in µg per mL, of the high- and low-concentration *Standard preparations*, respectively.

Assay for undecylenic acid—

Internal standard solution—Prepare a solution in chloroform containing 10 mg of tridecanoic acid in each mL.

Standard preparation—Dissolve an accurately weighed quantity of USP Undecylenic Acid RS in chloroform to obtain a solution having a known concentration of about 3.8 mg per mL. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, add 3.0 mL of *Internal standard solution*, dilute with chloroform to volume, and mix.

Assay preparation—Pass the chloroform extract prepared from the Ointment as directed in *Assay for zinc undecylenate* through phase-separating filter paper into a 250-mL volumetric flask. Rinse the separator with three 15-mL portions of chloroform, passing the rinsings through the filter and combining them with the main chloroform solution, add chloroform to volume, and mix. Transfer 20.0 mL of this solution to a 50-mL volumetric flask, add 3.0 mL of *Internal standard solution*, dilute with chloroform to volume, and mix.

Chromatographic system—Under typical conditions, the gas chromatograph is equipped with a flame-ionization detector and contains a 2-mm × 1.8-m glass column packed with 3% liquid phase G1 on 100- to 200-mesh support S1A. The column is maintained at a temperature of about 165°. Dry helium is used as the carrier gas at a flow rate of about 30 mL per minute.

System suitability—Chromatograph five injections of the silylated *Standard preparation*, and record the peak responses as directed for *Procedure*: the resolution, R (see *Chromatography* ⟨621⟩), is not less than 3.0.

Procedure—Transfer 1.0-mL portions of the *Standard preparation* and the *Assay preparation* to separate, stoppered test tubes. To each tube add 50 µL of bis(trimethylsilyl)tri fluoroacetamide, insert the stopper, mix, and allow to stand for 30 minutes. Inject a suitable portion (2 to 5 µL) of the *Standard preparation* into a suitable gas chromatograph, and record the chromatogram so as to obtain not less than 50% of maximum recorder response. Similarly inject a suitable portion of the *Assay preparation*, and record the chromatogram. Measure the peak responses for the first (undecylenic acid) and second (tridecanoic acid) peaks of the chromatograms. [NOTE—Relative retention times are, approximately, 0.43 for undecylenic acid and 1.0 for tridecanoic acid.] Calculate the percentage of total undecylenic acid in the Ointment taken by the formula:

$$62.5(C / W)(R_U / R_S)$$

in which C is the concentration, in mg per mL, of USP Undecylenic Acid RS in the *Standard preparation*; W is the weight, in g, of Ointment taken; and R_U and R_S are the ratios of the peak responses of undecylenic acid to those of tridecanoic acid from the *Assay preparation* and the *Standard preparation*, respectively. The difference between the total undecylenic acid and the undecylenic acid equivalent to the determined zinc undecylenate (the weight of zinc undecylenate multiplied by 0.8533 gives the equivalent of undecylenic acid), both expressed as a percentage of the Ointment, gives the percentage of free undecylenic acid in the Ointment, gives the percentage of free undecylenic acid in the Ointment.

Urea

CH_4N_2O 60.06

Urea;
Carbamide [57-13-6].

DEFINITION

Urea contains NLT 98.0% and NMT 102.0% of urea (CH_4N_2O).

IDENTIFICATION

Standard solution: 0.5 mg/mL of USP Urea RS in water

Sample solution: Transfer 0.25 mL of Irrigation into a 100-mL volumetric flask, and add water to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 192 nm

Column: 4.6-mm × 25-cm; 5-µm packing L96

Temperatures

Autosampler: 4°

Column: 25°

Flow rate: 1.0 mL/min

Injection volume: 8 µL

System suitability

Sample: *Standard solution*

[NOTE—The retention time for urea is about 3.3 min.]

Suitability requirements

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0% for replicate injections

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of urea (CH_4N_2O) in the portion of Irrigation taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of urea from the *Sample solution*

r_S = peak response of urea from the *Standard solution*

C_S = concentration of USP Urea RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of urea in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **pH** ⟨791⟩**:** 6.5–9.0

• **STERILITY TESTS** ⟨71⟩, *Test for Sterility of the Product to Be Examined, Membrane Filtration***:** It meets the requirements.

• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** NMT 0.003 USP Endotoxin Units/mg

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in sterile, single-dose plastic bottles. Store at controlled room temperature or in a refrigerator.

Change to read:

• **BEYOND-USE DATE:** ▲In the absence of passing a sterility test and endotoxins test, the BUDs in ⟨797⟩ apply. If prepared as a Category 2 CSP and a sterility test and endotoxins test is passed, NMT 60 days after the date on which it was compounded when stored at controlled room temperature or in a refrigerator.▲ (CN 1-May-2020)

• **LABELING:** Label it to state the *Beyond-Use Date*.

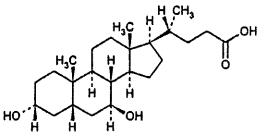
• **USP REFERENCE STANDARDS** ⟨11⟩

USP Urea RS

Urea for Injection

» Urea for Injection is Urea suitable for parenteral use.

Packaging and storage—Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*.



Completeness of solution ⟨641⟩—A 1.0-g portion dissolves in 10 mL of carbon dioxide-free water to yield a clear solution.

Constituted solution—At the time of use, it meets the requirements for *Injections and Implanted Drug Products* ⟨1⟩, *Specific Tests, Completeness and clarity of solutions*.

Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 0.003 USP Endotoxin Unit per mg of urea.

Other requirements—It responds to the *Identification* tests and meets the requirements for *Melting range, Residue on ignition, Alcohol-insoluble matter, Chloride, Sulfate*, and *Assay* under *Urea*. It meets also the requirements for *Sterility Tests* ⟨71⟩, *Uniformity of Dosage Units* ⟨905⟩, and *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*.

Ursodiol

$C_{24}H_{40}O_4$ 392.57

Cholan-24-oic acid, 3,7-dihydroxy-, (3α,5β,7β)-.

3α,7β-Dihydroxy-5β-cholan-24-oic acid [128-13-2].

» Ursodiol contains not less than 98.5 percent and not more than 101.5 percent of $C_{24}H_{40}O_4$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers.

USP Reference standards ⟨11⟩—

USP Ursodiol RS

Change to read:

Identification, ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

Melting range ⟨741⟩**:** between 200° and 205°.

Specific rotation ⟨781S⟩**:** between 57° and 62°.

Test solution: 20 mg per mL, in alcohol.

Loss on drying ⟨731⟩—Dry it at 105° for 3 hours: it loses not more than 0.5% of its weight.

Residue on ignition ⟨281⟩**:** not more than 0.1%.

Related compounds—

Adsorbent: 0.25-mm layer of chromatographic silica gel.

Solvent—Prepare a mixture of acetone and water (9:1).

Standard solution 1—Prepare a solution of chenodiol in *Solvent* containing 600 µg per mL.

Standard solution 2—Prepare a solution of lithocholic acid in *Solvent* containing 20 µg per mL.

Test solution—Prepare a solution of Ursodiol in *Solvent* containing 40 mg per mL.

www.webofpharma.com

Diluted test solution—Quantitatively dilute 1 mL of the *Test solution* with *Solvent* to obtain a solution having a concentration of 40 µg per mL.

Developing solvent system: a mixture of chloroform, glacial acetic acid, and water (85: 15: 0.5)

Spray reagent: phosphomolybdic acid TS.

Procedure—Separately apply 10 µL each of *Standard solution 1, Standard solution 2,* the *Test solution,* and the *Diluted test solution* to a thin-layer chromatographic plate (see *Thin Layer Chromatography* under *Chromatography* ⟨621⟩), and proceed as directed in the chapter, allowing the solvent front to move about three-fourths of the length of the plate. Remove the plate from the developing chamber, mark the solvent front, and air-dry the plate. Spray the plate with phosphomolybdic acid TS, dry at 105° for 5 minutes, and examine the plate: any secondary spot in the chromatogram of the *Test solution* having the same R_F value as the principal spot from *Standard solution 1* is not greater in size or intensity than that obtained from *Standard solution 1:* not more than 1.5% of chenodiol is found. No secondary spot observed in the chromatogram of the *Test solution* having the same R_F value as the principal spot from *Standard solution 2* is greater in size or intensity than that obtained from *Standard solution 2:* not more than 0.05% of lithocholic acid is found. No other secondary spot observed in the chromatogram of the *Test solution* is greater in size or intensity than the principal spot obtained from the *Diluted test solution:* not more than 0.1% of any other impurity is found.

Assay—

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and water (55:45). Adjust with 0.6 M phosphoric acid to a pH of 3.0. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Internal standard solution—Dissolve an accurately weighed quantity of epiandrosterone in methanol to obtain a solution having a concentration of about 4 mg per mL. Dilute a portion of this solution quantitatively with *Mobile phase* to obtain a solution having a concentration of about 0.8 mg per mL.

Standard preparation—Dissolve an accurately weighed quantity of USP Ursodiol RS in methanol, and dilute quantitatively, and stepwise if necessary, with methanol to obtain a solution having a known concentration of about 4 mg per mL. Transfer this solution to a suitable container, and dilute with *Mobile phase* to give a solution having a known concentration of about 0.8 mg of ursodiol per mL. Transfer equal volumes of this solution and the *Internal standard solution* to a suitable container, and mix.

Assay preparation—Transfer about 100 mg of Ursodiol, accurately weighed, to a 25-mL volumetric flask, dissolve in and dilute with methanol to volume. Transfer 5.0 mL of this solution to a 25-mL volumetric flask, dilute with *Mobile phase* to volume, and mix. Transfer equal volumes of this solution and the *Internal standard solution* to a suitable container, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a differential refractive index detector and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1.0 mL per minute. Both the detector temperature and the column temperature are maintained at 40°. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative retention times are about 0.74 for ursodiol and 1.0 for epiandrosterone; the resolution, *R,* between ursodiol and epiandrosterone is not less than 3.8 (If the resolution specification is not met, increase the water content of the *Mobile phase*); and the relative standard deviation for replicate injections is not more than 1.0%.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{24}H_{40}O_4$ in the portion of Ursodiol taken by the formula:

$$250C(R_U/R_S)$$

in which C is the concentration, in mg per mL, of USP Ursodiol RS in the *Standard preparation;* and R_U and R_S are the ratios of the ursodiol peak to the internal standard peak obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Ursodiol Capsules

» Ursodiol Capsules contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ursodiol ($C_{24}H_{40}O_4$).

Packaging and storage—Preserve in well-closed containers.

USP Reference standards ⟨11⟩—
USP Ursodiol RS

Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* both relative to the internal standard, as obtained in the *Assay.*

Dissolution ⟨711⟩—

Medium: 0.05 M pH 8.4 phosphate buffer, prepared by mixing 250 mL of 0.2 M monobasic potassium phosphate, 280 mL of 0.2 M potassium hydroxide, and 5 mL of 2% sodium lauryl sulfate solution. Adjust with 0.2 M potassium hydroxide to a pH of 8.4, and dilute with water to 1000 mL; 1000 mL.

Apparatus 2: 75 rpm.

Time: 30 minutes.

Determine the amount of ursodiol ($C_{24}H_{40}O_4$) dissolved by employing the following method.

Mobile phase—Prepare a filtered and degassed mixture of acetonitrile and 0.075 M monobasic potassium phosphate (50:50). Adjust with 85% phosphoric acid to a pH of 3.0. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard solution—Dissolve an accurately weighed quantity of USP Ursodiol RS, and dilute quantitatively, and stepwise if necessary, with *Medium* to obtain a solution having a known concentration equivalent to that expected in the solution under test.

Test solution—Use a filtered portion of the solution under test.

Chromatographic system—The liquid chromatograph is equipped with a refractive index detector, a guard column that contains packing L1, and a 3.9-mm × 30-cm column that contains packing L1. The flow rate is about 1 mL per minute, and the column and detector temperatures are maintained at 40°. Chromatograph the *Standard solution,* and record the peak responses as directed for *Procedure:* the tailing factor of the ursodiol peak is not more than 1.7; and the relative standard deviation for replicate injections is not more than 2%.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the percentage of $C_{24}H_{40}O_4$ dissolved by the formula:

USP Monographs

www.webofpharma.com

$$100{,}000(r_U/r_S)(C/W)$$

in which r_U and r_S are the peak responses obtained from the *Test solution* and the *Standard solution*, respectively; C is the concentration, in mg per mL, of USP Ursodiol RS in the *Standard solution;* and W is the labeled amount, in mg, of ursodiol in each Capsule.

Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_{24}H_{40}O_4$ is dissolved in 30 minutes.

Uniformity of dosage units ⟨905⟩**:** meet the requirements for *Weight Variation.*

Assay—

Mobile phase, Internal standard solution, Standard preparation, and *Chromatographic system*—Proceed as directed in the *Assay* under *Ursodiol.*

Assay preparation—Accurately weigh the contents of not fewer than 20 Capsules, and mix. Transfer an accurately weighed portion of the powder, equivalent to about 200 mg of ursodiol, to a 50-mL volumetric flask. Add about 40 mL of methanol, and sonicate for about 15 minutes. Cool the mixture to room temperature, dilute with methanol to volume, and centrifuge a portion of this mixture. Transfer 5.0 mL of the clear supernatant to a 25-mL volumetric flask, and dilute with *Mobile phase* to volume. Transfer equal amounts of this solution and the *Internal standard solution* to a suitable container, mix, and filter.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of ursodiol ($C_{24}H_{40}O_4$) in the portion of Capsules taken by the formula:

$$200(C_S/C_U)(R_U/R_S)$$

in which C_S and C_U are the concentrations, in mg per mL, of ursodiol in the *Standard preparation* and the *Assay preparation,* respectively; and R_U and R_S are the ratios of the ursodiol peak to the internal standard peak obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Ursodiol Compounded Oral Suspension

DEFINITION

Ursodiol Compounded Oral Suspension contains NLT 90.0% and NMT 110.0% of the labeled amount of ursodiol ($C_{24}H_{40}O_4$).

Prepare Ursodiol Compounded Oral Suspension 50 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Ursodiol tablets[a] equivalent to	5 g of ursodiol
Vehicle: a 1:1 mixture of Ora-Sweet,[b] (sugar-free) and Ora-Plus[b] a sufficient quantity to make	100 mL

[a] Urso 250-mg tablets, Axcan Pharma U.S. Inc., Birmingham, AL.
[b] Paddock Laboratories, Minneapolis, MN.

Calculate the required quantity of each ingredient for the total amount to be prepared. Place the required number of *Ursodiol tablets* in a suitable mortar, and comminute to a fine powder. Add the *Vehicle* in small portions, and triturate to make a smooth paste. Add increasing volumes of the *Vehicle* to make an ursodiol liquid that is pourable. Transfer the contents of the mortar, stepwise and quantitatively, to a calibrated bottle. Add enough of the *Vehicle* to bring to final volume, and mix well.

ASSAY

• **PROCEDURE**

Mobile phase: Methanol and 0.01 M dihydrogen potassium phosphate buffer (75:25). Adjust with dilute phosphoric acid to a pH of 5.25. Filter, and degas.

Standard solution: 1.25 mg/mL of USP Ursodiol RS in methanol

Sample solution: Shake thoroughly by hand each bottle of Oral Suspension. Prepare 1.25 mg/mL of ursodiol from Oral Suspension and methanol, and centrifuge.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability.*)

Mode: LC

Detector: UV 201 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Column temperature: 40°

Flow rate: 1.2 mL/min

Injection volume: 15 µL

System suitability

Sample: *Standard solution*

[NOTE—The retention time for ursodiol is about 7 min.]

Suitability requirements

Relative standard deviation: NMT 2.0% for replicate injections

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of ursodiol ($C_{24}H_{40}O_4$) in the portion of Oral Suspension taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Ursodiol RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of ursodiol in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **pH** ⟨791⟩**:** 4.0–5.0

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store in a refrigerator or at controlled room temperature.

• **BEYOND-USE DATE:** NMT 90 days after the date on which it was compounded when stored in a refrigerator or controlled room temperature

• **LABELING:** Label it to indicate that it is to be well shaken before use, and to state the *Beyond-Use Date.*

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Ursodiol RS

Ursodiol Tablets

DEFINITION

Ursodiol Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of ursodiol ($C_{24}H_{40}O_4$).

IDENTIFICATION

• **THIN-LAYER CHROMATOGRAPHY**

Standard solution: 1 mg/mL of USP Ursodiol RS in methanol

www.webofpharma.com

Sample solution: Transfer a quantity of finely powdered Tablets, equivalent to about 25 mg of ursodiol, to a conical flask. Add 25.0 mL of methanol, and mix for 20 min. Centrifuge this solution for 10 min at 4000 rpm, and use the clear supernatant.

Chromatographic system
(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture activated for at least 4 h at 105°
Application volume: 25 µL
Developing solvent system: Chloroform, acetone, and acetic acid (7:2:1)
Spray reagent: Dissolve 2.5 g of phosphomolybdic acid in 50 mL of glacial acetic acid. Add 2.5 mL of concentrated sulfuric acid, and mix well.

Analysis: Proceed as directed for *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*. Allow the chromatogram to develop until the solvent front has moved about three-fourths of the length of the plate. Spray the plate lightly with *Spray reagent*. Dry the plate by heating at 105° for about 7 min.

Acceptance criteria: The principal indigo-colored spot of the *Sample solution* corresponds in color and in R_F value to that of the *Standard solution*.

ASSAY

• **PROCEDURE**

Mobile phase: Methanol, water, and phosphoric acid (77:23:0.6)

Internal standard solution: 3.75 mg/mL of propylparaben in *Mobile phase*

Standard solution: 3.75 mg/mL of USP Ursodiol RS in *Internal standard solution*

Sample solution: Weigh and finely powder 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 37.5 mg of ursodiol, to a glass-stoppered conical flask. Add 10.0 mL of *Internal standard solution*, and shake by mechanical means for 15 min. Sonicate at 40° for an additional 15 min, and filter.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: Differential refractive index
Detector temperature: 40°
Column: 4.6-mm × 25-cm; packing L7
Flow rate: 1 mL/min
Injection size: 10 µL

System suitability
Sample: *Standard solution*
[NOTE—The relative retention times for propylparaben and ursodiol are 0.73 and 1.0, respectively.]
Suitability requirements
Resolution: NLT 3.0 between ursodiol and propylparaben
Column efficiency: NLT 1600 theoretical plates
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of $C_{24}H_{40}O_4$ in the portion of Tablets taken:

$$\text{Result} = (R_U/R_S) \times (C_S/C_U) \times 100$$

R_U = ratio of peak responses from the *Sample solution*
R_S = ratio of peak responses from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
C_U = nominal concentration of the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩

Medium: Simulated intestinal fluid TS, prepared without pancreatin and adjusted with 0.1 N sodium hydroxide or 0.1 N hydrochloric acid to a pH of 8.0; 900 mL

IMPURITIES

ORGANIC IMPURITIES

• **Procedure**

Standard solution A: 20 µg/mL of USP Ursodiol RS in methanol
Standard solution B: 10 µg/mL of lithocholic acid in methanol
Standard solution C: 300 µg/mL of chenodeoxycholic acid in methanol
Sample solution: Transfer a quantity of finely powdered Tablets, equivalent to about 250 mg of ursodiol, to a conical flask. Add 25.0 mL of methanol, and mix for 20 min. Centrifuge this solution for 10 min at 4000 rpm, and use the clear supernatant.
Chromatographic system
(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture, activated for at least 4 h at 105°
Application volume: 25 µL of *Standard solutions A*, *B*, and *C*; 50 µL of the *Sample solution*
Developing solvent system: Chloroform, acetone, and acetic acid (7:2:1)
Spray reagent: Dissolve 2.5 g of phosphomolybdic acid in 50 mL of glacial acetic acid. Add 2.5 mL of concentrated sulfuric acid, and mix well.

Analysis: Proceed as directed for *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*. Spray the plate lightly with *Spray reagent*. Dry the plate by heating at 105° for about 7 min.

Acceptance criteria: The spot due to lithocholic acid from the *Sample solution*, if present, is not greater in size and intensity

www.webofpharma.com

than that from *Standard solution B* (0.05%). The spot due to chenodeoxycholic acid from the *Sample solution*, if present, is not greater in size and intensity than that from *Standard solution C* (1.5%). No other unidentified spot in the *Sample solution* is greater in size and intensity than the spot from *Standard solution A* (0.1%).

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store at a temperature between 20° and 25°.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Ursodiol RS

Vaccinia Immune Globulin

» Vaccinia Immune Globulin conforms to the regulations of the FDA concerning biologics (see *Biologics* ⟨1041⟩). It is a sterile, nonpyrogenic solution of globulins derived from the blood plasma of adult human donors who have been immunized with vaccinia virus (Smallpox Vaccine). It is standardized for viral neutralizing activity in eggs or tissue culture with the U.S. Reference Vaccinia Immune Globulin and a specified vaccinia virus. It contains not less than 15 g and not more than 18 g of protein per 100 mL, not less than 90.0 percent of which is gamma globulin. It contains 0.3 M glycine as a stabilizing agent, and contains a suitable antimicrobial agent.

Packaging and storage—Preserve at a temperature between 2° and 8°.
Expiration date—The expiration date is not later than 3 years after date of issue.
Labeling—Label it to state that it is not intended for intravenous injection.

Valacyclovir Compounded Oral Suspension

DEFINITION
Valacyclovir Compounded Oral Suspension contains NLT 90.0% and NMT 110.0% of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$).
Prepare Valacyclovir Compounded Oral Suspension 50 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Valacyclovir tablets[a] equivalent to	5 g of valacyclovir
Vehicle: a 1:1 mixture of Ora-Sweet[b] (regular or sugar-free) and Ora-Plus[b], a sufficient quantity to make	100 mL

[a] Valtrex 500-mg tablets, Glaxo Wellcome Inc., Research Triangle Park, NC.
[b] Paddock Laboratories, Minneapolis, MN.

Calculate the required quantity of each ingredient for the total amount to be prepared. Place the required number of *Valacyclovir tablets* in a suitable mortar, and comminute to a fine powder. Add the *Vehicle* in small portions, and triturate to make a smooth paste. Add increasing volumes of the *Vehicle* to make a valacyclovir liquid that is pourable. Transfer the contents of the mortar, stepwise and quantitatively, to a calibrated bottle. Add enough of the *Vehicle* to bring to final volume, and mix well.

Valacyclovir Tablets

DEFINITION

Valacyclovir Tablets contain an amount of Valacyclovir Hydrochloride equivalent to NLT 90.0% and NMT 110.0% of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$).

IDENTIFICATION

- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution,* as obtained in the *Assay.*
- **B. IDENTIFICATION TESTS—GENERAL,** *Chloride* ⟨191⟩**:** Meet the requirements

ASSAY

- **PROCEDURE**

Diluent: 0.1% (v/v) phosphoric acid in water
Mobile phase: Methanol and *Diluent* (5:95)
Standard solution: 0.1 mg/mL of USP Valacyclovir Hydrochloride RS in *Diluent.* [NOTE—USP Valacyclovir Hydrochloride RS contains a detectable quantity of D-valacyclovir.]
Sample solution: Transfer NLT 5 Tablets into a suitable volumetric flask, and add 0.1 M hydrochloric acid (approximately 80% of the volume of the flask). Mechanically shake the sample until the Tablets disintegrate into a fine suspension (60 min), and sonicate for 10 min. Cool to ambient temperature, dilute with 0.1 M hydrochloric acid to volume, and mix to obtain a solution having a concentration of 2.5 mg/mL. Dilute a portion of the sample with *Diluent* to obtain a nominal concentration of 0.1 mg/mL of valacyclovir, and mix. Pass a portion of this solution through a membrane filter of 0.45-µm or finer pore size, and use the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability.*)
Mode: LC
Detector: UV 254 nm
Column: 4-mm × 15-cm; 5-µm packing L66
Column temperature: 10°
Flow rate: 0.75 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 1.3 between the D-valacyclovir and valacyclovir peaks
Tailing factor: NMT 2.0 for the valacyclovir peak
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Valacyclovir Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of valacyclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valacyclovir, 324.34
M_{r2} = molecular weight of valacyclovir hydrochloride, 360.80

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩

Test 1
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 2: 50 rpm
Time: 45 min
Diluent: Prepare as directed in the *Assay.*
Mobile phase: Acetonitrile and *Diluent* (5:95)
Standard solution: Prepare a solution in *Diluent* containing USP Valacyclovir Hydrochloride RS equivalent to 0.044 mg/mL of valacyclovir free base.
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size. Dilute with *Diluent* to obtain a final concentration of about 0.044 mg/mL of valacyclovir free base considering complete dissolution of the Tablet label claim.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability.*)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 5-cm, 5-µm packing L1
Flow rate: 2.0 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (M_{r1}/M_{r2}) \times (1/L) \times D \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Valacyclovir Hydrochloride RS in the *Standard solution* (mg/mL)
V = volume of *Medium,* 900 mL
M_{r1} = molecular weight of valacyclovir, 324.34
M_{r2} = molecular weight of valacyclovir hydrochloride, 360.80
L = label claim (mg/Tablet)
D = dilution factor of the *Sample solution*

Tolerances: NLT 75% (*Q*) of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) is dissolved.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2.*
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 2: 50 rpm
Time: 45 min
Instrumental conditions
(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)
Analytical wavelength: 252 nm
Cell: 0.02 cm
Blank: *Medium*
Standard solution
For Tablets labeled to contain 500 mg: 0.6 mg/mL of USP Valacyclovir Hydrochloride RS in *Medium.* A small volume of methanol, not exceeding 5% of the final volume, may be used to help solubilize valacyclovir.
For Tablets labeled to contain 1000 mg: 1.2 mg/mL of USP Valacyclovir Hydrochloride RS in *Medium.* A small volume of methanol, not exceeding 5% of the final volume, may be used to help solubilize valacyclovir.

www.webofpharma.com

Sample solution: Pass a portion of the solution under test through a filter of 0.45-µm pore size. Discard the first 3 mL of sample filtrate.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (M_{r1}/M_{r2}) \times (1/L) \times D \times 100$$

r_U = absorbance of the *Sample solution*
r_S = absorbance of the *Standard solution*
C_S = concentration of USP Valacyclovir Hydrochloride RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 900 mL
M_{r1} = molecular weight of valacyclovir, 324.34
M_{r2} = molecular weight of valacyclovir hydrochloride, 360.80
L = label claim (mg/Tablet)
D = dilution factor of the *Sample solution*

Tolerances: NLT 80% (Q) of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩

Procedure for content uniformity

[NOTE—All of the concentrations are expressed as valacyclovir free base.]

Diluent: Prepare as directed in the *Assay*.

Mobile phase: Acetonitrile and *Diluent* (5:95)

Standard solution: Prepare a solution of USP Valacyclovir Hydrochloride RS, equivalent to 0.04 mg/mL of valacyclovir, in *Diluent*.

Sample solution: Transfer 1 Tablet into a suitable volumetric flask. Add *Diluent* (approximately 60% of the volume of the flask), and mechanically shake the samples until the Tablet disintegrates into a fine suspension, and sonicate for 10 min. Cool, dilute with *Diluent* to volume, and mix. Dilute a portion of each sample with *Diluent* to obtain a nominal concentration of 0.04 mg/mL of valacyclovir. Pass a portion of each sample through a membrane filter of 0.45-µm pore size, and use the filtrate.

Chromatographic system and **System suitability:** Proceed as directed in *Dissolution*, *Test 1*.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of valacyclovir ($C_{13}H_{20}N_6O_4$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Valacyclovir Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of valacyclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valacyclovir, 324.34
M_{r2} = molecular weight of valacyclovir hydrochloride, 360.80

Acceptance criteria: Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Diluent, Mobile phase, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of D-valacyclovir and acyclovir in the portion of Tablets taken:

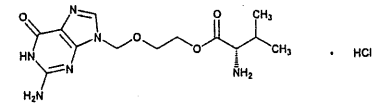
$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times (1/F) \times 100$$

r_U = peak response of D-valacyclovir or acyclovir from the *Sample solution*
r_S = peak response of USP Valacyclovir Hydrochloride RS from the *Standard solution*
C_S = concentration of valacyclovir hydrochloride in the *Standard solution* (mg/mL)
C_U = nominal concentration of valacyclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valacyclovir, 324.34
M_{r2} = molecular weight of valacyclovir hydrochloride, 360.80
F = relative response factor (see *Table 1*)

Acceptance criteria

Individual impurities: See *Table 1*.

Table 1



Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
D-Valacyclovir[a]	0.82	1.0	—
Acyclovir[b]	0.56	1.4	2.5

[a] D-Valine, 2-[(2-amino-1,6-dihydro-6-oxo-9*H*-purin-9-yl)methoxy] ethyl ester, monohydrochloride. [NOTE—This is a process impurity.]
[b] 2-Amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one (acyclovir).

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers. Store at controlled room temperature.
• **LABELING:** When more than one *Dissolution* test is given, the labeling states the test used only if *Test 1* is not used.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Valacyclovir Hydrochloride RS

Valacyclovir Hydrochloride

$C_{13}H_{20}N_6O_4 \cdot HCl$ 360.80

L-Valine, 2-[(2-amino-1,6-dihydro-6-oxo-9*H*-purin-9-yl) methoxy] ethyl ester, monohydrochloride;
L-Valine, ester with 9-[(2-hydroxyethoxy)methyl]guanine, monohydrochloride [124832-27-5].

DEFINITION

Valacyclovir Hydrochloride contains NLT 95.0% and NMT 102.0% of $C_{13}H_{20}N_6O_4 \cdot HCl$, calculated on the anhydrous and solvent-free basis.

IDENTIFICATION

USP Monographs

www.webofpharma.com

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

• **C. IDENTIFICATION TESTS—GENERAL,** *Chloride* ⟨191⟩
Sample solution: 50 mg/mL in water
Acceptance criteria: Meets the requirements

ASSAY

• **PROCEDURE**
Mobile phase: Methanol, water, and perchloric acid (1:19:0.1)
Standard solution: 0.5 mg/mL of USP Valacyclovir Hydrochloride RS in 0.05 M hydrochloric acid. [NOTE—USP Valacyclovir Hydrochloride RS contains a detectable quantity of D-valacyclovir.]
Sample solution: 0.5 mg/mL of Valacyclovir Hydrochloride in 0.05 M hydrochloric acid
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4-mm × 15-cm; 5-µm packing L66
Column temperature: 10°
Flow rate: 0.75 mL/min
Injection size: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 2.0 between valacyclovir hydrochloride and D-valacyclovir
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of valacyclovir hydrochloride ($C_{13}H_{20}N_6O_4 \cdot HCl$) in the portion of Valacyclovir Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of valacyclovir from the *Sample solution*
r_S = peak response of valacyclovir from the *Standard solution*
C_S = concentration of USP Valacyclovir Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Valacyclovir Hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–102.0% on the anhydrous and solvent-free basis

IMPURITIES

• **RESIDUE ON IGNITION** ⟨281⟩**:** NMT 0.1% on a 2-g sample

• **LIMIT OF PALLADIUM** (if present)
(See *Plasma Spectrochemistry* ⟨730⟩.)
Diluent: Water and nitric acid (99.8:0.2)
Blank solution: *Diluent*
Standard solutions: Dilute with *Diluent* any commercially available standard stock solution of 1 mg/mL of palladium to prepare the following solutions: 0.03 µg/mL, 0.19 µg/mL, 0.30 µg/mL, 0.38 µg/mL, 0.75 µg/mL, and 1.13 µg/mL of palladium.
Sample solution: 30 mg/mL of Valacyclovir Hydrochloride in *Diluent*
Analytical wavelength: 340.458 nm
Spectrophotometric system: Use a suitable standard inductively coupled plasma–optical emission spectrophotometric system, and construct a calibration curve.
System suitability
Samples: *Blank solution* and *Standard solutions*
Suitability requirements
Relative standard deviation: NMT 10.0%, *Standard solutions*
Correlation coefficient: NLT 0.995, *Blank solution* and *Standard solutions*
Analysis
Samples: *Blank solution* and *Sample solution*
Calculate the concentration of palladium using the calibration curve corrected for the emission response of the *Blank solution* and sample weight. Calculate the amount of palladium in the Valacyclovir Hydrochloride taken to prepare the *Sample solution*.
Acceptance criteria: NMT 10 ppm

• **ORGANIC IMPURITIES, PROCEDURE 1** (for related compounds E, F, and G)
Developing solvent: Methylene chloride, methanol, tetrahydrofuran, and ammonia solution (54:34:12:3)
Standard stock solution: Transfer 5 mg each of USP Valacyclovir Related Compound D RS and USP Valacyclovir Related Compound G RS, 10 mg of USP Valacyclovir Related Compound E RS, and 8.4 mg of USP Valacyclovir Related Compound F RS into a 10-mL volumetric flask. Add 2 mL of water with swirling, followed by 6 mL of alcohol, and sonicate for 20 min. Allow to cool, and dilute with alcohol to volume.
Standard solutions: Transfer 1.0 and 0.5 mL of the *Standard stock solution* into two separate 10-mL volumetric flasks. Dilute the solution in both flasks with alcohol to volume.
Sample solution: Transfer 250 mg of Valacyclovir Hydrochloride into a 5-mL volumetric flask. Add 2 mL of water, and sonicate for 20 min to dissolve. Add alcohol to about 95% volume of the flask. Cool, and dilute with alcohol to volume. Pass through a suitable filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: TLC
Detector: UV, long and short wavelength
Plate: TLC plate coated with a 0.25-mm layer of chromatographic silica gel mixture. Prewash the plate with methanol.
Developing distance: NLT 7 cm from the origin
Application size: 4 µL
Analysis
Samples: *Standard solutions* and *Sample solution*
Develop the plate to the specified distance. Remove the plate from the solvent chamber, and allow to dry. Examine the plate under short-wavelength UV light, and visually estimate the valacyclovir related compounds E and G in the sample using the appropriate standard spots. The chromatograms obtained with the *Standard solutions* each show three clearly separated spots due to valacyclovir related compounds D, E, and G. Spray the plate with 0.01% fluorescamine in ethylene dichloride, and examine the sprayed plate under long-wavelength UV light to estimate the level of valacyclovir related compound F in the sample using the appropriate standard spot. The relative R_F values and limits for each impurity are provided in *Table 1*.
Acceptance criteria: See *Table 1*.

www.webofpharma.com

Table 1

Name	Relative R_F Value	Acceptance Criteria, NMT (%)
Valacyclovir hydrochloride	1	—
Valacyclovir related compound D[a]	1.1	—
Valacyclovir related compound E[b]	1.3	0.2
Valacyclovir related compound F[c]	1.8	0.1
Valacyclovir related compound G[d]	1.9	0.05

[a] This impurity is quantitated using *Procedure 2*.
[b] 2-[(2-Amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-[(benzyloxy) carbonyl]-L-valinate.
[c] 2-Hydroxyethyl-L-valinate.
[d] *N*,*N*-Dimethylpyridin-4-amine.

• **ORGANIC IMPURITIES, PROCEDURE 2**

Solution A: 0.3% w/w trifluoroacetic acid solution in water
Solution B: 0.3% w/w trifluoroacetic acid solution in methanol
Diluent: Alcohol and water (1:4)
Mobile phase: See *Table 2*.

Valganciclovir Tablets

DEFINITION

Valganciclovir Tablets contain NLT 93.0% and NMT 105.0% of the labeled amount of valganciclovir ($C_{14}H_{22}N_6O_5$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
Sample solution: 10 µg/mL in 0.001 M hydrochloric acid
Wavelength range: 200–350 nm
Medium: 0.001 M hydrochloric acid
Acceptance criteria: Meet the requirements
- **B.** The retention time of the diastereomeric peaks of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Buffer: Dilute 2.5 mL of triethylamine with water to 1000 mL, and adjust with trifluoroacetic acid to a pH of 3.0 ± 0.05.
Mobile phase: Methanol and *Buffer* (7:93)
Diluent: 1 mM hydrochloric acid
System suitability solution: 0.1 µg/mL of USP Ganciclovir Mono-N-methyl Valinate RS and 78 µg/mL of USP Valganciclovir Hydrochloride RS in *Diluent*
Standard solution: 0.09 mg/mL of USP Valganciclovir Hydrochloride RS in *Diluent*. Pass a portion of the solution through a filter of 0.45-µm or finer pore size, and use the filtrate, discarding the initial 2 mL.
Sample stock solution: Nominally 5 mg/mL of valganciclovir hydrochloride prepared as follows. Transfer 5 Tablets into a 500-mL volumetric flask, add about 300 mL of *Diluent*, and shake well until the Tablets are fully disintegrated. Dilute with *Diluent* to volume, mix, and allow the solution to settle.
Sample solution: Nominally 0.075 mg/mL of valganciclovir hydrochloride prepared as follows. Transfer 3.0 mL of the supernatant from the *Sample stock solution* into a 200-mL volumetric flask, and dilute with *Diluent* to volume. Pass a portion of this solution through a filter of 0.45-µm or finer pore size, and use the filtrate, discarding the initial 2 mL.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 15-cm; packing L11
Column temperature: 30°
Flow rate: 1 mL/min
Injection volume: 50 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 2.0 between the second diastereomeric valganciclovir peak and the first ganciclovir mono-*N*-methyl valinate peak, *System suitability solution*
Column efficiency: NLT 3000 theoretical plates for the second diastereomeric valganciclovir peak, *Standard solution*
Tailing factor: NMT 3 for the second diastereomeric valganciclovir peak, *Standard solution*
Relative standard deviation: NMT 2.0% for the total areas of the two valganciclovir peaks, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of valganciclovir ($C_{14}H_{22}N_6O_5$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

www.webofpharma.com

r_U = sum of the peak responses of the valganciclovir diastereomers from the *Sample solution*
r_S = sum of the peak responses of the valganciclovir diastereomers from the *Standard solution*
C_S = concentration of USP Valganciclovir Hydrochloride RS in the *Standard solution*, corrected for water content (mg/mL)
C_U = nominal concentration of valganciclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valganciclovir, 354.36
M_{r2} = molecular weight of valganciclovir hydrochloride, 390.82

Acceptance criteria: 93.0%–105.0%

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩

Medium: 0.1 N hydrochloric acid; 900 mL, deaerated
Apparatus 2: 50 rpm
Time: 30 min
Standard stock solution: 5 mg/mL of valganciclovir in *Medium*. Expose the USP Valganciclovir Hydrochloride RS to ambient conditions overnight, and determine the water content before use.
Standard solution: 0.5 mg/mL of valganciclovir in *Medium* from the *Standard stock solution*. Pass a portion of this solution through a polyethylene filter of 10-µm pore size, discarding the first 2 mL of the filtrate.
Sample solution: Pass 10 mL of the solution under test through a polyethylene filter of 10-µm pore size, discarding the first 2 mL of the filtrate. Suitably dilute with *Medium*, if necessary, in comparison with the *Standard solution*.
Instrumental conditions
(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)
Mode: UV
Analytical wavelength: Absorption maximum at about 254 nm
Cell length: 0.02 cm quartz cell
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of valganciclovir ($C_{14}H_{22}N_6O_5$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times (M_{r1}/M_{r2}) \times D \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Valganciclovir Hydrochloride RS in the *Standard solution*, corrected for water content (mg/mL)
L = label claim of valganciclovir (mg/Tablet)
V = volume of *Medium*, 900 mL
M_{r1} = molecular weight of valganciclovir, 354.36
M_{r2} = molecular weight of valganciclovir hydrochloride, 390.82
D = dilution factor

Tolerances: NLT 80% (Q) of the labeled amount of valganciclovir ($C_{14}H_{22}N_6O_5$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩

Procedure for content uniformity
Mobile phase, Diluent, System suitability solution, Standard solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.
Sample solution: Transfer 1 Tablet to a 100-mL volumetric flask, add about 80 mL of *Diluent*, and sonicate until the Tablet is fully disintegrated. Dilute with *Diluent* to volume, mix, and allow the solution to settle. Pipet 3.0 mL of the top portion of the resulting solution into a 200-mL volumetric flask, and dilute with *Diluent* to volume. Pass a portion of the solution through a filter of 0.45-µm or finer pore size, and use the filtrate, discarding the initial 2 mL.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of valganciclovir ($C_{14}H_{22}N_6O_5$) in the Tablet taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = sum of the peak responses of the valganciclovir diastereomers from the *Sample solution*
r_S = sum of the peak responses of the valganciclovir diastereomers from the *Standard solution*
C_S = concentration of USP Valganciclovir Hydrochloride RS in the *Standard solution*, corrected for water content (mg/mL)
C_U = nominal concentration of valganciclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valganciclovir, 354.36
M_{r2} = molecular weight of valganciclovir hydrochloride, 390.82

Acceptance criteria: Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase, Diluent, System suitability solution, Standard solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.
Sample solution: Nominally 0.45 mg/mL of valganciclovir prepared as follows. Transfer an equivalent to 450 mg of valganciclovir from finely powdered Tablets (NLT 20) to a 1000-mL volumetric flask. Add about 800 mL of *Diluent*, and sonicate until the solid sample is fully disintegrated. Dilute with *Diluent* to volume. Pass a portion of this solution through a filter of 0.45-µm or finer pore size, and use the filtrate, discarding the initial 2 mL.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of ganciclovir and guanine in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times (1/F) \times 100$$

r_U = peak response of ganciclovir or guanine from the *Sample solution*
r_S = sum of the peak responses of the valganciclovir diastereomers from the *Standard solution*
C_S = concentration of USP Valganciclovir Hydrochloride RS in the *Standard solution*, corrected for water content (mg/mL)
C_U = nominal concentration of valganciclovir in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of valganciclovir, 354.36
M_{r2} = molecular weight of valganciclovir hydrochloride, 390.82
F = relative response factor (see *Table 1*)

Calculate the percentage of each individual unidentified and identified impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_T = sum of all the peak responses from the *Sample solution*

www.webofpharma.com

Acceptance criteria: See *Table 1*.

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)
Solution: 10 µg per mL.
Medium: methanol.

C: A solution in water (1 in 20) meets the requirements of the tests for *Chloride* ⟨191⟩.

Water Determination, *Method I* ⟨921⟩**:** not more than 8.0%, a 100-mg specimen being used.

Residue on ignition ⟨281⟩**:** not more than 0.10%, a 1-g specimen being used.

Limit of isopropyl alcohol—

Internal standard solution—Transfer 100 µL of 1,4-dioxane to a 100-mL volumetric flask, dilute with dimethylformamide to volume, and mix.

Standard stock solution—Transfer 1.0 mL of isopropyl alcohol and 0.1 mL of toluene to a 100-mL volumetric flask, dilute with dimethylformamide to volume, and mix. [NOTE—Toluene is used to verify the system suitability.]

Standard solution—Transfer 2.0 mL of the *Internal standard solution* to a vial. Add 100 µL of *Standard stock solution* to the *Internal standard solution,* and mix.

System suitability solution—Use the *Standard solution.*

Test solution—Transfer between 90 mg to 100 mg of Valganciclovir Hydrochloride, accurately weighed, to a vial. Add 2.0 mL, accurately measured, of *Internal standard solution,* and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The gas chromatograph is equipped with a flame-ionization detector and a 0.53-mm × 30-m capillary column coated with a 3.0-µm phase G43. The carrier gas is helium, flowing at a rate of about 10.5 mL per minute, and the split ratio is (1:15). The chromatograph is programmed as follows. Initially the column temperature is maintained at 40° for 10 minutes, and then the temperature is increased at a rate of 25° per minute to 240°. [NOTE—Condition the column at 240° after each injection for approximately 15 minutes.] The injection port temperature is maintained at about 250°, and the detector temperature is maintained at about 300°. Chromatograph the *System suitability solution* as directed for *Procedure:* the resolution, *R,* between 1,4-dioxane and toluene is not less than 8; the column efficiency, using the 1,4-dioxane peak, is not less than 6000 theoretical plates; and the relative standard deviation of the response area ratios of the isopropyl alcohol peak to the 1,4-dioxane peak for replicate injections is not more than 15%.

Procedure—Separately inject equal volumes (about 0.5 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the peak areas. Calculate the percentages of isopropyl alcohol in

www.webofpharma.com

the portion of Valganciclovir Hydrochloride taken by the formula:

$$100(VC/W)(R_U/R_S)$$

in which V is the volume, in mL, of the *Test solution;* C is the concentration, in mg per mL, of isopropyl alcohol in the *Standard solution;* W is the weight, in mg, of Valganciclovir Hydrochloride taken; and R_U and R_S are the peak area ratios of isopropyl alcohol to the internal standard obtained from the *Test solution* and the *Standard solution,* respectively: not more than 1.0% of isopropyl alcohol is found.

Related compounds—

TEST 1—

Solution A—Use *0.1 M Monobasic ammonium phosphate,* prepare as directed in the *Assay.*

Solution B—Use methanol.

Mobile phase—Use variable mixtures of *Solution A* and *Solution B* as directed for *Chromatographic system* (see *Table 1*). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Prepare as directed in the *Assay.*

Test solution—Use the *Assay preparation.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 15-cm column that contains packing L1. The chromatograph is programmed as shown in *Table 1.*

Table 1

Time (minutes)	*Solution A* (%)	*Solution B* (%)	Elution
0–5	92	8	isocratic
5–15	92→80	8→20	linear gradient
15–30	80→30	20→70	linear gradient

[NOTE—Equilibrate the column with starting *Mobile phase* for at least 15 minutes between injections.] The column temperature is maintained at 25°, and the flow rate is about 1.0 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the first peak of valganciclovir and the methoxymethylguanine peak is not less than 1.0, and the resolution, *R,* between the two peaks for valganciclovir (*R* and *S* esters of L-valine) is not less than 3.0; the column efficiency determined using the second peak of valganciclovir is not less than 8000 theoretical plates; and the tailing factor for the second peak of valganciclovir is not more than 1.4. [NOTE—The typical retention time for the second peak of valganciclovir is between 5 and 8.5 minutes.]

Procedure—Inject about 20 µL of the *Test solution* into the chromatograph, record the chromatogram, and measure the peak responses. The approximate relative retention times for each individual impurity are listed in *Table 3.* Calculate the percentage of each impurity in the portion of Valganciclovir Hydrochloride taken by the formula:

$$100(r_i/F_i)/(\Sigma r_i/F_i)$$

in which the r_i is the area response for each impurity, and F_i is the relative response factor for each individual component listed in *Table 3.* The impurities meet the requirements as specified in *Table 3.*

TEST 2—

Solution A—Dilute 2.5 mL of triethylamine with water to 1000 mL, and adjust with trifluoroacetic acid to a pH of 3.0 ± 0.05. Pass this solution through a filter having a 0.45-µm porosity, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Solution B—Use methanol.

Mobile phase—Use variable mixtures of *Solution A* and *Solution B* as directed for *Chromatographic system* (see *Table 2*). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Prepare as directed in the *Assay.*

Test solution—Use the *Assay preparation.*

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm × 15-cm column that contains packing L11. The chromatograph is programmed as follows in *Table 2.*

Table 2

Time (minutes)	*Solution A* (%)	*Solution B* (%)	Elution
0–10	93	7	isocratic
10–20	93→70	7→30	linear gradient

[NOTE—Equilibrate the column with starting *Mobile phase* for at least 15 minutes between injections.] The column temperature is maintained at 30°, and the flow rate is about 1.0 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the two peaks for valganciclovir (*R* and *S* esters of L-valine) is not less than 1.3; the column efficiency determined using the second peak of valganciclovir is not less than 8000 theoretical plates; and the tailing factor for the second peak of valganciclovir is not more than 1.2. [NOTE—The typical retention time for the second peak of valganciclovir is between 6 and 9 minutes.]

Procedure—Inject about 20 µL of the *Test solution* into the chromatograph, record the chromatogram, and measure the peak responses. Calculate the percentage of ganciclovir mono-*N*-methyl valinate impurity in the portion of Valganciclovir Hydrochloride taken by the formula:

$$100(r_i/F_i)/\Sigma(r_i/F_i)$$

in which r_i is the sum of the area responses of ganciclovir mono-*N*-methyl valinate impurity (diastereomers); and F_i is the relative response factor for this impurity and valganciclovir as given in *Table 3.* The impurity limits meet the requirements specified in *Table 3.*

Diastereomer ratio—Using the chromatogram for *Test 1* in the test for *Related compounds,* calculate the percentage of valganciclovir (*R* and *S* esters of L-valine) by the following formulas:

$$100[r_A/(r_A + r_B)]$$

$$100[r_B/(r_A + r_B)]$$

in which r_A and r_B are the peak responses for valganciclovir (*R* and *S* esters of L-valine), respectively. The diastereomer ratio is (45:55) to (55:45).

Enantiomeric purity of valganciclovir—

Mobile phase—Dissolve 16.2 g of perchloric acid in 1000 mL of water, and mix. Pass this solution through a filter having a 0.5-µm or finer porosity, and degas. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Transfer about 5 mg of USP Valganciclovir Hydrochloride RS and 0.5 mg of USP d-Valganciclovir RS to a 25-mL volumetric flask, dissolve in and dilute with 0.001 N hydrochloric acid to volume, and mix.

www.webofpharma.com

Table 3 (Valganciclovir Hydrochloride)

Component	Common Name	Test Number	Relative Retention Time	Relative Response Factor	Maximum Limit (%)
Valganciclovir	Valganciclovir	1, 2	1.00	1.00	—
A[a]	Ganciclovir	1	0.42	1.4	1.5
B[a]	Guanine	1	0.28	1.9	0.25
C[a]	Methoxymethylguanine	1	0.81	1.0	0.3
D[a, b]	Isovalganciclovir	1	1.26	1.0	0.5
E[a]	Monoacetoxyganciclovir	1	1.36	1.3	0.15
F (other identified impurity)	Bis-valine easter of ganciclovir	1	1.61	0.71	0.1
G[a, b]	Homologue of valganciclovir	1	1.66	1.0	0.25
H	—	1	1.47	1.3	0.1

J (other identified impurity)	Ganciclovir monopropionate	1	2.09	1.1	0.15
K[a]	Valganciclovir dimer (stereoisomer A)	1	2.49	1.0	0.1
L[a]	Valganciclovir dimer (stereoisomer B)	1	2.52	1.0	0.1
M[a]	Valganciclovir dimer (stereoisomer C)	1	2.54	1.0	0.1
N[a, b]	Ganciclovir mono-*N*-methyl valinate	2	1.2	1.0	0.3
Other identified impurity	—	1	—	1.0	0.1 individual; 0.25 total
Unidentified impurity	—	1 and 2	—	1.0	0.1 individual; 0.25 total
Total of all impurities	—	1 and 2	—	—	3.0

[a] Specified impurity.
[b] Reported as the sum of diastereomers.

Test solution—Transfer about 10 mg of Valganciclovir Hydrochloride, accurately weighed, to a 50-mL volumetric flask, dissolve in and dilute with 0.001 N hydrochloric acid to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.0-mm × 15-cm column that contains packing L66. The column temperature is maintained at ambient temperature, and the flow rate is about 0.8 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the second peak of the D-valine ester pair and the first peak of the valganciclovir pair is not less than 3.5; and the column efficiency determined using the second peak of valganciclovir is not less than 1800 theoretical plates.

Procedure—Inject about 20 µL of the *Test solution* into the chromatograph, record the chromatogram, and measure the peak responses. Calculate the enantiomeric purity, in percent, by the following formula:

$$100[r_S/(r_S + r_{IM})]$$

in which r_S is the sum of the peak responses of valganciclovir (*R* and *S* esters of L-valine) and r_{IM} is the sum of the peak responses of the enantiomeric impurities (*R* and *S* esters of D-valine), respectively. The enantiomeric purity is not less than 97.0%.

Assay—

0.10 M Monobasic ammonium phosphate solution—Dissolve 11.5 g of monobasic ammonium phosphate in about 900 mL of water, adjust with phosphoric acid (85%) to a pH of 2.8 ± 0.2, dilute with water to obtain 1000 mL of solution, and mix.

Mobile phase—Prepare a filtered and degassed mixture of *0.10 M Monobasic ammonium phosphate* and methanol (92:8). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Transfer about 10 mg of USP Valganciclovir Hydrochloride RS and 0.5 mg of USP Methoxymethylguanine RS to a 50-mL volumetric flask, dissolve in and dilute with 0.001 N hydrochloric acid to volume, and mix.

Standard preparation—Dissolve an accurately weighed quantity of USP Valganciclovir Hydrochloride RS in 0.001 N hydrochloric acid, and dilute quantitatively, and stepwise if necessary, to obtain a solution having a known concentration of about 0.2 mg per mL.

Assay preparation—Dissolve an accurately weighed quantity of Valganciclovir Hydrochloride in 0.001 N hydrochloric acid, and dilute quantitatively, and stepwise if necessary, to obtain a solution having a concentration of about 0.2 mg per mL.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 4.6-mm ×15-cm column that contains packing L1. The

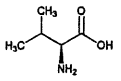
USP Monographs

www.webofpharma.com

column temperature is maintained at 25°, and the flow rate is about 1.0 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* meets the system suitability requirements as specified for *Test 1* in the test for *Related compounds.* Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation of the correction factor (C_F) for replicate injections is not more than 1.0%. [NOTE—C_F is calculated as directed below in the *Procedure.*]

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the peak responses. Calculate the percentage of valganciclovir hydrochloride ($C_{14}H_{22}N_6O_5 \cdot HCl$) in the portion of Valganciclovir Hydrochloride taken by the formula:

$$100[(r_U/W_U)(C_F)(100)]$$



in which r_U is the peak response (sum of two peaks for valganciclovir diastereomers) obtained from the *Assay preparation;* W_U is the weight, in mg, of Valganciclovir Hydrochloride in the *Assay preparation;* and C_F is the correction factor.

The C_F is calculated using the following formula:

$$(W_S/R_S)/100$$

in which W_S is the weight, in mg, of USP Valganciclovir Hydrochloride RS in the *Standard preparation;* and R_S is the area response (sum of two peaks for valganciclovir diastereomers) obtained from the *Standard preparation.*

Valine

$C_5H_{11}NO_2$ 117.15

L-Valine [72-18-4].

DEFINITION

Valine contains NLT 98.5% and NMT 101.5% of L-valine ($C_5H_{11}NO_2$), calculated on the dried basis.

Valrubicin Intravesical Solution

DEFINITION

Valrubicin Intravesical Solution is a sterile solution of Valrubicin in a suitable vehicle. It contains NLT 95.0% and NMT 105.0% of the labeled amount of valrubicin ($C_{34}H_{36}F_3NO_{13}$).

IDENTIFICATION

- **A. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Standard solution: Use the *Standard solution*, prepared as directed in the *Assay*, suitably diluted with methanol.

Sample solution: Use the *Sample solution*, prepared as directed in the *Assay*, suitably diluted with methanol.

Solution A: 0.1 M ammonium formate. Adjust with formic acid to a pH of 4.0.

Developing solvent system: Acetonitrile and *Solution A* (45:55)

- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Buffer: 0.1 M ammonium formate. Adjust with formic acid to a pH of 4.0.

Mobile phase: Acetonitrile and *Buffer* (45:55)

Standard solution: 0.2 mg/mL of USP Valrubicin RS in methanol

Sample solution: Equivalent to 0.2 mg/mL of valrubicin, from Intravesical Solution in methanol

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 254 mm

Column: 5-mm × 10-cm; 4-µm packing L1, and a guard column

Flow rate: 2.5 mL/min

Injection size: 10 µL

System suitability

Sample: *Standard solution*

Suitability requirements

Relative standard deviation: NMT 2%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of $C_{34}H_{36}F_3NO_{13}$ in the Intravesical Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Valrubicin RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of valrubicin in the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–105.0%

IMPURITIES

ORGANIC IMPURITIES

- **Procedure**

Buffer, Mobile phase, and **Chromatographic system:** Proceed as directed in the *Assay*.

Sample solution: 0.2 mg/mL of valrubicin in methanol

Analysis

Sample: *Sample solution*

Measure the areas for the major peaks. Calculate the percentage of each impurity in the portion of Intravesical Solution taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak area for each impurity

r_T = sum of the peak areas of all the peaks

[NOTE—Do not consider any peaks due to solvent or excipients.]

Acceptance criteria

Individual impurities: See *Impurity Table 1*.

Total impurities: NMT 3.5%

Impurity Table 1

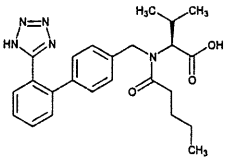
Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Valrubicin impurity 1	0.11	0.5
Valrubicin impurity 2	0.16	0.8
Valrubicin impurity 3	0.51	0.8
Valrubicin impurity 4	0.71	0.8
Any unspecified impurity	—	0.5

SPECIFIC TESTS

- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: NMT 0.14 USP Endotoxin Unit/mg of valrubicin
- **pH** ⟨791⟩

Sample solution: 1 in 15 solution in 0.9% sodium chloride solution

Acceptance criteria: 4.0–7.0



- **OTHER REQUIREMENTS:** Meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose or multiple-dose containers, preferably of Type I glass. Store in a refrigerator.
- **LABELING:** Label it to indicate that it is not intended for intravenous or intramuscular injection but is to be used for intravesical instillation.
- **USP REFERENCE STANDARDS** ⟨11⟩

USP Valrubicin RS

Valsartan

$C_{24}H_{29}N_5O_3$ 435.52

L-Valine, *N*-(1-oxopentyl)-*N*-[[2′-(1*H*-tetrazol-5-yl)[1,1′-biphenyl]-4-yl]methyl]-;

N-[*p*-(*o*-1*H*-Tetrazol-5-ylphenyl)benzyl]-*N*-valeryl-L-valine [137862-53-4].

www.webofpharma.com

DEFINITION

Valsartan contains NLT 98.0% and NMT 102.0% of valsartan ($C_{24}H_{29}N_5O_3$), calculated on the anhydrous basis.

IDENTIFICATION

IMPURITIES

- **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%
- **PROCEDURE 1: LIMIT OF VALSARTAN RELATED COMPOUND A**

Mobile phase: *n*-Hexane, 2-propanol, and trifluoroacetic acid (850:150:1)
System suitability solution: 0.04 mg/mL each of USP Valsartan Related Compound A RS and USP Valsartan RS in *Mobile phase*
Standard solution: 0.01 mg/mL of USP Valsartan Related Compound A RS in *Mobile phase*
Sample solution: 1 mg/mL of Valsartan in *Mobile phase*. Sonicate for 5 min.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 230 nm
Column: 4.6-mm × 25-cm; 5-µm packing L40
Flow rate: 0.8 mL/min
Injection volume: 10 µL
System suitability
Sample: *System suitability solution*
Suitability requirements
Resolution: NLT 2.0 between valsartan related compound A and valsartan
Relative standard deviation: NMT 5% for valsartan related compound A peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of valsartan related compound A in the portion of Valsartan taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of valsartan related compound A from the *Sample solution*
r_S = peak response of valsartan related compound A from the *Standard solution*
C_S = concentration of USP Valsartan Related Compound A RS in the *Standard solution* (mg/mL)
C_U = concentration of Valsartan in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 1.0% of valsartan related compound A.

- **PROCEDURE 2: LIMIT OF VALSARTAN RELATED COMPOUND B, VALSARTAN RELATED COMPOUND C, AND OTHER RELATED COMPOUNDS**

Mobile phase: Proceed as directed in the *Assay*.
Standard solution: 1 µg/mL each of USP Valsartan RS, USP Valsartan Related Compound B RS, and USP Valsartan Related Compound C RS in *Mobile phase*
Sample solution: 0.5 mg/mL of Valsartan in *Mobile phase*
Chromatographic system: Proceed as directed in the *Assay*, except for the following.
Detector: UV 225 nm
System suitability
Sample: *Standard solution*
Suitability requirements
Resolution: NLT 1.8 between valsartan related compound B and valsartan
Relative standard deviation: NMT 10.0% for valsartan related compound B and NMT 2.0% for valsartan
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of valsartan related compound B and valsartan related compound C in the portion of Valsartan taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of valsartan related compound B or valsartan related compound C from the *Sample solution*
r_S = peak response of valsartan related compound B or valsartan related compound C from the *Standard solution*
C_S = concentration of USP Valsartan Related Compound B RS or USP Valsartan Related Compound C RS in the *Standard solution* (mg/mL)
C_U = concentration of Valsartan in the *Sample solution* (mg/mL)

Calculate the percentage of any other impurity in the portion of Valsartan taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of any other impurity from the *Sample solution*

www.webofpharma.com

r_S = peak response of valsartan from the *Standard solution*
C_S = concentration of USP Valsartan RS in the *Standard solution* (mg/mL)
C_U = concentration of Valsartan in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 1*.

Valsartan Tablets

DEFINITION
Valsartan Tablets contain NLT 95.0% and NMT 105.0% of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$).

IDENTIFICATION
- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Mobile phase: Acetonitrile, water, and glacial acetic acid (50: 50: 0.1)
  Diluent: Acetonitrile and water (50:50)
  System suitability solution: 2 µg/mL of USP Valsartan Related Compound B RS and 20 µg/mL of USP Valsartan RS in *Diluent*
  Standard solution: 0.20 mg/mL of USP Valsartan RS in *Diluent*
  Sample stock solution: Place NLT 20 Tablets in a suitable volumetric flask, and initially add water (10% of the volume of the flask). Stir or shake until the Tablets disintegrate (about 5 min). Add acetonitrile (about 80% of the volume of the flask). Stir or shake for 30 min, and sonicate for 10 min. Cool, and dilute with acetonitrile to volume, mix, and centrifuge a portion of the suspension.
  Sample solution: Nominally 0.2 mg/mL of valsartan from the *Sample stock solution* in *Diluent*
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 230 nm
  Column: 4.6-mm × 25-cm; 10-µm packing L1
  Column temperature: 30°
  Flow rate: 1.0 mL/min
  Injection size: 20 µL
  System suitability
  Samples: *System suitability solution* and *Standard solution*
  Suitability requirements
  Resolution: NLT 1.5 between valsartan related compound B and valsartan, *System suitability solution*
  Relative standard deviation: NMT 2.0%, *Standard solution*
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of valsartan from the *Sample solution*
r_S = peak response of valsartan from the *Standard solution*
C_S = concentration of USP Valsartan RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of valsartan the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–105.0%

PERFORMANCE TESTS
- **DISSOLUTION** ⟨711⟩
  Test 1
  Medium: pH 6.8 phosphate buffer prepared as follows. Dissolve 6.805 g of monobasic potassium phosphate and 0.896 g of sodium hydroxide in and dilute with water to 1000 mL. Adjust with 0.2 M sodium hydroxide or 1 M phosphoric acid as required to a pH of 6.8; 1000 mL degassed.
  Apparatus 2: 50 rpm
  Time: 30 min
  Standard solution: (*L*/1000) mg/mL of USP Valsartan RS in *Medium*, where *L* is the label claim, in mg/Tablet. [NOTE—Dilute with *Medium* as needed.]
  Sample solution: Pass a portion of the solution under test through a suitable filter.
  Analysis
  Analytical wavelength: UV 250 nm
  Blank: *Medium*
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) dissolved:

www.webofpharma.com

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Valsartan RS in the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 1000 mL

Tolerances: NLT 80% (*Q*) of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) is dissolved.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: 0.067 M phosphate buffer prepared as follows. Dissolve 91.2 g of monobasic potassium phosphate and 12 g of sodium hydroxide in 10 L of water. Adjust with 1 N sodium hydroxide or 1 N orthophosphoric acid to a pH of 6.8; 1000 mL.
Apparatus 2: 50 rpm
Time: 30 min
Standard stock solution: 0.4 mg/mL of USP Valsartan RS prepared as follows. Transfer an appropriate quantity of USP Valsartan RS into a suitable volumetric flask, and add methanol to about 5% of the volume of the flask. Sonicate to dissolve. Dilute with *Medium* to volume.
Standard solution: 0.02 mg/mL of USP Valsartan RS in *Medium* from *Standard stock solution*
Sample solution: Withdraw 10 mL of the solution under test and pass through a suitable filter. Dilute a portion of the solution with *Medium* to the concentration similar to that in the *Standard solution*.
Instrumental conditions
Mode: UV-Vis
Analytical wavelength: 250 nm
Cell: 1.0 cm
Blank: *Medium*
System suitability
Sample: *Standard solution*
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) dissolved:

$$\text{Result} = (A_U/A_S) \times C_S \times V \times D \times (1/L) \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Valsartan RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 1000 mL
D = dilution factor
L = label claim (mg/Tablet)

Tolerances: NLT 80% (*Q*) of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) is dissolved.

- **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

IMPURITIES

- **ORGANIC IMPURITIES**

Mobile phase, Diluent, System suitability solution, Sample solution, and Chromatographic system: Proceed as directed in the *Assay*.
Standard solution: 0.4 µg/mL of USP Valsartan RS in *Diluent*
Sensitivity solution: 0.1 µg/mL of USP Valsartan RS in *Diluent*, from the *Standard solution*
System suitability
Samples: *Standard solution*, *Sensitivity solution*, and *System suitability solution*
Suitability requirements
Resolution: NLT 1.5 between valsartan related compound B and valsartan, *System suitability solution*
Relative standard deviation: NMT 10.0%, *Standard solution*
Signal-to-noise ratio: NLT 10, *Sensitivity solution*
Analysis
Samples: *Sample solution* and *Standard solution*
Calculate the percentage of each individual impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of valsartan from the *Standard solution*
C_S = concentration of USP Valsartan RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of valsartan in the *Sample solution* (µg/mL)

Acceptance criteria
Each individual impurity: NMT 0.2%
Total impurities: NMT 0.4%. [NOTE—Calculate the total impurities from the sum of all individual impurity peaks. Disregard any peak due to valsartan related compound B and any peaks ≤0.05%.]

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers.
- **LABELING:** When more than one test for *Dissolution* is given, the labeling states the *Dissolution* test used only if *Test 1* is not used.
- **USP REFERENCE STANDARDS** ⟨11⟩

Valsartan and Hydrochlorothiazide Tablets

DEFINITION

Valsartan and Hydrochlorothiazide Tablets contain NLT 90.0% and NMT 110.0% of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$).

IDENTIFICATION

- **A. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Sample solution: To an amount of ground Tablets, equivalent in weight to a single Tablet, add 2.0 mL of acetone, sonicate for 15 min, and centrifuge.
Application volume: 2 µL
Developing solvent system: Ethyl acetate, dehydrated alcohol, and 3.6 M of ammonium hydroxide (8:2:1)
Analysis: Proceed as directed in the chapter, except develop the plate in a paper-lined chromatographic chamber equilibrated with *Developing solvent system* for 15 min before use. Allow the chromatogram to develop until the solvent front has moved at least 7 cm. After removing the

USP Monographs

www.webofpharma.com

plate and marking the solvent front, dry the plate under a current of warm air.

Acceptance criteria: The R_F values of the principal spots from the *Sample solution* correspond to those from the *Standard solution*.

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Diluent: Acetonitrile and water (1:1)

Solution A: Acetonitrile, water, and trifluoroacetic acid (10:90:0.1)

Solution B: Acetonitrile, water, and trifluoroacetic acid (90:10:0.1)

Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	90	10
25	10	90
27	90	10
40	90	10

Standard solution: Transfer 12.5 mg of USP Hydrochlorothiazide RS to a 200-mL volumetric flask, and add 12.5*J* mg of USP Valsartan RS, *J* being the ratio of the labeled amount, in mg, of valsartan to the labeled amount, in mg, of hydrochlorothiazide per Tablet. Add 100 mL of *Diluent*, sonicate for 15 min, dilute with *Diluent* to volume, and mix. Transfer 25.0 mL of this solution to a 50-mL volumetric flask, dilute with *Diluent* to volume, and mix. Dilute with *Diluent* to obtain a solution having a concentration of 0.2 mg/mL of USP Valsartan RS in *Diluent*.

Sample stock solution: To the nominal equivalent of 62.5 mg of hydrochlorothiazide from a number of Tablets add 5 mL of water, and allow to stand for 5 min. Then add 100 mL of *Diluent*, sonicate for 15 min, and shake for 30 min. Dilute with *Diluent* to 250 mL, and centrifuge a portion of this solution at 3000 rpm. Dilute 25.0 mL of the clear supernatant with *Diluent* to 200.0 mL.

Sample solution: Nominally 0.2 mg/mL of valsartan from *Sample stock solution* in *Diluent*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 265 nm

Column: 3.0-mm × 12.5-cm; 5-µm packing L1

Flow rate: 0.4 mL/min

Injection volume: 10 µL

System suitability

Sample: *Standard solution*

Suitability requirements

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of the appropriate USP Reference Standard in the *Standard solution* (mg/mL)

C_U = nominal concentration of the corresponding analyte in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩

Test 1

Medium: pH 6.8 phosphate buffer; 1000 mL

Apparatus 2: 50 rpm

Time: 30 min

Determine the percentage of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) dissolved by using one of the following procedures.

Spectrophotometric procedure

(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)

Analytical wavelength: 250 nm for valsartan and 272 nm for hydrochlorothiazide

Cell path length: 0.2-cm quartz

Standard solution: USP Hydrochlorothiazide RS and USP Valsartan RS in *Medium*

Sample solution: Pass a portion of the solution under test through a suitable glass fiber filter of 1-µm pore size. Dilute with *Medium*, if necessary, to a concentration similar to that of the *Standard solution*.

Analysis

Calculate the percentage of the labeled amount of valsartan ($C_{24}H_{29}N_5O_3$) dissolved:

$$\text{Result} = [(AT_2 \times D) - (AT_1 \times E)/(C \times D) - (B \times E)] \times 12{,}500$$

Calculate the percentage of the labeled amount of hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) dissolved:

$$\text{Result} = [(AT_1 \times C) - (AT_2 \times B)/(D \times C) - (E \times B)] \times 80{,}000$$

AT_1 = absorbance of the *Sample solution* at 272 nm

C = $A1\%V_{250}$, absorptivity (1%, 0.2 cm, 250 nm) of valsartan in *Medium*

AT_2 = absorbance of the *Sample solution* at 250 nm

B = $A1\%V_{272}$, absorptivity (1%, 0.2 cm, 272 nm) of valsartan in *Medium*

D = $A1\%H_{272}$, absorptivity (1%, 0.2 cm, 272 nm) of hydrochlorothiazide in *Medium*

E = $A1\%H_{250}$, absorptivity (1%, 0.2 cm, 250 nm) of hydrochlorothiazide in *Medium*

Chromatographic procedure

Diluent: Water and acetonitrile (1:1)

Solution A: 0.2 M ammonium acetate (15.4 g/L of ammonium acetate in water), adjusted with glacial acetic acid to a pH of 5.6

Solution B: Acetonitrile

Mobile phase: See *Table 2*.

Table 2

Time (min)	Solution A (%)	Solution B (%)
0	88	12
4	65	35
7	88	12
8	88	12

www.webofpharma.com

System suitability solution: 80 µg/mL of USP Valsartan RS, 60 µg/mL of USP Hydrochlorothiazide RS, 30 µg/mL of USP Benzothiadiazine Related Compound A RS, and 200 µg/mL of USP Valsartan Related Compound B RS in *Diluent*. Transfer 25 mL of this solution to a 100-mL volumetric flask, and dilute with *Medium* to volume.

Standard solution: Transfer about 12.5 mg of USP Hydrochlorothiazide RS to a 200-mL volumetric flask. Add about 12.5*J* mg of USP Valsartan RS, with *J* being the ratio of the labeled amount (mg) of valsartan to the labeled amount (mg) of hydrochlorothiazide per Tablet. Dilute with *Diluent* to volume. Transfer 10 mL of this solution to a 50-mL volumetric flask, and dilute with *Medium* to volume.

Sample solution: For Tablets labeled to contain 12.5 mg of hydrochlorothiazide, pass a portion of the solution under test through a suitable filter.

For Tablets labeled to contain 25 mg of hydrochlorothiazide, pass a portion of the solution under test through a suitable filter, and dilute with *Medium* (1:1).

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 265 nm

Column: 4.6-mm × 25-cm; 5-µm packing L11

Flow rate: 1.5 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

Suitability requirements

Resolution: NLT 2.0 between valsartan and valsartan related compound B; NLT 2.0 between hydrochlorothiazide and benzothiadiazine related compound A, *System suitability solution*

Relative standard deviation: NMT 2.0% for both valsartan and hydrochlorothiazide, *Standard solution*

Analysis

Calculate the percentage of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times D \times V \times 100$$

r_U = peak response of valsartan or hydrochlorothiazide from the *Sample solution*

r_S = peak response of valsartan or hydrochlorothiazide from the *Standard solution*

C_S = concentration of valsartan or hydrochlorothiazide in the *Standard solution* (mg/mL)

L = label claim for valsartan or hydrochlorothiazide (mg/Tablet)

D = dilution factor of the *Sample solution*, if applicable

V = volume of *Medium*, 1000 mL

Tolerances: NLT 80% (*Q*) of the labeled amount of both valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) is dissolved.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.

Medium: pH 6.8 phosphate buffer; 1000 mL

Apparatus 1: 100 rpm

Time: 30 min

Buffer: Mix 1 mL of trifluoroacetic acid and 1 L of water.

Mobile phase: Acetonitrile and *Buffer* (450:550)

Valsartan standard stock solution: 3.2 mg/mL of USP Valsartan RS in *Medium* prepared as follows. To a suitable amount of the USP Valsartan RS in a suitable volumetric flask add methanol to fill 20% of the total volume. Sonicate to dissolve, and add *Medium* to fill 25% of the total volume. Sonicate for 5 min, and dilute with *Medium* to volume.

Hydrochlorothiazide standard stock solution: 0.5 mg/mL of USP Hydrochlorothiazide RS prepared as follows. To a suitable amount of the USP Hydrochlorothiazide RS in a suitable volumetric flask add methanol to fill 10% of the total volume. Sonicate to dissolve, and add *Medium* to fill 60% of the total volume. Sonicate for 5 min, and dilute with *Medium* to volume.

Standard solution: Prepare solutions of concentrations listed in *Table 3* from *Valsartan standard stock solution* and *Hydrochlorothiazide standard stock solution* in *Medium*. Pass through a suitable filter of 0.45-µm pore size, and discard the first few mL of the filtrate.

Table 3

Tablet Strength of Valsartan/ Hydrochlorothiazide (mg/mg)	Concentration of Valsartan (mg/mL)	Concentration of Hydrochlorothiazide (mg/mL)
320/25	0.32	0.025
320/12.5	0.32	0.0125
160/25	0.16	0.025
160/12.5	0.16	0.0125
80/12.5	0.08	0.0125

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, and discard the first few mL of the filtrate.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 265 nm

Column: 4.6-mm × 15-cm; 5-µm packing L1

Sample cooler temperature: 20°

Flow rate: 1 mL/min

Injection volume: 10 µL

System suitability

Sample: *Standard solution*

[NOTE—The relative retention times of valsartan and hydrochlorothiazide are 1.0 and 0.25, respectively.]

Suitability requirements

Tailing factor: NMT 2.0 for both valsartan and hydrochlorothiazide peaks

Relative standard deviation: NMT 2.0% for both valsartan and hydrochlorothiazide peaks

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$

r_U = peak response of valsartan or hydrochlorothiazide from the *Sample solution*

r_S = peak response of valsartan or hydrochlorothiazide from the *Standard solution*

C_S = concentration of valsartan or hydrochlorothiazide in the *Standard solution* (mg/mL)

V = volume of *Medium*, 1000 mL

L = label claim (mg/Tablet)

USP Monographs

www.webofpharma.com

Tolerances: NLT 80% (*Q*) of the labeled amount of both valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩

Procedure for content uniformity

Diluent, Solution A, Solution B, Mobile phase, Standard solution, and **Chromatographic system:** Proceed as directed in the *Assay*.

Sample solution: Transfer 1 Tablet to a 200-mL volumetric flask, add 5 mL of water, and allow to stand for 5 min. Add 100 mL of *Diluent*, and sonicate for 15 min. Dilute with *Diluent* to volume, mix, and centrifuge a portion of this solution at 3000 rpm. Dilute a volume of the clear supernatant with *Diluent* to obtain a solution having a nominal concentration of 0.2 mg/mL of valsartan.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amounts of valsartan ($C_{24}H_{29}N_5O_3$) and hydrochlorothiazide ($C_7H_8ClN_3O_4S_2$) in the Tablet taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of the appropriate USP Reference Standard in the *Standard solution* (mg/mL)
C_U = nominal concentration of the corresponding analyte in the *Sample solution* (mg/mL)

Acceptance criteria: Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Diluent, Solution A, Solution B, Mobile phase, Sample solution, and **Chromatographic system:** Proceed as directed in the *Assay*.

Standard stock solution: 0.03 mg/mL of USP Benzothiadiazine Related Compound A RS, 0.06 mg/mL of USP Hydrochlorothiazide RS, 0.08 mg/mL of USP Valsartan RS, and 0.2 mg/mL of USP Valsartan Related Compound B RS in *Diluent*

System suitability solution: Dilute 5.0 mL of the *Standard stock solution* with *Diluent* to 100 mL.

Standard solution: Dilute 10.0 mL of the *System suitability solution* in 100.0 mL of *Diluent*.

System suitability

Samples: *System suitability solution* and *Standard solution*

Suitability requirements

Resolution: NLT 1.4 between valsartan related compound B and valsartan; NLT 1.4 between benzothiadiazine related compound A and hydrochlorothiazide, *System suitability solution*

Relative standard deviation: NMT 10.0% for the valsartan and hydrochlorothiazide peaks, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Disregard the peak, if any, with a retention time of 22 min.

Calculate the percentage of benzothiadiazine related compound A in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of benzothiadiazine related compound A from the *Sample solution*
r_S = peak response of benzothiadiazine related compound A from the *Standard solution*
C_S = concentration of benzothiadiazine related compound A in the *Standard solution* (mg/mL)
C_U = nominal concentration of hydrochlorothiazide in the *Sample solution* (mg/mL)

Calculate the percentage of each other impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of each other impurity from the *Sample solution*
r_S = peak response of valsartan from the *Standard solution*
C_S = concentration of valsartan in the *Standard solution* (mg/mL)
C_U = nominal concentration of valsartan (for calculating other impurities) in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 1.0% of benzothiadiazine related compound A; NMT 0.2% of any other impurity, excluding valsartan related compound A; NMT 1.3% of total impurities, excluding valsartan related compound A. [NOTE—Valsartan related compound A is the enantiomer of valsartan and coelutes with valsartan in this test.]

ADDITIONAL REQUIREMENTS

• **LABELING:** When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only when *Test 1* is not used.

• **PACKAGING AND STORAGE:** Preserve in tight containers, and protect from moisture and heat. Store at controlled room temperature.

• **USP REFERENCE STANDARDS** ⟨11⟩

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K▲** (CN 1-May-2020)
- **B. IDENTIFICATION TESTS—GENERAL,** *Chloride* ⟨191⟩: It does not meet the requirements of the test.

ASSAY

- **ANTIBIOTICS—MICROBIAL ASSAYS** ⟨81⟩

Sample solution: Transfer 100 mg of Vancomycin to a 100-mL volumetric flask. Add 50 mL of water and 1 mL of 0.1 N hydrochloric acid, and swirl to dissolve, using sonication if necessary. Dilute with water to volume. Dilute a volume of this solution with *Buffer B.4* to yield a *Test Dilution* having a concentration assumed to be equal to that of the median dose of the standard.

Analysis: Proceed as directed for Vancomycin in the chapter.

Acceptance criteria: NLT 950 µg/mg of vancomycin on the anhydrous basis

SPECIFIC TESTS

- **COMPOSITION OF VANCOMYCIN**

Buffer: Triethylamine and water (1:500). Adjust with phosphoric acid to a pH of 3.2.

Solution A: Acetonitrile, tetrahydrofuran, and *Buffer* (7:1:92)

Solution B: Acetonitrile, tetrahydrofuran, and *Buffer* (29:1:70)

Mobile phase: See *Table 1*. Make adjustments if necessary, changing the acetonitrile proportion in *Solution A* to obtain a retention time of 7.5–10.5 min for the main vancomycin peak.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	100	0
12	100	0
20	0	100
22	0	100
23	100	0
30	100	0

System suitability solution: 0.5 mg/mL of USP Vancomycin Hydrochloride RS in water. Heat at 65° for 48 h, and allow to cool.

Sample stock solution: Transfer 250 mg of Vancomycin to a 25-mL volumetric flask. Add 5 mL of *Solution A*, then add 0.1 N hydrochloric acid dropwise with swirling until dissolution is achieved. Dilute with *Solution A* to volume.

Sample solution: Dilute 2.0 mL of the *Sample stock solution* to 50 mL with *Solution A*.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 280 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 2 mL/min

Injection size: 20 µL

System suitability

Sample: *System suitability solution*

[NOTE—The elution order is compound 1, vancomycin B, and compound 2. Compound 2 elutes 3–6 min after the start of the period when the percentage of *Solution B* is increasing from 0% to 100%.]

Suitability requirements

Resolution: NLT 3.0 between compound 1 and vancomycin B

Column efficiency: NLT 1500 theoretical plates for the vancomycin B peak

Analysis

Samples: *Sample stock solution* and *Sample solution*

Where baseline separation is not achieved, peak areas are defined by vertical lines extended from the valleys between peaks to the baseline. The main component peak may include a fronting shoulder, which is attributed to monodechlorovancomycin. This shoulder should not be integrated separately.

Correct any peak observed in the chromatograms obtained from the *Sample stock solution* and *Sample solution* by subtracting the area response of any peak observed in the chromatogram of *Solution A* at the corresponding retention time.

Calculate the percentage of vancomycin B in the portion of Vancomycin taken:

$$\text{Result} = \{(D \times r_B)/[(D \times r_B) + r_A]\} \times 100$$

D = dilution factor, *Sample stock solution* to *Sample solution*, 25

r_B = corrected peak area response of the main peak from the *Sample solution*

r_A = sum of the corrected peak area responses of all the peaks, other than the main peak, from the *Sample stock solution*

Calculate the percentage of any individual peak, other than the main peak, in the portion of Vancomycin taken:

$$\text{Result} = \{r_i/[(D \times r_B) + r_A]\} \times 100$$

r_i = corrected peak area response of any individual peak, other than the main peak, from the *Sample stock solution*

D = dilution factor, *Sample stock solution* to *Sample solution*, 25

r_B = corrected peak area response of the main peak from the *Sample solution*

r_A = sum of the corrected peak area responses of all the peaks, other than the main peak, from the *Sample stock solution*

Acceptance criteria: NLT 92% of vancomycin B; NMT 3% of any individual peak other than the main peak

- **WATER DETERMINATION,** *Method I* ⟨921⟩: NMT 20%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers.

DEFINITION

Vancomycin Hydrochloride is the hydrochloride salt of a kind of vancomycin, a substance produced by the growth of *Streptomyces orientalis* (Fam. Streptomycetaceae), or a mixture of two or more such salts. It has a potency equivalent to NLT 900 µg/mg of vancomycin, calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

▲• **Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

ASSAY

- **Procedure:** Proceed with Vancomycin Hydrochloride as directed under *Antibiotics—Microbial Assays* ⟨81⟩.
  Acceptance criteria: NLT 900 µg/mg on the anhydrous basis

IMPURITIES

Organic Impurities

- **Procedure: Limit of Monodechlorovancomycin**
  [Note—The *System suitability solution*, *Standard solution*, and *Sample solution* should be refrigerated immediately after preparation and during analysis. The solutions are stable for 4 days when refrigerated.]

Mobile phase: Dissolve 2.2 g of 1-heptanesulfonic acid sodium salt in about 500 mL of water, add 125 mL of acetonitrile and 10 mL of acetic acid, and dilute with water to 1 L.

Rinse solution: 10% acetonitrile in water. [Note—Use to rinse needle and column.]

System suitability solution: Equivalent to 1 mg/mL of vancomycin B from USP Vancomycin B with Monodechlorovancomycin RS in water

Standard solution: Equivalent to 50 µg/mL of vancomycin B, from *System suitability solution*

Sample solution: 1 mg/mL of Vancomycin Hydrochloride in water

Blank: Water

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6 mm × 25 cm; packing L1
Column temperature: 60°
Autosampler temperature: 5°

www.webofpharma.com

Flow rate: 1.5 mL/min
Injection volume: 50 µL
[NOTE—This procedure is sensitive to temperature changes. Sufficient tubing should be placed in the column oven to ensure that the samples have reached 60° before separation.]
System suitability
Samples: *System suitability solution*, *Standard solution*, *Sample solution*, and *Blank*
[NOTE—*Blank* and *Standard solution* run times are about 90 min. *System suitability solution* and *Sample solution* run times are about 120 min.]
[NOTE—The relative retention times for vancomycin B and monodechlorovancomycin are 1.0 and 1.1, respectively.]
Suitability requirements
Selectivity: The chromatogram for the *Blank* does not contain peaks that interfere with vancomycin B or monodechlorovancomycin.
Retention times: ±3.0% between monodechlorovancomycin in the *Sample solution* and the mean of the monodechlorovancomycin peaks in the *Standard solution*
Resolution: NLT 1.5 between vancomycin B and monodechlorovancomycin, *System suitability solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of monodechlorovancomycin in the portion of Vancomycin Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times P \times 100$$

r_U = peak area of monodechlorovancomycin in the *Sample solution*
r_S = average peak area of the vancomycin B peak in the *Standard solution*
C_S = concentration of USP Vancomycin B with Monodechlorovancomycin RS in the *Standard solution* (mg/mL)
C_U = concentration of Vancomycin Hydrochloride in the *Sample solution* (mg/mL)
P = potency of vancomycin B in USP Vancomycin B with Monodechlorovancomycin RS (mg/mg)

Acceptance criteria: NMT 4.7% of monodechlorovancomycin is found.

SPECIFIC TESTS

- **STERILITY TESTS** ⟨71⟩**:** Where the label states that Vancomycin Hydrochloride is sterile, it meets the requirements when tested as directed for *Test for Sterility of the Product to Be Examined, Membrane Filtration*, except to dissolve the specimen in water, instead of in *Fluid A*.
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** Where the label states that Vancomycin Hydrochloride is sterile or must be subjected to further processing during the preparation of injectable dosage forms, it contains NMT 0.33 USP Endotoxin Unit/mg of vancomycin.
- **pH** ⟨791⟩**:** 2.5–4.5, 50 mg/mL in water
- **WATER DETERMINATION,** *Method I* ⟨921⟩**:** NMT 5.0%
- **COMPOSITION OF VANCOMYCIN**

Solution A: Triethylamine and water (1:500). Adjust with phosphoric acid to a pH of 3.2.
Solution B: Acetonitrile, tetrahydrofuran, and *Solution A* (7:1:92)
Solution C: Acetonitrile, tetrahydrofuran, and *Solution A* (29:1:70)

Mobile phase: See the gradient table below. [NOTE—Make adjustments, if necessary, changing the acetonitrile proportion in *Solution B* to obtain a retention time of 7.5–10.5 min for the main vancomycin peak.]

Time (min)	Solution B (%)	Solution C (%)
0	100	0
12	100	0
20	0	100
22	0	100
23	100	0
30	100	0

System suitability solution: 0.5 mg/mL of USP Vancomycin Hydrochloride RS in water. Heat at 65° for 48 h, and allow to cool.
Sample solution 1: 10 mg/mL of Vancomycin Hydrochloride in *Solution B*
Sample solution 2: 0.4 mg/mL of Vancomycin Hydrochloride, from *Sample solution 1* in *Solution B*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 2 mL/min
Injection size: 20 µL
System suitability
Sample: *System suitability solution*
[NOTE—The elution order is compound 1, vancomycin B, and compound 2. Compound 2 elutes 3–6 min after the start of the period when the percentage of *Solution C* increases from 0%–100%.]
Suitability requirements
Resolution: NLT 3.0 between compound 1 and vancomycin B
Column efficiency: NLT 1500 theoretical plates, calculated from the vancomycin B peak
Analysis
Samples: *Sample solution 1* and *Sample solution 2*
[NOTE—Where baseline separation is not achieved, peak areas are defined by vertical lines extended from the valleys between the peaks to the baseline. The main component peak may include a fronting shoulder, which is attributed to monodechlorovancomycin. This shoulder should not be integrated separately.]
[NOTE—Correct any peak observed in the chromatograms obtained from *Sample solution 1* and *Sample solution 2* by subtracting the area response of any peak observed in the chromatogram of *Solution B* at the corresponding retention time.]
Measure the area responses for all of the peaks. Calculate the percentage of vancomycin B in the portion of Vancomycin Hydrochloride taken:

$$\text{Result} = [(D \times r_B)/((D \times r_B) + r_A)] \times 100$$

D = dilution factor, *Sample solution 1* to *Sample solution 2*, 25
r_B = corrected area response of the main peak of *Sample solution 2*
r_A = sum of the corrected area responses of all the peaks, other than the main peak, from *Sample solution 1*

USP Monographs

www.webofpharma.com

Calculate the percentage of each other peak in the portion of Vancomycin Hydrochloride taken:

$$\text{Result} = \{r_I/[(D \times r_B) + r_A]\} \times 100$$

r_I = corrected area response of any individual peak, other than the main peak of *Sample solution 1*
D = dilution factor, *Sample solution 1* to *Sample solution 2*, 25
r_B = corrected area response of the main peak of *Sample solution 2*
r_A = sum of the corrected area responses of all the peaks, other than the main peak from *Sample solution 1*

Acceptance criteria: NLT 85.0% of vancomycin B; NMT 5.0% of any peak other than the main peak

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers.
- **LABELING:** Where it is intended for use in preparing injectable dosage forms, the label states that it is sterile or must be subjected to further processing during the preparation of injectable dosage forms.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Vancomycin Hydrochloride RS
  USP Vancomycin B with Monodechlorovancomycin RS

Vancomycin Hydrochloride Capsules

DEFINITION
Vancomycin Hydrochloride Capsules contain the equivalent of NLT 90.0% and NMT 115.0% of the labeled amount of vancomycin ($C_{66}H_{75}Cl_2N_9O_{24}$).

IDENTIFICATION

Change to read:

- **▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

Sample: Disperse the contents of 1 Capsule in about 20 mL of chloroform. Pass the liquid through a suitable filter. Rinse the filter and residue with chloroform. Dry the residue in a vacuum at 60° for 1 h.

ASSAY
- **ANTIBIOTICS—MICROBIAL ASSAYS** ⟨81⟩

Analysis: Proceed as directed, using NLT 5 Capsules blended at high speed in a glass blender jar for 3–5 min with a sufficient volume of *Buffer B.4* to yield a stock solution having a convenient concentration of vancomycin. Dilute a volume of this stock solution with *Buffer B.4* to obtain a *Test Dilution* having a concentration assumed to be equal to the median dose level of the Standard.
Acceptance criteria: 90.0%–115.0%

PERFORMANCE TESTS
- **DISSOLUTION** ⟨711⟩

Medium: Water; 900 mL
Apparatus 1: 100 rpm
Time: 45 min
Sample solution: Sample per *Dissolution* ⟨711⟩
Analysis: Determine the amount of vancomycin dissolved by assaying a filtered portion of the *Sample solution* as directed for vancomycin under *Antibiotics—Microbial Assays* ⟨81⟩.
Tolerances: NLT 85% (Q) of the labeled amount of vancomycin is dissolved.
- **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

SPECIFIC TESTS
- **WATER DETERMINATION,** *Method I* ⟨921⟩: NMT 8.0%

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Vancomycin Hydrochloride RS

Vancomycin Hydrochloride for Injection

DEFINITION
Vancomycin Hydrochloride for Injection is a sterile dry mixture of Vancomycin Hydrochloride and may contain a suitable stabilizing agent. It contains NLT 90.0% and NMT 115.0% of the labeled amount of vancomycin.

IDENTIFICATION

Change to read:

- **▲• SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

ASSAY
- **ANTIBIOTICS—MICROBIAL ASSAYS** ⟨81⟩

Sample solution 1 (where it is represented as being in a single-dose container): Constitute a container of Vancomycin Hydrochloride for Injection in water corresponding to the volume of diluent specified in the labeling. Withdraw all of the withdrawable contents, using a suitable hypodermic needle and syringe. Dilute to an equivalent of 1 mg/mL of vancomycin with water.
Sample solution 2 (where it is packaged for dispensing): Dissolve the contents of 1 container of Vancomycin Hydrochloride for Injection in water, and dilute with water to obtain a solution having a concentration of 1 mg/mL of vancomycin.
Sample solution 3 (where the label states the quantity of vancomycin in a given volume of constituted solution): Constitute a container of Vancomycin Hydrochloride for Injection in water corresponding to the volume of diluent specified in the labeling. Dilute a portion to obtain a final concentration equivalent to 1 mg/mL of vancomycin in water.
Analysis: Proceed as directed in *Antibiotics—Microbial Assays* ⟨81⟩. [NOTE—Use a measured volume of the appropriate *Sample solution*, diluted quantitatively with *Buffer B.4* to yield a *Test Dilution* having a concentration assumed to be equal to the median dose level of the Standard.]
Acceptance criteria: 90.0%–115.0%

PERFORMANCE TESTS
- **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meets the requirements

SPECIFIC TESTS
- **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩: Meets the requirements under small-volume injections
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: NMT 0.33 USP Endotoxin Unit/mg of vancomycin
- **STERILITY TESTS** ⟨71⟩: It meets the requirements when tested as directed for *Test for Sterility of the Product to Be Examined, Membrane Filtration*, except to dissolve the specimen in water instead of in *Fluid A*.

- **Content of Vancomycin**

Solution A: Triethylamine and water (1:500). Adjust with phosphoric acid to a pH of 3.2.
Solution B: Acetonitrile, tetrahydrofuran, and *Solution A* (7:1:92)
Solution C: Acetonitrile, tetrahydrofuran, and *Solution A* (29:1:70)
Mobile phase: See the gradient table below.
[Note—Make adjustments if necessary, changing the acetonitrile proportion in *Solution B* to obtain a retention time of 7.5–10.5 min for the main vancomycin peak.]

Time (min)	Solution B (%)	Solution C (%)
0	100	0
12	100	0
20	0	100
22	0	100
23	100	0
30	100	0

System suitability solution: 0.5 mg/mL of USP Vancomycin Hydrochloride RS. Heat at 65° for 48 h, and allow to cool.
Sample solution 1: Equivalent to 10 mg/mL of vancomycin from Vancomycin Hydrochloride for Injection in *Solution B*
Sample solution 2: 0.4 mg/mL of vancomycin from *Sample solution 1* in *Solution B*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 2 mL/min
Injection size: 20 µL
System suitability
Sample: *System suitability solution*
[Note—The elution order is compound 1, vancomycin B, and compound 2. Compound 2 elutes 3–6 min after the start of the period when the percentage of *Solution C* increases from 0% to 100%.]
Suitability requirements
Resolution: NLT 3.0 between compound 1 and vancomycin B
Column efficiency: NLT 1500 theoretical plates, calculated from the vancomycin B peak
Analysis
Samples: *Sample solution 1* and *Sample solution 2*
[Note—Where baseline separation is not achieved, peak areas are defined by vertical lines extended from the valleys between peaks to the baseline. The main component peak may include a fronting shoulder, which is attributed to monodechlorovancomycin. This shoulder should not be integrated separately.]
[Note—Correct any peak observed in the chromatograms obtained from *Sample solution 1* and *Sample solution 2* by subtracting the area response of any peak observed in the chromatogram of *Solution B* at the corresponding elution time.]
Measure the area responses for all of the peaks.

Calculate the percentage of vancomycin B in the specimen tested:

$$\text{Result} = [D \times r_B/((D \times r_B) + r_A)] \times 100$$

D = dilution factor, *Sample solution 1* to *Sample solution 2*, 25
r_B = corrected area response of the main peak from *Sample solution 2*
r_A = sum of the corrected area responses of all the peaks, other than the main peak, from *Sample solution 1*

Calculate the percentage of each other peak taken:

$$\text{Result} = \{r_I/[(D \times r_B) + r_A]\} \times 100$$

r_I = corrected area response of any individual peak, other than the main peak, from *Sample solution 1*
D = dilution factor, *Sample solution 1* to *Sample solution 2*, 25

Acceptance criteria: NLT 80.0% of vancomycin B; NMT 9.0% of any peak other than the main peak

- **Other Requirements:** It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

ADDITIONAL REQUIREMENTS

- **Packaging and Storage:** Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*.
- **Labeling:** Meets the requirements under *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*
- **USP Reference Standards** ⟨11⟩
USP Vancomycin Hydrochloride RS

Add the following:

▲Vancomycin Hydrochloride Compounded Oral Solution

DEFINITION

Vancomycin Hydrochloride Compounded Oral Solution contains NLT 90.0% and NMT 110.0% of the labeled amount of vancomycin ($C_{66}H_{75}Cl_2N_9O_{24}$).

Prepare Vancomycin Hydrochloride Compounded Oral Solution 50 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Vancomycin (as Vancomycin Hydrochloride)	5 g (calculate)[a]
SyrSpend SF PH4 (Liquid Cherry Flavored),[b] a sufficient quantity to make	100 mL

[a] Calculate the amount of vancomycin hydrochloride needed based on the potency equivalent (activity) of vancomycin.
[b] Fagron Inc., St. Paul, MN.

Calculate the amount of *Vancomycin Hydrochloride* needed based on the potency equivalent (activity) of vancomycin. Pour the *Vancomycin Hydrochloride* into a suitable container. Wet the powder with a small amount of *SyrSpend SF PH4 (Liquid Cherry Flavored)* and triturate to make a smooth paste. Add the *SyrSpend SF PH4 (Liquid Cherry Flavored)* to make the contents pourable. Transfer the contents stepwise and

USP Monographs

www.webofpharma.com

quantitatively to a calibrated container using the remainder of the *SyrSpend SF PH4 (Liquid Cherry Flavored)*. Add sufficient *SyrSpend SF PH4 (Liquid Cherry Flavored)* to bring to final volume. Shake to mix well.

ASSAY

• **PROCEDURE**

Solution A: 50 mM ammonium acetate adjusted with ammonium hydroxide to a pH of 8.0

Solution B: Methanol and water (35:65)

Mobile phase: See *Table 1*.

  This mixture contains Vardenafil Hydrochloride and approximately 1% of 7-methyl vardenafil (2-{2-ethoxy-5-[(4-ethylpiperazin-1-yl)sulfonyl]phenyl}-5,7-dimethylimidazo[5,1-*f*][1,2,4]triazin-4(3*H*)-one).
  $C_{21}H_{28}N_6O_4S$ 460.55

Varicella-Zoster Immune Globulin

» Varicella-Zoster Immune Globulin conforms to the regulations of the FDA concerning biologics (see *Biologics* ⟨1041⟩). It is a sterile 15 percent to 18 percent solution of pH 7.0 containing the globulin fraction of human plasma consisting of not less than 99 percent of immunoglobulin G with traces of immunoglobulin A and immunoglobulin M, in 0.3 M glycine as a stabilizer and 1:10,000 thimerosal as a preservative. It is derived from adult human plasma selected for high titers of varicella-zoster antibodies. Each unit of blood or plasma has been found nonreactive for hepatitis B surface antigen by a suitable method. The proteins of the plasma pools are fractionated by the cold ethanol precipitation method. The content of specific antibody is not less than 125 units, deliverable from a vial containing not more than 2.5 mL solution. The unit is defined as equivalent to 0.01 mL of a Varicella-Zoster Immune Globulin lot found effective in clinical trials and used as a reference for potency determinations, based on a fluorescent-antibody membrane antigen (FAMA) method for antibody titration.

Packaging and storage—Preserve at a temperature between 2° and 8°.
Expiration date—The expiration date is not later than 2 years after date of issue from manufacturer's cold storage.
Labeling—Label it to state that it is to be administered by intramuscular injection, in the recommended dose based on body weight.

Vasopressin

$C_{46}H_{65}N_{15}O_{12}S_2$ 1084.24
Vasopressin, 8-L-arginine [113-79-1].

DEFINITION
Vasopressin is a polypeptide hormone having the properties of causing the contraction of vascular and other smooth muscles, and of antidiuresis. It is prepared by chemical synthesis. It contains NLT 95.0% and NMT 105.0% of vasopressin ($C_{46}H_{65}N_{15}O_{12}S_2$), calculated on the anhydrous, acetic acid-free basis.

IDENTIFICATION
- **A.** The retention time of the vasopressin peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B. MASS SPECTRAL ANALYSIS**
  Infusion solution: Acetonitrile, water, and trifluoroacetic acid (80: 20: 0.08)
  Standard solution: 1 mg/mL of USP Vasopressin RS in water
  Sample solution: 1 mg/mL of Vasopressin in water.
  [NOTE—The final concentrations of the *Standard solution* and the *Sample solution* can be adjusted, depending on the sensitivity of the mass spectrometer used in the testing.]
  Instrumental conditions
  (See *Mass Spectrometry* ⟨736⟩.)
  Mode: LC/MS spectrometer
  Interface/detection: Infusion system connected to an electrospray interface (positive ion)
  Flow rate: 0.3 mL/min
  Injection size: 10 µL
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Acceptance criteria: Should contain peaks with mass-to-charge ratios of 1084 and 543

ASSAY
- **PROCEDURE**
  Mobile phase: Dissolve 6.6 g of dibasic ammonium phosphate in 950 mL of water. Adjust with concentrated phosphoric acid to a pH of 3.0. Dilute with water to 1000 mL. To 870 mL of this solution add 130 mL of acetonitrile, and mix. Filter under vacuum through a nylon membrane of 0.45-µm pore size. [NOTE—The retention time of the vasopressin peak is very sensitive to small changes in acetonitrile concentration in the *Mobile phase*.]
  System suitability solution: Dissolve suitable quantities of USP Lypressin RS and USP Vasopressin RS in 0.25% glacial acetic acid to obtain a solution having a known concentration of about 25 µg/mL of each substance.
  Standard solution: Dissolve the entire contents of a vial of USP Vasopressin RS in a known volume of 0.25% glacial acetic acid. [NOTE—The solution may be diluted as necessary to a working concentration range for the *Assay*.]

USP Monographs

www.webofpharma.com

Sample solution: Transfer about 10 mg of Vasopressin to a 25-mL volumetric flask. Dissolve in 0.25% glacial acetic acid, and dilute with the same solvent to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 220 nm
Column: 4.6-mm × 25-cm; packing L1
Column temperature: 40 ± 1°
Flow rate: 1.0 mL/min
Injection size: 20 µL. [NOTE—The column is allowed to equilibrate for 1 h before making the first injection.]
System suitability
Samples: *System suitability solution* and *Standard solution*.
[NOTE—Inject into an equilibrated liquid chromatograph, allowing about 60 min for complete elution.]
[NOTE—The retention time of the vasopressin peak is between 6 and 9 min.]
Suitability requirements
Resolution: NLT 1.1 between the vasopressin and lypressin peaks
Relative standard deviation: NMT 2.0% for the vasopressin peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of vasopressin ($C_{46}H_{65}N_{15}O_{12}S_2$) in the portion of Vasopressin taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Vasopressin RS in the *Standard solution* (mg/mL)
C_U = concentration of Vasopressin in the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–105.0% on the anhydrous, acetic acid-free basis

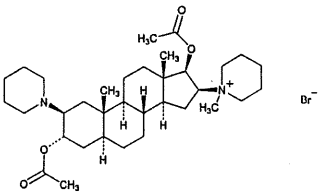
IMPURITIES
- **ORDINARY IMPURITIES:** The sum of the responses of impurities from the *Sample solution* in the *Assay* is NMT 5% of the area of the vasopressin peak.

SPECIFIC TESTS
- **MICROBIAL ENUMERATION TESTS** ⟨61⟩ and **TESTS FOR SPECIFIED MICROORGANISMS** ⟨62⟩**:** The total bacterial count is NMT 2×10^2 cfu/g. For products of animal origin, it also meets the requirements of the tests for absence of *Salmonella* species and *Escherichia coli*.
- **WATER DETERMINATION,** *Method Ic* ⟨921⟩**:** NMT 8.0%
- **ACETIC ACID IN PEPTIDES** ⟨503⟩**:** NMT 15.0%

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers, preferably of Type I glass, and store in a refrigerator.
- **USP REFERENCE STANDARDS** ⟨11⟩
USP Lypressin RS
USP Vasopressin RS

Vasopressin Injection

» Vasopressin Injection is a sterile solution of Vasopressin in a suitable diluent. Each mL of Vasopressin Injection possesses an activity of not less than 90.0 percent and not more than 110.0 percent of that stated on the label in USP Vasopressin Units. It may contain a suitable preservative.



Packaging and storage—Preserve in single-dose or multiple-dose containers, preferably of Type I glass. Do not freeze.
Labeling—Label it to indicate its origin (animal or synthetic). Label it also to state the potency in USP Vasopressin Units per mL.
USP Reference standards ⟨11⟩—
USP Vasopressin RS
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 17.0 Endotoxin Units per USP Vasopressin Unit.
pH ⟨791⟩: between 2.5 and 4.5.
Particulate Matter in Injections ⟨788⟩ —It meets the requirements under small-volume injections.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—
Mobile phase, System suitability solution, Chromatographic system, and *Procedure*—Proceed as directed in the *Assay* under *Vasopressin*.
Diluent—Dissolve 5.0 g of chlorobutanol in 5.0 mL of glacialacetic acid, add 5.0 g of alcohol, 1.1 g of sodium acetate, and 1000mL of water, and mix.
Standard preparation—Dissolve the entire contents of a vial ofUSP Vasopressin RS in a known volume of *Diluent*. [NOTE—The solution may be diluted as necessary to a workingconcentration range for the *Assay*.]
Assay preparation—Pipet 2.0 mL of Injection into a 25-mL volumetric flask, dilute with 0.25% glacial acetic acid to volume, and mix.
Procedure—Calculate the potency, in USP Vasopressin Units per mL, by the formula:

$$C(r_U/r_S)$$

in which C is the concentration, in USP Vasopressin Units per mL, of the *Standard preparation;* and r_U and r_S are the mean values of the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively. [NOTE—The runtime should be long enough to allow for the elution of the chlorobutanol peak (approximately 60 minutes).]

Vecuronium Bromide

$C_{34}H_{57}BrN_2O_4$ 637.73
Piperidinium, 1-[(2β,3α,5α,16β,17β)-3,17-bis(acetyloxy)- 2-(1-piperidinyl) androstan-16-yl]-1-methyl-, bromide;
1-(3α,17β-Dihydroxy-2β-piperidino-5α-androstan-16β,5α-yl)-1-methylpiperidinium bromide, diacetate [50700-72-6].

www.webofpharma.com

DEFINITION

Vecuronium Bromide contains NLT 98.0% and NMT 102.0% of $C_{34}H_{57}BrN_2O_4$, calculated on the dried basis.

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS ⟨197⟩, *Infrared Spectroscopy*: 197K.▲** (CN 1-May-2020) Meets the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Diluent: Pipet 1.0 mL of 1 N hydrochloric acid into a 1000-mL volumetric flask, and dilute with acetonitrile to volume.

Solution A: Dissolve 8.0 g of sodium perchlorate in 6.0 mL of water, and dilute with acetonitrile to 1 L.

Solution B: Dissolve 1.6 g of ammonium chloride in 8 mL of ammonium hydroxide, and dilute with methanol to 1 L. [NOTE—Avoid excessive degassing to prevent the loss of ammonium hydroxide.]

Mobile phase: *Solution A* and *Solution B* (60:40)

Standard solution: 0.5 mg/mL of USP Vecuronium Bromide RS in *Diluent*

Sample solution: 0.5 mg/mL of Vecuronium Bromide in *Diluent*

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 215 nm
Column: 4.6-mm × 25-cm; 5-µm packing L3
Column temperature: 40°
Flow rate: 0.5 mL/min
Injection size: 20 µL

System suitability
Sample: *Standard solution*
Suitability requirements
Column efficiency: NLT 5000 theoretical plates
Relative standard deviation: NMT 2.0%

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of vecuronium bromide ($C_{34}H_{57}BrN_2O_4$) in the portion of Vecuronium Bromide taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Vecuronium Bromide RS in the *Standard solution* (mg/mL)
C_U = concentration of Vecuronium Bromide in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the dried basis

IMPURITIES

- **ORGANIC IMPURITIES**

Cation suppressor regeneration solution: 0.02 M tetrabutylammonium hydroxide

Mobile phase
[NOTE—Filter components before combining. Avoid evaporation of tetrahydrofuran during degassing.]
Combine methanol, water, and hydrochloric acid (250:1500:1). Leave at room temperature for a few min. Add 45 mL of tetrahydrofuran, and then dilute with water to 2 L.
[NOTE—This applies to all of the solution preparations. The addition, with sonication, of a small amount of acetonitrile (NMT 0.5 mL per 25 mg) to the weighed quantity of the samples may be used to aid in dissolution. Shaking and sonication may also be used after the addition of the required amount of 2.5 mM hydrochloric acid.]

System suitability solution: 5 µg/mL each of USP Vecuronium Bromide RS, USP Pancuronium Bromide RS, USP Vecuronium Bromide Related Compound A RS, USP Vecuronium Bromide Related Compound B RS, USP Vecuronium Bromide Related Compound C RS, and USP Vecuronium Bromide Related Compound F RS in 2.5 mM hydrochloric acid

Standard solution: 0.005 mg/mL of USP Vecuronium Bromide RS in 2.5 mM hydrochloric acid

Sample solution: 1 mg/mL of Vecuronium Bromide prepared as follows. To 25 mg of Vecuronium Bromide in a 25-mL volumetric flask add 0.5 mL of acetonitrile, sonicate, and rapidly dilute with 2.5 mM hydrochloric acid.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: Conductivity with 4-mm cation suppressor
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1.5 mL/min
Flow rate (for cation suppressor): 2 mL/min
Injection size: 25 µL

System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—The system may need equilibration for 4 h. Rinse and store the column in acetonitrile and water (1:1).]
Suitability requirements
Peak-to-valley ratio: NLT 2.0 between the vecuronium bromide related compound F peak and the height of the trough between the vecuronium bromide related compound F and pancuronium peaks, *System suitability solution*
Relative standard deviation: NMT 10.0% for three replicate injections, *Standard solution*

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Vecuronium Bromide taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak area response for each impurity from the *Sample solution*
r_S = peak area response for USP Vecuronium Bromide RS from the *Standard solution*
C_S = concentration of the USP Vecuronium Bromide RS in the *Standard solution* (mg/mL)
C_U = concentration of Vecuronium Bromide in the *Sample solution* (mg/mL)
F = relative response factor for the corresponding impurity (see *Table 1*)

Acceptance criteria: See *Table 1*.

Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Pancuronium bromide	0.5	1.1	0.5

www.webofpharma.com

Table 1 *(continued)*

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Vecuronium bromide related compound F[a]	0.6	1.3	0.5

Venlafaxine Tablets

DEFINITION

Venlafaxine Tablets contain an amount of venlafaxine hydrochloride equivalent to NLT 90.0% and NMT 110.0% of the labeled amount of venlafaxine free base ($C_{17}H_{27}NO_2$).

IDENTIFICATION

- **A.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**
  Buffer: 3.4 g of potassium dihydrogen phosphate in 700 mL of water. Add 5 mL of triethylamine, and adjust with phosphoric acid to a pH of 3.0.
  Diluent: Methanol and 0.1 N hydrochloric acid (80:20)
  Mobile phase: Acetonitrile and *Buffer* (30:70)
  Standard solution: 0.3 mg/mL of venlafaxine free base from a suitable quantity of USP Venlafaxine Hydrochloride RS in *Diluent*
  Sample solution: Nominally 0.3 mg/mL of venlafaxine (from NLT 20 finely powdered Tablets) in *Diluent*. Sonicate for 30 min. Centrifuge and pass a portion of the supernatant through a suitable membrane filter of 0.45-µm pore size. [NOTE—A centrifuge speed of 4000 rpm for 10 min may be suitable.]
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 275 nm. For *Identification A*, use a diode array detector in the range of 200–400 nm.
  Column: 4.6-mm × 25-cm; 5-µm packing L1
  Flow rate: 1.0 mL/min
  Injection volume: 10 µL
  Run time: 5 times the retention time of the venlafaxine peak
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.0
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of venlafaxine free base ($C_{17}H_{27}NO_2$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of venlafaxine free base in the *Standard solution* (mg/mL)
C_U = nominal concentration of venlafaxine in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0% of the labeled amount of venlafaxine free base ($C_{17}H_{27}NO_2$)

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩
  Medium: Water, deaerated; 900 mL
  Apparatus 2: 50 rpm
  Time: 30 min

www.webofpharma.com

Standard stock solution: 0.84 mg/mL of venlafaxine free base from a suitable quantity of USP Venlafaxine Hydrochloride RS in methanol
Standard solution: (*L*/1000) mg/mL of venlafaxine free base in *Medium*, where *L* is the label claim in mg/Tablet, from the *Standard stock solution*
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
Detector: UV 275 nm
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of venlafaxine free base ($C_{17}H_{27}NO_2$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of venlafaxine free base in the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 900 mL

Tolerances: NLT 80% (*Q*) of the labeled amount of venlafaxine free base ($C_{17}H_{27}NO_2$) is dissolved.
• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**
Buffer: Prepare as directed in the *Assay*.
Solution A: Acetonitrile and *Buffer* (20:80)
Solution B: Acetonitrile and *Buffer* (35:65)
Diluent: Acetonitrile and *Buffer* (30:70)
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	100	0
5	100	0
25	0	100
30	0	100
32	100	0
45	100	0

System suitability solution: 0.0018 mg/mL of USP Venlafaxine Related Compound A RS and 0.6 mg/mL of USP Venlafaxine Hydrochloride RS in *Diluent*
Standard stock solution: 0.6 mg/mL of USP Venlafaxine Hydrochloride RS in *Diluent*
Standard solution: 0.0018 mg/mL of USP Venlafaxine Hydrochloride RS in *Diluent* from the *Standard stock solution*
Sample solution: Nominally 0.6 mg/mL of venlafaxine (from NLT 20 finely powdered Tablets) in *Diluent*. Centrifuge and pass a portion through a suitable membrane filter of 0.45-µm pore size. [NOTE—Sonicate, if necessary. A centrifuge speed of 4000 rpm for 10 min may be suitable.]
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 225 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7
Flow rate: 1.0 mL/min
Injection volume: 20 µL

System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 1.5 between venlafaxine related compound A and venlafaxine, *System suitability solution*
Tailing factor: NMT 1.8, *Standard solution*
Relative standard deviation: NMT 10.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each individual degradation product in the portion of Tablets taken:

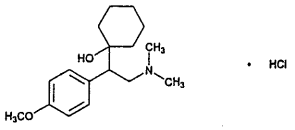
$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times (1/F) \times 100$$

r_U = peak response of each individual degradation product from the *Sample solution*
r_S = peak response of venlafaxine from the *Standard solution*
C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of venlafaxine in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86
F = relative response factor (see *Table 2*)

Acceptance criteria: See *Table 2*.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Descyclohexanol venlafaxine[a]	0.4	1.3	0.20
Venlafaxine related compound A[b]	0.9	—	—
Venlafaxine	1.0	—	—
Any unspecified degradation product	—	1.0	0.20
Total degradation products	—	—	1.0



[a] 2-(4-Methoxyphenyl)-*N*,*N*-dimethylethylamine.
[b] Process impurity, included for system suitability and identification only. Controlled in the drug substance and is not to be reported or included in the total degradation products for the drug product.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store at controlled room temperature.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Venlafaxine Hydrochloride RS
USP Venlafaxine Related Compound A RS
1-(1-(4-Methoxyphenyl)-2-(methylamino)ethyl) cyclohexanol hydrochloride.

Venlafaxine Hydrochloride Extended-Release Capsules

DEFINITION
Venlafaxine Hydrochloride Extended-Release Capsules contain an amount of Venlafaxine Hydrochloride equivalent to NLT 90.0% and NMT 110.0% of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$).

IDENTIFICATION

Change to read:

- **A.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
  Wavelength range: 250–310 nm
  Acceptance criteria: Meet the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Mobile phase: Acetonitrile, triethylamine, and water (250:4:750). Adjust with phosphoric acid to a pH of 3.5.
  Standard solution: 0.25 mg/mL of USP Venlafaxine Hydrochloride RS in *Mobile phase*
  Sample stock solution: Nominally 1.0 mg/mL of venlafaxine (from the contents of NLT 10 Capsules) prepared as follows. Transfer a weighed quantity of Capsule contents to a suitable volumetric flask. Add 8% of the flask volume of acetonitrile, and shake for 40 min. Add 50% of flask volume of *Mobile phase*, and shake for an additional 20 min. Dilute with *Mobile phase* to volume. Pass a portion through a suitable filter of 0.45-µm pore size.
  Sample solution: 0.25 mg/mL of venlafaxine (using the filtrate from the *Sample stock solution*) in *Mobile phase*
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 226 nm
  Column: 4.6-mm × 25-cm; 5-µm packing L1
  Flow rate: 1 mL/min
  Injection volume: 10 µL
  Run time: 1.5 times the retention time of venlafaxine
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.0
  Relative standard deviation: NMT 1.5%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of venlafaxine in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS
- **DISSOLUTION** ⟨711⟩
  Test 1
  Medium: Water; 900 mL
  Apparatus 1: 100 rpm
  Times: 3, 6, 16, and 24 h
  Mobile phase: Acetonitrile, triethylamine, and water (450:4:550). Adjust with phosphoric acid to a pH of 3.5.
  Standard stock solution: 0.1 mg/mL of USP Venlafaxine Hydrochloride RS in water
  Standard solution: 0.05 mg/mL of USP Venlafaxine Hydrochloride RS in acetonitrile, from the *Standard stock solution*
  Sample stock solution: Pass a portion of the solution under test through a suitable filter.
  Sample solution: *Sample stock solution* and acetonitrile (50:50)
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 274 nm
  Column: 4.6-mm × 25-cm; 5-µm packing L1
  Flow rate: 1 mL/min
  Injection volume: 60 µL
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.5
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the concentration, C_i, of venlafaxine ($C_{17}H_{27}NO_2$) in *Medium* (mg/mL) after time point *i*:

$$\text{Result}_i = (r_U/r_S) \times C_S \times D \times (M_{r1}/M_{r2})$$

USP Monographs

www.webofpharma.com

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of the USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
D = dilution factor for the *Sample solution*, 2
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at each time point *i*:

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = \{[C_2 \times (V - V_S)] + [C_1 \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_3 = \{[C_3 \times (V - (2 \times V_S))] + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_4 = \{[C_4 \times (V - (3 \times V_S))] + [(C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of venlafaxine in *Medium* in the portion of sample withdrawn at time point *i* (mg/mL)
V = volume of *Medium*, 900 mL
V_S = volume of the *Sample solution* withdrawn from the *Medium* (mL)
L = label claim (mg/Capsule)

Tolerances: See *Table 1*.

Table 1

Time Point, *i*	Time (h)	Amount Dissolved
1	3	NMT 40%
2	6	35%–60%
3	16	60%–85%
4	24	NLT 75%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: Water; 900 mL
Apparatus 1: 100 rpm
Times: 2, 4, 8, 12, and 20 h
Capsule correction solution: Dissolve 6 empty Capsule shells in 900 mL of water.
Blank: Dilute 150 mL of *Capsule correction solution* with water to 900 mL.
Standard solution: (*L*/900) mg/mL of USP Venlafaxine Hydrochloride RS, where *L* is the label claim, in mg/Capsule, prepared as follows. To a weighed amount of the Standard equivalent to the sample claim, add *Capsule correction solution* to fill 17% of final flask volume. Dilute with water to volume.
Sample solution: Pass a portion of the solution under test through a suitable filter.
Instrumental conditions
Mode: UV
Detector: 274 nm
Analysis
Samples: *Standard solution* and *Sample solution*

[NOTE—If necessary, the volume of *Medium* may be corrected for volumes removed from any previous sample time points.]
Calculate the concentration, C_i, of venlafaxine ($C_{17}H_{27}NO_2$) in *Medium* (mg/mL) after time point *i*:

$$\text{Result}_i = (r_U/r_S) \times C_S \times (M_{r1}/M_{r2})$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at each time point *i*:

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = \{[C_2 \times (V - V_S)] + [C_1 \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_3 = \{[C_3 \times (V - (2 \times V_S))] + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_i = \{[C_i \times (V - ([i - 1] \times V_S))] + [(C_{i-1} + C_{i-2} + \ldots + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of venlafaxine in *Medium* in the portion of sample withdrawn at time point *i* (mg/mL)
V = volume of *Medium*, 900 mL
V_S = volume of the *Sample solution* withdrawn from the *Medium* (mL)
L = label claim (mg/Capsule)

Tolerances: See *Table 2*.

Table 2

Time Point, *i*	Time (h)	Amount Dissolved
1	2	10%–30%
2	4	33%–53%
3	8	58%–78%
4	12	68%–88%
5	20	NLT 80%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

Test 3: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 3*.
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 1: 100 rpm
Times: 4, 8, and 16 h
Buffer: Dissolve 1.4 g of monobasic potassium phosphate in 1 L of water. Add 5 mL of triethylamine, and adjust with phosphoric acid to a pH of 3.0.
Mobile phase: Acetonitrile and *Buffer* (35:65)
Standard stock solution: 0.9 mg/mL of USP Venlafaxine Hydrochloride RS in *Medium*
Standard solution: (*L*/750) mg/mL of USP Venlafaxine Hydrochloride RS in *Medium* from the *Standard stock*

USP Monographs

www.webofpharma.com

solution, where *L* is the label claim, in mg/Capsule. Pass a portion through a suitable filter of 0.45-µm pore size.

Sample solution: At the end of the specified time interval, withdraw a known volume of the solution from the dissolution vessel, and replace with an equal volume of fresh *Medium*. Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)

r_S = peak response from the *Standard solution*
C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at each time point *i*:

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = \{[C_2 \times V] + [C_1 \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_3 = \{[C_3 \times V] + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of venlafaxine in *Medium* in the portion of sample withdrawn at time point *i* (mg/mL)
V = volume of *Medium*, 900 mL
V_S = volume of the *Sample solution* withdrawn from the vessel and replaced with *Medium* (mL)
L = label claim (mg/Capsule)

Tolerances: See *Table 3*.

Table 3

Time Point, *i*	Time (h)	Amount Dissolved
1	4	35%–55%
2	8	65%–90%
3	16	NLT 85%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

Test 4: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 4*.
Medium: Water; 900 mL
Apparatus 1: 100 rpm
Times: 2, 4, 8, 12, and 20 h
Solution A: Dilute 10 mL of phosphoric acid with water to 100 mL.
Buffer: 11.4 g/L of ammonium dihydrogen phosphate in water
Mobile phase: Acetonitrile and *Buffer* (35:65). Adjust with *Solution A* to a pH of 4.4.
Standard stock solution: 0.24 mg/mL of USP Venlafaxine Hydrochloride RS in *Medium*. Sonication may be used to aid in dissolution.
Standard solution: See *Table 4* for the concentration of USP Venlafaxine Hydrochloride RS in *Medium* from the *Standard stock solution*. Using a glass syringe, pass a portion through a suitable filter of 0.45-µm pore size.

Table 4

Label Claim (*L*)	Standard Solution (mg/mL)
37.5	0.05
75	0.1
150	0.1

Sample solution: At the end of the specified time interval, withdraw a known volume of the solution from the dissolution vessel, and replace with an equal volume of fresh *Medium*. For Capsules that are labeled to contain 150 mg of venlafaxine, dilute this solution with an equal volume of *Medium*. Using a glass syringe, pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 225 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7

4	12	60%–90%
5	20	NLT 80%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

Test 8: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 8*.

Medium: Water; 900 mL

Apparatus 1: 100 rpm

Times: 1, 6, 16, and 24 h

Diluent: Acetonitrile and water (30:70)

Buffer: Dissolve 8.9 g of dibasic sodium phosphate dihydrate and 2.5 g of sodium 1-octanesulfonate in 1 L of water. Adjust with 10% phosphoric acid to a pH of 3.0.

Mobile phase: Acetonitrile and *Buffer* (32:68)

Standard stock solution: 0.9 mg/mL of USP Venlafaxine Hydrochloride RS prepared as follows. Dissolve the weighed amount of the Standard first in acetonitrile using 20% of flask volume. Sonicate to dissolve, and dilute with *Diluent* to volume.

Standard solution: (*L*/900) mg/mL of USP Venlafaxine Hydrochloride RS from *Standard stock solution* in *Diluent*, where *L* is the label claim, in mg/Capsule

Sample solution: At the end of the specified time interval, withdraw a known volume of the solution from the dissolution vessel, and replace with an equal volume of fresh *Medium*. Pass a portion of the withdrawn sample through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 226 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 1.5 mL/min

Injection volume: 20 µL

Run time: 1.7 times the retention time of venlafaxine

System suitability

Sample: *Standard solution*

Suitability requirements

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the concentration, C_i, of venlafaxine ($C_{17}H_{27}NO_2$) in *Medium* (mg/mL) after time point *i*:

$$\text{Result}_i = (r_U/r_S) \times C_S \times (M_{r1}/M_{r2})$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)

M_{r1} = molecular weight of venlafaxine, 277.40

M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at each time point *i*:

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = \{[C_2 \times V] + [C_1 \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_3 = \{[C_3 \times V] + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_4 = \{[C_4 \times V] + [(C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of venlafaxine in *Medium* in the portion of sample withdrawn at time point *i* (mg/mL)

V = volume of *Medium*, 900 mL

V_S = volume of the *Sample solution* withdrawn from the vessel and replaced with *Medium* (mL)

L = label claim (mg/Capsule)

Tolerances: See *Table 9*.

Table 9

Time Point, *i*	Time (h)	Amount Dissolved
1	1	NMT 25%
2	6	50%–70%
3	16	70%–95%
4	24	NLT 80%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

Test 9: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 9*.

Medium: Water; 900 mL, degassed

Apparatus 1: 100 rpm

Times: 2, 4, 8, 12, and 20 h

Buffer: Dissolve 3.4 g of monobasic potassium phosphate in 700 mL of water. Add 5 mL of triethylamine. Adjust with phosphoric acid to a pH of 3.0.

Mobile phase: Acetonitrile and *Buffer* (30:70)

Standard stock solution: 1.6 mg/mL of USP Venlafaxine Hydrochloride RS prepared as follows. Dissolve a weighed amount of the Standard first in methanol using 20% of flask volume. Sonicate to dissolve, and dilute with water to volume.

Standard solution: (*L*/900) mg/mL of USP Venlafaxine Hydrochloride RS from the *Standard stock solution* in *Medium*, where *L* is the label claim, in mg/Capsule

Sample solution: At the end of the specified time interval, withdraw a known volume of the solution from the dissolution vessel, and replace it with an equal volume of fresh *Medium*. Pass a portion of the withdrawn sample through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 275 nm

Column: 4.6-mm × 15-cm; 5-µm packing L1

Flow rate: 1 mL/min

Injection volume: 20 µL

Run time: 2 times the retention time of venlafaxine

System suitability

Sample: *Standard solution*

Suitability requirements

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

www.webofpharma.com

Calculate the concentration, C_i, of venlafaxine ($C_{17}H_{27}NO_2$) in *Medium* (mg/mL) after time point *(i)*:

$$\text{Result}_i = (r_U/r_S) \times C_S \times (M_{r1}/M_{r2})$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Venlafaxine Hydrochloride RS in the *Standard solution* (mg/mL)
M_{r1} = molecular weight of venlafaxine, 277.40
M_{r2} = molecular weight of venlafaxine hydrochloride, 313.86

Calculate the percentage of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at each time point *(i)*:

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = [(C_2 \times V) + (C_1 \times V_S)] \times (1/L) \times 100$$

$$\text{Result}_3 = \{[C_3 \times V] + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_4 = \{[C_4 \times V] + [(C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

$$\text{Result}_5 = \{[C_5 \times V] + [(C_4 + C_3 + C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of venlafaxine in *Medium* in the portion of sample withdrawn at the specified time point *i* (mg/mL)
V = volume of *Medium*, 900 mL
V_S = volume of the *Sample solution* withdrawn from the vessel and replaced with *Medium* (mL)
L = label claim (mg/Capsule)

Tolerances: See *Table 10*.

Table 10

Time Point, *i*	Time (h)	Amount Dissolved
1	2	NMT 25%
2	4	30%–50%
3	8	55%–80%
4	12	65%–90%
5	20	NLT 80%

The percentages of the labeled amount of venlafaxine ($C_{17}H_{27}NO_2$) dissolved at the times specified conform to *Acceptance Table 2* in *Dissolution* ⟨711⟩.

- **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

IMPURITIES

- **ORGANIC IMPURITIES**

Mobile phase, Standard solution, and Sample solution: Proceed as directed in the *Assay*.

Verapamil Hydrochloride Extended-Release Capsules

DEFINITION

Verapamil Hydrochloride Extended-Release Capsules contain NLT 90.0% and NMT 110.0% of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$).

IDENTIFICATION

- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Solution A: 0.01 N sodium acetate in water containing 33 mL/L of glacial acetic acid

www.webofpharma.com

Mobile phase: Acetonitrile, 2-aminoheptane, and *Solution A* (30: 0.5: 70)
System suitability solution: 0.12 mg/mL of USP Verapamil Hydrochloride RS and 0.1 mg/mL of USP Verapamil Related Compound B RS in *Mobile phase*
Standard solution: 0.12 mg/mL of USP Verapamil Hydrochloride RS in *Mobile phase*
Sample stock solution: Nominally 1.2 mg/mL of verapamil hydrochloride prepared as follows. Transfer an equivalent to 240 mg of verapamil hydrochloride, from the pool of Capsule contents (NLT 20), to a 200-mL volumetric flask. Add about 150 mL of *Mobile phase* (prewarm the *Mobile phase* to 45°). While sonicating, stir for 1 h, cool to room temperature, dilute with *Mobile phase* to volume, and mix. Centrifuge a portion for 20 min, and use the supernatant.
Sample solution: Nominally 0.12 mg/mL of verapamil hydrochloride in *Mobile phase* from the *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 278 nm. For *Identification B*, use a diode array detector in the range of 220–400 nm.
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1.2 mL/min
Injection volume: 20 µL
Run time: NLT 2 times the retention time of verapamil
System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—The relative retention times for verapamil related compound B and verapamil are 0.84 and 1.0, respectively.]
Suitability requirements
Resolution: NLT 1.5 between verapamil and verapamil related compound B, *System suitability solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of verapamil from the *Sample solution*
r_S = peak response of verapamil from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of verapamil hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS
• **DISSOLUTION** ⟨711⟩
Test 1
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 2: 100 rpm. Use a wire helix sinker as necessary.
Times: 2, 4, 8, and 24 h
Solution A, Mobile phase, and **Chromatographic system:** Proceed as directed in the *Assay*, except for the *Injection volume*.
Injection volume: 30 µL
System suitability solution: 0.25 mg/mL of USP Verapamil Hydrochloride RS and 0.2 mg/mL of USP Verapamil Related Compound B RS in *Medium*
Standard solution: 0.267 mg/mL of USP Verapamil Hydrochloride RS in *Medium*
Sample solution: Pass a portion of the solution under test through a suitable filter.
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 1.5 between verapamil and verapamil related compound B, *System suitability solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at each time point (*i*):

$$Q_2 = (r_U/r_S) \times (C_S/L) \times V \times 100$$

$$Q_4 = (Q_2 \times V_{S1}/V) + [(r_U/r_S) \times (C_S/L) \times (V - V_{S1}) \times 100]$$

$$Q_8 = (Q_2 \times V_{S1}/V) + \{Q_4 \times V_{S2}/[V - (V_{S1} + V_{S2})]\} + \{(r_U/r_S) \times (C_S/L) \times [V - (V_{S1} + V_{S2})] \times 100\}$$

$$Q_{24} = (Q_2 \times V_{S1}/V) + \{Q_4 \times V_{S2}/[V - (V_{S1} + V_{S2})]\} + \{Q_8 \times V_{S3}/[V - (V_{S1} + V_{S2} + V_{S3})]\} + \{(r_U/r_S) \times (C_S/L) \times [V - (V_{S1} + V_{S2} + V_{S3})] \times 100\}$$

r_U = peak response of verapamil from the *Sample solution*
r_S = peak response of verapamil from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution*
L = label claim (mg/Capsule)
V = initial volume of *Medium*, 900 mL
V_{Si} = volume of *Medium* taken at each time point (mL)

Tolerances: See *Table 1*.

Table 1

Time (h)	Amount Dissolved (%)
2	10–25
4	15–40
8	40–65
24	NLT 80

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) released at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.
Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium, Apparatus 2, Times, Solution A, Mobile phase, System suitability solution, Standard solution, Sample solution, Chromatographic system, System suitability, and **Analysis:** Proceed as directed in *Test 1*.
Tolerances: See *Table 2*.

Verapamil Hydrochloride Compounded Oral Solution

DEFINITION

Verapamil Hydrochloride Compounded Oral Solution contains NLT 90.0% and NMT 110.0% of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$).

Prepare Verapamil Hydrochloride Compounded Oral Solution 50 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Verapamil Hydrochloride powder	5 g
Vehicle for Oral Solution (regular or sugar-free), *NF*, a sufficient quantity to make	100 mL

Add *Verapamil Hydrochloride powder* and about 40 mL of *Vehicle* to a mortar, and mix. Add the *Vehicle* in small portions almost to volume, and mix thoroughly after each addition. Transfer the contents of the mortar, stepwise and quantitatively, to a calibrated bottle. Add sufficient *Vehicle* to bring the preparation to final volume, and mix well.

ASSAY

• **PROCEDURE**

Solution A: 0.01 N sodium acetate solution containing 33 mL/L of acetic acid

Mobile phase: Acetonitrile, 2-aminoheptane, and *Solution A* (50: 0.5: 50). Filter, and degas.

Standard solution: 500 µg/mL of USP Verapamil Hydrochloride RS in *Mobile phase*

Sample solution: Agitate containers of Oral Solution for 30 min on a rotating mixer, remove a 5-mL sample, and store in a clear glass vial at −70° until analyzed. At the time of analysis, remove the sample from the freezer, allow it to reach room temperature, and mix on a vortex mixer for 30 s. Pipet 1.0 mL of the sample into a 100-mL volumetric flask, and dilute with *Mobile phase* to volume.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 278 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 0.5 mL/min
Injection volume: 20 µL

System suitability
Sample: *Standard solution*
[NOTE—The retention time for verapamil hydrochloride is about 4.8 min.]

Suitability requirements
Relative standard deviation: NMT 0.7% for replicate injections

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) in the portion of Oral Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of verapamil hydrochloride in the *Sample solution* (µg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **pH** ⟨791⟩: 3.8–4.8

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store at controlled room temperature or in a refrigerator.
• **BEYOND-USE DATE:** NMT 60 days after the date on which it was compounded when stored at controlled room temperature or in a refrigerator
• **LABELING:** Label to indicate the *Beyond-Use Date*.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Verapamil Hydrochloride RS

Verapamil Hydrochloride Compounded Oral Suspension

DEFINITION

Verapamil Hydrochloride Compounded Oral Suspension contains NLT 90.0% and NMT 110.0% of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$).

Prepare Verapamil Hydrochloride Compounded Oral Suspension 50 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Verapamil Hydrochloride	5 g
Vehicle: a 1:1 mixture of Vehicle for Oral Solution, (regular or sugar-free), *NF*, and Vehicle for Oral Suspension, *NF*, a sufficient quantity to make	100 mL

If using tablets, comminute to a fine powder using a suitable mortar, or add *Verapamil Hydrochloride* powder. Add about 40 mL of the *Vehicle* in small portions, and mix to obtain a uniform paste. Transfer the mortar contents, stepwise and quantitatively, to a calibrated bottle. Add the *Vehicle* in portions to rinse the mortar, add sufficient *Vehicle* to bring to final volume, and mix well.

ASSAY

• **PROCEDURE**

Solution A: 0.01 N sodium acetate solution containing 33 mL/L of acetic acid

Mobile phase: Acetonitrile, 2-aminoheptane, and *Solution A* (50: 0.5: 50). Filter, and degas.

Standard solution: 500 µg/mL of USP Verapamil Hydrochloride RS in *Mobile phase*

• **BEYOND-USE DATE:** NMT 60 days after the date on which it was compounded when stored at controlled room temperature or in a refrigerator
• **LABELING:** Label it to state that it is to be well shaken before use, and to state the *Beyond-Use Date*.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Verapamil Hydrochloride RS

Verapamil Hydrochloride Tablets

» Verapamil Hydrochloride Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$).

Packaging and storage—Preserve in tight, light-resistant containers.
USP Reference standards ⟨11⟩—
USP Verapamil Hydrochloride RS
USP Verapamil Related Compound A RS
3,4-Dimethoxy-α-[3-(methylamino)propyl]-α-(1-methylethyl)-benzeneacetonitrile monohydrochloride.
$C_{17}H_{26}N_2O_2 \cdot HCl$ 326.87
USP Verapamil Related Compound B RS
Benzeneacetonitrile, α-[2-[[2-(3,4-dimethoxyphenyl)-ethyl]methylamino]ethyl]-3,4-dimethoxy-α-(1-methylethyl)-, monohydrochloride.
$C_{26}H_{36}N_2O_4 \cdot HCl$ 477.05
USP Verapamil Related Compound E RS
3,4-Dimethoxybenzaldehyde.
USP Verapamil Related Compound F RS
(3,4-Dimethoxyphenyl)methanol.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020)—
Test specimen—Transfer a portion of finely powdered Tablets, equivalent to about 25 mg of verapamil hydrochloride, to a separator. Add 25 mL of water, and shake by mechanical means for 30 minutes. Add 1 mL of 1 N sodium hydroxide, and extract with 25 mL of chloroform, shaking by mechanical means for 10 minutes. Pass the chloroform extract through a filter containing anhydrous sodium sulfate. Triturate the chloroform extract with 400 mg of potassium bromide and evaporate to dryness. Dry at 105° for 2 hours.
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation*, as obtained in the *Assay*.

Dissolution ⟨711⟩—
Medium: 0.01 N hydrochloric acid; 900 mL.
Apparatus 2: 50 rpm.
Time: 30 minutes.
Procedure—Determine the amount of $C_{27}H_{38}N_2O_4 \cdot HCl$ dissolved from the difference between UV absorbances at the wavelengths of maximum absorbance at about 278 nm and 300 nm using filtered portions of the solution under test, suitably diluted with *Medium* if necessary, in comparison with a Standard solution having a known concentration of USP Verapamil Hydrochloride RS in the same *Medium*.
Tolerances—Not less than 75% *(Q)* of the labeled amount of $C_{27}H_{38}N_2O_4 \cdot HCl$ is dissolved in 30 minutes.
Uniformity of dosage units ⟨905⟩: meet the requirements.
Procedure for content uniformity—Transfer 1 Tablet to a 100-mL volumetric flask, add 50 mL of 0.01 N hydrochloric acid, and heat on a steam bath for 50 minutes. Sonicate the heated solution for about 10 minutes, cool, dilute with 0.01 N hydrochloric acid to volume, mix, and filter. Dilute an accurately measured portion of the filtrate quantitatively with 0.01 N hydrochloric acid to obtain a *Test preparation* containing about 48 µg of verapamil hydrochloride per mL. Dissolve an accurately weighed quantity of USP Verapamil Hydrochloride RS in 0.01 N hydrochloric acid to obtain a *Standard preparation* having a known concentration of about 48 µg per mL. Concomitantly determine the absorbances of the *Test preparation* and the *Standard preparation* in 1-cm cells at the wavelength of maximum absorbance at about 278 nm and the absorbance of the *Test preparation* at 300 nm, with a suitable spectrophotometer using 0.01 N hydrochloric acid as the blank. Calculate the quantity, in mg, of $C_{27}H_{38}N_2O_4 \cdot HCl$ in the Tablet taken by the formula:

$$(TC/D)(A_U/A_S)$$

www.webofpharma.com

in which T is the labeled quantity, in mg, of verapamil hydrochloride in the Tablet; C is the concentration, in µg per mL, of USP Verapamil Hydrochloride RS in the *Standard preparation*; D is the concentration, in µg per mL, of verapamil hydrochloride in the *Test preparation*, on the basis of the labeled quantity per Tablet and the extent of dilution; A_U is the difference between absorbances at 278 nm and 300 nm of the *Test preparation*; and A_S is the absorbance of the *Standard preparation* at 278 nm.

Related compounds—

Aqueous solvent mixture, Mobile phase, System suitability solution, and *Chromatographic system*—Proceed as directed in the *Assay*.

Standard solution—Dissolve accurately weighed quantities of USP Verapamil Hydrochloride RS, USP Verapamil Related Compound A RS, USP Verapamil Related Compound E RS, and USP Verapamil Related Compound F RS in *Mobile phase* to obtain a solution having known concentrations of about 1.6 mg of USP Verapamil Hydrochloride RS per mL and 0.0048 mg each of USP Verapamil Related Compound A RS, USP Verapamil Related Compound E RS, and USP Verapamil Related Compound F RS per mL.

Test solution—Use the *Assay preparation*.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard solution* and the *Test solution* into the chromatograph, and allow the *Test solution* to elute for not less than four times the retention time for verapamil. Record the chromatograms, and measure all of the peak responses. [NOTE—The retention times are about 0.4 for verapamil related compound F, 0.5 for verapamil related compound A, 0.7 for verapamil related compound E, and 1.0 for verapamil.] Calculate the quantity, in mg, of each individual impurity in the portion of Tablets taken by the formula:

$$25C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of verapamil related compound A, verapamil related compound E, or verapamil related compound F in the *Standard solution* [NOTE—For calculating any other unspecified impurity, C is the concentration, in mg per mL, of USP Verapamil Hydrochloride RS in the *Standard solution*.] ; and r_U and r_S are the peak responses of the appropriate impurity obtained from the *Test solution* and the *Standard solution*, respectively: not more than 0.3% of any specified impurity is found; and the sum of all impurities is not more than 1.0%.

Assay—

Aqueous solvent mixture—Prepare a 0.015 N sodium acetate solution containing about 33 mL of glacial acetic acid per L.

Mobile phase—Prepare a filtered and degassed mixture of *Aqueous solvent mixture*, acetonitrile, and 2-aminoheptane (70: 30: 0.5). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed quantity of USP Verapamil Hydrochloride RS in *Mobile phase* to obtain a solution having a known concentration of about 1.6 mg per mL.

Assay preparation—Weigh and finely powder not fewer than 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 40 mg of verapamil hydrochloride, to a stoppered centrifuge tube, and add 25 mL of *Mobile phase*. Shake by mechanical means for 15 minutes, centrifuge, and if necessary filter the supernatant.

System suitability solution—Dissolve suitable quantities of USP Verapamil Hydrochloride RS and USP Verapamil Related Compound B RS in *Mobile phase* to obtain a solution having known concentrations of about 1.9 mg per mL and 1.5 mg per mL, respectively.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 278-nm detector and a 4.6-mm × 12.5- to 15-cm column that contains packing L1. The flow rate is about 0.9 mL per minute. Chromatograph the *System suitability solution*, and record the peak responses as directed for *Procedure:* the relative retention times are about 0.88 for verapamil related compound B and 1.0 for verapamil; the resolution, R, between the verapamil related compound B and verapamil peaks is not less than 1.5; and the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, and allow the *Assay preparation* to elute for not less than four times the retention time for verapamil. Record the chromatograms, and measure the responses for all of the major peaks. Calculate the quantity, in mg, of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) in the portion of Tablets taken by the formula:

$$25C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Verapamil Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Verapamil Hydrochloride Extended-Release Tablets

DEFINITION

Verapamil Hydrochloride Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$).

IDENTIFICATION

- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The UV spectrum of the major peak of the *Diluted sample solution* corresponds to that of the *Diluted standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Buffer: To 0.82 g of sodium acetate, add 33 mL of glacial acetic acid and dilute with water to 1 L.

Mobile phase: Acetonitrile, 2-aminoheptane, and *Buffer* (60:1:140)

System suitability solution: 2.5 mg/mL of USP Verapamil Hydrochloride RS and 2.0 mg/mL of USP Verapamil Related Compound B RS in *Mobile phase*

Standard solution: 1.2 mg/mL of USP Verapamil Hydrochloride RS in *Mobile phase*

Diluted standard solution: 0.6 mg/mL of USP Verapamil Hydrochloride RS in *Mobile phase* from the *Standard solution*

Sample solution: Nominally 1.2 mg/mL of verapamil hydrochloride from Tablets prepared as follows. Transfer an amount equivalent to 240 mg of verapamil hydrochloride, from NLT 20 powdered Tablets, to a 200-mL volumetric flask, and add about 160 mL of *Mobile phase*. Sonicate for 15 min, stir for 15 min, dilute with *Mobile phase* to volume, and mix. Centrifuge a portion for 20 min, and use the supernatant.

Diluted sample solution: Nominally 0.6 mg/mL of verapamil hydrochloride in *Mobile phase* from the *Sample solution*

www.webofpharma.com

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 278 nm. For *Identification B*, use a diode array detector in the range of 200–400 nm.
Column: 4.6-mm × 15-cm; 5-µm packing L1
Flow rate: 1 mL/min
Injection volume: 10 µL
Run time: NLT 3 times the retention time of verapamil
System suitability
Samples: *System suitability solution* and *Standard solution*
[NOTE—The relative retention times for verapamil related compound B and verapamil are 0.85 and 1.0, respectively.]
Suitability requirements
Resolution: NLT 1.5 between verapamil and verapamil related compound B, *System suitability solution*
Relative standard deviation: NMT 2.0%, *Standard solution*
Analysis
Samples: *Standard solution*, *Diluted standard solution*, *Sample solution*, and *Diluted sample solution*
[NOTE—The *Diluted standard solution* and *Diluted sample solution* are used for *Identification B*.]
Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of verapamil from the *Sample solution*
r_S = peak response of verapamil from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of verapamil hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **DISSOLUTION** ⟨711⟩
Test 1: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 1*. Proceed as directed in *Dissolution* ⟨711⟩, *Procedure, Apparatus 1 and Apparatus 2, Delayed-Release Dosage Forms, Method B Procedure*.
Acid stage medium: Using 900 mL of simulated gastric fluid TS (without enzyme), conduct this stage of the test for 1 h.
Buffer stage medium: Using 900 mL of simulated intestinal fluid TS (without enzyme), conduct this stage of the test for 7 h.
Apparatus 2: 50 rpm
Times
Acid stage: 1 h
Buffer stage: 2, 3.5, 5, and 8 h
Standard solution: USP Verapamil Hydrochloride RS in 0.01 N hydrochloric acid
Sample solution: Pass portions of the solution under test through a suitable filter. Dilute with medium as necessary.
Blank solution: 0.01 N hydrochloric acid
Analysis: Wrap each Tablet in a wire helix to prevent the Tablets from floating. After 1 h in the *Acid stage medium*, withdraw a specimen for analysis, and carefully transfer the dosage form, including the wire helix, to a vessel containing the *Buffer stage medium*, which has been previously warmed to 37 ± 0.5°. At each time interval, pass a portion of the solution under test through a suitable glass microfiber filter paper. Dilute, if necessary, the filtered portions of the solutions under test with water at the 1-h interval and with 0.1 N hydrochloric acid at the 2-, 3.5-, 5-, and 8-h intervals. Determine the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved.
[NOTE—Use only filters that have been shown not to absorb verapamil.]
Detector: UV 278 nm
Tolerances: See *Table 1* and *Table 2*.

2	15–35
3.5	27–57
5	45–75
8	NLT 80

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 4: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 4*.

Medium: Simulated intestinal fluid TS (without enzyme); 50 mL

Apparatus 7: 20 cycles/min (see *Drug Release* ⟨724⟩)

Detector: UV 278 nm

Standard solution: USP Verapamil Hydrochloride RS in *Medium*

Analysis: Scrape about 2 mm × 2 mm of the coating from the side edge of the Tablet under test. Glue the system to a plastic rod sample holder at the area where the color has been removed. Attach each plastic sample holder to an arm of the apparatus, which reciprocates at an amplitude of about 2 cm and 15–30 cycles/min. The Tablet is continuously immersed in tubes containing 50 mL of *Medium* at 37°. At the end of each specified test interval, the systems are transferred to the next row of new test tubes containing 50 mL of fresh *Medium*. Remove the tubes after the last test interval, and allow them to cool to room temperature. Add 2.0 mL of 1.0 M phosphoric acid to each tube, and dilute with water to 50 mL. Stir and mix each tube thoroughly. Determine the percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) for the filtered portions of the solution under test, suitably diluted with *Medium*.

Tolerances: See *Table 7*.

Table 7

Time (h)	Amount Dissolved (%)
3	NMT 10
6	20–50
9	52.5–82.5
14	NLT 85

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 5: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 5*.

Phosphate buffer: Dissolve 6.8 g of monobasic potassium phosphate in 250 mL of water. Add 190 mL of 0.2 N sodium hydroxide in 400 mL of water, adjust with 0.2 N sodium hydroxide to a pH of 7.5 ± 0.1, and dilute with water to 1000 mL.

Medium: *Phosphate buffer*; 900 mL

Apparatus 2: 50 rpm

Detector: UV 278 nm

Standard solution: USP Verapamil Hydrochloride RS in *Medium*

Sample solution: Pass portions of the solution under test through a suitable filter. Dilute with *Medium* as necessary.

Analysis: Determine the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved.

Tolerances: See *Table 8*.

Table 8

Time (h)	Amount Dissolved (%)
1	2–12
2	10–25
4	25–50
8	NLT 80

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 6: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 6*.

Acid stage medium, Buffer stage medium, Apparatus 2, Times, and **Detector:** Proceed as directed for *Test 1*.

Standard solution: 0.04 mg/mL of USP Verapamil Hydrochloride RS in 0.01 N hydrochloric acid

Sample solution: Pass portions of the solution under test through a suitable filter. Dilute with 0.1 N hydrochloric acid to prepare a sample of concentration similar to that of the *Standard solution*.

Analysis

Samples: *Standard solution* and *Sample solution*

Proceed as directed for *Test 1*.

Calculate the concentration (C_i) of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved in medium (mg/mL) at each time point (i):

$$C_i = (A_U/A_S) \times C_S \times D$$

A_U = absorbance of verapamil from the *Sample solution*

A_S = absorbance of verapamil from the *Standard solution*

C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (mg/mL)

www.webofpharma.com

D = dilution factor

Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved ($Q_i$), at each time point ($i$):

$$Result_1 = (C_1 \times V) \times (1/L) \times 100$$

$$Result_2 = \{[C_2 \times (V - V_S)] + (C_1 \times V_S)\} \times (1/L) \times 100$$

$$Result_3 = (\{C_3 \times [V - (2 \times V_S)]\} + [(C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

$$Result_4 = (\{C_4 \times [V - (3 \times V_S)]\} + [(C_3 + C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

$$Result_5 = (\{C_5 \times [V - (4 \times V_S)]\} + [(C_4 + C_3 + C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

C_i = concentration of verapamil hydrochloride in the portion of the sample withdrawn at time point i (mg/mL)
V = volume of *Medium*, 900 mL
L = label claim (mg/Tablet)
V_S = volume of the *Sample solution* withdrawn at each time point from the medium in the *Buffer stage* (mL)

Tolerances: See *Table 9*.

Table 9

Time Point (i)	Time (h)	Amount Dissolved (%)		
		Tablet Strength—240 mg	Tablet Strength—180 mg	Tablet Strength—120 mg
1	1	10–25	10–25	15–30
2	2	25–45	27–47	35–55
3	3.5	50–75	55–80	60–85
4	5	70–90	NLT 75	NLT 80
5	8	NLT 85	NLT 85	NLT 85

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 7: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 7*.
Acid stage medium: Simulated gastric fluid TS (without enzyme); 900 mL
Buffer stage medium: Simulated intestinal fluid TS (without enzyme); 900 mL
Apparatus 2: 50 rpm, with a sinker (see *Dissolution* ⟨711⟩, *Figure 2a*)
Times
Acid stage : 1 h
Buffer stage : 2, 3.5, 5, and 8 h
Diluent: 0.01 N hydrochloric acid
Dilute phosphoric acid: Dilute 5.0 mL of phosphoric acid with water to 50 mL.
Buffer: 1.74 g/L of dibasic potassium phosphate in water. Adjust to a pH of 7.5 using *Dilute phosphoric acid*.
Mobile phase: Acetonitrile and *Buffer* (650:350)
Standard solution: Prepare the corresponding USP Verapamil Hydrochloride RS solutions in *Diluent* as directed in *Table 10*. Pass through a suitable membrane filter of 0.45-µm pore size.

Table 10

Tablet Strength (mg)	Concentration of USP Verapamil Hydrochloride RS (µg/mL)
240	270
120	135
180	203

Sample solutions: Pass a portion of the solution under test at each time point through a suitable filter of 1-µm pore size, and use the filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 278 nm
Column: 4.6-mm × 25-cm; 5-µm packing L7
Column temperature: 30°
Flow rate: 1.5 mL/min
Injection volume: 10 µL
Run time: NLT 1.4 times the retention time of verapamil
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solutions*
After 1 h in the *Acid stage medium*, withdraw 10 mL of the solution under test. Carefully transfer the dosage form including the sinker to a vessel containing the *Buffer stage medium*, previously warmed to 37 ± 0.5°.
Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved in the *Acid stage medium*:

$$Result = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$

r_U = peak response of verapamil from the *Sample solutions*
r_S = peak response of verapamil from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (mg/mL)
V = volume of *Acid stage medium*, 900 mL
L = label claim (mg/Tablet)

Calculate the concentration (C_i) of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) in the sample withdrawn from the vessel at each *Buffer stage* time point (i):

$$Result_i = (r_U/r_S) \times C_S$$

r_U = peak response of verapamil from the *Sample solution* at each time point (i)
r_S = peak response of verapamil from the *Standard solution*
C_S = concentration of USP Verapamil Hydrochloride RS in the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at each time point (i):

$$Result_1 = C_1 \times V \times (1/L) \times 100$$

USP Monographs

www.webofpharma.com

$$Result_2 = \{[C_2 \times (V - V_S)] + (C_1 \times V_S)\} \times (1/L) \times 100$$

$$Result_3 = (\{C_3 \times [V - (2 \times V_S)]\} + [(C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

$$Result_4 = (\{C_4 \times [V - (3 \times V_S)]\} + [(C_3 + C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

C_i = concentration of verapamil hydrochloride in the *Sample solution* at the specified time point *i* (mg/mL)
V = volume of *Buffer stage medium*, 900 mL
L = label claim (mg/Tablet)
V_S = volume of the *Sample solution* withdrawn at each time point (mL)

Tolerances: See *Table 11*.

Table 11

Time Point (*i*)	Time (h)	Amount Dissolved (%)		
		Tablet Strength—240 mg	Tablet Strength—180 mg	Tablet Strength—120 mg
1	1	7–20	7–20	10–21
2	2	15–30	15–30	18–33
3	3.5	31–60	31–60	30–55
4	5	55–85	55–85	50–82
5	8	NLT 85	NLT 85	NLT 85

The percentages of the labeled amount of verapamil hydrochloride ($C_{27}H_{38}N_2O_4 \cdot HCl$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

• **Uniformity of Dosage Units** ⟨905⟩: Meet the requirements

IMPURITIES

• **Organic Impurities**

Buffer, Mobile phase, System suitability solution, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Sample: *Sample solution*

Calculate the percentage of each unspecified degradation product in the portion of Tablets taken:

$$Result = (r_U/r_T) \times 100$$

r_U = peak response for each unspecified degradation product from the *Sample solution*
r_T = sum of all peak responses from the *Sample solution*

Acceptance criteria: See *Table 12*.

Table 12

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Verapamil related compound B[a]	0.85	—
Verapamil	1.0	—
Any unspecified degradation product	—	0.5
Total degradation products	—	1.0

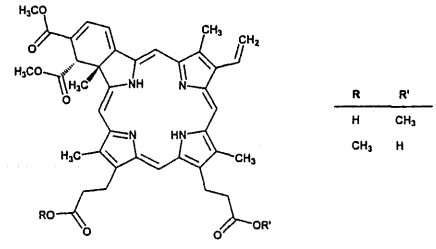
[a] For resolution measurement only. Do not include it in the total.

ADDITIONAL REQUIREMENTS

• **Packaging and Storage:** Preserve in tight, light-resistant containers. Store at controlled room temperature.

• **Labeling:** The labeling indicates the *Dissolution* test with which the product complies.

• **USP Reference Standards** ⟨11⟩



USP Verapamil Hydrochloride RS

USP Verapamil Related Compound B RS

Benzeneacetonitrile, 4-[(3,4-Dimethoxyphenethyl)(methyl)amino]-2-(3,4-dimethoxyphenyl)-2-isopropylbutanenitrile hydrochloride.

Verteporfin for Injection

DEFINITION
Verteporfin for Injection is a sterile mixture of verteporfin and lipids. It contains NLT 91.0% and NMT 110.0% of the labeled amount of verteporfin ($C_{41}H_{42}N_4O_8$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS ⟨197⟩,** *Ultraviolet-Visible Spectroscopy*: **197U▲** (CN 1-May-2020)
  Sample solution: 10 µg/mL in methanol
  Acceptance criteria: Meets the requirements
- **B.** The retention time of the two major peaks of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Mobile phase: Acetonitrile, tetrahydrofuran, 1% (w/v) ammonium sulfate solution, and acetic acid (11:9:20:2), adjusted with 3.6 M sulfuric acid to a pH of 3.0
  Diluent 1: Acetonitrile and tetrahydrofuran (1:1)
  Diluent 2: Acetonitrile, tetrahydrofuran, and water (3:3:4)
  Standard solution: 0.1 mg/mL of USP Verteporfin RS prepared as follows. Prepare 0.167 mg/mL of USP Verteporfin RS in *Diluent 1*, then dilute this solution with water. Protect the solution from light.
  Sample solution: Reconstitute 1 vial of Verteporfin for Injection in deionized water to obtain 2 mg/mL of verteporfin. Transfer the contents to a 200-mL volumetric flask, rinsing the vial with *Diluent 2*. Dilute with *Diluent 2* to volume. Protect the solution from light.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV-Vis 410 nm
  Column: 4.6-mm × 25-cm; 5-µm packing L1

  Injection volume: 20 µL
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Resolution: NLT 2.5 between the two verteporfin isomer peaks
  Tailing factor: NMT 1.3
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of verteporfin ($C_{41}H_{42}N_4O_8$) in the portion of Verteporfin for Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = sum of two verteporfin isomer peak responses from the *Sample solution*
r_S = sum of two verteporfin isomer peak responses from the *Standard solution*
C_S = concentration of USP Verteporfin RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of verteporfin in the *Sample solution* (mg/mL)

Acceptance criteria: 91.0%–110.0%

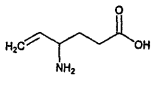
PERFORMANCE TESTS
- **UNIFORMITY OF DOSAGE UNITS ⟨905⟩:** Meets the requirements

IMPURITIES
- **LIMIT OF VERTEPORFIN RELATED COMPOUND A**
  Mobile phase, Sample solution, Chromatographic system and System suitability: Proceed as directed in the *Assay*.
  Diluent: Acetonitrile and tetrahydrofuran (1:1)
  Standard stock solution: 0.167 mg/mL of USP Verteporfin RS and 6.67 µg/mL of USP Verteporfin Related Compound A RS in *Diluent*
  Standard solution: 0.1 mg/mL of USP Verteporfin RS and 4 µg/mL of USP Verteporfin Related Compound A RS prepared as follows. Dissolve 3 parts of the *Standard stock solution* with 2 parts of water. Protect the solution from light.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV-Vis 410 nm
  Column: 4.6-mm × 25-cm; 5-µm packing L1
  Column temperature: 30°
  Flow rate: 1.4 mL/min
  Injection volume: Equal volumes for *Standard solution* and *Sample solution*
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Resolution: NLT 2.5 between the two verteporfin isomer peaks
  Tailing factor: NMT 1.3
  Relative standard deviation: NMT 2.0%
  Analysis
  Samples: *Standard solution* and *Standard solution*
  Calculate the percentage of verteporfin related compound A in the portion of Verteporfin for Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of verteporfin related compound A from the *Sample solution*
r_S = peak response of verteporfin related compound A from the *Standard solution*
C_S = concentration of USP Verteporfin Related Compound A RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of verteporfin in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 4.0%



SPECIFIC TESTS
- **PYROGEN TEST ⟨151⟩**
  Test dose: 4 mg/kg
  Acceptance criteria: Meets the requirements
- **STERILITY TESTS ⟨71⟩:** It meets the requirements when tested as directed in *Test for Sterility of the Product to Be Examined, Membrane Filtration*.
- **WATER DETERMINATION,** *Method Ic* ⟨921⟩**:** NMT 3.0%, use a mixture of methanol and formamide (7:3) as the solvent.
- **PARTICULATE MATTER IN INJECTIONS ⟨788⟩:** Meets the requirements for small-volume injections

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*, and store at controlled room temperature, protected from light.

www.webofpharma.com

- **LABELING:** The label states that it is to be protected from light after constitution, indicates that it is intended for intravenous use only, and includes the name and amount of diluent for constitution.

  Run time: NLT 1.8 times the retention time of vigabatrin
  System suitability
  Sample: *System suitability solution*
  [NOTE—The relative retention times for vigabatrin related compound A and vigabatrin are about 0.5 and 1.0, respectively.]
  Suitability requirements
  Resolution: NLT 1.5 between vigabatrin related compound A and vigabatrin
  Relative standard deviation: NMT 1.0% for the vigabatrin peak
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of vigabatrin ($C_6H_{11}NO_2$) in the portion of Vigabatrin taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Vigabatrin RS in the *Standard solution* (mg/mL)
C_U = concentration of Vigabatrin in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the anhydrous basis

IMPURITIES
- **LIMIT OF γ-AMINOBUTYRIC ACID**
  Solution A: 1.6 g/L of 9-fluorenylmethyl chloroformate (FMOC) in acetone
  Buffer A: 4.1 g/L of anhydrous sodium acetate. Adjust with glacial acetic acid to a pH of 4.2.
  Buffer B: 31 g/L of boric acid. Adjust with 0.5 g/mL of sodium hydroxide to a pH of 7.7.
  Mobile phase: Acetonitrile and *Buffer A* (32:68)
  System suitability stock solution: 2.0 mg/mL of USP Vigabatrin RS and 4 µg/mL of USP γ-Aminobutyric Acid RS in water
  System suitability solution: Transfer 1.0 mL of *System suitability stock solution* to a suitable container. Pipet 2 mL of *Buffer B* into the container, and mix. Pipet 3 mL of *Solution A* into the container, mix, and allow to stand for 5 min. Pipet 3 mL of ethyl acetate into the container, shake for a few seconds, and allow the layers to separate. Use the lower layer within 8 h of preparation.
  Standard stock solution: 4 µg/mL of USP γ-Aminobutyric Acid RS in water
  Standard solution: Transfer 1.0 mL of *Standard stock solution* to a suitable container. Pipet 2 mL of *Buffer B* into the container, and mix. Pipet 3 mL of *Solution A* into the container, mix, and allow to stand for 5 min. Pipet 3 mL of ethyl acetate into the container, shake for a few seconds, and allow the layers to separate. Use the lower layer within 8 h of preparation.
  Sample stock solution: 2.0 mg/mL of Vigabatrin in water
  Sample solution: Transfer 1.0 mL of *Sample stock solution* to a suitable container. Pipet 2 mL of *Buffer B* into the container, and mix. Pipet 3 mL of *Solution A* into the container, mix, and allow to stand for 5 min. Pipet 3 mL of ethyl acetate into the container, shake for a few seconds, and allow the layers to separate. Use the lower layer within 8 h of preparation.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 263 nm
  Column: 4.6-mm × 15.0-cm; 5-µm packing L11
  Flow rate: 1 mL/min
  Injection volume: 25 µL
  Run time: NLT 1.5 times the retention time of FMOC-vigabatrin
  System suitability
  Samples: *System suitability solution* and *Standard solution*
  [NOTE—The relative retention times for (9-fluorenyl) methanol (FMOC-OH), FMOC-γ-aminobutyric acid, and FMOC-vigabatrin are about 0.5, 0.6, and 1.0, respectively.]
  Suitability requirements
  Resolution: NLT 2.0 between FMOC-OH and FMOC-γ-aminobutyric acid, *System suitability solution*
  Relative standard deviation: NMT 2.0% for the FMOC-γ-aminobutyric acid peak, *Standard solution*
  Analysis
  Samples: *Standard solution* and *Sample solution*

www.webofpharma.com

Calculate the percentage of γ-aminobutyric acid in the portion of Vigabatrin taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of FMOC-γ-aminobutyric acid from the *Sample solution*
r_S = peak response of FMOC-γ-aminobutyric acid from the *Standard solution*
C_S = concentration of USP γ-Aminobutyric Acid RS in the *Standard stock solution* (mg/mL)
C_U = concentration of Vigabatrin in the *Sample stock solution* (mg/mL)

Acceptance criteria: NMT 0.2% of γ-aminobutyric acid

• **ORGANIC IMPURITIES**

Buffer: 58.5 g/L of monobasic sodium phosphate in dilute phosphoric acid (23 in 1000)
Mobile phase: Acetonitrile, *Buffer*, and water (25:25:950)
System suitability solution: 6 µg/mL of USP Vigabatrin Related Compound A RS, 8 µg/mL of USP Vigabatrin Related Compound B RS, 8 µg/mL of USP Vigabatrin Related Compound E RS, and 4.0 mg/mL of USP Vigabatrin RS in *Mobile phase*
Standard solution: 6 µg/mL of USP Vigabatrin Related Compound A RS, 8 µg/mL of USP Vigabatrin Related Compound B RS, and 8 µg/mL of USP Vigabatrin Related Compound E RS in *Mobile phase*
Sample solution: 4.0 mg/mL of Vigabatrin in *Mobile phase*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)

Vigabatrin for Oral Solution

DEFINITION

Vigabatrin for Oral Solution contains NLT 95.0% and NMT 105.0% of the labeled amount of vigabatrin ($C_6H_{11}NO_2$).

USP Monographs

www.webofpharma.com

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

Sample: Combine an appropriate number of Vigabatrin for Oral Solution packets to prepare a 50 mg/mL solution of vigabatrin in water. Pass a portion through a suitable filter, and prepare a 2-mg/mL solution by mixing a suitable portion of the filtrate with acetone. Evaporate the solution to dryness in a stream of nitrogen. Prepare a potassium bromide (KBr) pellet using a suitable amount of the residue. Alternatively, the *Sample* may be prepared by directly mixing an amount of the contents of NLT 2 packets of Vigabatrin for Oral Solution equivalent to about 3 mg of vigabatrin with about 200 mg of potassium bromide.

Acceptance criteria: The spectrum of the *Sample* corresponds to that of the spectrum of USP Vigabatrin RS prepared in a similar manner.

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Buffer: 3.4 g/L of monobasic potassium phosphate in water

Mobile phase: Acetonitrile, methanol, and *Buffer* (4:40:1000). Adjust with phosphoric acid to a pH of 2.8.

System suitability solution: 2 mg/mL of USP Vigabatrin RS and 12 µg/mL of USP Vigabatrin Related Compound A RS in *Mobile phase*

Standard solution: 2.0 mg/mL of USP Vigabatrin RS in *Mobile phase*

Sample solution: Nominally 2.0 mg/mL of vigabatrin from the contents of NLT 10 Vigabatrin for Oral Solution packets prepared as follows. Combine the contents from the packets, and transfer a suitable amount of the powder equivalent to NLT 200 mg of vigabatrin to a suitable volumetric flask. Dilute with *Mobile phase* to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 210 nm

Column: 4.6-mm × 25-cm; 10-µm packing L9

Flow rate: 1.5 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

[NOTE—The relative retention times for vigabatrin related compound A and vigabatrin are about 0.7 and 1.0, respectively.]

Suitability requirements

Resolution: NLT 1.5 between vigabatrin related compound A and vigabatrin peaks, *System suitability solution*

Tailing factor: NMT 2.0, *Standard solution*

Relative standard deviation: NMT 1.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of vigabatrin ($C_6H_{11}NO_2$) in the portion of Vigabatrin for Oral Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of vigabatrin from the *Sample solution*

r_S = peak response of vigabatrin from the *Standard solution*

C_S = concentration of USP Vigabatrin RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of vigabatrin in the *Sample solution* (mg/mL)

Acceptance criteria: 95.0%–105.0%

PERFORMANCE TESTS

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meets the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Buffer: 1.5 g/L of ammonium acetate in water

Mobile phase: Acetonitrile and *Buffer* (5:95)

System suitability solution: 0.1 mg/mL each of USP Vigabatrin RS, USP Vigabatrin Related Compound A RS, USP Vigabatrin Related Compound B RS, and USP Povidone RS in *Mobile phase*

Sensitivity solution: 0.01 mg/mL of USP Vigabatrin Related Compound A RS in *Mobile phase*

Standard solution: 0.07 mg/mL of USP Vigabatrin Related Compound A RS in *Mobile phase*

Sample solution: Nominally 22 mg/mL of vigabatrin prepared as follows. Transfer a suitable amount of powder from the combined contents of NLT 10 Vigabatrin for Oral Solution packets, equivalent to NLT 220 mg of vigabatrin, to a suitable volumetric flask. Add *Mobile phase* to 80% of the volume of the flask. Sonication may be used to aid in dissolution. Allow the resulting solution to cool to room temperature. Dilute with *Mobile phase* to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 210 nm

Column: 4.6-mm × 25-cm; 5-µm packing L1

Flow rate: 1.0 mL/min

Injection volume: 10 µL

Run time: 12 times the retention time of the vigabatrin peak

System suitability

Samples: *System suitability solution*, *Sensitivity solution*, and *Standard solution*

[NOTE—See *Table 1* for the relative retention times.]

Suitability requirements

Resolution: NLT 2.0 between vigabatrin related compound B and povidone, *System suitability solution*

Relative standard deviation: NMT 5.0%, *Standard solution*

Signal-to-noise ratio: NLT 10, *Sensitivity solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of each impurity in the portion of Vigabatrin for Oral Soution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*

r_S = peak response of vigabatrin related compound A from the *Standard solution*

C_S = concentration of USP Vigabatrin Related Compound A in the *Standard solution*

C_U = nominal concentration of vigabatrin in the *Sample solution*

F = relative response factor (see *Table 1*)

Acceptance criteria: See *Table 1*.

Vigabatrin Tablets

DEFINITION

Vigabatrin Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of vigabatrin ($C_6H_{11}NO_2$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
  Sample: Grind an appropriate number of Tablets to prepare a 50-mg/mL solution of vigabatrin in water. Pass a portion of the solution through a suitable filter, and prepare a 2-mg/mL solution by mixing a suitable portion of the filtrate with acetone. Evaporate the solution to dryness in a stream of nitrogen. Prepare a potassium bromide pellet using a suitable amount of the residue. Alternatively, the *Sample* may be prepared by directly mixing an amount of finely ground Tablets (NLT 2) equivalent to about of 3 mg of vigabatrin with about 200 mg of potassium bromide.
  Acceptance criteria: The IR spectrum of the *Sample* is consistent with a similarly prepared pellet of USP Vigabatrin RS.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**
  Buffer: 3.4 g/L of monobasic potassium phosphate in water
  Mobile phase: Acetonitrile, methanol, and *Buffer* (4:40:1000). Adjust with phosphoric acid to a pH of 2.8.
  System suitability solution: 1.0 mg/mL of USP Vigabatrin RS and 12 µg/mL of USP Vigabatrin Related Compound A RS in *Mobile phase*
  Standard solution: 1.0 mg/mL of USP Vigabatrin RS in *Mobile phase*
  Sample stock solution: Nominally 5.0 mg/mL of vigabatrin from Tablets (NLT 10) prepared as follows. Transfer a suitable number of Tablets to a suitable volumetric flask. Add *Mobile phase* to about 80% of the flask volume, and stir for 1 h to give a uniform dispersion of fine particulate. Dilute with *Mobile phase* to volume, and pass a portion of the solution through a suitable filter of 0.45-µm pore size.
  Sample solution: Nominally 1.0 mg/mL of vigabatrin from the *Sample stock solution* and *Mobile phase*. Pass a portion of the solution through a suitable filter of 0.45-µm pore size.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 210 nm
  Column: 4.6-mm × 25-cm; 10-µm packing L9
  Flow rate: 1.5 mL/min
  Injection volume: 50 µL

Vinblastine Sulfate

$C_{46}H_{58}N_4O_9 \cdot H_2SO_4$ 909.05
Vincaleukoblastine, sulfate (1:1) (salt);
Vincaleukoblastine sulfate (1:1) (salt) [143-67-9].

DEFINITION
Vinblastine Sulfate contains NLT 96.0% and NMT 102.0% of $C_{46}H_{58}N_4O_9 \cdot H_2SO_4$, corrections being applied for loss in weight.
[CAUTION—Handle vinblastine sulfate with great care, because it is a potent cytotoxic agent.]

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: 197A or 197K▲ (CN 1-May-2020)
  Analysis: The sample specimen and Reference Standard are previously dried under vacuum at 60° for 16 h.
  Acceptance criteria: Meets the requirements
- **B. IDENTIFICATION TESTS—GENERAL** ⟨191⟩, *Chemical Identification Tests, Sulfate*
  Sample: 10 mg/mL in water
  Acceptance criteria: Meets the requirements
- **C.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Solution A: Diethylamine and water (14:986). Adjust with phosphoric acid to a pH of 7.5.
  Solution B: Acetonitrile and methanol (20:80)
  Mobile phase: *Solution A* and *Solution B* (38:62)
  Standard solution: 0.4 mg/mL of USP Vinblastine Sulfate RS in water
  System suitability solution: 0.4 mg/mL each of vincristine sulfate and vinblastine sulfate in water prepared as follows. Transfer USP Vincristine Sulfate RS or USP Vincristine Sulfate (Assay) RS to a suitable volumetric flask, and dissolve in the *Standard solution*. [NOTE—No loss on drying determination is needed for USP Vincristine Sulfate RS.]
  Sample solution: 0.4 mg/mL of Vinblastine Sulfate in water. Equilibrate a portion of Vinblastine Sulfate for 30 min in ambient humidity. Using another portion of the equilibrated specimen, determine the loss on drying.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 262 nm
  Columns
  Precolumn: Packed with porous silica gel; installed between the pump and the injector
  Analytical: 4.6-mm × 15-cm; 5-µm packing L1
  Flow rate: 2 mL/min
  Injection volume: 20 µL
  System suitability
  Samples: *Standard solution* and *System suitability solution*
  Suitability requirements
  Resolution: NLT 4.0 between vincristine and vinblastine, *System suitability solution*
  Relative standard deviation: NMT 0.73%, *Standard solution*
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of vinblastine sulfate ($C_{46}H_{58}N_4O_9 \cdot H_2SO_4$) in the portion of Vinblastine Sulfate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Vinblastine Sulfate RS in the *Standard solution* (mg/mL)
C_U = concentration of Vinblastine Sulfate in the *Sample solution* (mg/mL)

Acceptance criteria: 96.0%–102.0%, corrections being applied for loss in weight

IMPURITIES
- **ORGANIC IMPURITIES**
  Mobile phase, Standard solution, System suitability solution, and **System suitability:** Proceed as directed in the *Assay*.
  Sample solution A: Use the *Sample solution* prepared in the *Assay*.
  Sample solution B: 16 µg/mL of Vinblastine Sulfate in water from *Sample solution A*
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 262 nm
  Columns
  Precolumn: Packed with porous silica gel; installed between the pump and the injector
  Analytical: 4.6-mm × 15-cm; 5-µm packing L1
  Flow rate: 2 mL/min
  Injection volume: 200 µL (20 µL for *System suitability*)
  Analysis
  Samples: *Sample solution A* and *Sample solution B*
  Calculate the percentage of each individual impurity in the portion of Vinblastine Sulfate taken:

$$\text{Result} = [r_{UA}/(\Sigma r_{UA} + 25r_{UB})] \times 100$$

r_{UA} = peak response for each individual impurity appearing after the solvent peak from *Sample solution A*
r_{UB} = peak response for vinblastine from *Sample solution B*

Calculate the percentage of total impurities:

$$\text{Result} = [\Sigma r_{UA}/(\Sigma r_{UA} + 25r_{UB})] \times 100$$

r_{UA} = peak response for each impurity appearing after the solvent peak from *Sample solution A*
r_{UB} = peak response for vinblastine from *Sample solution B*

Acceptance criteria
Individual impurities: NMT 1.0%
Total impurities: NMT 3.0%

  Acceptance criteria: 3.5–5.0
- **Loss on Drying**
  (See *Thermal Analysis* ⟨891⟩.)
  [Note—In this procedure, perform weighings rapidly with minimum exposure of the substances to air.]
  Sample: 10 mg
  Analysis: Determine the percentage of volatile substances by thermogravimetric analysis on an appropriately calibrated instrument. Heat the *Sample* at the rate of 5°/min between ambient temperature and 200° in an atmosphere of nitrogen at a flow rate of 40 mL/min. From the thermogram, determine the accumulated loss in weight between ambient temperature and a point on the plateau before decomposition is indicated (about 160°).
  Acceptance criteria: It loses NMT 15.0% of its weight.
- **Sterility Tests** ⟨71⟩: Where the label states that Vinblastine Sulfate is sterile, it meets the requirements.
- **Bacterial Endotoxins Test** ⟨85⟩: Where the label states that Vinblastine Sulfate is sterile or must be subjected to further processing during the preparation of injectable dosage forms, it contains NMT 10.0 USP Endotoxin Units/mg of vinblastine sulfate.

ADDITIONAL REQUIREMENTS

- **Packaging and Storage:** Preserve in tight, light-resistant containers, and store in a freezer.
- **Labeling:** Where it is intended for use in preparing injectable dosage forms, the label states that it is sterile or must be subjected to further processing during the preparation of injectable dosage forms.
- **USP Reference Standards** ⟨11⟩
  USP Vinblastine Sulfate RS
  USP Vincristine Sulfate RS
  [Note—No loss on drying determination is needed.]
  USP Vincristine Sulfate (Assay) RS

Vinblastine Sulfate for Injection

DEFINITION

Vinblastine Sulfate for Injection contains NLT 90.0% and NMT 110.0% of the labeled amount of vinblastine sulfate ($C_{46}H_{58}N_4O_9 \cdot H_2SO_4$).

[**Caution**—Handle Vinblastine Sulfate for Injection with great care because it is a potent cytotoxic agent.]

IDENTIFICATION

Change to read:

- **A. ▲Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
  Sample: Use material previously dried in a vacuum at 60° for 16 h.
  Acceptance criteria: Meets the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **C. Identification Tests—General** ⟨191⟩, *Sulfate*
  Sample solution: 100 mg/mL in water
  Acceptance criteria: Meets the requirements

ASSAY

- **Procedure**
  Solution A: Diethylamine and water (14:986). Adjust with phosphoric acid to a pH of 7.5.
  Solution B: Acetonitrile and methanol (20:80)
  Mobile phase: *Solution A* and *Solution B* (38:62)
  Standard solution: 0.4 mg/mL of USP Vinblastine Sulfate RS in water
  System suitability solution: 0.4 mg/mL each of vincristine sulfate and vinblastine sulfate in water prepared as follows. Transfer USP Vincristine Sulfate RS or USP Vincristine Sulfate (Assay) RS to a suitable volumetric flask, and dissolve in *Standard solution*.
  Sample stock solution: Pipet a suitable volume of water into each of five containers of Vinblastine Sulfate for Injection to obtain a solution in each having a nominal concentration of 1 mg/mL of vinblastine sulfate. Insert the stopper, shake to mix, and combine the solutions from the five containers.
  Sample solution: Nominally equivalent to 0.4 mg/mL of vinblastine sulfate in water, from the *Sample stock solution*
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 262 nm
  Columns
  Precolumn: Packed with porous silica gel; installed between the pump and the injector
  Analytical: 4.6-mm × 15-cm; packing L1
  Flow rate: 2 mL/min
  Injection volume: 20 µL
  System suitability
  Samples: *Standard solution* and *System suitability solution*
  Suitability requirements
  Resolution: NLT 4.0 between vincristine and vinblastine, *System suitability solution*
  Relative standard deviation: NMT 2.0%, *Standard solution*
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of vinblastine sulfate ($C_{46}H_{58}N_4O_9 \cdot H_2SO_4$) in the portion of Vinblastine Sulfate for Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Vinblastine Sulfate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of vinblastine sulfate in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **Uniformity of Dosage Units** ⟨905⟩
  Procedure for content uniformity
  Buffer: Dissolve 13.61 g of sodium acetate in 900 mL of water in a 1000-mL volumetric flask. Adjust with glacial acetic acid to a pH of 5.0 while stirring, and dilute with water to volume.
  Standard solution: 40 µg/mL of USP Vinblastine Sulfate RS in *Buffer*
  Sample solution: Nominally equivalent to 40–50 µg/mL of vinblastine sulfate by dissolving the contents of one container of Vinblastine Sulfate for Injection in *Buffer*
  Instrumental conditions

  Blank: *Buffer*
  Analysis
  Samples: *Standard solution* and *Sample solution*

www.webofpharma.com

Concomitantly determine the absorbances of the *Sample solution* and the *Standard solution*.
Calculate the percentage of the labeled amount of vinblastine sulfate ($C_{46}H_{58}N_4O_9 \cdot H_2SO_4$) in the portion of Vinblastine Sulfate for Injection taken:

$$\text{Result} = (A_U/A_S) \times (C_S/C_U) \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Vinblastine Sulfate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of vinblastine sulfate in the *Sample solution* (mg/mL)

Acceptance criteria: Meets the requirements

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase, System suitability solution, and System suitability: Prepare as directed in the *Assay*.
Sample solution A: Use the *Sample solution*, prepared as directed in the *Assay*.
Sample solution B: 16 µg/mL of vinblastine sulfate in water, from *Sample solution A*
Chromatographic system: Proceed as directed in the *Assay*, except use an injection volume of 200 µL.
Analysis
Samples: *Sample solution A* and *Sample solution B*
Calculate the percentage of each impurity in the portion of Vinblastine Sulfate for Injection taken:

$$\text{Result} = [r_U/(\Sigma r_U + 25r_S)] \times 100$$

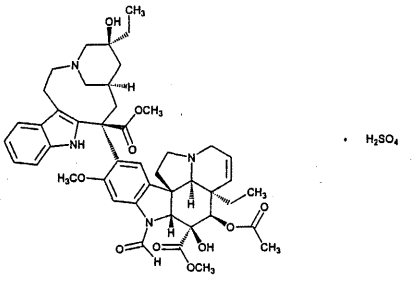
r_U = peak response of each impurity appearing after the solvent peak from *Sample solution A*
r_S = peak response of vinblastine from *Sample solution B*

Calculate the percentage of total impurities:

$$\text{Result} = [\Sigma r_U/(\Sigma r_U + 25r_S)] \times 100$$

r_U = peak response of each impurity appearing after the solvent peak from *Sample solution A*
r_S = peak response of vinblastine from *Sample solution B*

Acceptance criteria
Individual impurities: NMT 2.0%
Total impurities: NMT 5.0%



SPECIFIC TESTS

• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: It contains NMT 10.0 USP Endotoxin Units/mg of vinblastine sulfate.
• **STERILITY TESTS** ⟨71⟩: Meets the requirements
• **INJECTIONS AND IMPLANTED DRUG PRODUCTS** ⟨1⟩, *Product Quality Tests Common to Parenteral Dosage Forms, Specific Tests, Completeness and clarity of solutions*: At the time of use, it meets the requirements.
• **OTHER REQUIREMENTS:** It meets the requirements for *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*, and store in a refrigerator.
• **LABELING:** The label states: "For Intravenous Use Only—Fatal If Given By Other Routes." When dispensed, the container or syringe (holding the individual dose prepared for administration to the patient) must be enclosed in an overwrap bearing the statement: "Do Not Remove Covering Until Moment of Injection. For Intravenous Use Only—Fatal If Given By Other Routes."

USP Vincristine Sulfate RS

USP Vincristine Sulfate (Assay) RS

Vincristine Sulfate Injection

DEFINITION

Vincristine Sulfate Injection is a sterile solution of Vincristine Sulfate in Water for Injection. It contains NLT 90.0% and NMT 110.0% of the labeled amount of vincristine sulfate ($C_{46}H_{56}N_4O_{10} \cdot H_2SO_4$).

[**CAUTION**—Handle Vincristine Sulfate Injection with great care because it is a potent cytotoxic agent.]

USP Monographs

www.webofpharma.com

IDENTIFICATION

• **A. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Standard solution: 10 mg/mL of USP Vincristine Sulfate RS or USP Vincristine Sulfate (Assay) RS in dichloromethane and methanol (3:1)

Sample solution: Transfer a volume of Injection, equivalent to 2 mg of vincristine sulfate, to a small centrifuge tube. For each mL of solution add 1 drop of ammonium hydroxide. Add 0.2 mL of dichloromethane. Place the cap on the tube, shake it vigorously for NLT 1 min, and centrifuge for 1 min. Carefully withdraw the dichloromethane layer, and transfer to a small stoppered vial.

Chromatographic system

(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)

Mode: TLC

Adsorbent: 0.25-mm layer of chromatographic silica gel mixture

Application volume: 20 µL

Developing solvent system: Fresh ether, methanol, and methylamine solution (2 in 5) (19:2:1)

Spray reagent: Dissolve 2.0 g of ceric ammonium sulfate in 100 mL of water with heating and stirring, and slowly add 100 mL of phosphoric acid. Filter if necessary.

Analysis

Samples: *Standard solution* and *Sample solution*

Develop the chromatographic plate in a methanol prewash tank; for maximum sensitivity, dry it NMT 2 h before use. Score it about 15 cm above the points of application. Apply the *Standard solution* and the *Sample solution* about 2.5 cm from the lower edge of the plate, and dry thoroughly (a current of cool air may be used to help dry the spots). Place the plate in the nonequilibrated developing chamber that contains a paper liner around the back and sides and *Developing solvent system* to a depth of 2 cm. Remove the plate when the solvent moves to the scored line (about 80 min), and discard the solvent system. Dry the plate in a fume hood at room temperature, heat on a metal plate on a steam bath for 15 min, and spray the plate while still hot with *Spray reagent*. Continue heating the plate for 15 min to stabilize the spots.

Acceptance criteria: The R_F value and the color of the principal spot from the *Sample solution* correspond to those from the *Standard solution*.

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Solution A: Diethylamine and water (1:59). Adjust with phosphoric acid to a pH of 7.5.

Mobile phase: Methanol and *Solution A* (7:3)

Standard solution: 1.2 mg/mL of USP Vincristine Sulfate RS or USP Vincristine Sulfate (Assay) RS in water

System suitability solution: 1 mg/mL of USP Vinblastine Sulfate RS in the *Standard solution*

Sample solution: Nominally 1.0 mg/mL from Injection in water

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 297 nm

Columns

Precolumn: Porous silica gel packing

Guard: 2- to 5-cm; packing L1

Analytical: 4.6-mm × 25-cm; packing L7

Flow rate: 1.5 mL/min

Injection size: 10 µL

System suitability

Samples: *Standard solution* and *System suitability solution*

Suitability requirements

Resolution: NLT 4.0 between vincristine sulfate and vinblastine sulfate, *System suitability solution*

Relative standard deviation: NMT 2.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of vincristine sulfate ($C_{46}H_{56}N_4O_{10} \cdot H_2SO_4$) in the portion of Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of vincristine sulfate in the *Standard solution* (mg/mL)

C_U = nominal concentration of vincristine sulfate in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

IMPURITIES

ORGANIC IMPURITIES

• **Procedure**

Solution A: Diethylamine and water (3:197). Adjust with phosphoric acid to a pH of 7.5.

Solution B: Methanol

Solution C: Prepare a suitable dilution of any preservative present in the Injection, as identified in the labeling.

Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	38	62
12	38	62
27	8	92
29	38	62
34	38	62

Sample solution A: 1 mg/mL of vincristine sulfate from Injection in water

Sample solution B: 0.04 mg/mL in water from *Sample solution A*

Chromatographic system: Proceed as directed in the *Assay*, except use a *Flow rate* of 2 mL/min and an *Injection size* of 200 µL.

Analysis

Samples: *Solution C*, *Sample solution A*, and *Sample solution B*

Inject *Solution C* to identify the peaks due to the preservatives. Disregard any peaks at these retention times for the calculations of any other individual impurity and total impurities.

Calculate the percentage of each impurity in the portion of Injection taken:

$$\text{Result} = [r_{UA}/(\Sigma r_{UA} + 25 r_{UB})] \times 100$$

r_{UA} = peak response of each impurity appearing after the solvent peak from *Sample solution A*

r_{UB} = peak response of vincristine from *Sample solution B*

www.webofpharma.com

Calculate the percentage of total impurities in the portion of Injection taken:

$$\text{Result} = [(\Sigma r_{UA}/(\Sigma r_{UA} + 25 r_{UB})] \times 100$$

The terms in the formula are as defined above.

Acceptance criteria: See *Table 2.*

Table 2

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Vincristine	1.0	—
N-Desformylvincristine	1.4	3.0
Any other individual impurity	—	2.0
Total impurities	—	6.0

SPECIFIC TESTS

- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: It contains NMT 62.5 USP Endotoxin Units/mg of vincristine sulfate.
- **PH** ⟨791⟩: 3.5–5.5
- **STERILITY TESTS** ⟨71⟩: Meets the requirements
- **OTHER REQUIREMENTS:** It meets the requirements in *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products.*

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in light-resistant glass containers, and store in a refrigerator.
- **LABELING:** The label states: "For Intravenous Use Only—Fatal If Given By Other Routes."

  Where labeled as containing more than 2 mg, it must also be labeled as a Pharmacy Bulk Package (see *Injections* ⟨1⟩). The labeling directs that the drug be dispensed only in containers enclosed in an overwrap labeled as directed below. When packaged in a Pharmacy Bulk Package, it is exempt from the requirement in *Injections* ⟨1⟩ that the closure be penetrated only one time after constitution with a suitable sterile transfer device or dispensing set, when it contains a suitable substance or mixture of substances to prevent the growth of microorganisms.

  When dispensed, the container or syringe (holding the individual dose prepared for administration to the patient) must be enclosed in an overwrap bearing the statement: "Do Not Remove Covering Until Moment of Injection. For Intravenous Use Only—Fatal If Given By Other Routes."

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of vincristine sulfate ($C_{46}H_{56}N_4O_{10} \cdot H_2SO_4$) in the portion of Vincristine Sulfate for Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of vincristine sulfate in the *Standard solution* (mg/mL)
C_U = nominal concentration of vincristine sulfate in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩

Procedure for content uniformity

Buffer solution: Dissolve 6.3 g of ammonium formate in about 900 mL of water. Adjust with formic acid to a pH of 5.0 while stirring, and dilute with water to 1000 mL.

Standard solution: 40–50 µg/mL of USP Vincristine Sulfate RS or USP Vincristine Sulfate (Assay) RS in *Buffer solution*

Sample solution: Dissolve the contents of one container of Vincristine Sulfate for Injection in a suitable volume of *Buffer solution* to obtain a solution containing 40–50 µg/mL of vincristine sulfate.

Instrumental conditions

(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)

Mode: UV

Cell: 1 cm

Analytical wavelength: 262 nm

Blank: *Buffer solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the quantity, in mg, of vincristine sulfate ($C_{46}H_{56}N_4O_{10} \cdot H_2SO_4$) in the container of Vincristine Sulfate for Injection taken:

$$\text{Result} = (A_U/A_S) \times C_S \times V \times F$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Vincristine Sulfate RS in the *Standard solution* (µg/mL)
V = final volume of the *Sample solution*
F = unit conversion factor, 0.001 mg/µg

Acceptance criteria: Meets the requirements for solids

IMPURITIES

• **ORGANIC IMPURITIES**

Solution A: Diethylamine and water (3:197). Adjust with phosphoric acid to a pH of 7.5.

Solution B: Methanol

Sample solution A: 1 mg/mL of vincristine sulfate from Vincristine Sulfate for Injection in water

Sample solution B: 0.04 mg/mL of vincristine sulfate in water from *Sample solution A*

Chromatographic system: Proceed as directed in the *Assay*, except use a *Flow rate* of 2 mL/min and an *Injection size* of 200 µL.

Analysis

Samples: *Sample solution A* and *Sample solution B*

Calculate the percentage of each impurity in the portion of Vincristine Sulfate for Injection taken:

$$\text{Result} = [r_{UA}/(\Sigma r_{UA} + 25r_{UB})] \times 100$$

r_{UA} = peak response of each impurity appearing after the solvent peak from *Sample solution A*
r_{UB} = peak response of vincristine from *Sample solution B*

Calculate the percentage of total impurities in the portion of Vincristine Sulfate for Injection taken:

$$\text{Result} = [\Sigma r_{UA}/(\Sigma r_{UA} + 25r_{UB})] \times 100$$

r_{UA} = peak response of each impurity appearing after the solvent peak from *Sample solution A*
r_{UB} = peak response of vincristine from *Sample solution B*

Acceptance criteria

Individual impurities: NMT 2.0%

Total impurities: NMT 5.0%

SPECIFIC TESTS

• **STERILITY TESTS** ⟨71⟩**:** Meets the requirements

• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** It contains NMT 100.0 USP Endotoxin Units/mg of vincristine sulfate.

• **CONSTITUTED SOLUTION:** At the time of use, it meets the requirements for *Injections and Implanted Drug Products* ⟨1⟩, *Specific Tests, Completeness and clarity of solutions*.

• **OTHER REQUIREMENTS:** It meets the requirements in *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*, and store in a refrigerator.

• **LABELING:** The label states, "For Intravenous Use Only—Fatal If Given By Other Routes".

Where labeled as containing more than 2 mg, it must also be labeled as a Pharmacy Bulk Package (see *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*). The labeling directs that the drug be dispensed only in containers enclosed in an overwrap labeled as directed below. When packaged in a Pharmacy Bulk Package, it is exempt from the requirement in *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products* that the closure be penetrated only one time after constitution with a suitable sterile transfer device or dispensing set, when it contains a suitable

USP Monographs

www.webofpharma.com

substance or mixture of substances to prevent the growth of microorganisms.

When dispensed, the container or syringe (holding the individual dose prepared for administration to the patient) must be enclosed in an overwrap bearing the statement, "Do Not Remove Covering Until Moment of Injection. For Intravenous Use Only—Fatal If Given By Other Routes."

Vinorelbine Tartrate

$C_{45}H_{54}N_4O_8 \cdot 2C_4H_6O_6$ 1079.11

8′-Norvincaleukoblastine,3′,4′-didehydro-4′-deoxy-,[*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (1:2) (salt); 3′,4′-Didehydro-4′-deoxy-8′-norvincaleukoblastine L-(+)-tartrate (1:2) (salt) [125317-39-7].

DEFINITION

Vinorelbine Tartrate contains NLT 98.0% and NMT 102.0% of $C_{45}H_{54}N_4O_8 \cdot 2C_4H_6O_6$, calculated on the anhydrous basis.

[CAUTION—Vinorelbine Tartrate is cytotoxic. Great care should be taken to prevent inhaling particles and exposing the skin to it.]

IDENTIFICATION

Change to read:

• **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)

Sample: Dissolve 10 mg in 5 mL of water, add 0.5 mL of 5 N sodium hydroxide, and extract with 5 mL of methylene chloride. Filter the organic extract through anhydrous sodium sulfate, and evaporate the organic extract to a volume of about 0.5 mL.

Acceptance criteria: Meets the requirements

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

• **C.**

Sample solution: Equivalent to 15 mg/mL of tartaric acid in water

Analysis: To 0.1 mL of the *Sample solution* add 0.1 mL of 100 mg/mL of potassium bromide, 0.1 mL of 20 mg/mL of resorcinol, and 3 mL of sulfuric acid. Heat on a hot water bath for 5–10 min until a dark blue color develops. Allow to cool, and pour the solution into water.

Acceptance criteria: The color changes to red (presence of tartrate).

ASSAY

• **PROCEDURE**

Buffer: Dissolve 6.9 g of monobasic sodium phosphate in 900 mL of water. Adjust with phosphoric acid to a pH of 4.2, and dilute with water to 1000 mL.

Mobile phase: Dissolve 1.22 g of sodium 1-decanesulfonate in 620 mL of methanol, and add 380 mL of *Buffer*.

System suitability solution: Prepare a solution containing 1.4 mg/mL of USP Vinorelbine Tartrate RS and 0.01 mg/mL of USP Vinorelbine Related Compound A RS in water. Expose a portion of this solution in a suitable xenon lamp apparatus capable of supplying a dose of 1600 KJ/m² between 310 and 800 nm at a power of 500 W/m² for 1 h to generate an additional photodegradation product, 3,6-epoxy vinorelbine.

Standard solution: 1.4 mg/mL of USP Vinorelbine Tartrate RS in *Mobile phase*

Sample solution: 1.4 mg/mL of Vinorelbine Tartrate in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 267 nm

Column: 3.9-mm × 15-cm; 5-µm packing L1

Column temperature: 40°

Flow rate: 1 mL/min

Injection size: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

Suitability requirements

Resolution: NLT 1.5 between vinorelbine and vinorelbine related compound A, *System suitability solution*

Tailing factor: NMT 2.0, *Standard solution*

Relative standard deviation: NMT 2.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of vinorelbine tartrate ($C_{45}H_{54}N_4O_8 \cdot 2C_4H_6O_6$) in the portion of Vinorelbine Tartrate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of vinorelbine from the *Sample solution*

r_S = peak response of vinorelbine from the *Standard solution*

C_S = concentration of USP Vinorelbine Tartrate RS in the *Standard solution* (mg/mL)

C_U = concentration of Vinorelbine Tartrate in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the anhydrous basis

IMPURITIES

• **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%

• **ORGANIC IMPURITIES**

Buffer, Mobile phase, System suitability solution, Sample solution, and System suitability: Proceed as directed in the *Assay*.

Standard stock solution: Use the *Standard solution* as prepared in the *Assay*.

Standard solution: 0.28 µg/mL of vinorelbine tartrate in *Mobile phase*, from *Standard stock solution*

Chromatographic system: Proceed as directed in the *Assay*, except use a run time of NLT three times the retention time of vinorelbine.

www.webofpharma.com

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Vinorelbine Tartrate taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response for each impurity from the *Sample solution*
r_T = sum of the responses of all the peaks from the *Sample solution*

Acceptance criteria: See *Table 1*.
[NOTE—Disregard any peaks with an area less than or equal to one-half of the area of the peak for vinorelbine in the *Standard solution*.]

Vitamin A

DEFINITION
Vitamin A contains a suitable form of retinol ($C_{20}H_{30}O$; vitamin A alcohol) and possesses vitamin A activity equivalent to NLT 95.0% of that declared on the label. It may consist of retinol or esters of retinol formed from edible fatty acids, principally acetic and palmitic acids. It may be diluted with edible oils, or it may be incorporated in solid edible carriers or excipients, and it may contain suitable antimicrobial agents, dispersants, and antioxidants.

IDENTIFICATION
• **A. COLOR REACTION WITH ANTIMONY III**
Sample solution: Vitamin A equivalent to 6 µg/mL of retinol in chloroform
Analysis: To 1 mL of the *Sample solution* add 10 mL of antimony trichloride TS.
Acceptance criteria: A transient blue color appears at once.
• **B. THIN-LAYER CHROMATOGRAPHY**
Standard solution: USP Retinyl Acetate RS and USP Retinyl Palmitate RS in methylene chloride, each equivalent to about 0.2 mg/mL of retinol ($C_{20}H_{30}O$)
Sample solution for the liquid form of Vitamin A: Dissolve a volume, equivalent to about 5 mg of retinol, in methylene chloride to obtain 10.0 mL of solution.
Sample solution for the solid form of Vitamin A: Transfer a quantity, equivalent to about 5 mg of retinol, to a separator, add 75 mL of water, and shake vigorously for 1 min. Extract with 10.0 mL of methylene chloride by shaking for 1 min, and centrifuge to clarify the methylene chloride extract.
Chromatographic system
(See *Chromatography* ⟨621⟩, *General Procedures, Thin-Layer Chromatography*.)
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture
Application volume
Standard solution: 15 µL
Sample solution: 10 µL
Developing solvent system: Cyclohexane and ether (4:1)
Developing distance: 10 cm
Spray reagent: Phosphomolybdic acid TS
System suitability
Sample: *Standard solution*
Suitability requirements: The chromatogram shows two main blue-green spots of the corresponding esters. The R_F values are 0.45 ± 0.10 and 0.7 ± 0.1 for retinyl acetate and retinyl palmitate, respectively.
Analysis
Samples: *Standard solution* and the appropriate *Sample solution*
Allow the solvent front to move a distance of 10 cm, remove the plate, and air-dry. Spray the plate with *Spray reagent*.
Acceptance criteria: The appropriate *Sample solution* exhibits a main blue-green spot at an R_F value that corresponds to one of the two main spots from the

USP Monographs

www.webofpharma.com

Standard solution and is consistent with the labeled ester. The appropriate *Sample solution* of Vitamin A labeled as containing retinol exhibits the main blue-green spot at an approximate R_F value of 0.1.

ASSAY

• **VITAMIN A ASSAY** ⟨571⟩

Sample: Use a suitable quantity of Vitamin A.

Analysis: Proceed as directed in *Vitamin A Assay* ⟨571⟩, *Assay, Chemical Methods* or *Chromatographic Methods*, depending on the form of Vitamin A under test.

Acceptance criteria: Equivalent to NLT 95.0% of the labeled amount of vitamin A activity

SPECIFIC TESTS

• **ABSORBANCE RATIO**

[NOTE—This test is required only if *Vitamin A Assay* ⟨571⟩, *Assay, Chemical Methods* is used for the *Assay*.]

Sample: Use a suitable quantity of Vitamin A.

Analysis: Proceed as directed in *Vitamin A Assay* ⟨571⟩, *Assay, Chemical Methods, Procedure 1* or *Procedure 2*.

Acceptance criteria

Procedure 1: The ratio of the corrected absorbance [A_{325}] to the observed absorbance A_{325} is NLT 0.85.

Procedure 2: The absorption maximum is between 325 and 327 nm. The absorbance ratios are as follows: A_{300}/A_{326} is NMT 0.60; A_{350}/A_{326} is NMT 0.54; and A_{370}/A_{326} is NMT 0.14.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers, preferably under an atmosphere of an inert gas, protected from light.

Change to read:

• **LABELING:** Label it to indicate the form in which the vitamin is present, and to indicate the presence of any antimicrobial agent, dispersant, antioxidant, or other added substance, and to indicate the vitamin A activity in terms of the equivalent amount of retinol, in mg/g. ▲▲ (USP 1-Aug-2019)

Add the following:

▲• **USP REFERENCE STANDARDS** ⟨11⟩

USP Retinyl Acetate RS

USP Retinyl Palmitate RS▲ (ERR 1-Jan-2019)

Vitamin A Capsules

DEFINITION

Vitamin A Capsules contain NLT 95.0% and NMT 120.0% of the labeled amount of vitamin A.

IDENTIFICATION

• **A.**

Sample solution: Equivalent to 6 µg/mL of retinol from Capsules in methylene chloride

Analysis: To 1 mL of *Sample solution* add 10 mL of antimony trichloride TS.

Acceptance criteria: A transient blue color appears at once.

Change to read:

• **B. THIN-LAYER CHROMATOGRAPHY**

Standard solution: 0.5 mg/mL of retinol from USP Retinyl Acetate RS or USP Retinyl Palmitate RS in methylene chloride

Sample solution: Dissolve or extract with methylene chloride the contents of a quantity of Capsules to obtain a solution with a nominal concentration of 0.5 mg/mL of retinol.

Chromatographic system

(See *Chromatography* ⟨621⟩, *General Procedures, Thin-Layer Chromatography*.)

Adsorbent: 0.25-mm layer of chromatographic silica gel mixture

Application volume: 10 µL, ▲8-mm band▲ (USP 1-Aug-2019)

Developing solvent system: Cyclohexane and ether (4:1)

Spray reagent: Phosphomolybdic acid TS

Analysis: Proceed as directed in the chapter, using the *Developing solvent system*. Locate the spots on the plate using the *Spray reagent*.

Acceptance criteria: The blue-green spot formed is indicative of the presence of retinol, and its R_F value corresponds to that of the *Standard solution*. (The approximate R_F values of the predominant spots, corresponding to the different forms of retinol, are 0.1 for the alcohol form, 0.45 for the acetate form, and 0.7 for the palmitate form.)

ASSAY

• **VITAMIN A ASSAY** ⟨571⟩

Analysis: Use the appropriate procedure described in *Vitamin A Assay* ⟨571⟩, *Assay, Chromatographic Methods*.

[NOTE—The procedure used is stated in the labeling only if *Procedure 1* is not used.]

Acceptance criteria: 95.0%–120.0%

PERFORMANCE TESTS

• **DISINTEGRATION** ⟨701⟩

Immersion fluid: Use 0.05 M acetate buffer, prepared by mixing 2.99 g of sodium acetate and 1.66 mL of glacial acetic acid with water to obtain 1000 mL of solution with a pH of 4.5 ± 0.05.

Temperature: 37 ± 2°

Time: 45 min

Acceptance criteria: Meet the requirements

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers.

Change to read:

• **LABELING:** Label the Capsules to indicate the form in which the vitamin is present, and to indicate the vitamin A activity in terms of the equivalent amount of retinol in ▲µg/Capsule. Expression of the amount of vitamin A in terms of units may be added in parentheses after the mass units.[1] ▲ (USP 1-Aug-2019)

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Retinyl Acetate RS

USP Retinyl Palmitate RS

[1] Where articles are labeled in terms of units in addition to the required labeling, the relationship of the USP Units or International Units (IU) to mass is as follows: 1 USP Vitamin A Unit = 0.3 µg of *all-trans*-retinol (vitamin A alcohol) or 0.344 µg of *all-trans*-retinyl acetate (vitamin A acetate) or 0.55 µg of *all-trans*-retinyl palmitate (vitamin A palmitate), and 1 µg of retinol (3.3 USP Vitamin A Units) = 1 retinol equivalent (RE).

www.webofpharma.com

Vitamin A Oral Liquid Preparation

DEFINITION

Vitamin A Oral Liquid Preparation is an emulsion, suspension, or solution that contains retinyl acetate or retinyl palmitate in an amount equivalent to NLT 90.0% and NMT 120.0% of the labeled amount of vitamin A, as retinol ($C_{20}H_{30}O$).

IDENTIFICATION

[NOTE—Use low-actinic glassware.]

• **A.**

Sample solution: Equivalent to 6 µg/mL of retinol from Oral Liquid Preparation in methylene chloride

Analysis: To 1 mL of *Sample solution* add 10 mL of antimony trichloride TS.

Acceptance criteria: A transient blue color appears at once.

• **B. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Standard solution: 0.5 mg/mL of retinol from USP Retinyl Acetate RS or USP Retinyl Palmitate RS in methylene chloride

Sample solution: Dissolve or extract with methylene chloride a quantity of Oral Liquid Preparation to obtain a solution with a nominal concentration of 0.5 mg/mL of retinol.

Chromatographic system

(See *Chromatography* ⟨621⟩, *General Procedures, Thin-Layer Chromatography*.)

Application volume: 10 µL, 8-mm band

Developing solvent system: Cyclohexane and ether (4:1)

Developing distance: 10 cm

Spray reagent: 0.2 g/mL of phosphomolybdic acid in alcohol. Filter, and use only the clear filtrate.

Analysis: Apply the *Sample solution* at the starting point of the chromatogram, and proceed as directed in the chapter. Allow the solvent front to move 10 cm, remove the plate, and air-dry. Spray with *Spray reagent*.

Acceptance criteria: The blue-green spot formed is indicative of the presence of retinol, and its R_F value corresponds to that of the *Standard solution*. The approximate R_F values of the predominant spots, corresponding to the different forms of retinol, are 0.1 for the alcohol form, 0.45 for the acetate form, and 0.7 for the palmitate form.

ASSAY

• **VITAMIN A**

[NOTE—Use low-actinic glassware.]

Mobile phase: *n*-Hexane

Standard solution 1: 13 µg/mL of retinol from USP Retinyl Acetate RS in *n*-hexane

Standard solution 2: 13 µg/mL of retinol from USP Retinyl Palmitate RS in *n*-hexane

System suitability solution: Mix equal volumes of *Standard solution 1* and *Standard solution 2*.

Sample solution

For Oral Liquid Preparation in oil vehicles packaged in single-unit containers: Deliver the contents of NLT 30 single-unit containers, following the directions for use as stated in the labeling. Weigh directly the individual contents delivered from each single-unit container, and calculate the average. [NOTE—Do not weigh the contents delivered by difference between full containers and empty containers. Capsules intended as single-unit containers are not rinsed after expulsion of the contents.] Mix the contents to obtain a homogeneous sample. Transfer an amount of the composite to a suitable volumetric flask. Dissolve with hexane, and dilute with hexane quantitatively and stepwise, if necessary, to obtain a solution containing the equivalent of about 13 µg/mL of retinol, based on the labeled amount.

For Oral Liquid Preparation in oil vehicles packaged in multiple-unit containers: Dissolve an accurately measured volume of Oral Liquid Preparation in a suitable volume of hexane, and dilute with hexane, quantitatively and stepwise, if necessary, to obtain a solution containing the equivalent of about 13 µg/mL of retinol, based on the labeled amount.

For Oral Liquid Preparation in aqueous vehicles: Transfer a weighed quantity, or an accurately measured volume of Oral Liquid Preparation, into a separatory funnel, and extract quantitatively with hexane or other suitable solvent. Dilute with hexane, quantitatively and stepwise, if necessary, to obtain a solution containing the equivalent of about 13 µg/mL of retinol, based on the labeled amount.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 325 nm

Column: 4.6-mm × 15-cm; 3-µm packing L8

Flow rate: 1 mL/min

System suitability

Sample: *System suitability solution*

Suitability requirements

Resolution: NLT 10 between *all-trans*-retinyl acetate and *all-trans*-retinyl palmitate

Relative standard deviation: NMT 3.0%

Analysis

Samples: *Standard solution 1* or *Standard solution 2* and *Sample solution*

Calculate the percentage of the labeled amount of vitamin A, as retinol ($C_{20}H_{30}O$), in each individual container:

$$\text{Result} = (r_U/r_S) \times (C/W) \times D \times U \times (100/L)$$

r_U = peak response of the corresponding *all-trans*-retinyl ester from the *Sample solution*

r_S = peak response of the *all-trans*-retinyl ester from the appropriate *Standard solution*

C = concentration of retinol ($C_{20}H_{30}O$) in the appropriate *Standard solution* (mg/mL)

W = weight or volume of Oral Liquid Preparation composite taken (mg or mL)

D = dilution factor (dilution volume/aliquot volume)

U = for multiple-unit containers: labeled volume of each dosage unit (mL); for single-unit containers: average mass (mg) of the contents delivered from each individual container, following the directions for use as stated in the labeling

L = label claim of vitamin A as retinol ($C_{20}H_{30}O$) (mg/dosage unit)

Acceptance criteria: 90.0%–120.0% of the labeled amount of vitamin A, as retinol ($C_{20}H_{30}O$)

PERFORMANCE TESTS

• **DELIVERABLE VOLUME** ⟨698⟩

For multiple-unit containers: Meets the requirements

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩

For single-unit containers

Analysis: Empty the single-unit containers, following the directions for use as stated in the labeling. [NOTE—Do not weigh the contents delivered by difference between full containers and empty containers. Capsules intended for use as single-unit containers are not rinsed after expulsion of the contents.]

www.webofpharma.com

Acceptance criteria: The contents so delivered, and weighed directly, meet the requirements.

ADDITIONAL REQUIREMENTS

Change to read:

- **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers. It may be packaged in single-unit containers. It also may be suitable as single-unit containers provided they are packaged in secondary containers. ▲▲ (CN 1-May-2020)
- **LABELING:** The label states that the product is Vitamin A Oral Liquid Preparation. Label the Oral Liquid Preparation to indicate the ester form in which the vitamin is present, and to indicate the amount of vitamin A delivered in each dosage unit in terms of the equivalent amount of retinol in µg/dosage unit. Expression of the amount of vitamin A in terms of units may be added in parentheses after the mass units.[1] Capsules used as single-unit containers may be exempted from the requirements of individual labeling, provided they are packaged in an appropriately labeled secondary container, including directions for use and delivery of each dosage unit of Oral Liquid Preparation. Label the Oral Liquid Preparation packaged in multiple-unit containers to indicate the volume of each dosage unit.

  USP Retinyl Acetate RS
  USP Retinyl Palmitate RS

Vitamin A Tablets

DEFINITION

Vitamin A Tablets contain retinyl acetate or retinyl palmitate in an amount equivalent to NLT 95.0% and NMT 120.0% of the labeled amount of vitamin A as retinol ($C_{20}H_{30}O$).

IDENTIFICATION

[NOTE—Use low-actinic glassware.]

- **A.**

  Sample solution: A solution containing the equivalent of 6 µg/mL of retinol from powdered Tablets in methylene chloride

  Analysis: To 1 mL of *Sample solution* add 10 mL of antimony trichloride TS.

  Acceptance criteria: A transient blue color appears at once.
- **B. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

  Standard solution: Equivalent to 0.5 mg/mL of retinol from USP Retinyl Acetate RS or USP Retinyl Palmitate RS in methylene chloride

  Sample solution: To a portion of finely powdered Tablets, equivalent to 5 mg of retinol, add 15 mL of water, sonicate, and shake vigorously for 2 min. Extract with 10 mL of methylene chloride by shaking for 2 min. Centrifuge, and use the lower layer of methylene chloride extract.

  Application volume: 10 µL, 8-mm band

  Developing solvent system: Cyclohexane and ether (4:1)

  Spray reagent: Phosphomolybdic acid TS

  Analysis: Proceed as directed in the chapter, using the *Developing solvent system*. Locate the spots on the plate using the *Spray reagent*.

  Acceptance criteria: The R_F value of the principal spot from the *Sample solution* corresponds to that from the *Standard solution*.
- **C.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

Add the following:

▲[NOTE—In the following assays, where more than one assay method is given for an individual ingredient, the requirements may be met by following any one of the specified methods, with the method used being stated in the labeling only if *Procedure 1* is not used.]▲ (USP 1-May-2020)

Change to read:

- **PROCEDURE** ▲1

  [NOTE—Where vitamin A (retinyl acetate or retinyl palmitate) is specified in the following procedure, use the chemical form present in the formulation and the relevant Reference Standard. ▲ (USP 1-May-2020) Use low-actinic glassware.]

  Mobile phase: *n*-Hexane

  Standard solution 1: 15 µg/mL of retinol from USP Retinyl Acetate RS in *n*-hexane

  Standard solution 2: 15 µg/mL of retinol from USP Retinyl Palmitate RS in *n*-hexane

  System suitability solution: Mix equal volumes of *Standard solution 1* and *Standard solution 2*.

  Sample solution: Finely powder NLT 20 Tablets. To a portion of the powder, equivalent to 5 Tablets, accurately weighed, add 15 mL of water and sonicate for 5 min. Add 15 mL of *n*-hexane, and shake for 15 min on a wrist-action shaker in a water bath maintained at 60°. Add 10 mL of dimethyl sulfoxide, and shake for an additional period of 30 min on a wrist-action shaker in a water bath maintained at 60°. [NOTE—Set up the wrist-action shaker to ensure that the contents of the container are mixed vigorously and thoroughly.] Centrifuge, and transfer the hexane layer to a 100-mL volumetric flask. Repeat the extraction with 3 additional 15-mL portions of *n*-hexane by thoroughly shaking each for 5 min. Dilute the extracts in the volumetric flask with *n*-hexane to volume. Further dilute this solution with *n*-hexane to obtain a solution with a concentration equivalent to 15 µg/mL of retinol.

  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 325 nm

  Flow rate: 1 mL/min
  Injection volume: 40 µL

  System suitability
  Sample: *System suitability solution*
  Suitability requirements
  Resolution: NLT 10 between *all-trans*-retinyl palmitate and *all-trans*-retinyl acetate
  Relative standard deviation: NMT 3.0%

  Analysis
  Samples: *Standard solution 1* or *Standard solution 2* and *Sample solution*
  Calculate the percentage of the labeled amount of vitamin A activity, as retinol ($C_{20}H_{30}O$), in the portion of Tablets taken:

[1] Where articles are labeled in terms of units in addition to the required labeling, the relationship of the USP Units or International Units (IU) to mass is as follows: 1 USP Vitamin A Unit = 0.3 µg of *all-trans*-retinol (vitamin A alcohol) or 0.344 µg of *all-trans*-retinyl acetate (vitamin A acetate) or 0.55 µg of *all-trans*-retinyl palmitate (vitamin A palmitate), and 1 µg of retinol (3.3 USP Vitamin A Units) = 1 retinol equivalent (RE).

www.webofpharma.com

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak area of the *all-trans*-retinyl ester from the *Sample solution*
r_S = peak area of the *all-trans*-retinyl ester from the appropriate *Standard solution*
C_S = concentration of retinol in the appropriate *Standard solution* (µg/mL)
C_U = nominal concentration of vitamin A, as retinol, in the *Sample solution* (µg/mL)

Acceptance criteria: 95.0%–120.0% of the labeled amount of vitamin A, as retinol ($C_{20}H_{30}O$)

Add the following:

▲• **PROCEDURE 2**

[NOTE—Where vitamin A (retinyl acetate or retinyl palmitate) is specified in the following procedure, use the chemical form present in the formulation and the relevant Reference Standard. Use low-actinic glassware.]

Solution A: Methanol and water (90:10)
Solution B: Methanol and isopropyl alcohol (55:45)
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	100	0
8	0	100
13	0	100
13.1	100	0
15	100	0

Vitamin A standard stock solution: 0.2 mg/mL of retinol ($C_{20}H_{30}O$) from USP Retinyl Acetate RS or USP Retinyl Palmitate RS in isopropyl alcohol. Dissolve with the aid of sonication if necessary.
Standard solution: 0.04 mg/mL of retinol in methanol from *Vitamin A standard stock solution*
Sample solution: Finely powder NLT 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to 4.0 mg of retinol into a 100-mL volumetric flask. Add 10 mL of water and immediately swirl the sample, add 20 mL of dimethyl sulfoxide, and sonicate for 30 min with vigorous intermittent shaking. Cool to room temperature, add 70 mL of isopropyl alcohol, and swirl for 1 min to dissolve the vitamin. Place the sample in a sonicator for 5 min, and then cool the flask to room temperature. Dilute with methanol to volume and mix well. Pass a portion of the solution through a nylon filter of 0.45-µm pore size, and discard the first milliliter of the filtrate.

Vitamin E

DEFINITION

Change to read:

Vitamin E is a form of alpha tocopherol ($C_{29}H_{50}O_2$). It includes the following: ▲*RRR*-▲ (USP 1-Aug-2019)or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopherol ($C_{29}H_{50}O_2$), ▲*RRR*-▲ (USP 1-Aug-2019)or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate ($C_{31}H_{52}O_3$), and ▲*RRR*-▲ (USP 1-Aug-2019)or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate ($C_{33}H_{54}O_5$). It contains NLT 96.0% and NMT 102.0% of $C_{29}H_{50}O_2$, $C_{31}H_{52}O_3$, or $C_{33}H_{54}O_5$.

IDENTIFICATION

Change to read:

- **A.**
  [NOTE—Use low-actinic glassware.]
  Sample solutions
  Alpha tocopherol: 1 mg/mL in dehydrated alcohol
  Alpha tocopheryl acetate: Transfer 220 mg of ▲*RRR*-▲ (USP 1-Aug-2019) or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate to a round-bottom, glass-stoppered, 150-mL flask, and dissolve in 25 mL of dehydrated alcohol. Add 20 mL of diluted sulfuric acid in alcohol (1 in 7), and reflux in an all-glass apparatus for 3 h, protected from sunlight. Cool, transfer to a 200-mL volumetric flask, and add diluted sulfuric acid in alcohol (1 in 72) to volume.
  Alpha tocopheryl acid succinate: [**CAUTION**—Wear safety goggles.] Transfer an amount of the sample, equivalent to 200 mg of alpha tocopherol, to a round-bottom, glass-stoppered, 250-mL flask, dissolve in 50 mL of dehydrated alcohol, and reflux for 1 min. While the solution is boiling, add, through the condenser, 1 g of potassium hydroxide pellets, one at a time to avoid overheating.
  Continue refluxing for 20 min and, without cooling, add 2 mL of hydrochloric acid dropwise through the condenser. [NOTE—This technique is essential to prevent oxidative action by air while the sample is in an alkaline medium.]
  Cool, and transfer the contents of the flask to a 500-mL separator, rinsing the flask with 100 mL each of water and ether, and adding the rinsings to the separator. Shake vigorously, allow the layers to separate, and collect each of the two layers in individual separators. Extract the aqueous layer with two 50-mL portions of ether, and add these extracts to the main ether extract. Wash the combined ether extracts with four 100-mL portions of water, then evaporate the ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until about 7–8 mL remain. Complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in diluted sulfuric acid in alcohol (1 in 72), transfer to a 200-mL volumetric flask, and dilute with the alcoholic sulfuric acid to volume.
  Analysis
  Sample: Use the appropriate *Sample solution*.
  To 10 mL of *Sample solution* add 2 mL of nitric acid, with swirling, and heat at about 75° for 15 min.
  Acceptance criteria: A bright red or orange color develops.

Change to read:

- **B. OPTICAL ROTATION** ⟨781⟩
  Sample solutions
  Alpha tocopherol: Dissolve 100 mg of alpha tocopherol in 50 mL of ether.
  Alpha tocopheryl acetate: Transfer a volume of the *Sample solution* for *Alpha tocopheryl acetate* from *Identification A*, equivalent to 100 mg of alpha tocopheryl acetate, to a separator, and add 200 mL of water. Extract with ether, first with 75 mL, then with 25 mL, and combine the ether extracts in another separator.
  Alpha tocopheryl acid succinate: Transfer a volume of *Sample solution* for *Alpha tocopheryl acid succinate* from *Identification A*, equivalent to 100 mg of alpha tocopheryl acid succinate, to a separator, and add 200 mL of water. Extract with ether, first with 75 mL, then with 25 mL, and combine the ether extracts in another separator.
  Analysis
  Sample: Use the appropriate *Sample solution*.
  To the entire volume of a *Sample solution*, as prepared above, add 20 mL of a solution (1 in 10) of potassium ferricyanide in sodium hydroxide solution (1 in 125), and shake for 3 min. Wash the ether solution with four 50-mL portions of water, discard the washings, and dry over anhydrous sodium sulfate. Evaporate the dried ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until 7–8 mL remain, then complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in 5.0 mL of 2,2,4-trimethylpentane, and determine the optical rotation using *c* as the number of grams of total tocopherols, determined in the appropriate *Assay*, in each 100 mL of solution used for the test.
  Acceptance criteria
  ▲*RRR*▲ (USP 1-Aug-2019) **Isomers:** NLT +24°
  ▲*all-rac*▲ (USP 1-Aug-2019) **Forms:** ▲−0.01° to +0.01°▲ (USP 1-Aug-2019)
- **C.** The retention time of the major peak of alpha tocopherol of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Vitamin E Capsules

DEFINITION

Change to read:

Vitamin E Capsules contain Vitamin E or Vitamin E Preparation, where Vitamin E is a form of alpha tocopherol ($C_{29}H_{50}O_2$) that includes ▲*RRR*-▲ (USP 1-Aug-2019) or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopherol ($C_{29}H_{50}O_2$), ▲*RRR*-▲ (USP 1-Aug-2019) or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate ($C_{31}H_{52}O_3$), and ▲*RRR*-▲ (USP 1-Aug-2019) or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate ($C_{33}H_{54}O_5$); and Vitamin E Preparation is a combination of a single form of Vitamin E with one or more inert substances. Vitamin E Capsules contain NLT 95.0% and NMT 120.0% of the labeled amount of vitamin E.

IDENTIFICATION

Change to read:

- **A.**
  [NOTE—Use low-actinic glassware.]

Sample solutions

Alpha tocopherol: Nominally 1 mg/mL in dehydrated alcohol

Alpha tocopheryl acetate: Transfer 220 mg of ▲*RRR*-▲ (USP 1-Aug-2019) or ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate from the Capsule contents to a round-bottom, glass-stoppered, 150-mL flask, and dissolve in 25 mL of dehydrated alcohol. Add 20 mL of diluted sulfuric acid in alcohol (1 in 7), and reflux in an all-glass apparatus for 3 h, protected from sunlight. Cool, transfer to a 200-mL volumetric flask, and add diluted sulfuric acid in alcohol (1 in 72) to volume.

Alpha tocopheryl acid succinate: [**CAUTION**—Wear safety goggles.] Transfer an amount of Capsule contents, equivalent to 200 mg of alpha tocopherol, to a round-bottom, glass-stoppered, 250-mL flask, dissolve in 50 mL of dehydrated alcohol, and reflux for 1 min. While the solution is boiling, add, through the condenser, 1 g of potassium hydroxide pellets, one at a time to avoid overheating.

Continue refluxing for 20 min and, without cooling, add 2 mL of hydrochloric acid dropwise through the condenser. [NOTE—This technique is essential to prevent oxidative action by air while the sample is in an alkaline medium.]

Cool, and transfer the contents of the flask to a 500-mL separator, rinsing the flask with 100 mL each of water and of ether, and adding the rinsings to the separator. Shake vigorously, allow the layers to separate, and collect each of the two layers in individual separators. Extract the aqueous layer with two 50-mL portions of ether, and add these extracts to the main ether extract. Wash the combined ether extracts with four 100-mL portions of water, then evaporate the ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until about 7–8 mL remain. Complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in diluted sulfuric acid in alcohol (1 in 72), transfer to a 200-mL volumetric flask, and dilute with diluted sulfuric acid in alcohol (1 in 72) to volume.

Analysis

Sample: Use the appropriate *Sample solution*.

To 10 mL of *Sample solution* add 2 mL of nitric acid, with swirling, and heat at about 75° for 15 min.

Acceptance criteria: A bright red or orange color develops.

Change to read:

- **B. OPTICAL ROTATION** ⟨781⟩

Sample solutions

Alpha tocopherol: Dissolve an amount of the sample equivalent to 100 mg of alpha tocopherol in 50 mL of ether.

Alpha tocopheryl acetate: Transfer a volume of the *Sample solution* for *Alpha tocopheryl acetate* from *Identification A*, equivalent to 100 mg of the test article, to a separator, and add 200 mL of water. Extract with ether, first with 75 mL, then with 25 mL, and combine the ether extracts in another separator.

Alpha tocopheryl acid succinate: Transfer a volume of the *Sample solution* for *Alpha tocopheryl acid succinate* from *Identification A*, equivalent to 100 mg of the test article, to a separator, and add 200 mL of water. Extract with ether, first with 75 mL, then with 25 mL, and combine the ether extracts in another separator.

Analysis

Sample: Use the appropriate *Sample solution*.

[1] In terms of ▲former▲ (USP 1-Aug-2019) USP Units, 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopherol = 1.1 former USP Vitamin E Units; 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate = 1 former USP Vitamin E unit; 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate = 0.89 former USP Vitamin E Units; 1 mg of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopherol = 1.49 former USP Vitamin E Units; 1 mg of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate = 1.36 former USP Vitamin E Units; and 1 mg of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate = 1.21 former USP Vitamin E Units. In terms of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopherol equivalents, 1 mg of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate = 0.91; 1 mg of ▲*RRR*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate = 0.81; 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopherol = 0.74; 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acetate = 0.67; and 1 mg of ▲*all-rac*▲ (USP 1-Aug-2019)-alpha tocopheryl acid succinate = 0.60. ▲Note that 1 mg of Institute of Medicine (IOM) alpha tocopherol equivalent = 1 mg of 2 *R*-alpha tocopherol = 1 mg of *RRR*-alpha tocopherol = 2 mg of *all-rac*-alpha tocopherol.▲ (USP 1-Aug-2019)

www.webofpharma.com

To the entire volume of a *Sample solution*, as prepared above, add 20 mL of a solution (1 in 10) of potassium ferricyanide in sodium hydroxide solution (1 in 125), and shake for 3 min. Wash the ether solution with four 50-mL portions of water, discard the washings, and dry over anhydrous sodium sulfate. Evaporate the dried ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until 7–8 mL remain, then complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in 5.0 mL of 2,2,4-trimethylpentane, and determine the optical rotation using *c* as the number of grams of total tocopherols, determined in the appropriate *Assay*, in each 100 mL of solution used for the test.

Acceptance criteria

For Capsules labeled to contain ▲*RRR*▲ (USP 1-Aug-2019) isomers: NLT +24°

For Capsules labeled to contain ▲*all-rac*▲ (USP 1-Aug-2019) forms: ▲−0.01° to +0.01°▲ (USP 1-Aug-2019)

• **C.** The retention time of the major peak of alpha tocopherol of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Vitamin E Preparation

DEFINITION

Change to read:

Vitamin E Preparation is a combination of a single form of Vitamin E with one or more inert substances. It may be in a liquid or solid form. It contains NLT 95.0% and NMT 120.0% of the labeled amount of vitamin E. Vitamin E Preparation labeled to contain an ▲*all-rac*▲ (USP 1-Aug-2019) form of Vitamin E may contain also a small amount of a ▲*RRR*▲ (USP 1-Aug-2019) form of Vitamin E, occurring as a minor constituent of an added substance.

IDENTIFICATION

- **A.**

[NOTE—Use low-actinic glassware.]

Sample solution: [**CAUTION**—Wear safety goggles.] Transfer an amount of Preparation, equivalent to 200 mg of alpha tocopherol, to a round-bottom, glass-stoppered, 250-mL flask. Dissolve in 50 mL of dehydrated alcohol, and reflux for 1 min. While the solution is boiling, add, through the condenser, 1 g of potassium hydroxide pellets, one at a time to avoid overheating.

Continue refluxing for 20 min and, without cooling, add 2 mL of hydrochloric acid dropwise through the condenser. [NOTE—This technique is essential to prevent oxidative action by air while the sample is in an alkaline medium.]

Cool, and transfer the contents of the flask to a 500-mL separator, rinsing the flask with 100 mL each of water and of ether, and adding the rinsings to the separator. Shake vigorously, allow the layers to separate, and collect each of the two layers in individual separators. Extract the aqueous layer with two 50-mL portions of ether, and add these extracts to the main ether extract. Wash the combined ether extracts with four 100-mL portions of water, then evaporate the ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until about 7–8 mL remain. Complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in dehydrated alcohol, transfer to a 250-mL volumetric flask, and dilute with dehydrated alcohol to volume.

Analysis: To 10 mL of the *Sample solution*, add 2 mL of nitric acid, with swirling, and heat at about 75° for 15 min.

Acceptance criteria: A bright red or orange color develops.

Change to read:

- **B. OPTICAL ROTATION** ⟨781⟩

Sample solution: A volume of the *Sample solution* from *Identification A*, equivalent to 100 mg of Preparation

Analysis: Transfer the *Sample solution* to a separator, and add 200 mL of water. Extract with ether, first with 75 mL, then with 25 mL, and combine the ether extracts in another separator. To the combined ether extracts, add 20 mL of a solution (1 in 10) of potassium ferricyanide in sodium hydroxide solution (1 in 125), and shake for 3 min. Wash the ether solution with four 50-mL portions of water, discard the washings, and dry over anhydrous sodium sulfate. Evaporate the dried ether solution on a water bath under reduced pressure or in an atmosphere of nitrogen until about 7–8 mL remain, then complete the evaporation, removing the last traces of ether without the application of heat. Immediately dissolve the residue in 5.0 mL of 2,2,4-trimethylpentane, and determine the optical rotation using *c* as the number of grams of total tocopherols, as determined in the appropriate *Assay*, in each 100 mL of solution used for the test.

[a] 1-(2,4-Difluorophenyl)-2-(1*H*-1,2,4-triazol-1-yl)ethanone.

[b] (2*RS*,3*SR*)-2-(2,4-Difluorophenyl)-3-(pyrimidin-4-yl)-1-(1*H*-1,2,4-triazol-1-yl) butan-2-ol.

[c] Disregard peaks less than 0.05%.

[d] Include voriconazole related compound B and voriconazole related compound F.

• **VORICONAZOLE RELATED COMPOUND F**

Sodium hydroxide solution: 470 g/L of sodium hydroxide in water

Mobile phase: Methanol, water, and *Sodium hydroxide solution* (500: 1500: 0.175). [NOTE—Minimize the carbonate formation in the *Mobile phase* by degassing methanol and water before mixing.]

Suppressant solution: 12 mM of sulfuric acid in water

Chloride stock solution: 85 µg/mL of sodium chloride in water

Standard stock solution: 250 µg/mL of USP Voriconazole Related Compound F RS. Dissolve in 50% of the final volume with methanol, and dilute with *Mobile phase* to volume.

Standard solution: 5 µg/mL of USP Voriconazole Related Compound F RS from the *Standard stock solution* in a mixture of methanol and *Mobile phase* (50:50)

System suitability solution A: 5 µg/mL of USP Voriconazole Related Compound F RS from the *Standard stock solution* and 1.7 µg/mL of sodium chloride in a mixture of methanol and *Mobile phase* (50:50)

System suitability solution B: 2.5 µg/mL of USP Voriconazole Related Compound F RS from the *Standard solution* in *Mobile phase*

Sample solution: 5 mg/mL of Voriconazole. Dissolve in 50% of the final volume with methanol, and dilute with *Mobile phase* to volume.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: Ion chromatography/LC

Detector: Conductivity with anion suppressor

Column: 4-mm × 5-cm guard column and 4-mm × 25-cm analytical column; both packing L46

Column temperature: 40°

Flow rate: 1 mL/min

Flow rate (for anion suppressor): 2 mL/min

Injection size: 20 µL

System suitability

Samples: *System suitability solution A* and *System suitability solution B*

[NOTE—The relative retention times for acetate ion (for information only), voriconazole related compound F, and chloride ion are 0.47, 1.0, and 1.5, respectively.]

Suitability requirements

Resolution: NLT 3.5 between the voriconazole related compound F and chloride peaks, *System suitability solution A*

Tailing factor: NMT 2.0, *System suitability solution B*

Relative standard deviation: NMT 10.0%, *System suitability solution B*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of voriconazole related compound F in the portion of Voriconazole taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of voriconazole related compound F from the *Sample solution*

r_S = peak response of voriconazole related compound F from the *Standard solution*

C_S = concentration of USP Voriconazole Related Compound F RS in the *Standard solution* (µg/mL)

C_U = concentration of Voriconazole in the *Sample solution* (µg/mL)

Acceptance criteria: NMT 0.1%

• **VORICONAZOLE RELATED COMPOUND B**

Initially dissolve the Standard and sample materials in 4% of the final volume of acetonitrile.

Buffer: 0.8 g/L of ammonium acetate. Adjust with glacial acetic acid to a pH of 5.0.

Mobile phase: Acetonitrile and *Buffer* (18:82)

System suitability solution A: 500 µg/mL of USP Voriconazole RS and 2.5 µg/mL of USP Voriconazole Related Compound B in *Mobile phase*.

System suitability solution B: 0.25 µg/mL of USP Voriconazole Related Compound B RS in *Mobile phase*

Voriconazole Compounded Ophthalmic Solution, Veterinary

DEFINITION

Voriconazole Compounded Ophthalmic Solution, Veterinary contains NLT 90.0% and NMT 110.0% of the labeled amount of voriconazole ($C_{16}H_{14}F_3N_5O$).
Prepare Voriconazole Compounded Ophthalmic Solution, Veterinary 10 mg/mL as follows (see *Pharmaceutical Compounding—Sterile Preparations* ⟨797⟩).

Voriconazole for Injection[a] equivalent to	200 mg
Sodium Chloride Injection (0.9%), a sufficient quantity to make	20 mL

[a] V-Fend 200-mg injection, Pfizer, Inc., Groton, CT.

Reconstitute *Voriconazole for Injection* with *Sodium Chloride Injection (0.9%)* to bring to a final volume of 20 mL. [NOTE—May reconstitute according to package insert to achieve a 10-mg/mL solution.] Shake well until a clear solution is achieved. Aseptically draw up into sterile unit-dose 1-mL syringes.

ASSAY

- **PROCEDURE**

Solution A: 30 mM monobasic sodium phosphate adjusted with phosphoric acid to a pH of 4.0
Mobile phase: Methanol, acetonitrile, and *Solution A* (30:15:55). Pass through a PTFE filter of 0.45-µm pore size.
Standard solution: 0.25 mg/mL of voriconazole prepared from USP Voriconazole RS in *Mobile phase.* Sonicate for about 5 min to dissolve.
Sample solution: Transfer 250 µL of Ophthalmic Solution, Veterinary into a 10-mL volumetric flask, dilute with *Mobile phase* to volume, and mix well to dissolve. Protect from light.
Chromatographic system

Warfarin Sodium

$C_{19}H_{15}NaO_4$ 330.31
2*H*-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, sodium salt;
3-(α-Acetonylbenzyl)-4-hydroxycoumarin sodium salt;
Sodium 2-oxo-3-(3-oxo-1-phenylbutyl)-2*H*-chromen-4-olate [129-06-6].

DEFINITION
Warfarin Sodium is an amorphous solid or a crystalline clathrate. The crystalline form consists principally of warfarin sodium and isopropyl alcohol in a 2:1 molecular ratio. It contains NLT 8.0% and NMT 8.5% of isopropyl alcohol. Warfarin Sodium contains NLT 97.0% and NMT 102.0% of warfarin sodium ($C_{19}H_{15}NaO_4$), calculated on the anhydrous basis for the amorphous form or on the anhydrous and isopropyl alcohol-free basis for the crystalline form.

IDENTIFICATION

Change to read:

- **A.** ▲**Spectroscopic Identification Tests** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
Standard: Use USP Warfarin RS.
Sample: Dissolve 100 mg in 25 mL of water, and adjust with hydrochloric acid to a pH of less than 3, using short-range pH indicator paper. Stir the mixture, and allow the precipitate to coagulate. Filter the mixture, wash the precipitate with four, 5-mL portions of water, and dry under vacuum over phosphorus pentoxide for 4 h. Use the warfarin obtained.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay.*
- **C.**
Methoxyphenylacetic reagent: Dissolve 2.7 g of methoxyphenylacetic acid in 6 mL of 10% tetramethylammonium hydroxide aqueous solution, and add 20 mL of absolute alcohol.
Diluted ammonia: Dilute 41 g of ammonium hydroxide with water to 100 mL.
Ammonium carbonate solution: 158 mg/mL of ammonium carbonate in water
Sample solution: Dissolve 30 mg of Warfarin Sodium in 0.5 mL of water.
Analysis: Add 1.5 mL of *Methoxyphenylacetic reagent* to the *Sample solution*, and cool in ice water for 30 min.
Acceptance criteria: A voluminous, white, crystalline precipitate is formed. Place the precipitate in a water bath at 20° and stir for 5 min. The precipitate does not disappear. Add 1 mL of *Diluted ammonia.* The precipitate dissolves completely. Add 1 mL of *Ammonium carbonate solution.* No precipitate is formed.

ASSAY
- **Procedure**
Buffer: Transfer 1.36 g of monobasic potassium phosphate to a 200-mL volumetric flask, and dissolve in 50 mL of water. Add 39.1 mL of 0.2 N sodium hydroxide, and dilute with water to volume. Adjust with sodium hydroxide or phosphoric acid to a pH of 7.4 ± 0.1.
Mobile phase: Methanol, glacial acetic acid, and water (64:1:36)
Standard stock solution: 0.376 mg/mL of USP Warfarin RS prepared as follows. Transfer USP Warfarin RS to a suitable volumetric flask, and dissolve in 0.1 N sodium hydroxide equivalent to 39% of the final volume. Add 0.2 M monobasic potassium phosphate, equivalent to 25% of the final volume, and dilute with water to volume.
Standard solution: Transfer 5 mL of *Standard stock solution* and 15 mL of *Buffer* into a conical flask, and mix.
Sample stock solution: 0.4 mg/mL of Warfarin Sodium prepared as follows. Transfer 100 mg of Warfarin Sodium, accurately weighed, to a 250-mL volumetric flask, and dissolve in 97.8 mL of 0.1 N sodium hydroxide. Add 62.5 mL of 0.2 M monobasic potassium phosphate, and dilute with water to volume.
Sample solution: Transfer 5 mL of *Sample stock solution* and 15 mL of *Buffer* into a conical flask, and mix.

$C_{18}H_{16}O_2$ 264.32

Warfarin Sodium for Injection

DEFINITION
Warfarin Sodium for Injection is a sterile, freeze-dried mixture of Warfarin Sodium and suitable added substances. It contains NLT 95.0% and NMT 105.0% of the labeled amount of warfarin sodium ($C_{19}H_{15}NaO_4$). It may contain a suitable buffer.

IDENTIFICATION

Change to read:

• **A.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
Sample: Dissolve 100 mg in 25 mL of water, and adjust with hydrochloric acid to a pH of less than 3, using short-range pH indicator paper. Stir the mixture, and allow the precipitate to coagulate. Filter the mixture. Wash the precipitate with four 5-mL portions of water, and dry under vacuum over phosphorus pentoxide for 4 h. Use the warfarin obtained.
Standard: Use USP Warfarin RS.
• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
• **PROCEDURE**
Buffer: Transfer 1.36 g of monobasic potassium phosphate to a 200-mL volumetric flask, and dissolve in 50 mL of water. Add 39.1 mL of 0.2 N sodium hydroxide, and dilute with water to volume. Adjust with sodium hydroxide or phosphoric acid to a pH of 7.4 ± 0.1.
Mobile phase: Methanol, glacial acetic acid, and water (64:1:36)
Standard stock solution: 0.94 mg/mL of USP Warfarin RS prepared as follows. Transfer USP Warfarin RS to a suitable volumetric flask, and dissolve in 0.1 N sodium hydroxide equivalent to 39% of the final volume. Add 0.2 M monobasic potassium phosphate, equivalent to 25% of the final volume, and dilute with water to volume.
Standard solution: Transfer 5 mL of *Standard stock solution* into a 50-mL volumetric flask, and dilute with *Buffer* to volume.

System suitability solution: 1.2 µg/mL of each of USP Warfarin RS and USP Warfarin Related Compound A RS in *Diluent* from *Standard stock solution 2* and *System suitability stock solution 2*
Sample solution: Nominally equivalent to 0.5 mg/mL of warfarin sodium in *Diluent* prepared as follows. Transfer the contents of NLT 10 vials of Warfarin Sodium for Injection into a suitable volumetric flask, dissolve, and dilute with *Diluent* to volume.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 25-cm; packing L11
Column temperature: 35°
Flow rate: 1.5 mL/min
Injection volume: 100 µL
Run time: NLT 4 times the retention time of warfarin
System suitability
Samples: *Standard solution* and *System suitability solution*
[Note—The relative retention times for warfarin and warfarin related compound A are about 1.0 and 1.4, respectively.]
Suitability requirements
Resolution: NLT 2 between warfarin and warfarin related compound A peaks, *System suitability solution*
Relative standard deviation: NMT 5.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of Alice's ketone in the portion of Warfarin Sodium for Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times (1/F) \times 100$$

r_U = peak response of warfarin related compound A from the *Sample solution*
r_S = peak response of warfarin from the *Standard solution*
C_S = concentration of USP Warfarin RS in the *Standard solution* (mg/mL)
C_U = concentration of warfarin sodium in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of warfarin sodium, 330.31
M_{r2} = molecular weight of warfarin, 308.33
F = relative response factor for Alice's ketone, 0.9

[Note—Alice's ketone is a sodium salt of warfarin related compound A, 3-(*o*-hydroxyphenyl)-5-phenyl-2-cyclohexen-1-one sodium salt.]
Acceptance criteria: NMT 0.5%

SPECIFIC TESTS

• **Water Determination,** *Method I* ⟨921⟩**:** NMT 4.5%
• **pH** ⟨791⟩
Sample solution: 10 mg/mL
Acceptance criteria: 7.2–8.3
• **Constituted Solution:** Meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩, *Specific Tests, Completeness and clarity of solutions*
• **Bacterial Endotoxins Test** ⟨85⟩**:** NMT 24.0 of USP Endotoxin Units/mg of warfarin sodium
• **Sterility Tests** ⟨71⟩**:** Meets the requirements

ADDITIONAL REQUIREMENTS

• **Packaging and Storage:** Preserve in light-resistant containers as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging, Packaging for constitution*. Store at controlled room temperature.
• **Labeling:** Meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩, *Specific Tests, Completeness and clarity of solutions*
• **USP Reference Standards** ⟨11⟩

Warfarin Sodium Tablets

DEFINITION
Warfarin Sodium Tablets contain NLT 95.0% and NMT 105.0% of the labeled amount of warfarin sodium ($C_{19}H_{15}NaO_4$).

IDENTIFICATION
• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Change to read:

• **B.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
Sample: Triturate a quantity of finely powdered Tablets, equivalent to about 200 mg of warfarin sodium, with 50 mL of water, centrifuge, and filter the supernatant. Extract with 50 mL of ether, transfer the aqueous layer to a second separator, and discard the ether. Adjust with hydrochloric acid to a pH of less than 3, using short-range pH indicator paper, and extract with 50 mL of chloroform. Transfer the chloroform layer to another separator, extract with 50 mL of sodium hydroxide solution (1 in 250), and discard the chloroform. Transfer the aqueous layer to a beaker, and adjust with hydrochloric acid to a pH of less than 3 (using the pH indicator paper) to precipitate the warfarin. Stir the mixture, and allow the precipitate to coagulate. Filter, and wash the precipitate with four, 5-mL portions of water. If the precipitate is not white or practically white, dissolve it in a minimum volume of sodium hydroxide solution (1 in 250), dilute with water to 50 mL, and repeat the foregoing procedure, beginning with "Extract with 50 mL of ether." Dry the warfarin under vacuum over phosphorus pentoxide for 4 h.

ASSAY
• **PROCEDURE**
Buffer: Transfer 1.36 g of monobasic potassium phosphate to a 200-mL volumetric flask, and dissolve in 50 mL of water. Add 39.1 mL of 0.2 N sodium hydroxide, and dilute with water to volume. Adjust with sodium hydroxide or phosphoric acid to a pH of 7.4 ± 0.1.
Diluent: Acetonitrile and *Buffer* (15:85)
Mobile phase: Methanol, glacial acetic acid, and water (68:1:32)
Standard stock solution: 0.31 mg/mL of USP Warfarin RS prepared as follows. Transfer USP Warfarin RS to a suitable volumetric flask, and dissolve in 0.1 N sodium hydroxide equivalent to 39% of the final volume. Add 0.2 M monobasic potassium phosphate, equivalent to 25% of the final volume, and dilute with water to volume.
Standard solution: Transfer 15.0 mL of *Standard stock solution* into a 50-mL volumetric flask, and dilute with *Diluent* to volume.
Sample solution: Nominally 0.1 mg/mL of warfarin sodium in *Diluent* prepared as follows. Weigh, and finely powder NLT 20 Tablets. Transfer an accurately weighed portion of the powder, equivalent to about 5 mg of warfarin sodium, to a 50-mL volumetric flask, and add about 30 mL of *Diluent*. Sonicate for 10 min, and then shake by mechanical means for 60 min. Dilute with *Diluent* to volume, and filter.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 25-cm; packing L7
Flow rate: 1.4 mL/min
Injection volume: 20 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Relative standard deviation: NMT 1.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of warfarin sodium ($C_{19}H_{15}NaO_4$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of warfarin from the *Sample solution*
r_S = peak response of warfarin from the *Standard solution*
C_S = concentration of USP Warfarin RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of warfarin sodium in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of warfarin sodium, 330.31
M_{r2} = molecular weight of warfarin, 308.33

Acceptance criteria: 95.0%–105.0%

PERFORMANCE TESTS
• **DISSOLUTION** ⟨711⟩
Medium: Water; 900 mL
Apparatus 2: 50 rpm
Time: 30 min
Mobile phase: Prepare as directed in the *Assay*.
Standard solution: USP Warfarin RS in water, having a known concentration of 0.0008*L* mg/mL, *L* being the labeled amount, in mg, of warfarin sodium in the Tablets. [NOTE—Use a small amount of 0.1 N sodium hydroxide to aid in dissolution.]
Sample solution: Pass a portion of the solution under test through a suitable filter.
Chromatographic system: Proceed as directed in the *Assay* except the *Injection volume*.
Injection volume: 40 µL
System suitability: Proceed as directed in the *Assay*.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of warfarin sodium ($C_{19}H_{15}NaO_4$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (M_{r1}/M_{r2}) \times (1/L) \times 100$$

r_U = peak response of warfarin from the *Sample solution*
r_S = peak response of warfarin from the *Standard solution*
C_S = concentration of USP Warfarin RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 900 mL
M_{r1} = molecular weight of warfarin sodium, 330.31
M_{r2} = molecular weight of warfarin, 308.33
L = label claim (mg/Tablet)

Tolerances: NLT 80% (*Q*) of the labeled amount of warfarin sodium ($C_{19}H_{15}NaO_4$) is dissolved.
• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

IMPURITIES
• **ORGANIC IMPURITIES**
Diluent: Methanol and water (25:75). Alternatively, a mixture of acetonitrile and water (25:75) can be used.
Mobile phase: Methanol, tetrahydrofuran, glacial acetic acid, and water (57:1:1:42)

USP Monographs

www.webofpharma.com

Standard stock solution: 0.126 mg/mL of USP Warfarin RS prepared as follows. Transfer USP Warfarin RS to a suitable volumetric flask, and add 0.1 N sodium hydroxide and methanol equivalent to 2% and 25% of the final volume, respectively. Sonicate, if necessary, to dissolve. Dilute with water to volume.
Standard solution (for 1-mg Tablets): 1.0 µg/mL of USP Warfarin RS in *Diluent* from *Standard stock solution*
Standard solution (for other strengths): 2.0 µg/mL of USP Warfarin RS in *Diluent* from *Standard stock solution*
System suitability stock solution: 0.4 mg/mL of USP Warfarin Related Compound A RS in methanol
System suitability solution: 2.0 µg/mL of each of USP Warfarin RS and USP Warfarin Related Compound A RS in *Diluent* from *Standard stock solution* and *System suitability stock solution*
Sample solution (for 1-mg Tablets): Nominally 0.4 mg/mL of warfarin sodium in *Diluent* prepared as follows. Transfer 10 Tablets into a suitable volumetric flask, dissolve Tablets in *Diluent* by sonicating for 10 min and shaking for 60 min. Dilute with *Diluent* to volume. Pass through a suitable filter, and discard the first few mL.
Sample solution (for other strengths): Nominally 0.8 mg/mL of warfarin sodium in *Diluent* prepared as follows. Transfer 8–10 Tablets into a suitable volumetric flask, dissolve Tablets in *Diluent* by sonicating for 10 min and shaking for 60 min. Dilute with *Diluent* to volume. Pass through a suitable filter, and discard the first few mL.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 25-cm; packing L11
Column temperature: 35°
Flow rate: 1.5 mL/min
Injection volume: 200 µL
Run time: NLT 4 times the retention time of warfarin
System suitability
Samples: *Standard solution* and *System suitability solution*
[NOTE—The relative retention times for warfarin and warfarin related compound A are about 1.0 and 1.4, respectively.]
Suitability requirements
Resolution: NLT 2 between warfarin and warfarin related compound A peaks, *System suitability solution*
Relative standard deviation: NMT 5.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of Alice's ketone in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times (1/F) \times 100$$

r_U = peak response of warfarin related compound A from the *Sample solution*
r_S = peak response of warfarin from the *Standard solution*
C_S = concentration of USP Warfarin RS in the *Standard solution* (mg/mL)
C_U = concentration of warfarin sodium in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of warfarin sodium, 330.31
M_{r2} = molecular weight of warfarin, 308.33

Water for Hemodialysis

[NOTE—See *Water for Hemodialysis Applications* ⟨1230⟩ for guidelines on microbial and chemical testing.]

H_2O 18.02

DEFINITION
Water for Hemodialysis is water that complies with the U.S. Environmental Protection Agency National Primary Drinking Water Regulations and that has been subjected to further treatment, using a suitable process, to reduce chemical and microbiological components. It is produced and used onsite under the direction of qualified personnel. It contains no added antimicrobials and is not intended for injection.

SPECIFIC TESTS
- **TOTAL ORGANIC CARBON** ⟨643⟩: Meets the requirements
- **MICROBIAL ENUMERATION TESTS** ⟨61⟩ and **TESTS FOR SPECIFIED MICROORGANISMS** ⟨62⟩: The total aerobic microbial count does not exceed 100 cfu/mL. It meets the requirements of the test for absence of *Pseudomonas aeruginosa*.
- **WATER CONDUCTIVITY,** *Bulk Water* ⟨645⟩: Meets the requirements
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: It contains less than 1 USP Endotoxin Unit/mL.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in unreactive storage containers that are designed to prevent bacterial entry. Store at room temperature.

Water for Injection

[NOTE—For microbiological guidance, see general information chapter *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION
Water for Injection is water purified by distillation or a purification process that is equivalent or superior to distillation in the removal of chemicals and microorganisms. It is prepared from water complying with the U.S. Environmental Protection Agency National Primary Drinking Water Regulations or with the drinking water regulations of the European Union or of Japan or with the World Health Organization's Guidelines for Drinking Water Quality. It contains no added substance.

USP Monographs

www.webofpharma.com

[NOTE—Water for Injection, whether it is available in bulk or packaged forms, is intended for use in the preparation of parenteral solutions. Where used for the preparation of parenteral solutions subject to final sterilization, use suitable means to minimize microbial growth, or first render the Water for Injection sterile and, thereafter, protect it from microbial contamination. For parenteral solutions that are prepared under aseptic conditions and are not sterilized by appropriate filtration or in the final container, first render the Water for Injection sterile and, thereafter, protect it from microbial contamination. In addition to the *Specific Tests*, Water for Injection that is packaged for commercial use elsewhere meets the additional requirements for *Packaging and Storage* and *Labeling* as indicated under *Additional Requirements*.]

SPECIFIC TESTS

[NOTE—Required for bulk and packaged forms of *Water for Injection*.]

- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: Less than 0.25 USP Endotoxin Unit/mL
- **WATER CONDUCTIVITY,** *Bulk Water* ⟨645⟩: Meets the requirements
- **TOTAL ORGANIC CARBON** ⟨643⟩: Meets the requirements

ADDITIONAL REQUIREMENTS

[NOTE—Required for packaged forms of *Water for Injection*.]

- **PACKAGING AND STORAGE:** Where packaged, preserve in unreactive storage containers that are designed to prevent microbial entry.
- **LABELING:** Where packaged, label the article to state that it contains no antimicrobial or other substance, and that it is not intended for direct parenteral administration.

Bacteriostatic Water for Injection

[NOTE—For microbiological guidance, see general information chapter *Water for Pharmaceutical Purposes* ⟨1231⟩.]

DEFINITION

Bacteriostatic Water for Injection is prepared from Water for Injection that is sterilized and suitably packaged, containing one or more suitable antimicrobial agents.

[NOTE—Use Bacteriostatic Water for Injection with due regard for the compatibility of the antimicrobial agent or agents it contains with the particular medicinal substance that is to be dissolved or diluted.]

SPECIFIC TESTS

- **CALCIUM**
  Sample: 100 mL
  Analysis: Add 2 mL of ammonium oxalate TS to the *Sample*.
  Acceptance criteria: No turbidity is produced.
- **CARBON DIOXIDE**
  Sample: 25 mL
  Analysis: Add 25 mL of calcium hydroxide TS to the *Sample*.
  Acceptance criteria: The mixture remains clear.
- **SULFATE**
  Sample: 100 mL
  Analysis: Add 1 mL of barium chloride TS to the *Sample*.
  Acceptance criteria: No turbidity is produced.
- **PH** ⟨791⟩
  Sample: To 100 mL of Bacteriostatic Water for Injection add 0.3 mL of saturated potassium chloride solution.
  Acceptance criteria: 4.5–7.0
- **ANTIMICROBIAL AGENT(S):** Meets the requirements in *Antimicrobial Effectiveness Testing* ⟨51⟩, and meets the labeled claim for content of the antimicrobial agent(s), as determined by the method set forth in *Antimicrobial Agents—Content* ⟨341⟩
- **STERILITY TESTS** ⟨71⟩: Meets the requirements
- **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩: Meets the requirements
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: Less than 0.5 USP Endotoxin Unit/mL

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose or multiple-dose glass or plastic containers. Glass containers are preferably of Type I or Type II glass, of not larger than 30-mL size.
- **LABELING:** Label it to indicate the name(s) and proportion(s) of the added antimicrobial agent(s). Label it also to include the statement "Not For Use In Newborns", in boldface capital letters on the label immediately under the official name, printed in a contrasting color, preferably red. Alternatively, the statement may be placed prominently elsewhere on the label if the statement is enclosed within a box.

Sterile Water for Inhalation

[NOTE—For microbiological guidance, see *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION

Sterile Water for Inhalation is prepared from Water for Injection that is sterilized and suitably packaged. It contains no added antimicrobial agents. [NOTE—Do not use Sterile Water for Inhalation for parenteral administration or for other sterile compendial dosage forms.]

SPECIFIC TESTS

- **OXIDIZABLE SUBSTANCES**
  Sample: 100 mL
  Analysis: Add 10 mL of 2 N sulfuric acid, and heat to boiling. For Sterile Water for Inhalation in containers having a fill volume of less than 50 mL, add 0.4 mL of 0.02 M potassium permanganate, and boil for 5 min; where the fill volume is 50 mL or more, add 0.2 mL of 0.02 M potassium permanganate, and boil for 5 min. If a precipitate forms, cool in an ice bath to room temperature, and pass through a sintered-glass filter.
  Acceptance criteria: The pink color does not completely disappear. Alternatively, perform the test for *Total Organic Carbon* ⟨643⟩, *Sterile Water*.
- **TOTAL ORGANIC CARBON,** *Sterile Water* ⟨643⟩: Meets the requirements. Alternatively, perform the test for *Oxidizable Substances*.
- **WATER CONDUCTIVITY,** *Sterile Water* ⟨645⟩: Meets the requirements
- **STERILITY TESTS** ⟨71⟩: Meets the requirements
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: Less than 0.5 USP Endotoxin Unit/mL

www.webofpharma.com

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in glass or plastic containers. Glass containers are preferably of Type I or Type II glass.
- **LABELING:** Label it to indicate that it is for inhalation therapy only and that it is not for parenteral administration.

Delete the following:

Sterile Water for Injection

[NOTE—For microbiological guidance, see *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION

Sterile Water for Injection is prepared from Water for Injection that is sterilized and suitably packaged. It contains no antimicrobial agent or other added substance.

SPECIFIC TESTS

- **OXIDIZABLE SUBSTANCES**
  Sample: 100 mL
  Analysis: Add 10 mL of 2 N sulfuric acid, and heat to a boil. For Sterile Water for Injection in containers having a fill volume less than 50 mL, add 0.4 mL of 0.02 M potassium permanganate, and boil for 5 min; where the fill volume is 50 mL or more, add 0.2 mL of 0.02 M potassium permanganate, and boil for 5 min. If a precipitate forms, cool in an ice bath to room temperature, and pass through a sintered-glass filter.
  Acceptance criteria: The pink color does not completely disappear. Alternatively, perform the test for *Total Organic Carbon* ⟨643⟩, *Sterile Water.*
- **TOTAL ORGANIC CARBON,** *Sterile Water* ⟨643⟩**:** Meets the requirements. Alternatively, perform the test for *Oxidizable Substances.*
- **WATER CONDUCTIVITY,** *Sterile Water* ⟨645⟩**:** Meets the requirements
- **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩**:** Meets the requirements
- **STERILITY TESTS** ⟨71⟩**:** Meets the requirements
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** Less than 0.25 USP Endotoxin Unit/mL

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose glass or plastic containers of not larger than 1-L size. Glass containers are preferably of Type I or Type II glass.
- **LABELING:** Label it to indicate that no antimicrobial or other substance has been added, and that it is not suitable for intravascular injection without first having been made approximately isotonic by the addition of a suitable solute.

Sterile Water for Irrigation

[NOTE—For microbiological guidance, see *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION

Sterile Water for Irrigation is prepared from Water for Injection that is sterilized and suitably packaged. It contains no antimicrobial agent or other added substance.

SPECIFIC TESTS

- **OXIDIZABLE SUBSTANCES**
  Sample: 100 mL
  Analysis: Add 10 mL of 2 N sulfuric acid, and heat to a boil. For Sterile Water for Irrigation in containers having a fill volume less than 50 mL, add 0.4 mL of 0.02 M potassium permanganate, and boil for 5 min; where the fill volume is 50 mL or more, add 0.2 mL of 0.02 M potassium permanganate, and boil for 5 min. If a precipitate forms, cool in an ice bath to room temperature, and pass through a sintered-glass filter.
  Acceptance criteria: The pink color does not completely disappear. Alternatively, perform the test for *Total Organic Carbon* ⟨643⟩, *Sterile Water.*
- **TOTAL ORGANIC CARBON,** *Sterile Water* ⟨643⟩**:** Meets the requirements. Alternatively, perform the test for *Oxidizable Substances.*
- **WATER CONDUCTIVITY,** *Sterile Water* ⟨645⟩**:** Meets the requirements
- **STERILITY TESTS** ⟨71⟩**:** Meets the requirements
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** Less than 0.25 USP Endotoxin Unit/mL

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in single-dose glass or plastic containers. Glass containers are preferably of Type I or Type II glass. The container may contain a volume of more than 1 L and may be designed to empty rapidly.
- **LABELING:** Label it to indicate that no antimicrobial or other substance has been added. The designations "For irrigation only" and "Not for injection" appear prominently on the label.

Purified Water

[NOTE—For microbiological guidance, see general information chapter *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION

Purified Water is water obtained by a suitable process. It is prepared from water complying with the U. S. Environmental Protection Agency National Primary Drinking Water Regulations or with the drinking water regulations of the European Union or of Japan, or with the World Health Organization's Guidelines for Drinking Water Quality. It contains no added substance.

[NOTE—Purified Water whether it is available in bulk or packaged forms, is intended for use as an ingredient of official preparations and in tests and assays unless

www.webofpharma.com

otherwise specified (see *General Notices, 8.230. Water*). Where used for sterile dosage forms, other than for parenteral administration, process the article to meet the requirements under *Sterility Tests* ⟨71⟩, or first render the Purified Water sterile and thereafter protect it from microbial contamination. Do not use Purified Water in preparations intended for parenteral administration. For such purposes use Water for Injection, Bacteriostatic Water for Injection, or Sterile Water for Injection. In addition to the *Specific Tests*, Purified Water that is packaged for commercial use elsewhere meets the additional requirements for *Packaging and Storage* and *Labeling* as indicated under *Additional Requirements*.]

SPECIFIC TESTS

[NOTE—Required for bulk and packaged forms of *Purified Water*]

- **TOTAL ORGANIC CARBON** ⟨643⟩: Meets the requirements
- **WATER CONDUCTIVITY,** *Bulk Water* ⟨645⟩: Meets the requirements

ADDITIONAL REQUIREMENTS

[NOTE—Required for packaged forms of Purified Water]

- **PACKAGING AND STORAGE:** Where packaged, preserve in unreactive storage containers that are designed to prevent microbial entry.
- **LABELING:** Where packaged, label it to indicate the method of preparation and that it is not intended for parenteral administration.

▲• **USP REFERENCE STANDARDS** ⟨11⟩
USP 1,4-Benzoquinone RS▲ (ERR 1-Nov-2018)

Pure Steam

[NOTE—For microbiological guidance, see general information chapter *Water for Pharmaceutical Purposes* ⟨1231⟩.]

H_2O 18.02

DEFINITION

Pure Steam is water that has been heated above 100° and vaporized in a manner that prevents source water entrainment. It is prepared from water complying with the EPA National Primary Drinking Water Regulations, or with drinking water regulations of the European Union or of Japan, or with WHO drinking water guidelines. It contains no added substance. The level of steam saturation or dryness and the amount of noncondensable gases are to be determined by the Pure Steam application.

[NOTE—Pure Steam is intended for use where the steam or its condensate comes in contact with the article or the preparation. Pure Steam quality is difficult to assess in its vapor state; therefore, the attributes of its condensate are used to test its quality. The process used to create and collect the condensate for analysis must not adversely impact these quality attributes.]

SPECIFIC TESTS

- **TOTAL ORGANIC CARBON** ⟨643⟩: The condensate meets the requirement.
- **WATER CONDUCTIVITY,** *Bulk Water* ⟨645⟩: The condensate meets the requirement.
- **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: The condensate contains less than 0.25 USP Endotoxin Unit/mL when used in the production of parenterals.

ADDITIONAL REQUIREMENTS

Wheat Bran

DEFINITION

Wheat Bran is the outer fraction of the cereal grain, comprising the pericarp, seed coat (testa), nucellar tissue, and aleurone layer, and is derived from *Triticum aestivum* L., *T. compactum* Host, *T. durum* Desf., and other common einkorn and emmer wheat cultivars. It is obtained by the milling and processing of the whole wheat grain meeting U.S. Standards for Number 1 wheat (7 CFR 810.2201). It contains NLT 36.0% of dietary fiber.

IDENTIFICATION

• **A. Botanic Characteristics**

Microscopic: Fragments of aleurone and nucellar layers (about 60% of the components) and fragments of seed coat and pericarp (about 40%); aleurone and nucellar tissues composed of a usually single layer of thick-walled, isodiametric, translucent cells having conspicuous protoplasm and a single, inconspicuous layer of thick-walled, nearly transparent cells; inconspicuous seed coat, consisting of two layers of thin-walled cells crossing at roughly right angles to each other; pericarp composed of an inconspicuous endocarp layer of elongated, thick-walled tube cells, a cross layer with cells longer than wide, arranged side-by-side in rows, having thick, highly pitted side and end walls, and epicarp and hypoderm layers with cells longer than wide, arranged alternately in rows and having thick, highly pitted side and end walls; epicarp and hypoderm cells larger than and crossing at right angles to the cells of the cross layer; and a few trichomes also present, with lumens narrower than the thickness of their cell walls and originating from isodiametric-polygonal epicarp cells. If micronized, the original structures are mostly destroyed.

COMPOSITION

• **Content of Total Dietary Fiber**

Buffer: pH 6.0 phosphate buffer (see *Reagents, Indicators, and Solutions—Buffer Solutions*)

Protease solution: Dissolve 5 mg of protease in 0.1 mL of *Buffer*.

Samples: Prepare two samples in parallel previously dried in a vacuum oven at 100° for 5 h. Mill the dried Wheat Bran to a coarse powder, and store in a desiccator until use.

Analysis: To correct for any contribution from reagents, perform examinations of reagent blanks, which are treated similarly to the *Samples*. Transfer 1.0 g of each *Sample* into separate 400-mL, tall-form beakers. Add 50 mL of *Buffer*, and adjust the pH, if necessary, to 6.0 ± 0.1. Add 0.2 mL of heat-stable α-amylase solution. Cover the beaker with aluminum foil, place in a boiling water bath for 15 min at 100°, shaking gently every 5 min, and cool to room temperature. Adjust with about 10 mL of 0.275 N sodium hydroxide solution to a pH of 7.5 ± 0.1. Add freshly prepared *Protease solution*, cover the beaker with aluminum foil, and incubate for 30 min at 60° with continuous agitation. Cool, and adjust with 10 mL of 0.325 N hydrochloric acid to a pH of 4.5 ± 0.2. Add 0.3 mL of amyloglucosidase, cover with aluminum foil, and incubate for 20 min at 60°, with continuous agitation. Heat 280 mL of alcohol to 60°, add to the digest, and allow the precipitate to form at room temperature for 60 min. Place 0.5 g of chromatographic siliceous earth in a crucible with fritted disk, dry at 130° to constant weight, and weigh. Wet the chromatographic siliceous earth in the crucible using a stream of 78% alcohol from a washing bottle, and apply suction to evenly distribute the chromatographic siliceous earth over the fritted disk. Maintain suction, and quantitatively transfer the enzyme digest precipitate to the crucible. Wash the residue successively with three 20-mL portions of 78% alcohol, two 10-mL portions of alcohol, and two 10-mL portions of acetone. In some cases, gums may form during filtration, trapping liquid in residue. If so, break the surface film with a spatula to improve filtration. Dry the crucible containing the residue at 105° in an air oven for 16 h, cool in a desiccator, and determine the weight of the residue. Determine the percentage of protein in the first *Sample* as directed in the test for *Limit of Protein*. Incinerate the residue from the second *Sample* as directed in *Articles of Botanical Origin* ⟨561⟩, *Total Ash*.

Calculate the corrected weight, *W*, of the sample residue:

$$W = W_U \times (1 - P_U/100 - A_U/100) - W_B \times (1 - P_B/100 - A_B/100)$$

W_U = average weight of the *Sample* residues
P_U = percentage of protein present in the *Sample*
A_U = percentage of ash found in the *Sample*
W_B = average weight of the blank residues
P_B = percentage of protein found in the test for *Limit of Protein* for the blank
A_B = percentage of ash found in the blank

Calculate the percentage of the total dietary fiber in the portion of Wheat Bran taken:

$$\text{Result} = (W/W_I) \times 100$$

W_I = weight of the *Sample* taken

Correct the final percentage of the total dietary fiber for fat and for water.

Acceptance criteria: NLT 36.0%

CONTAMINANTS

• **Articles of Botanical Origin,** *Limits of Elemental Impurities* ⟨561⟩**:** Meet the requirements

• **Limit of Insect Infestation**

Sample: 50 g of Wheat Bran

Analysis: Prepare a smooth slurry by transferring the *Sample* to a 1-L beaker and adding 500 mL of 1.5 N hydrochloric acid. Add 50 mL of light mineral oil, and carefully heat to boiling on a hot plate. Boil for 10 min to digest, stirring occasionally to prevent scorching. Remove from the hot plate, and stir for 5 min with a magnetic stirrer, increasing the stirring speed until a vortex is formed without visible splashing. Quantitatively transfer the contents of the beaker to a separatory funnel with the aid of hot water. Allow to stand for 30 min, stirring gently with a glass rod several times during the first 10 min. Drain the lower layer to about 2.5 cm from the layer interface. Wash the funnel with hot water, and allow 5 min for the layers to separate. Drain the lower layer, and wash with cold water several times until the lower phase is clear. Filter the contents of the funnel through ruled filter paper with the aid of a Büchner funnel and suction. Thoroughly rinse the separatory funnel with water and a detergent solution, filtering each rinse through the same paper. Examine the ruled filter paper under a microscope at 30× magnification.

Acceptance criteria: NMT 25 insect fragments are seen.

• **Microbial Enumeration Tests** ⟨61⟩ and **Tests for Specified Microorganisms** ⟨62⟩**:** The total aerobic microbial count does not exceed 10^4 cfu/g, and it meets the requirements of the tests for absence of *Salmonella* species and *Escherichia coli*.

SPECIFIC TESTS

• **Limit of Protein**

Sample: 1 g of Wheat Bran

Analysis: Place the *Sample* in a 500-mL Kjeldahl flask, and proceed as directed in *Nitrogen Determination* ⟨461⟩, *Method I*. Multiply the percentage of nitrogen found by 6.31.

Acceptance criteria: NMT 18.5%

• **Limit of Fat**

Sample: 2 g of Wheat Bran, previously dried in a vacuum oven at 100° for 5 h

Analysis: Transfer the *Sample* to an extraction thimble, and mix with an equivalent quantity of dry, clean sand. Place a fat-free cotton or glass wool plug on top of the thimble. Place the thimble in a continuous-extraction apparatus provided with a tared collection flask. Pour 75 mL of solvent

USP Monographs

www.webofpharma.com

hexane through the sample into the collection flask. Extract at a condensation rate of 5–6 drops/s for 4 h, then at a rate of 2–3 drops/s for the next 16 h. Detach the collection flask, carefully evaporate the solvent, and dry the collection flask and its contents in a drying oven at 100° for 30 min to constant weight. Calculate the percentage of the extract (crude fat) in the portion of Wheat Bran taken.
Acceptance criteria: NMT 6%

- **ABSENCE OF PEROXIDASE ACTIVITY**

Sample: 1 g of Wheat Bran
Analysis: Transfer the *Sample* to a test tube, and add 50 mL of water. Add, in the order specified, 2 mL of 5.68 mM erythorbic acid, 3 mL of 0.69 mM dichloroindophenol, and 0.1 mL of 1.2% hydrogen peroxide, each freshly prepared. Stopper the test tube tightly, and shake until the *Sample* is dissolved. Place into a water bath at 38° for 5 min.
Acceptance criteria: No color change is observed, indicating the absence of peroxidase activity.

- **WATER DETERMINATION,** *Method III, Procedure for Articles of Botanical Origin* ⟨921⟩**:** NMT 12%
- **ARTICLES OF BOTANICAL ORIGIN,** *Total Ash* ⟨561⟩**:** NMT 8%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed containers, secured against insect attack.

Witch Hazel

DEFINITION

Witch Hazel is a clear, colorless distillate prepared from recently cut and partially dried dormant twigs of *Hamamelis virginiana* L.
Prepare Witch Hazel as follows. Macerate a weighed amount of the twigs for about 24 h in about twice their weight of water, and then distill until NLT 800 mL and NMT 850 mL of clear, colorless distillate is obtained from each 1000 g of the twigs taken. Add 150 mL of alcohol to each 850 mL of distillate, and mix thoroughly.

OTHER COMPONENTS

- **ALCOHOL DETERMINATION** ⟨611⟩, *Procedures, Method I—Distillation Method***:** 14.0%–15.0% of ethanol

CONTAMINANTS

- **NONVOLATILE RESIDUE:** Evaporate 100 mL to dryness in a tared dish on a hot plate at 60°. The weight of the residue does not exceed 25 mg (0.025%).
- **LIMIT OF TANNINS**

Solution A: 1000 mL of water adjusted with phosphoric acid to a pH of 2.5 ± 0.1
Solution B: Acetonitrile
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	90	10
5	90	10
20	0	100

Standard solution: 0.03 mg/mL of tannic acid
Sample solution: Witch Hazel
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 15-cm; packing L1
Flow rate: 1 mL/min
Injection volume: 25 µL
Analysis
Samples: *Standard solution* and *Sample solution*
Acceptance criteria: If any peak corresponding to the retention time of tannic acid in the *Standard solution* is present for the *Sample solution*, its peak area is NMT that of the tannic acid in the *Standard solution*.

Delete the following:

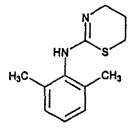
▲• **ARTICLES OF BOTANICAL ORIGIN** ⟨561⟩, *Pesticide Residue Analysis***:** Meets the requirements▲ (USP 1-May-2019)

SPECIFIC TESTS

- **SPECIFIC GRAVITY** ⟨841⟩**:** 0.979–0.983
- **pH** ⟨791⟩**:** 3.0–5.0

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers, and avoid exposure to excessive heat.



Xenon Xe 133

Xenon, isotope of mass 133.
Xenon, isotope of mass 133 [14932-42-4].

» Xenon Xe 133 is a gas suitable for inhalation in diagnostic studies. Xenon 133 is a radioactive nuclide that may be prepared from the fission of uranium 235. It contains not less than 85.0 percent and not more than 115.0 percent of the labeled amount of ^{133}Xe at the date and time indicated in the labeling.

Packaging and storage—Preserve in single-dose or in multiple-dose vials having leak-proof stoppers, at room temperature.
Other requirements—It meets the requirements for *Labeling*, except for the information specified for *Labeling* under *Injections;* for *Radionuclide identification;* and for *Radionuclidic purity* and *Assay for radioactivity* under *Xenon Xe 133 Injection*, except to determine the radioactivity in MBq (mCi) per container.

Xylazine

$C_{12}H_{16}N_2S$ 220.33
4*H*-1,3-Thiazin-2-amine, *N*-(2,6-dimethylphenyl)-5,6-dihydro-;
5,6-Dihydro-2-(2,6-xylidino)-4*H*-1,3-thiazine [7361-61-7].

DEFINITION

Xylazine contains NLT 98.0% and NMT 102.0% of xylazine ($C_{12}H_{16}N_2S$).

Sample solution: 5 µg/mL in 0.1 N hydrochloric acid
Acceptance criteria: Meets the requirements

ASSAY

• **PROCEDURE**
Solution A: Dissolve 3.03 g of sodium 1-heptanesulfonate in 800 mL of water, adjust with 2 N sulfuric acid to a pH of 3.0, and dilute with water to 1000 mL. Pass through a filter of 0.5-µm or finer pore size.
Solution B: Acetonitrile
Diluent: *Solution A* and *Solution B* (50:50)
Mobile phase: See *Table 1*. Return to original conditions, and equilibrate the system.

Table 1

Time (min)	Solution A (%)	Solution B (%)
0	70	30
5	70	30
10	60	40
15	60	40

Standard solution: 0.4 mg/mL of USP Xylazine RS in *Diluent*
Sample solution: 0.4 mg/mL of Xylazine in *Diluent*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 226 nm
Column: 3.9-mm × 30-cm; packing L1
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of xylazine ($C_{12}H_{16}N_2S$) in the portion of Xylazine taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Xylazine RS in the *Standard solution* (mg/mL)
C_U = concentration of Xylazine in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0%

IMPURITIES

• **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.1%
• **LIMIT OF 3-AMINO-1-PROPANOL**
Standard solution: 0.5 mg/mL of 3-amino-1-propanol in methanol
Sample solution: 100 mg/mL of Xylazine in methanol. Sonicate to dissolve.
Chromatographic system
(See *Chromatography* ⟨621⟩, *General Procedures, Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel
Application volume: 5 µL
Developing solvent system: Alcohol and ammonium hydroxide (80:20)
Spray reagent: 2 mg/mL of ninhydrin in alcohol
Analysis
Samples: *Standard solution* and *Sample solution*
Develop the chromatogram in a saturated chromatographic chamber containing the *Developing solvent system* until the solvent front has moved three-fourths of the length of the plate. Remove the plate from the chromatographic chamber, mark the solvent front, and air-dry the plate. Spray the plate with the *Spray reagent*, and immediately heat the plate in an oven at 105°. When the spots are visible, remove the plate from the oven, and allow to cool.
Acceptance criteria: The intensity of the spot for 3-amino-1-propanol from the *Sample solution* is not greater than that of the spot for 3-amino-1-propanol from the *Standard solution* (0.5%).
• **LIMIT OF ACETONE AND ISOPROPYL ALCOHOL**
Proceed as directed in Residual Solvents ⟨467⟩.
Acceptance criteria
Acetone: NMT 0.02%
Isopropyl alcohol: NMT 0.2%
• **ORGANIC IMPURITIES**
Solution A, Solution B, and **Diluent:** Prepare as directed in the *Assay*.
Mobile phase: See *Table 2*. Return to original conditions, and equilibrate the system.

Table 2

www.webofpharma.com

Calculate the percentage of each impurity in the portion of Xylazine taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak area of any individual impurity from the *Sample solution* that is not present in the chromatogram of the *Diluent*
r_S = peak area of xylazine from the *Standard solution*
C_S = concentration of USP Xylazine RS in the *Standard solution* (mg/mL)
C_U = concentration of Xylazine in the *Sample solution* (mg/mL)
F = relative response factor (see *Table 3*)

Acceptance criteria: See *Table 3*.

Table 3

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
2,6-Dimethylaniline	0.8	1.4	0.5
Xylazine	1.0	—	—
Specified unknown	1.3	2.8	0.5
2,6-Dimethylphenyl isothiocyanate	2.0	2.7	0.5
Any individual unspecified impurity	—	1.0	0.5
Total impurities	—	—	1.0

SPECIFIC TESTS
- **LOSS ON DRYING** ⟨731⟩
  Analysis: Dry under vacuum at 60° for 4 h.
  Acceptance criteria: NMT 0.5%

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers. Store at 25°, excursions permitted between 15° and 30°.
- **LABELING:** Where it is intended for veterinary use only, the label so states.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Xylazine RS

Xylazine Hydrochloride

$C_{12}H_{16}N_2S \cdot HCl$ 256.79
4*H*-1,3-Thiazin-2-amine, *N*-(2,6-dimethylphenyl)-5,6-dihydro-, monohydrochloride.
5,6-Dihydro-2-(2,6-xylidino)-4*H*-1,3-thiazine hydrochloride [23076-35-9].

» Xylazine Hydrochloride contains not less than 98.0 percent and not more than 102.0 percent of $C_{12}H_{16}N_2S \cdot HCl$.

Packaging and storage—Preserve in tight containers. Store at 25°, excursions permitted between 15° and 30°.
Labeling—Where it is intended for veterinary use only, the label so states.
USP Reference standards ⟨11⟩—
USP Xylazine Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: *Thin-Layer Chromatographic Identification Test* ⟨201⟩—
Test solution: 5 mg per mL, in methanol.
Developing solvent system: methanol and ammonium hydroxide (98.5: 1.5).
Procedure—Separately apply 1 µL of the *Test solution* and the *Standard solution.* Allow the applications to dry with the aid of a stream of nitrogen, develop in a saturated chromatographic chamber, and dry the plate in a current of air: the size, intensity, and R_F value of the principal spot obtained from the *Test solution* correspond to those of the principal spot obtained from the *Standard solution.*
Melting range ⟨741⟩: between 164° and 168°.
pH ⟨791⟩: between 4.0 and 6.0, in a solution (1 in 100).
Loss on drying ⟨731⟩—Dry it at 105° for 4 hours: it loses not more than 1.0% of its weight.
Residue on ignition ⟨281⟩: not more than 0.1%.
Chromatographic purity—Examine the chromatogram obtained from the *Assay preparation.* Calculate the percentage of impurities in the Xylazine Hydrochloride taken by the formula:

$$100r_S/(r_U + r_S)$$

in which r_S is the sum of the areas of all the impurity peaks observed; and r_U is the area of the xylazine peak: the sum of the impurity responses is not greater than 2.0%.

Assay—
Mobile phase—Dissolve 6.0 g of sodium 1-heptanesulfonate in 2500 mL of water, add 60 mL of glacial acetic acid, dilute with water to 3000 mL, and mix. Prepare a mixture of 2200 mL of this solution and 1800 mL of methanol, and pass through a filter having a 0.5-µm or finer porosity. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Prepare a solution of USP Xylazine Hydrochloride RS in *Mobile phase* having a known concentration of about 1 mg per mL.
Assay preparation—Transfer about 25 mg of Xylazine Hydrochloride, accurately weighed, to a 25-mL volumetric flask, dissolve in and dilute with *Mobile phase* to volume, and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector, a 2-mm × 2-cm guard column that contains packing L1, and a 3.9-mm × 30-cm analytical column that contains packing L1 and is maintained at a constant temperature of about 40°. The flow rate is about 2.5 mL per minute. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%. [NOTE—After daily use, rinse the column with 100 mL of acetonitrile and with 100 mL of methanol, and store the column containing methanol.]
Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_{12}H_{16}N_2S \cdot HCl$ in the portion of Xylazine Hydrochloride taken by the formula:

$$25C(r_U/r_S)$$

www.webofpharma.com

in which C is the concentration, in mg per mL, of USP Xylazine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the areas of the xylazine peak responses in the chromatograms obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Xylazine Injection

» Xylazine Injection is a sterile solution of Xylazine in Water for Injection prepared with the aid of Hydrochloric Acid or a sterile solution of Xylazine Hydrochloride in Water for Injection. It contains the equivalent of not less than 90.0 percent and not more than 110.0 percent of the labeled amount of xylazine ($C_{12}H_{16}N_2S$).

Packaging and storage—Preserve in single-dose or multiple-dose containers.
Labeling—Where it is intended for veterinary use only, the label so states.
USP Reference standards ⟨11⟩—
USP Xylazine Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 5 µg per mL.
Medium: 0.1 N hydrochloric acid.

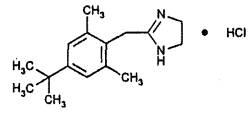
B: Transfer a volume of Injection equivalent to about 50 mg of xylazine to a separator, add 1 mL of sodium carbonate solution (1 in 20), and extract with four 10-mL portions of methylene chloride, combining the methylene chloride extracts in a beaker and evaporating to dryness. Add 10 mL of methanol to the beaker, and swirl to dissolve the residue. The test solution thus obtained responds to *Identification* test *B* under *Xylazine Hydrochloride.*
Bacterial Endotoxins Test ⟨85⟩ —It contains not more than 1.7 USP Endotoxin Units per mg of xylazine.
Sterility Tests ⟨71⟩ —It meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined.*
pH ⟨791⟩: between 4.5 and 5.5.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—

Mobile phase—Dissolve 6.0 g of sodium 1-heptanesulfonate in 3000 mL of water, adjust to a pH of 3.0 by dropwise addition of phosphoric acid. Add 1000 mL of acetonitrile, mix, and pass through a filter having a 0.5-µm or finer porosity. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Dissolve an accurately weighed portion of USP Xylazine Hydrochloride RS quantitatively in *Mobile phase* to obtain a solution having a known concentration of about 1.2 mg per mL. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with *Mobile phase* to volume, and mix. Pass a portion of this solution through a filter having a 0.5-µm or finer porosity, discarding the first 3 mL of the filtrate. Use the clear filtrate as the *Standard preparation.* This solution contains about 0.12 mg of USP Xylazine Hydrochloride RS per mL.

Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 200 mg of xylazine, to a 100-mL volumetric flask, dilute with *Mobile phase* to volume, and mix. Transfer 5.0 mL of this solution to a second 100-mL volumetric flask, dilute with *Mobile phase* to volume, and mix. Pass a portion of this solution through a filter having a 0.5-µm or finer porosity, discarding the first 3 mL of the filtrate. Use the clear filtrate as the *Assay preparation.*



Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector, a 2-mm × 2-cm guard column that contains packing L2, and a 4.6-mm × 25-cm analytical column that contains packing L1 and is maintained at a constant temperature of about 40°. The flow rate is about 1 mL per minute. Chromatograph the *Assay preparation,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between the main xylazine peak and the closest eluting other peak, if any, is not less than 2.5; and the tailing factor for the xylazine peak is not more than 2.0. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%. [NOTE—After daily use, rinse the column with 100 mL of water and with 100 mL of methanol, and store the column containing methanol.]

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of xylazine ($C_{12}H_{16}N_2S$) in each mL of the Injection taken by the formula:

$$(220.34/256.80)(2000C/V)(r_U/r_S)$$

in which 220.34 and 256.80 are the molecular weights of xylazine and xylazine hydrochloride, respectively; C is the concentration, in mg per mL, of USP Xylazine Hydrochloride RS in the *Standard preparation; V* is the volume, in mL, of Injection taken to prepare the *Assay preparation;* and r_U and r_S are the areas of the xylazine peak responses in the chromatograms obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Xylometazoline Hydrochloride

$C_{16}H_{24}N_2 \cdot HCl$ 280.84
1*H*-Imidazole, 2-[[4-(1,1-dimethylethyl)-2,6-dimethylphenyl] methyl]-4,5-dihydro-, monohydrochloride;
2-(4-*tert*-Butyl-2,6-dimethylbenzyl)-2-imidazoline monohydrochloride [1218-35-5].

DEFINITION

Change to read:

Xylometazoline Hydrochloride contains ▲NLT 98.0% and NMT 102.0%▲ (USP 1-Aug-2019) of xylometazoline hydrochloride ($C_{16}H_{24}N_2 \cdot HCl$), calculated on the dried basis.

Yohimbine Hydrochloride

$C_{21}H_{26}N_2O_3 \cdot HCl$ 390.90
17α-Hydroxy-20-α-yohimban-16-β-carboxylic acid, methyl ester, hydrochloride [65-19-0].

» Yohimbine Hydrochloride contains not less than 98.0 percent and not more than 102.0 percent of $C_{21}H_{26}N_2O_3 \cdot HCl$, calculated on the dried basis.

Packaging and storage—Preserve in tight containers, and store at controlled room temperature.
Labeling—Where it is intended for veterinary use only, it is so labeled.
USP Reference standards ⟨11⟩—
USP Yohimbine Hydrochloride RS

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).
B: Thin-Layer Chromatographic Identification Test ⟨201⟩—
Test solution—Dissolve 10 mg of it in 1 mL of methanol, add 1 drop of ammonium hydroxide, and mix.
Application volume: 1 µL.
Developing solvent system: methylene chloride, methanol, and ammonium hydroxide (90:14:1), in a saturated chamber.
Procedure—Allow the plate to air-dry in a hood. Expose the dry plate for 30 minutes to short-wavelength UV light, then examine under long-wavelength UV light: the size, intensity, and R_F value of the principal spot in the chromatogram obtained from the *Test solution* correspond to those characteristics of the principal spot in the chromatogram obtained from the Standard solution.

Change to read:

C: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 10 µg per mL.
Medium: 0.1 N hydrochloric acid in methanol.
D: To 10 mg of it add 3 drops of sulfuric acid. Mix, and add 50 mg of ammonium vanadate: a violet color is produced

USP Monographs

www.webofpharma.com

(differentiation from *strychnine,* which produces a red color). Add 1 mL of water: no color change occurs.
Specific rotation ⟨781S⟩: between +100° and +105°.
Test solution: 10 mg per mL, in water, prepared by warming on a steam bath and allowing to cool.
Loss on drying ⟨731⟩—Dry it at 105° for 2 hours: it loses not more than 1.0% of its weight.
Chromatographic purity—Use the chromatogram of the *Assay preparation* obtained as directed in the *Assay.* Calculate the percentage of each impurity in the portion of Yohimbine Hydrochloride taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the response of the individual impurity; and r_s is the sum of all the responses in the chromatogram: not more than 1.0% of any individual impurity is found, and the sum of all the impurities found is not more than 2.0%.

Assay—
Mobile phase—Prepare a mixture of water, dibasic sodium phosphate dihydrate solution (11.88 g per L), and monobasic potassium phosphate solution (9.08 g per L) (355:100:50). Add 4 g of sodium dodecyl sulfate, and mix. Add 285 mL of acetonitrile, and mix. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Quantitatively dissolve an accurately weighed quantity of USP Yohimbine Hydrochloride RS in methanol to obtain a solution having a known concentration of about 0.2 mg per mL.
Assay preparation—Transfer about 50 mg of Yohimbine Hydrochloride, accurately weighed, to a 100-mL volumetric flask, dilute with methanol to volume, and mix. Transfer 10.0 mL of this solution to a 25-mL volumetric flask, dilute with methanol to volume, and mix.
System suitability solution—Quantitatively dilute an accurately measured volume of the *Standard preparation* with methanol to obtain a solution having a concentration of 0.40 µg of USP Yohimbine Hydrochloride RS per mL.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 229-nm detector and a 4-mm × 12.5-cm column that contains 4-µm packing L7. The flow rate is about 2 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* the main yohimbine peak gives a measurable response. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the tailing factor is not more than 2.5; and the relative standard deviation for replicate injections is not more than 1%.
Procedure—Separately inject equal volumes (about 10 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Calculate the quantity, in mg, of $C_{21}H_{26}N_2O_3 \cdot HCl$ in the portion of Yohimbine Hydrochloride taken by the formula:

$$250C(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Yohimbine Hydrochloride RS in the *Standard preparation;* and r_U and r_S are the yohimbine peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Yohimbine Injection

» Yohimbine Injection is a sterile solution of Yohimbine Hydrochloride in Water for Injection. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of yohimbine ($C_{21}H_{26}N_2O_3$).

Packaging and storage—Preserve in single-dose or multiple-dose containers as described in *Packaging and Storage Requirements* ⟨659⟩, *Injection Packaging.* Store at controlled room temperature.
Labeling—Where it is intended for veterinary use only, it is so labeled.
USP Reference standards ⟨11⟩—
USP Yohimbine Hydrochloride RS

Identification, *Thin-Layer Chromatographic Identification Test* ⟨201⟩—
Test solution—Transfer a volume of Injection, equivalent to about 40 mg of yohimbine, to a separator, add 5 mL of a sodium carbonate solution (1 in 20), and extract with four 10-mL portions of chloroform, combining the chloroform extracts in a beaker and evaporating to dryness. Add 20 mL of methanol to the beaker, and swirl to dissolve the residue.
Standard solution—Prepare a solution of USP Yohimbine Hydrochloride RS in methanol containing 2 mg per mL.
Mixed solution: a mixture of the *Test solution* and the *Standard solution* (1:1).
Application volume: 1 µL.
Developing solvent system: methylene chloride, methanol, and ammonium hydroxide (90:14:1), in a saturated chamber.
Procedure—Allow the plate to air-dry in a hood. Expose the dry plate for 30 minutes to short-wavelength UV light, then examine under long-wavelength UV light: the size, intensity, and R_F value of the principal spots in the chromatograms obtained from the *Test solution* and the *Mixed solution* correspond to those characteristics of the principal spot in the chromatogram obtained from the *Standard solution.*
Bacterial Endotoxins Test ⟨85⟩—It contains not more than 45.5 USP Endotoxin Units per mg of yohimbine.
Sterility Tests ⟨71⟩—It meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined.*
pH ⟨791⟩: between 3.7 and 4.3.
Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩.

Assay—
Diluent—Prepare a mixture of acetonitrile, water, and glacial acetic acid (49:49:2).
Mobile phase—Prepare a mixture of water, acetonitrile, and glacial acetic acid (603:377:20) containing 3.5 g of sodium 1-decanesulfonate in each 1000 mL. Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard preparation—Transfer about 55 mg of USP Yohimbine Hydrochloride RS, accurately weighed, to a 25-mL volumetric flask, add 20 mL of water, warm, and swirl to dissolve. Add 84 mg of anhydrous citric acid, and swirl to dissolve. Allow the solution to cool, adjust with 1 N sodium hydroxide to a pH of 4.0, dilute with water to volume, and mix. Transfer 125.0 µL of this stock solution to a second 25-mL volumetric flask, dilute with *Diluent* to volume, and mix. This solution contains about 0.011 mg of USP Yohimbine Hydrochloride RS per mL.
Resolution solution—Prepare a solution in methanol containing about 0.56 mg of methylparaben and 0.06 mg of

USP Monographs

www.webofpharma.com

propylparaben per mL. Transfer 200 µL of this solution to a 25-mL volumetric flask, add 125.0 µL of the stock solution used to prepare the *Standard preparation,* dilute with *Diluent* to volume, and mix.

Assay preparation—Transfer an accurately measured volume of Injection, equivalent to about 0.25 mg of yohimbine, to a 25-mL volumetric flask, dilute with *Diluent* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 254-nm detector and a 3.9-mm × 15-cm column that contains 5-µm packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Resolution solution*, and record the peak responses as directed for *Procedure:* the relative retention times are about 0.4 for methylparaben, 0.7 for propylparaben, and 1.0 for yohimbine; and the resolution, *R,* between methylparaben and propylparaben and between propylparaben and yohimbine is not less than 2.0. Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 2.0%.

Procedure—Separately inject equal volumes (about 25 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Calculate the quantity, in mg, of yohimbine ($C_{21}H_{26}N_2O_3$) in each mL of the Injection taken by the formula:

$$(354.45/390.90)(25{,}000C/V)(r_U/r_S)$$

in which 354.45 and 390.90 are the molecular weights of yohimbine and yohimbine hydrochloride, respectively; C is the concentration, in mg per mL, of USP Yohimbine Hydrochloride RS in the *Standard preparation;* V is the volume, in µL, of Injection taken to prepare the *Assay preparation;* and r_U and r_S are the yohimbine peak responses obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Yttrium Y 90 Ibritumomab Tiuxetan Injection

» Ibritumomab Tiuxetan is the immunoconjugate resulting from a stable thiourea covalent bond between the monoclonal antibody ibritumomab and the linker-chelator tiuxetan [*N*-[2-bis(carboxymethyl)amino]-3-(*p*-isothiocyanatophenyl) propyl]-[*N*-[2-bis(carboxymethyl)amino]-2-(methyl)ethyl)glycine. This chelate provides a high-affinity, conformationally restricted chelation site for ^{90}Y and ^{111}In. The approximate molecular weight of Ibritumomab Tiuxetan is 148 kD.

Ibritumomab is a murine IgG_1 kappa monoclonal antibody directed against the CD20 antigen, which is found on the surface of normal and malignant B lymphocytes. Ibritumomab is produced in Chinese hamster ovary cells and is composed of two murine gamma 1 heavy chains of 445 amino acids each and two kappa light chains of 213 amino acids each.

Yttrium Y 90 Ibritumomab Tiuxetan Injection is a sterile, nonpyrogenic preparation of the immunoconjugate of ibritumomab and tiuxetan that is labeled with ^{90}Y and is suitable for intravenous administration. It contains not less than 90.0 percent and not more than 110.0 percent of the labeled amount of ^{90}Y as the ibritumomab complex, expressed in megabecquerels (or millicuries) per mL at the time indicated in the labeling. It may contain buffers and stabilizers. It contains no antimicrobial agents. Other chemical forms of radioactivity do not exceed 5 percent of the total radioactivity. The immunoreactive fraction, as determined by a validated method, is not less than 90 percent.

Packaging and storage—Preserve in single-dose containers, and store in a refrigerator for not more than 8 hours. [NOTE—Translucent protein particles may develop, which are removed by filtration prior to administration using a 0.22-µm low-protein-binding filter.]

Labeling—Label it to include the following in addition to the information specified for *Labeling* ⟨7⟩, *Labels and Labeling for Injectable Products*: the time and date of calibration; the amount of Yttrium Y 90 ibritumomab tiuxetan as total MBq (or mCi) and concentration of yttrium ^{90}Y ibritumomab tiuxetan, in MBq (or mCi) per mL, at the time of calibration; the expiration date and time; the storage temperature; and the statement, "Caution—Radioactive Material." The labeling indicates that, in making dosage calculations, correction is to be made for radioactive decay, and also indicates that the radioactive half-life of ^{90}Y is 64.1 hours.

Radionuclide identification (see *Radioactivity* ⟨821⟩)—

A: The beta radiation of the Injection shows a mass absorption coefficient within 5% of the value found for a known standard of the ^{90}Y when tested under the same counting conditions.

B: The beta-ray spectrum, obtained on an energy calibrated beta spectrometer, is identical to that of the spectrum of ^{90}Y of known purity, showing a maximum beta particle energy (E_{max}) at about 2280 keV. [NOTE—Because of the inherent difficulty in measuring beta radiation, a second comparative test should be performed.]

Bacterial Endotoxins Test ⟨85⟩—The limit of endotoxin content is not more than $175/V$ USP Endotoxin Units per mL of the Injection, when compared with the USP Endotoxin RS, in which V is the maximum recommended total dose, in mL, at the expiration date or time.

pH ⟨791⟩**:** between 5.5 and 7.5.

Radiochemical purity—

Adsorbent: 1- × 8-cm instant silica gel strip.

Test solution: the Injection.

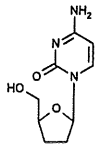
Application volume: 10 µL.

Developing solvent system: 0.9% sodium chloride solution.

Procedure—Proceed as directed for *Thin-Layer Chromatography* under *Chromatography* ⟨621⟩ by ascending chromatography. Determine the distribution of radioactivity on the chromatogram by scanning with a suitable collimated radiochromatogram strip scanner, and determine the percentage of radiochemical purity of the test specimen. Not less than 95% of the ^{90}Y activity is present as a band between the R_f values of 0.0 and 0.1.

Radionuclidic purity (Content of ^{90}Sr in an yttrium Y 90 chloride solution) (see *Radioactivity* ⟨821⟩)—Prepare a strontium/yttrium carrier solution containing 0.34 mg of

USP Monographs



www.webofpharma.com

yttrium chloride ($YCl_3 \cdot 6H_2O$) and 0.30 mg of strontium chloride ($SrCl_2 \cdot 6H_2O$) per mL of 0.1 N hydrochloric acid. Apply about 50 µL of this solution at the origin of a 2- × 19-cm cellulose phosphate chromatographic strip (see *Chromatography* ⟨621⟩), and allow to dry. Apply about 5 µL of the yttrium Y 90 chloride radiolabeling solution at the origin, and develop the chromatogram by ascending chromatography over a period of about 1.25 hours, using 3 N hydrochloric acid as the developing solvent, until the solvent front migrates to the 15-cm mark. Allow to dry. Cut the strip at the 8-cm mark, and place the upper section (solvent front) in a suitable liquid scintillation solvent. Using a suitable counting assembly, determine the radioactivity, in KBq (or µCi) per mL of yttrium Y 90 chloride solution. The total radioactivity of ^{90}Sr is not greater than 740 KBq per 37 GBq (or 20 µCi per Ci) of ^{90}Y at the expiration date as stated on the labeling.

Other requirements—It meets the requirements under *Injections and Implanted Drug Products* ⟨1⟩, except that the radioactive component may be distributed or dispensed prior to completion of the test for *Sterility*, the latter test being started on the date of manufacture.

Assay for radioactivity (see *Radioactivity* ⟨821⟩)—Using a suitable counting assembly, determine the total radioactivity, in MBq (or µCi), of the unshielded Injection, using a calibrated system.

Zalcitabine

$C_9H_{13}N_3O_3$ 211.22

Cytidine, 2′,3′-dideoxy-.

2′,3′-Dideoxycytidine. [7481-89-2].

» Zalcitabine contains not less than 98.0 percent and not more than 102.0 percent of $C_9H_{13}N_3O_3$, calculated on the dried basis.

[**CAUTION**—Great care should be taken to prevent inhaling particles of Zalcitabine and exposing it to the skin.]

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—

USP Zalcitabine RS

USP Zalcitabine Related Compound A RS

2′,3′-Didehydro-2′,3′-dideoxycytidine.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that of the *Standard preparation*, as obtained in the *Assay*.

C: Prepare a test solution of it in a mixture of methanol and water (1:1) containing 50 mg per mL. Similarly prepare a Standard solution, using USP Zalcitabine RS. Separately apply 10 µL portions of the test solution and the Standard solution to a suitable thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Place the plate in a paper-lined chromatographic chamber saturated with a solvent system consisting of the clear lower layer of a mixture of alcohol, dichloromethane, and water (3:2:2), and develop the chromatogram. When the solvent front has moved about three-fourths of the length of the plate, remove the plate from the chamber, mark the solvent front, and allow to dry. Locate the spots on the plate by examination under short-wavelength UV light: the R_F value of the principal spot obtained from the test solution corresponds to that obtained from the Standard solution.

Specific rotation ⟨781S⟩: between +73° and +77°.

Test solution: 7 mg per mL, in water.

Water Determination, *Method Ia* ⟨921⟩: not more than 0.3%.

Residue on ignition ⟨281⟩: not more than 0.1%.

Chromatographic purity—

Phosphate buffer, Mobile phase, Resolution solution, Standard preparation, and *Assay preparation*—Prepare as directed in the *Assay*.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 270-nm detector and a 4.6-mm × 15-cm column that contains 5-µm packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Resolution solution*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between zalcitabine and zalcitabine related compound A is not less than 2.0, and the tailing factor for zalcitabine is not greater than 1.5. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the relative standard deviation is not more than 2%.

Procedure—Inject a volume (about 20 µL) of the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses of the major peaks. Inject a volume of acetonitrile in water (3 in 100) as a chromatographic blank. Calculate the percentage of each impurity in the portion of zalcitabine taken by the formula:

$$100(r_i/r_s)$$

in which r_i is the peak response for each impurity, and r_s is the sum of the responses of all of the peaks: not more than 0.3% of any individual impurity is found, and the sum of all impurities is not more than 2.0%.

Ordinary impurities ⟨466⟩—

Test solution: 50 mg per mL, in a mixture of methanol and water (1:1).

Standard solution: a mixture of methanol and water (1:1).

Eluant: the lower layer of a mixture of alcohol, dichloromethane, and water (3:2:2).

Visualization: 1.

Assay—

Phosphate buffer—Dissolve 6.8 g of monobasic potassium phosphate and 8.7 g of dibasic potassium phosphate in 2000 mL of water. Adjust, if necessary, with dilute phosphoric acid or potassium hydroxide solution (1 in 10) to a pH of 6.8 ± 0.05.

Mobile phase—Prepare a filtered and degassed mixture of *Phosphate buffer* and acetonitrile (97:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Resolution solution—Dissolve USP Zalcitabine RS and USP Zalcitabine Related Compound A RS in a mixture of

www.webofpharma.com

acetonitrile in water (3 in 100), and dilute quantitatively, and stepwise if necessary, with the same solvent to obtain a solution containing about 0.024 mg of each per mL.

Standard preparation—Dissolve an accurately weighed quantity of USP Zalcitabine RS in a mixture of acetonitrile and water (3 in 100) to obtain a solution having a known concentration of about 0.5 mg per mL.

Assay preparation—Transfer about 100 mg of Zalcitabine, accurately weighed, to a 200-mL volumetric flask. Dissolve in a mixture of acetonitrile and water (3 in 100), dilute with the same solvent to volume, and mix.

Chromatographic system—The liquid chromatograph is equipped with a 270-nm detector and a 4.6-mm × 15-cm column that contains packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as directed for *Procedure:* the tailing factor for the zalcitabine peak is not greater than 1.5, and the relative standard deviation is not more than 2.0%. Chromatograph the *Resolution solution:* the resolution, *R*, between zalcitabine and zalcitabine related compound A is not less than 2.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses for the major peaks. Calculate the quantity, in mg, of $C_9H_{13}N_3O_3$ in the portion of Zalcitabine taken by the formula:

$$200C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Zalcitabine RS in the *Standard preparation*; and r_U and r_S are the peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Zalcitabine Tablets

» Zalcitabine Tablets contain not less than 90.0 percent and not more than 110.0 percent of the labeled amount of zalcitabine ($C_9H_{13}N_3O_3$). [**CAUTION**—Great care should be taken to prevent inhaling particles of zalcitabine and exposing it to the skin.]

Packaging and storage—Preserve in tight, light-resistant containers.

USP Reference standards ⟨11⟩—
USP Zalcitabine RS
USP Zalcitabine Related Compound A RS
2′,3′-Didehydro-2′,3′-dideoxycytidine.

Identification—The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that of the *Standard preparation*, as obtained in the *Assay*.

Dissolution ⟨711⟩—
Medium: water; 900 mL.
Apparatus 2: 50 rpm.
Time: 20 minutes.

Phosphate buffer—Transfer 8.7 g of dibasic potassium phosphate to a 1 L volumetric flask, dilute with water to volume, and adjust with phosphoric acid to a pH of 6.8.

Mobile phase—Prepare a filtered and degassed mixture of *Phosphate buffer*, methanol, and acetonitrile (96:4:3). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

Standard preparation—Transfer about 10 mg of USP Zalcitabine RS, accurately weighed, to a 250-mL volumetric flask. Add about 200 mL of *Medium*, and sonicate until complete solution is effected. Dilute with *Medium* to volume, and mix.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 270-nm detector and a 3.9-mm × 15-cm column that contains 10-µm packing L1. The flow rate is about 1 mL per minute. Chromatograph the *Standard preparation*, and record the peak responses as described for *Procedure:* the retention time is about 5 minutes; the tailing factor is not more than 2; and the relative standard deviation is not more than 2%.

Procedure—Separately inject equal volumes (about 150 µL) of the *Standard preparation* and a filtered portion of the solution under test into the chromatograph, record the chromatograms, and measure the responses of the major peaks. Calculate the quantity, in mg, of zalcitabine in the Tablets taken by the formula:

$$900C(r_U/r_S)$$

in which *C* is the concentration, in mg per mL, of USP Zalcitabine RS in the *Standard preparation*; and r_U and r_S are the zalcitabine peak responses obtained from the solution under test and the *Standard preparation*, respectively.

Tolerances—Not less than 80% *(Q)* of the labeled amount of $C_9H_{13}N_3O_3$ is dissolved in 20 minutes.

Uniformity of dosage units ⟨905⟩: meet the requirements.

Assay—

Buffer solution—Dissolve 3.4 g of monobasic potassium phosphate in sufficient water to make 1 L. Using a suitable pH meter, adjust with phosphoric acid to a pH of 2.2. [NOTE—If too much phosphoric acid is added, yielding a pH below 2.2, the pH may be adjusted to 2.2 with 0.025 M monobasic potassium phosphate.] Add 1.08 g of sodium 1-octanesulfonic acid, and mix.

Mobile phase—Prepare a filtered and degassed mixture of *Buffer solution* and acetonitrile (85:15).

Diluent—Prepare a mixture of water and acetonitrile (17:3).

Resolution solution—Dissolve weighed quantities of USP Zalcitabine RS and USP Zalcitabine Related Compound A RS in *Diluent*, and dilute quantitatively, and stepwise if necessary, with the same solvent to obtain a solution containing about 0.02 mg per mL of zalcitabine and 0.002 mg per mL of zalcitabine related compound A.

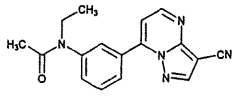
Standard preparation—Dissolve an accurately weighed quantity of USP Zalcitabine RS in *Diluent*, and dilute quantitatively, and stepwise if necessary, with the same solvent to obtain a solution having a known concentration of about 0.008 mg per mL.

Assay preparation—Transfer 5 Tablets to a volumetric flask suitable to obtain a solution containing about 0.008 mg zalcitabine per mL. Add a volume of *Diluent* that is about six-tenths of the volume of the flask, sonicate for 15 minutes, and shake by mechanical means for 10 minutes. Dilute with *Diluent* to volume, and mix. Filter before use.

Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 280-nm detector, a precolumn cartridge that contains packing L1, and a 4.6-mm × 25-cm analytical column that contains 5-µm packing L1. The flow rate is about 1.5 mL per minute. Chromatograph the *Resolution solution*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between the zalcitabine and zalcitabine related compound A peaks is not less than 1.1, and the tailing factor for the zalcitabine peak is not more than 1.5. Chromatograph the *Standard preparation*, and record the peak responses as directed for

USP Monographs

www.webofpharma.com



Procedure: the relative standard deviation for replicate injections is not more than 2%.

Procedure—Separately inject equal volumes (about 50 µL) of the *Standard preparation* and the *Assay preparation* into the chromatograph, record the chromatograms, and measure the responses of the major peaks. Calculate the quantity, in mg, of $C_9H_{13}N_3O_3$ in the portion of Tablets taken by the formula:

$$CV(r_U/r_S)$$

in which C is the concentration, in mg per mL, of USP Zalcitabine RS in the *Standard preparation*; V is the volume, in mL, of the volumetric flask used to prepare the *Assay preparation*; and r_U and r_S are the zalcitabine peak responses obtained from the *Assay preparation* and the *Standard preparation*, respectively.

Zaleplon

$C_{17}H_{15}N_5O$ 305.33

Acetamide,*N*-[3-(3-cyanopyrazolo[1,5-*a*]pyrimidin-7-yl) phenyl]-*N*-ethyl-;
3′-(3-Cyanopyrazolo[1,5-*a*]pyrimidin-7-yl)-*N*-ethylacetanilide [151319-34-5].

DEFINITION

Zaleplon contains NLT 98.0% and NMT 102.0% of zaleplon ($C_{17}H_{15}N_5O$), calculated on the anhydrous basis.

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **DISSOLUTION**

Test 1

Medium: Water; 900 mL

Apparatus 2: 75 rpm, with sinkers if necessary

Time: 20 min

Determine the percentage of zaleplon dissolved using one of the following procedures.

Spectrophotometric procedure

Standard stock solution: 0.044 mg/mL of USP Zaleplon RS prepared as follows. Transfer a suitable quantity of USP Zaleplon RS to an appropriate volumetric flask. Add 10.0% of the total flask volume of methanol to dissolve. Dilute with *Medium* to volume. [NOTE—This solution is stable for 7 days.]

Standard solution: (L/1000) mg/mL of USP Zaleplon RS from *Standard stock solution* in *Medium*, where L is the label claim in mg/Capsule. [NOTE—This solution is stable for 7 days.]

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Instrumental conditions

(See *Ultraviolet-Visible Spectroscopy* ⟨857⟩.)

Mode: UV

Analytical wavelength: About 333 nm

Blank: *Medium*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zaleplon ($C_{17}H_{15}N_5O$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL

Chromatographic procedure

Buffer: 0.77 g/L of ammonium acetate in water

Mobile phase: Methanol and *Buffer* (33:67)

Standard stock solution: 0.22 mg/mL of USP Zaleplon RS prepared as follows. Dissolve first in methanol using 5% of total flask volume and dilute with *Medium* to volume.

Standard solution: (L/900) mg/mL of USP Zaleplon RS from *Standard stock solution* in *Medium*, where L is the label claim in mg/Capsule

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 230 nm

Column: 4.6-mm × 5-cm; 3-µm packing L1

Column temperature: 35°

Flow rate: 2.0 mL/min

Injection volume: 50 µL

Run time: 2 times the retention time of zaleplon

System suitability

Sample: *Standard solution*

Suitability requirements

Column efficiency: NLT 2000 theoretical plates

Tailing factor: NMT 1.5

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zaleplon ($C_{17}H_{15}N_5O$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zaleplon RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL

Tolerances: NLT 85% (Q) of the labeled amount of zaleplon ($C_{17}H_{15}N_5O$) is dissolved.

Test 2: If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 2*.

Medium: Water; 900 mL

Apparatus 2: 75 rpm, with sinkers

Time: 20 min

Buffer: 1.36 g/L of monobasic potassium phosphate in water. Adjust with phosphoric acid to a pH of 3.0.

Mobile phase: Acetonitrile and *Buffer* (30:70)

Standard stock solution: 1.1 mg/mL of USP Zaleplon RS in *Mobile phase*

Standard solution: (L/900) mg/mL of USP Zaleplon RS from *Standard stock solution* in *Medium*, where L is the label claim in mg/Capsule

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 225 nm

Column: 4.6-mm × 15-cm; 5-µm packing L1

Flow rate: 1.5 mL/min

Injection volume: 20 µL

Run time: 2 times the retention time of zaleplon

System suitability

Sample: *Standard solution*

Suitability requirements

Column efficiency: NLT 2000 theoretical plates

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zaleplon ($C_{17}H_{15}N_5O$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zaleplon RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL

Tolerances: NLT 80% (Q) of the labeled amount of zaleplon ($C_{17}H_{15}N_5O$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

USP Monographs

www.webofpharma.com

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase, Diluent, Sample solution, and **Chromatographic system:** Proceed as directed in the *Assay*.

Standard stock solution: 0.5 mg/mL of USP Zaleplon RS in *Diluent*

System suitability solution: 0.5 µg/mL of USP Zaleplon Related Compound B RS and 0.5 mg/mL of USP Zaleplon RS in *Diluent*

Sensitivity solution: 0.05 µg/mL of USP Zaleplon RS in *Diluent*, from the *Standard stock solution*

Standard solution: 0.1 mg/mL of USP Zaleplon RS in *Diluent*, from the *Standard stock solution*

System suitability

Samples: *System suitability solution* and *Sensitivity solution*

Suitability requirements

Resolution: NLT 1.5 between zaleplon and zaleplon related compound B, *System suitability solution*

Tailing factor: NMT 1.5 for the zaleplon peak, *System suitability solution*

Relative standard deviation: NMT 2.0% for the zaleplon peak, *System suitability solution*

Signal-to-noise ratio: NLT 10, *Sensitivity solution*

Analysis

Samples: *Sample solution* and *Standard solution*

Calculate the percentage of any individual degradation product in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of any individual degradation product from the *Sample solution*

r_S = peak response of USP Zaleplon RS from the *Standard solution*

C_S = concentration of USP Zaleplon RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zaleplon in the *Sample solution* (mg/mL)

Acceptance criteria: See *Table 2*.

Table 2

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Cyanopyrazolamine[a, b]	0.16	—
Zaleplon related compound A[b, c]	0.76	—
Zaleplon	1.0	—
Zaleplon related compound B[b]	1.05	—
Any individual unspecified degradation product	—	0.2
Total degradation products	—	1.0

[a] 3-Aminopyrazole-4-carbonitrile.

[b] This is a process impurity that is included in the table for identification purposes only. It is controlled in the drug substance and is not to be reported or included in the total degradation products for the drug product.

[c] (*E*)-*N*-{3-[3-(Dimethylamino)acryloyl]phenyl}-*N*-ethylacetamide.

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in light-resistant containers. Store at controlled room temperature.

• **LABELING:** When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only if *Test 1* is not used.

• **USP REFERENCE STANDARDS** ⟨11⟩

• **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Mobile phase: Acetonitrile and 7.5 mM sulfuric acid (60:40). Adjust with ammonia TS to a pH of 6.2.

Resolution solution: Prepare 2.5 µg/mL of *talo*-zanamivir and 0.05 mg/mL of zanamivir from USP Zanamivir Resolution Mixture RS in *Mobile phase*.

Standard solution: 0.045 mg/mL of USP Zanamivir RS in *Mobile phase*

Sample solution: 0.045 mg/mL of Zanamivir in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 234 nm

Column: 4.6-mm × 25-cm; 5-µm packing L82

Column temperature: 30°

Flow rate: 1.5 mL/min

Injection volume: 20 µL

System suitability

Samples: *Resolution solution* and *Standard solution*

Suitability requirements

Resolution: NLT 1.5 between *talo*-zanamivir and zanamivir, *Resolution solution*

Relative standard deviation: NMT 1.5%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of zanamivir ($C_{12}H_{20}N_4O_7$) in the portion of Zanamivir taken:

www.webofpharma.com

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zanamivir RS in the *Standard solution* (mg/mL)
C_U = concentration of Zanamivir in the *Sample solution* (mg/mL)

Acceptance criteria: 98.0%–102.0% on the anhydrous and solvent-free basis

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase: Proceed as directed in the *Assay*.

System suitability solution: Prepare 0.45 mg/mL of zanamivir and 9 µg/mL each of imidazole, imidazole carboximidamide, zanamivir urea analog, 4-amino zanamivir, 4-biguanide zanamivir, and *talo*-zanamivir from USP Zanamivir Related Compounds Mixture RS in *Mobile phase*.

Sample solution: 0.45 mg/mL of Zanamivir prepared as follows. Dissolve the sample using 40% of the final volume with water, and dilute with acetonitrile to volume.

Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 210 nm and 234 nm
Column: 4.6-mm × 25-cm; 5-µm packing L82
Column temperature: 30°
Flow rate: 1.5 mL/min
Injection volume: 20 µL

System suitability
Sample: *System suitability solution*
Suitability requirements
Resolution: NLT 1.5 between the peaks of *talo*-zanamivir and zanamivir at 234 nm

Analysis
Sample: *Sample solution*
Calculate the percentage of imidazole in the portion of Zanamivir taken:

$$\text{Result} = [(r_i/F)/(r_i/F + r_z)] \times 100$$

r_i = peak response of imidazole at 210 nm
F = relative response factor for imidazole (see *Table 1*)
r_z = peak response of zanamivir at 210 nm

Calculate the percentage of imidazole carboximidamide and 4-biguanide zanamivir in the portion of Zanamivir taken:

$$\text{Result} = [(r_i/F)/(r_i/F + r_z)] \times 100$$

r_i = peak response of imidazole carboximidamide or 4-biguanide zanamivir at 234 nm
F = relative response factor for imidazole carboximidamide or 4-biguanide zanamivir (see *Table 1*)
r_z = sum of the responses of all the peaks including the zanamivir peak at 234 nm

Calculate the percentage of *O*-triazinyl zanamivir, zanamivir urea analog, 4-amino zanamivir, *talo*-zanamivir, zanamivir dimer, and any other unspecified impurity in the portion of Zanamivir taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response of *O*-triazinyl zanamivir, zanamivir urea analog, 4-amino zanamivir, *talo*-zanamivir, zanamivir dimer, or any other unspecified impurity at 234 nm
r_T = sum of the responses of all the peaks including the zanamivir peak at 234 nm

Acceptance criteria: See *Table 1*.

Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Imidazole[a]	0.26	2.5	—
Imidazole carboximidamide[b]	0.30	3.3	0.01
O-Triazinyl zanamivir[c]	0.60	—	0.3
Zanamivir urea analog[d]	0.70	—	0.2
4-Amino zanamivir[e]	0.77	—	0.2
4-Biguanide zanamivir[f]	0.83	1.6	0.2
Zanamivir	1.00	—	—

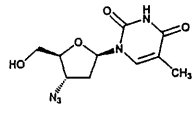
SPECIFIC TESTS

• **OPTICAL ROTATION,** *Specific Rotation* ⟨781S⟩
Sample solution: 10 mg/mL in water
Acceptance criteria: +36.0° to +38.0°, measured at 20°, determined on the anhydrous and solvent-free basis

• **WATER DETERMINATION,** *Method Ic* ⟨921⟩**:** 4.0%–9.0%

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Store in a well-closed container at controlled room temperature.



• **USP REFERENCE STANDARDS** ⟨11⟩
USP Zanamivir RS
USP Zanamivir Related Compounds Mixture RS
This Reference Standard is a mixture of zanamivir, imidazole, imidazole carboximidamide, zanamivir urea analog, 4-amino zanamivir, 4-biguanide zanamivir, *talo*-zanamivir, and zanamivir dimer. The chemical names are given below:
Imidazole: 1*H*-Imidazole.
Imidazole carboximidamide: 1*H*-Imidazole-1-carboximidamide.

www.webofpharma.com

Zanamivir urea analog: 5-Acetamido-9-*O*-[4-amino-6-(1*H*-pyrazol-1-yl)-1,3,5-triazin-2-yl]-2,6-anhydro-3,4,5-trideoxy-4-ureido-D-*glycero*-D-*galacto*-non-2-enonic acid.
4-Amino zanamivir: 5-Acetamido-9-*O*-[4-amino-6-(1*H*-pyrazol-1-yl)-1,3,5-triazin-2-yl]-2,6-anhydro-3,4,5-trideoxy-4-amino-D-*glycero*-D-*galacto*-non-2-enonic acid.
4-Biguanide zanamivir: 5-Acetamido-9-*O*-[4-amino-6-(1*H*-pyrazol-1-yl)-1,3,5-triazin-2-yl]-2,6-anhydro-3,4,5-trideoxy-4-(1-biguanidyl)-D-*glycero*-D-*galacto*-non-2-enonic acid.
talo-Zanamivir: 5-Acetamido-2,6-anhydro-3,4,5-trideoxy-4-guanidino-D-*glycero*-D-*talo*-non-2-enonic acid.
Zanamivir dimer: 4,4′-(2-Amino-4-oxo-1,3,5-triazapent-2-ene-1,5-diyl) bis(5-acetamido-2,6-anhydro-3,4,5-trideoxy-D-*glycero*-D-*galacto*-non-2-enonic acid.)

USP Zanamivir Resolution Mixture RS
This Reference Standard is a mixture of zanamivir and *talo*-zanamivir.

Zidovudine

$C_{10}H_{13}N_5O_4$ 267.24
Thymidine, 3′-azido-3′-deoxy-;
3′-Azido-3′-deoxythymidine [30516-87-1].

DEFINITION
Zidovudine contains NLT 97.0% and NMT 102.0% of zidovudine ($C_{10}H_{13}N_5O_4$), calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**

Mobile phase: Methanol and water (20:80)
Standard stock solution: 1.0 mg/mL of USP Zidovudine RS in methanol
Zidovudine related compound B standard stock solution: 0.1 mg/mL of USP Zidovudine Related Compound B RS in methanol
Zidovudine related compound C standard stock solution: 0.2 mg/mL of USP Zidovudine Related Compound C RS in methanol prepared as follows. Transfer 20 mg of USP Zidovudine Related Compound C RS to a 100-mL volumetric flask, add 75 mL of methanol, sonicate for 15 min, and dilute with methanol to volume.
Standard solution: 0.1 mg/mL USP Zidovudine RS, 1 µg/mL of USP Zidovudine Related Compound B RS, and 2 µg/mL of USP Zidovudine Related Compound C RS in methanol from an appropriate volume of *Standard stock solution*, *Zidovudine related compound B standard stock solution*, and *Zidovudine related compound C standard stock solution*, respectively.
Sample solution: 0.1 mg/mL of Zidovudine in methanol
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 265 nm
Columns
Guard: With recommended dimensions of 3.2-mm × 1.5-cm; packing L1
Analytical: 4.0-mm × 25-cm; packing L1
Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
[NOTE—The relative retention times for zidovudine related compound C, zidovudine, and zidovudine related compound B are 0.25, 1.0, and 1.17, respectively.]
Suitability requirements
Resolution: NLT 1.4 between the zidovudine and zidovudine related compound B peaks
Tailing factor: NMT 1.5 for the zidovudine peak
Relative standard deviation: NMT 2.0% for the zidovudine peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of zidovudine ($C_{10}H_{13}N_5O_4$) in the portion of Zidovudine taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zidovudine from the *Sample solution*
r_S = peak response of zidovudine from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
C_U = concentration of the *Sample solution* (mg/mL)

Acceptance criteria: 97.0%–102.0% on the anhydrous basis

IMPURITIES
- **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.25%
- **LIMIT OF TRIPHENYLMETHANOL AND OTHER IMPURITIES**

Standard solution: 0.1 mg/mL each of USP Zidovudine RS and triphenylmethanol in methanol
Sample solution: 20 mg/mL of Zidovudine in methanol
Chromatographic system
(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel mixture containing a fluorescent indicator having an optimal intensity at 254 nm
Application volume: 10 µL
Developing solvent system: Chloroform and methanol (9:1)
Spray reagent: 5 mg/mL of carbazole in alcohol and sulfuric acid (95:5)
Analysis: Develop the chromatogram until the solvent front has moved three-fourths of the length of the plate. Remove the plate from the chamber, mark the solvent front, and allow the solvent to evaporate. Examine the plate under short-wavelength UV light, and compare the intensities of any secondary spots observed in the chromatogram of the *Sample solution* with those of the principal spot in the chromatogram of the *Standard solution*.
Acceptance criteria 1: No secondary spot from the chromatogram of the *Sample solution* is larger or more intense than the principal spot from the *Standard solution*, and the sum of the intensities of the secondary spots obtained from the *Sample solution* corresponds to NMT 3.0%.

www.webofpharma.com

Spray the plate with *Spray reagent*, heat for 10 min at 120°, and compare the intensities of any secondary spots observed in the chromatogram of the *Sample solution* with those of the principal spots in the chromatogram of the *Standard solution*.

Acceptance criteria 2: No spot corresponding to triphenylmethanol (R_F about 2.3 relative to the R_F of zidovudine) is more intense than the corresponding spot from the *Standard solution*. No secondary spot from the chromatogram of the *Sample solution* is larger or more intense than the principal spot obtained from the *Standard solution*. The sum of the intensities of the secondary spots from the *Sample solution* corresponds to NMT 3.0%.

• **LIMIT OF ZIDOVUDINE RELATED COMPOUNDS B AND C**

Mobile phase, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Sample: *Sample solution*

Calculate the percentage of zidovudine related compound B and zidovudine related compound C in the portion of Zidovudine taken:

$$\text{Result} = (r_U/r_T) \times 100$$

r_U = peak response for zidovudine related compound B or zidovudine related compound C

r_T = sum of the responses of all of the peaks

Acceptance criteria

Individual impurities: NMT 1.0% for zidovudine related compound B and NMT 2.0% for zidovudine related compound C

Total impurities: NMT 3.0% for all impurities from the tests for *Limit of Triphenylmethanol and Other Impurities* and *Limit of Zidovudine Related Compounds B and C*.

SPECIFIC TESTS

• **WATER DETERMINATION,** *Method I* ⟨921⟩**:** NMT 1.0%

• **OPTICAL ROTATION,** *Specific Rotation* ⟨781S⟩

Sample solution: 10 mg/mL, in alcohol

Acceptance criteria: +60.5° to +63°

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers. Store at 25°, excursions permitted between 15° and 30°.

• **USP REFERENCE STANDARDS** ⟨11⟩

Flow rate: 1 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
[Note—The relative retention times for zidovudine related compound C and zidovudine are about 0.2 and 1.0, respectively.]
Suitability requirements
Resolution: NLT 5.0 between zidovudine and zidovudine related compound C
Tailing factor: NMT 1.5 for the zidovudine peak
Relative standard deviation: NMT 2.0% for the zidovudine peak
Analysis
Samples: *Standard solution* and *Sample solution*

USP Monographs

www.webofpharma.com

Calculate the percentage of the labeled amount of zidovudine ($C_{10}H_{13}N_5O_4$) in the portion of Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zidovudine from the *Sample solution*
r_S = peak response of zidovudine from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

IMPURITIES

• **ORGANIC IMPURITIES**

Mobile phase, Standard stock solution, Zidovudine related compound C standard stock solution, Sample solution, Chromatographic system, and System suitability: Proceed as directed in the *Assay*.

Standard solution: 0.1 mg/mL of USP Zidovudine RS and 2 µg/mL of USP Zidovudine Related Compound C RS prepared as follows. Transfer a suitable volume of *Standard stock solution* and *Zidovudine related compound C standard stock solution* to a suitable volumetric flask. Add 25% of the flask volume of water, and dilute with methanol to volume.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of zidovudine related compound C in the portion of Injection taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zidovudine related compound C from the *Sample solution*
r_S = peak response of zidovudine related compound C from the *Standard solution*
C_S = concentration of USP Zidovudine Related Compound C RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 1.0%

SPECIFIC TESTS

• **STERILITY TESTS** ⟨71⟩**:** Meets the requirement when tested as directed in *Test for Sterility of the Product to Be Examined, Membrane Filtration*

• **pH** ⟨791⟩

Sample solution: A mixture containing a volume of Injection equivalent to 150 mg of zidovudine and 5 mL of 0.12 M potassium chloride

Acceptance criteria: 3.5–7.0

• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩**:** NMT 1.0 USP Endotoxin Unit/mg of zidovudine

• **OTHER REQUIREMENTS:** Meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers.

• **USP REFERENCE STANDARDS** ⟨11⟩

USP Zidovudine RS
USP Zidovudine Related Compound C RS

Zidovudine Oral Solution

DEFINITION

Zidovudine Oral Solution contains NLT 90.0% and NMT 110.0% of the labeled amount of zidovudine ($C_{10}H_{13}N_5O_4$).

IDENTIFICATION

• The retention time of the zidovudine peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

• **PROCEDURE**

Mobile phase: Methanol, acetonitrile, glacial acetic acid, and 0.040 M sodium acetate (90:10:2:900)

Standard stock solution: 1 mg/mL of USP Zidovudine RS in *Mobile phase*

Zidovudine related compound C stock solution: 0.1 mg/mL of USP Zidovudine Related Compound C RS in *Mobile phase*. [NOTE—Sonicate for 10 min before making final volume.]

Standard solution: Transfer 10.0 mL of the *Standard stock solution* and 2.0 mL of the *Zidovudine related compound C stock solution* to a 100-mL volumetric flask. Dilute with *Mobile phase* to volume.

Sample solution: Equivalent to 0.1 mg/mL of zidovudine in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC
Detector: UV 240 nm
Column: 4.0-mm × 12.5-cm; packing L1
Flow rate: 1 mL/min
Injection size: 10 µL

System suitability

Sample: *Standard solution*

[NOTE—The relative retention times for zidovudine related compound C and zidovudine are about 0.12 and 1.0, respectively.]

Suitability requirements

Resolution: NLT 4.0 between zidovudine and zidovudine related compound C
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of $C_{10}H_{13}N_5O_4$ in the portion of Oral Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

IMPURITIES

ORGANIC IMPURITIES

[NOTE—On the basis of the synthetic route, perform either *Procedure 1* or *Procedure 2*.]

• **Procedure 1**

Mobile phase: Methanol, acetonitrile, glacial acetic acid, and 0.040 M sodium acetate (90:10:2:900)

Standard stock solution: 1 mg/mL of USP Zidovudine RS in *Mobile phase*

Zidovudine related compound C stock solution: 0.1 mg/mL of USP Zidovudine Related Compound C RS in

www.webofpharma.com

Mobile phase. [NOTE—Sonicate for 10 min before making final volume.]

Standard solution: Transfer 10.0 mL of the *Standard stock solution* and 2.0 mL of the *Zidovudine related compound C stock solution* to a 100-mL volumetric flask. Dilute with *Mobile phase* to volume, and mix.

Sample solution: Equivalent to 0.1 mg/mL of zidovudine in *Mobile phase*

Chromatographic system and **System suitability:** Proceed as directed in the *Assay.*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of zidovudine related compound C (thymine) in the portion of Oral Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Zidovudine Related Compound C RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 3.0%

• Procedure 2

Buffer: 5.44 mg/mL of sodium acetate trihydrate in water. Pass the solution through a suitable filter of 0.45-µm pore size.

Mobile phase: Methanol, acetonitrile, glacial acetic acid, and *Buffer* (50:10:2:940)

Standard stock solution: 0.25 mg/mL of USP Zidovudine RS in *Mobile phase.* [NOTE—Sonicate to dissolve if necessary.]

Standard solution: 0.002 mg/mL of USP Zidovudine RS in *Mobile phase* from the *Standard stock solution*

Impurity stock solution: 0.625 mg/mL of USP Zidovudine Related Compound C RS, 0.375 mg/mL of thymidine, 0.375 mg/mL of USP Stavudine RS, and 0.25 mg/mL of USP Zidovudine Related Compound B RS dissolved initially at 25% of final volume with methanol. Dilute with *Mobile phase* to final volume. [NOTE—Sonicate with intermittent shaking to dissolve, if necessary, and cool to room temperature before diluting to final volume.]

Impurity solution: 0.05 mg/mL of USP Zidovudine Related Compound C RS, 0.03 mg/mL of thymidine, 0.03 mg/mL of USP Stavudine RS, and 0.02 mg/mL of USP Zidovudine Related Compound B RS in *Mobile phase* from the *Impurity stock solution*

System suitability solution: 1 mg/mL of USP Zidovudine RS, 0.005 mg/mL of USP Zidovudine Related Compound C RS, 0.003 mg/mL of thymidine, 0.003 mg/mL of USP Stavudine RS, 0.002 mg/mL of USP Zidovudine Related Compound B RS in *Mobile phase* from USP Zidovudine RS and the *Impurity solution*

Sample solution: Equivalent to 1 mg/mL of zidovudine in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability.*)

Mode: LC

Detector: UV 240 nm

Column: 4.6-mm × 10-cm; 3-µm packing L1

Column temperature: 25°

Flow rate: 1.5 mL/min

Injection size: 20 µL

System suitability

Samples: *Standard solution* and *System suitability solution*

[NOTE—The relative retention times are listed in *Impurity Table 1.*]

Suitability requirements

Resolution: NLT 1.4 between zidovudine and zidovudine related compound B, *System suitability solution*

Tailing factor: NMT 2.0, *Standard solution*

Relative standard deviation: NMT 5.0%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of each impurity in the portion of Oral Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 1/F \times 100$$

r_U = peak response of each impurity in the *Sample solution*

r_S = peak response of zidovudine in the *Standard solution*

C_S = concentration of USP Zidovudine RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

F = relative response factor for each impurity (see *Impurity Table 1*)

Acceptance criteria

Individual impurities: See *Impurity Table 1.*

Total impurities: NMT 2.0%. [NOTE—All impurities listed in *Impurity Table 1* excluding zidovudine related compound C]

Impurity Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Zidovudine related compound C[a]	0.08	1.9	3.0
Zidovudine (thymidine)[b]	0.14	1.0	0.30
Stavudine[c]	0.27	1.0	0.30
Zidovudine	1.00	—	—
Zidovudine related compound B[d]	1.22	1.0	0.20
Individual unspecified impurity	—	1.0	0.20

[a] 5-Methylpyrimidine-2,4(1*H*,3*H*)-dione.
[b] [1-(2-Deoxy-β-D-ribofuranosyl)]thymine.
[c] Thymidine, 2′,3′-didehydro-3′-deoxy-.
[d] 3′-Chloro-3′-deoxythymidine.

SPECIFIC TESTS

• MICROBIAL ENUMERATION TESTS ⟨61⟩ and **TESTS FOR SPECIFIED MICROORGANISMS** ⟨62⟩**:** Meets the requirements of the tests for absence of *Salmonella* species, *Escherichia coli*, *Staphylococcus aureus*, and *Pseudomonas aeruginosa*

• pH ⟨791⟩**:** 3.0–4.0, in a mixture containing a volume of Oral Solution equivalent to 150 mg of zidovudine and 5 mL of 0.12 M potassium chloride (3:1)

PERFORMANCE TESTS

• DELIVERABLE VOLUME ⟨698⟩**:** Meets the requirements for oral solution packaged in multiple-unit containers

• UNIFORMITY OF DOSAGE UNITS ⟨905⟩**:** Meets the requirements for oral solution packaged in single-unit containers

Zidovudine Tablets

DEFINITION

Zidovudine Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of zidovudine ($C_{10}H_{13}N_5O_4$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
  Sample: Grind 1 Tablet in a mortar so that no large pieces remain, and remove the coating film so that about 5 mg of ground Tablet remain.
  Acceptance criteria: Meet the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**
  Mobile phase: Dissolve 3.0 g of sodium acetate and 1.3 g of sodium 1-octane sulfonate in 900 mL of water. Add 90 mL of methanol and 40 mL of acetonitrile. Adjust with glacial acetic acid to a pH of 5.3.
  Zidovudine related compound B standard stock solution: 0.1 mg/mL of USP Zidovudine Related Compound B RS in methanol
  Zidovudine related compound C standard stock solution: 0.2 mg/mL of USP Zidovudine Related Compound C RS in methanol prepared as follows. Dissolve by sonicating for 15 min before bringing the solution to volume.
  Standard solution: 0.12 mg/mL of USP Zidovudine RS, 1 µg/mL of USP Zidovudine Related Compound B RS, and 4 µg/mL of USP Zidovudine Related Compound C RS prepared as follows. Transfer 30 mg of USP Zidovudine RS to a 250-mL volumetric flask, and dissolve in 3.0 mL of methanol. Add 2.5 mL of *Zidovudine related compound B standard stock solution* and 5.0 mL of *Zidovudine related compound C standard stock solution*, and dilute with water to volume.
  Sample stock solution: Nominally 3 mg/mL of zidovudine prepared as follows. Transfer a number of Tablets, equivalent to 1500 mg of zidovudine, to a 500-mL volumetric flask. Add 50 mL of water, and shake by mechanical means for 30 min to disperse the Tablets. Add 150 mL of methanol, and sonicate for 10 min. Dilute with water to volume.
  Sample solution: Nominally 0.12 mg/mL of zidovudine in water from *Sample stock solution*. Pass the solution through a nylon filter, discarding the first 2 mL of the filtrate.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 265 nm
  Column: 4.6-mm × 15-cm; packing L1
  Flow rate: 1.3 mL/min
  Injection volume: 20 µL
  System suitability
  Sample: *Standard solution*
  [NOTE—The relative retention times for zidovudine related compound C, zidovudine, and zidovudine related compound B are about 0.17, 1.0, and 1.2, respectively.]
  Suitability requirements
  Resolution: NLT 2.5 between the zidovudine and zidovudine related compound B peaks
  Tailing factor: NMT 2.0 for the zidovudine peak
  Relative standard deviation: NMT 2.0% for the zidovudine peak
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of zidovudine ($C_{10}H_{13}N_5O_4$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zidovudine RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩
  Medium: Water; 900 mL
  Apparatus 2: 50 rpm
  Time: 30 min
  Standard solution: Prepare a solution having a known concentration of USP Zidovudine RS in *Medium*
  Sample solution: A filtered portion of the solution under test suitably diluted with *Medium*
  Analysis:
  Samples: *Standard solution* and *Sample solution*
  Determine the percentage of zidovudine ($C_{10}H_{13}N_5O_4$) dissolved by using the procedure set forth in the *Assay*.
  Tolerances: NLT 80% (*Q*) of the labeled amount of $C_{10}H_{13}N_5O_4$ is dissolved.
- **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩
  Procedure for content uniformity
  Mobile phase: Methanol and water (1:4)
  Standard solution: Proceed as directed in the *Assay*.
  Sample solution: Transfer 1 Tablet to a 100-mL volumetric flask, add 20 mL of water, and shake by mechanical means to disperse the Tablet. Add 30 mL of methanol, and sonicate for 10 min. Dilute with water to volume. Pipet 4.0 mL of the resulting solution into a 100-mL volumetric flask, and dilute with water to volume. Pass a portion of the solution through a suitable nylon filter, discarding the first 2 mL of the filtrate.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 265 nm
  Column: 4.6-mm × 15-cm; base-deactivated packing L1

Supplement 3

www.webofpharma.com

Flow rate: 2 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0 for the zidovudine peak
Relative standard deviation: NMT 2.0% for the zidovudine peak
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of zidovudine ($C_{10}H_{13}N_5O_4$), based on the label claim, in the portion of Tablet taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zidovudine from the *Sample solution*
r_S = peak response of zidovudine from the *Standard solution*
C_S = concentration of USP Zidovudine RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zidovudine in the *Sample solution* (mg/mL)

Acceptance criteria: Meet the requirements

IMPURITIES
• **ORGANIC IMPURITIES**
Mobile phase, Standard solution, Sample solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each impurity from the *Sample solution*
r_S = peak response of zidovudine from the *Standard solution*
C_S = concentration of USP Zidovudine RS in the Standard solution (mg/mL)
C_U = nominal concentration of Zidovudine in the Sample solution (mg/mL)
F = relative response factor (see *Table 1*)

Acceptance criteria: See *Table 1*.

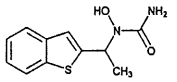

Table 1

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Zidovudine related compound C	0.17	1.7	1.5
Zidovudine	1.00	—	—
Zidovudine related compound B[a]	1.2	—	—
Any other individual unidentified impurity	—	1.0	0.2
Total impurities	—	—	2.0

[a] Process impurity. Included for identification purpose only. Not to be included in the *Total Impurities*.

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).
B: The retention time of the major peak in the chromatogram of the *Assay preparation* corresponds to that in the chromatogram of the *Standard preparation,* as obtained in the *Assay*.
Specific rotation ⟨781S⟩**:** between –0.5° and +0.5°.
Test solution: 10 mg per mL, in methanol.
Water Determination, *Method I* ⟨921⟩**:** not more than 1.5%.
Residue on ignition ⟨281⟩**:** not more than 0.2%.
Specific surface area, *Method I* ⟨846⟩—Outgas a portion of the test sample, about 100 mg, at 90° for 1 hour at ambient pressure using 0.001 mole fraction of krypton in helium as the adsorbate gas: between 0.9 and 3.1. m^2 per g.
Arsenic, *Method II* ⟨211⟩**:** 2 µg per g.

Limit of boron—
Sulfuric acid solution—Carefully add 50 mL of sulfuric acid to 450 mL of water, and mix.
Standard solution—Prepare a solution in *Sulfuric acid solution* having a concentration of about 2.0 µg of boron per

USP Monographs

www.webofpharma.com

mL. Use of a commercially prepared boron ICP standard solution is recommended.

Test solution—Accurately weigh approximately 1.0 g of Zileuton into a 125-mL conical flask. Add 1 to 1.5 mL of sulfuric acid, and digest in a fume hood on a hot plate until charring begins. Add 2 mL of nitric acid to the cooled sample to aid digestion, and heat until brown fumes are not evolved. Cautiously add 30 percent hydrogen peroxide, dropwise, allowing the reaction to subside, and heating between drops. Add the first few drops very slowly with sufficient mixing in order to prevent a rapid reaction. Discontinue heating if foaming becomes excessive. When the reaction has abated, heat cautiously, rotating the flask occasionally to prevent the sample from caking on glass exposed to the heating unit. Maintain oxidizing conditions at all times during the digestion by adding small quantities of the 30 percent hydrogen peroxide, whenever the mixture turns brown or darkens. Approximately 1 to 2 mL of nitric acid can be added, if necessary, which will create a refluxing effect to wash down any particles adhering to the neck of the flask. Continue the digestion until the organic matter is destroyed, gradually raising the temperature of the hot plate until fumes of sulfur trioxide are copiously evolved and the solution becomes colorless or retains only a light straw color. Transfer the solution to a 25-mL volumetric flask using about 7 mL of water. Repeat the washing twice more, and combine the washings in the volumetric flask. Dilute with water to volume, and mix.

Procedure—The inductively coupled plasma-atomic emission spectrometer is set up with wavelength of 249.7 nm, RF power of 1.25 KW, argon torch flow of about 13 L per minute, argon nebulizer flow of about 1 L per minute, and argon auxillary flow of about 0.5 L per minute. Analyze the *Standard solution* and the *Test solution,* using *Sulfuric acid solution* as the blank. Calculate the quantity, in µg of boron per g, in the portion of Zileuton taken by the formula:

$$25C/W,$$

where C is the concentration, in µg per mL, of boron in the *Test solution* determined from the instrument; and W is the weight, in g, of the Zileuton: not more than 10 µg per g is found.

Limit of pyridine—

Standard solution—Dissolve an accurately weighed quantity of pyridine, approximately 250 mg, in dimethyl sulfoxide, and dilute with dimethyl sulfoxide to 50 mL. Transfer 5 µL to a 100-mL sealed headspace vial.

Test solution—Transfer about 100 mg of Zileuton, accurately weighed, to a vial, add 5.0 mL of dimethyl sulfoxide and 1 g of anhydrous sodium sulfate, and seal with a septum and crimp cap. Heat the sealed vial at 80° for 60 minutes.

Chromatographic system (see *Chromatography* ⟨621⟩)—[NOTE—The use of a headspace apparatus is allowed.] The gas chromatograph is equipped with a flame-ionization detector, a 0.53-mm × 30-m fused silica analytical column coated with a 3.0-µm G43 stationary phase. The carrier gas is helium with a linear velocity of about 35 cm per second. The injection port and detector temperatures are maintained at 140° and 260°, respectively. The column temperature is programmed according to the following steps. It is maintained at 40° for 20 minutes, then increased rapidly to 240°, and maintained at 240° for 20 minutes. Inject the *Standard solution,* and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 15%.

Procedure—Using a heated gas-tight syringe separately inject equal volumes (about 1 mL) of the headspace of the *Standard solution* and the *Test solution* into the gas chromatograph, and record the peak responses. Calculate the quantity, in ppm, of pyridine in the portion of Zileuton taken by the formula:

$$100(r_U/r_S)(W_S/W_U)$$

in which r_U and r_S are the peak responses for pyridine in the *Test solution* and the *Standard solution,* respectively; W_S is the weight, in mg, of pyridine used to prepare the *Standard solution;* and W_U is the weight, in mg, of Zileuton: not more than 100 ppm is found.

Chromatographic purity— [NOTE—For *Test 1* and *Test 2,* the *System suitability solution,* the *Standard solution,* and the *Test solution* are to be refrigerated at or below 5° immediately after preparation and during analysis using a refrigerated autosampler. The solutions are stable at or below 5° for about 36 hours.]

TEST 1—

Buffer solution—Prepare as directed in the *Assay.*

Mobile phase—Prepare a filtered and degassed mixture of *Buffer solution* and acetonitrile (82:18). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).

System suitability solution—Dissolve accurately weighed quantities of USP Zileuton RS and USP Zileuton Related Compound A RS in acetonitrile, and dilute quantitatively, and stepwise if necessary, to obtain a solution having a known concentration of about 5 µg of each USP Reference Standard per mL.

Standard solution—Dissolve an accurately weighed quantity of USP Zileuton RS in acetonitrile to obtain a solution having a known concentration of about 10 µg per mL.

Test solution—Transfer about 125 mg of Zileuton, accurately weighed, to a 50-mL volumetric flask, dissolve in and dilute with acetonitrile to volume, and mix.

Chromatographic system—Prepare as directed in the *Assay,* except to use a flow rate of 2.2 mL per minute. Chromatograph the *System suitability solution,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between zileuton and zileuton related compound A is not less than 1.5; and the relative standard deviation for replicate injections is not more than 5.0%.

Procedure—Separately inject equal volumes (about 20 µL) of the *Standard solution* and the *Test solution* into the chromatograph, and measure the areas for the major peaks. Calculate the percentage of each impurity in the portion of Zileuton taken by the formula:

$$100F(C_S/C_U)(r_i/r_S)$$

in which F is the relative response factor for each impurity, which is 1.0 for any peak with a relative retention time of 0.5, 0.7, 1.2, 1.6, 3.2, or 3.4, and is 1.2, 1.4, and 1.7 for peaks with relative retention times of 0.8, 2.1, and 2.8, respectively; C_S is the concentration, in mg per mL, of USP Zileuton RS in the *Standard solution;* C_U is the concentration, in mg per mL, of zileuton in the *Test solution;* r_i is the peak response for each impurity obtained from the *Test solution;* and r_S is the peak response for zileuton obtained from the *Standard solution:* not more than 0.1% of any individual impurity with a relative retention time of 0.8, 1.6, or 2.1 is found; not more than 0.10% of any individual impurity with a relative retention time of 0.7, 3.2, or 3.4 is found; not more than 0.20% of any individual impurity with a relative retention time of 0.5 or 1.2 is found; and not more than 0.07% of any individual impurity with a relative retention time of 2.8 is found.

TEST 2—

Perchloric acid solution—Dissolve 5.0 mL of perchloric acid in 1000 mL of water.

www.webofpharma.com

Mobile phase—Prepare a filtered and degassed mixture of *Perchloric acid solution* and acetonitrile (1:1). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Standard stock solution—Dissolve an accurately weighed quantity of USP Zileuton Related Compound B RS in acetonitrile to obtain a solution having a known concentration of about 0.25 mg per mL. Transfer 5.0 mL of this solution to a 50-mL volumetric flask, dilute with acetonitrile to volume, and mix.
System suitability solution—Dissolve an accurately weighed quantity of USP Zileuton Related Compound C RS in acetonitrile to obtain a solution having a known concentration of about 10 µg per mL. Transfer 5.0 mL of this solution and 5.0 mL of the *Standard stock solution* to a 50-mL volumetric flask, dilute with acetonitrile to volume, and mix.
Standard solution—Transfer 5.0 mL of the *Standard stock solution* to a 50-mL volumetric flask, dilute with acetonitrile to volume, and mix.
Test solution—Proceed as directed for *Test solution* under *Test 1*.
Chromatographic system—Prepare as directed in the *Assay*. Chromatograph the *System suitability solution*, and record the peak responses as directed for *Procedure:* the resolution, *R*, between zileuton related compound B and zileuton related compound C is not less than 20. Chromatograph the *Standard solution*, and record the peak responses as directed for *Procedure:* the relative standard deviation for replicate injections is not more than 5.0%.
Procedure—Separately inject equal volumes (about 50 µL) of the *Standard solution* and the *Test solution* into the chromatograph, record the chromatograms, and measure the areas for the major peaks. Calculate the percentage of each impurity in the portion of Zileuton taken by the formula:

$$100(C_S/C_U)(r_i/r_S)$$

in which C_S is the concentration, in mg per mL, of USP Zileuton Related Compound B RS in the *Standard solution;* C_U is the concentration, in mg per mL, of zileuton in the *Test solution;* r_i is the peak response for each impurity obtained from the *Test solution;* and r_S is the peak response for zileuton related compound B obtained from the *Standard solution:* not more than 0.1% of any individual impurity is found; and not more than 0.7% of total impurities is found, the results for *Test 1* and *Test 2* being added.

Assay—
[NOTE—The *Standard preparation* and the *Assay preparation* are to be refrigerated at or below 5° immediately after preparation and during analysis using a refrigerated autosampler. The solutions are stable at or below 5° for about 36 hours.]
Buffer solution—Dissolve 7.7 g of ammonium acetate and 0.25 g of acetohydroxamic acid in about 900 mL of water in a 1000-mL volumetric flask, adjust with perchloric acid to a pH of 2.0, dilute with water to volume, and mix.
Mobile phase—Prepare a filtered and degassed mixture of *Buffer solution* and acetonitrile (72:28). Make adjustments if necessary (see *System Suitability* under *Chromatography* ⟨621⟩).
Internal standard preparation—Transfer about 30 mg of methylparaben, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with acetonitrile to volume, and mix.
Standard stock preparation—Dissolve an accurately weighed quantity of USP Zileuton RS in acetonitrile to obtain a solution having a known concentration of about 1 mg per mL.
Standard preparation—Transfer 5.0 mL of the *Standard stock preparation* and 4.0 mL of the *Internal standard preparation* to a 50-mL volumetric flask, dilute with acetonitrile to volume, and mix.
Assay preparation—Transfer about 100 mg of Zileuton, accurately weighed, to a 100-mL volumetric flask, dissolve in and dilute with acetonitrile to volume, and mix. Transfer 5.0 mL of this solution and 4.0 mL of the *Internal standard preparation* to a 50-mL volumetric flask, dilute with acetonitrile to volume, and mix.
Chromatographic system (see *Chromatography* ⟨621⟩)—The liquid chromatograph is equipped with a 260-nm detector and a 4.6-mm × 30-cm column that contains 10-µm packing L1. The flow rate is about 1.5 mL per minute.
Chromatograph the *Standard preparation,* and record the peak responses as directed for *Procedure:* the resolution, *R,* between zileuton and methylparaben is not less than 5.0; the tailing factor is not more than 1.3; and the relative standard deviation for replicate injections is not more than 0.6%.
Procedure—Separately inject equal volumes (about 20 µL) of the *Assay preparation* and the *Standard preparation* into the chromatograph, record the chromatograms, and measure the peak areas. Calculate the quantity, in mg, of $C_{11}H_{12}N_2O_2S$ in the portion of Zileuton taken by the formula:

$$1000C(R_U/R_S)$$

in which *C* is the concentration, in mg per mL, of USP Zileuton RS in the *Standard preparation;* and R_U and R_S are the peak area ratios obtained from the *Assay preparation* and the *Standard preparation,* respectively.

Zinc Acetate

$C_4H_6O_4Zn \cdot 2H_2O$ 219.50
$C_4H_6O_4Zn$ 183.48
Acetic acid, zinc salt, dihydrate;
Zinc acetate dihydrate [5970-45-6].
Zinc acetate anhydrous [557-34-6].

DEFINITION
Zinc Acetate contains NLT 98.0% and NMT 102.0% of $C_4H_6O_4Zn \cdot 2H_2O$.

IDENTIFICATION
- **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩: A 50 mg/mL solution meets the requirements.
- **B. IDENTIFICATION TESTS—GENERAL,** *Acetate* ⟨191⟩: A 50 mg/mL solution meets the requirements.

ASSAY
- **PROCEDURE**

Sample solution: To 400 mg of Zinc Acetate in 100 mL of water add 5 mL of ammonia–ammonium chloride buffer TS and 0.1 mL of eriochrome black TS.
Analysis: Titrate the *Sample solution* with 0.05 M edetate disodium VS until the solution is deep blue in color. Each mL of 0.05 M edetate disodium is equivalent to 10.98 mg of zinc acetate dihydrate ($C_4H_6O_4Zn \cdot 2H_2O$).
Acceptance criteria: 98.0%–102.0%

USP Monographs

www.webofpharma.com

IMPURITIES

- **CHLORIDE AND SULFATE,** *Chloride* ⟨221⟩: A 1.5-g portion shows no more chloride than corresponds to 0.10 mL of 0.020 N hydrochloric acid (0.005%).
- **CHLORIDE AND SULFATE,** *Sulfate* ⟨221⟩: A 1.0-g portion shows no more sulfate than corresponds to 0.10 mL of 0.020 N sulfuric acid (0.010%).
- **ARSENIC,** *Method I* ⟨211⟩: NMT 3 ppm
- **LEAD** ⟨251⟩

Standard solution: To 20 mL of dilute nitric acid (1 in 100) add 0.01 mg of lead, 4 mL of *Ammonia–cyanide solution*, and 2 drops of *Hydroxylamine hydrochloride solution*, and shake for 30 s with 10.0 mL of *Standard dithizone solution*. Pass through acid-washed filter paper into a color-comparison tube.

Sample solution: Dissolve 0.5 g of zinc acetate in 1 mL of a mixture of nitric acid and water (1:1) in a separator. Add 3 mL of *Ammonium citrate solution* and 0.5 mL of *Hydroxylamine hydrochloride solution*, and render alkaline with ammonium hydroxide to phenol red TS. Add 10 mL of *Potassium cyanide solution*, and immediately extract the solution with successive 5-mL portions of *Dithizone extraction solution*, draining off each extract into another separator, until the last portion of dithizone solution retains its green color. Shake the combined extracts for 30 s with 20 mL of dilute nitric acid (1 in 100), and discard the chloroform layer. Add to the acid solution 4.0 mL of *Ammonia–cyanide solution* and 2 drops of *Hydroxylamine hydrochloride solution*. Add 10.0 mL of *Standard dithizone solution*, and shake the mixture for 30 s. Filter the chloroform layer through acid-washed filter paper into a color-comparison tube.

Analysis: Compare the color of the *Sample solution* with that of a *Standard solution*.

Acceptance criteria: The color of the *Sample solution* does not exceed the color of the *Standard solution* (0.002%).

- **ALKALIES AND ALKALINE EARTHS**

Sample solution: Dissolve 2.0 g in 150 mL of water in a 200-mL volumetric flask. Add sufficient ammonium sulfide TS to precipitate the zinc completely, and dilute with water to volume. Pass through a dry filter, rejecting the first portion of the filtrate.

Analysis: To 100 mL of the filtrate add 5 drops of sulfuric acid. Evaporate to dryness, and ignite.

Acceptance criteria: The weight of the residue does not exceed 2 mg (0.2%).

SPECIFIC TESTS

- **INSOLUBLE MATTER:** A 20-g portion, dissolved in 150 mL of water containing 1 mL of glacial acetic acid, shows NMT 1.0 mg of insoluble matter (0.005%).
- **pH** ⟨791⟩: 6.0–8.0, in a solution (1 in 20)

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers.

Zinc Acetate Oral Solution

DEFINITION

Zinc Acetate Oral Solution contains NLT 90.0% and NMT 110.0% of the labeled amount of zinc (Zn) as zinc acetate dihydrate ($C_4H_6O_4Zn \cdot 2H_2O$). It may contain one or more suitable flavors and sweeteners, which are recognized as safe, in amounts that are unobjectionable.

IDENTIFICATION

- **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩and *Acetate* ⟨191⟩: Meets the requirements

ASSAY

- **PROCEDURE**

Sample: An accurately measured volume of Oral Solution, equivalent to 40 mg of zinc

Blank: 100 mL of water, 5 mL of ammonia–ammonium chloride buffer TS, and 0.1 mL of eriochrome black TS

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.05 M edetate disodium VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* to a 250-mL flask. Add 100 mL of water, 5 mL of ammonia–ammonium chloride buffer TS, and 0.1 mL of eriochrome black TS. Titrate with *Titrant* to a green endpoint.

Calculate the percentage of the labeled amount of zinc (Zn) in the portion of Oral Solution taken:

$$\text{Result} = \{[(V_S - V_B) \times M \times F]/W\} \times 100$$

V_S = *Titrant* volume consumed by the *Sample* (mL)
V_B = *Titrant* volume consumed by the *Blank* (mL)
M = actual molarity of the *Titrant* (mmol/mL)
F = equivalency factor, 65.4 mg/mmol
W = nominal amount of zinc in the *Sample* (mg)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

- **pH** ⟨791⟩: 5.7–6.3
- **MICROBIAL ENUMERATION TESTS** ⟨61⟩ and **TESTS FOR SPECIFIED MICROORGANISMS** ⟨62⟩: The total aerobic microbial count does not exceed 10^2 cfu/mL. The total molds and yeasts count does not exceed 10^1 cfu/mL. It meets the requirement of the test for absence of *Escherichia coli*.

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store in a cool, dry place protected from light.
- **LABELING:** Label the Oral Solution in terms of zinc acetate dihydrate ($C_4H_6O_4Zn \cdot 2H_2O$) and in terms of elemental zinc.

Zinc Carbonate

$3Zn(OH)_2 \cdot 2ZnCO_3$ 548.96

Basic zinc carbonate;
Zinc subcarbonate [5263-02-5].

DEFINITION

Zinc Carbonate contains the equivalent of NLT 70.0% of zinc oxide (ZnO).

IDENTIFICATION

- **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩

Sample solution: Dissolve in a slight excess of hydrochloric acid.

Acceptance criteria: Meets the requirements

ASSAY

- **PROCEDURE**

Analysis: Transfer 2.0 g to a 125-mL conical flask, add 50.0 mL of 1 N sulfuric acid VS, and swirl to dissolve. Add 3 drops of methyl orange TS, and titrate with 1 N sodium hydroxide VS to a yellow endpoint. Each mL of 1 N sulfuric acid is equivalent to 40.69 mg of zinc oxide (ZnO).

www.webofpharma.com

Acceptance criteria: NLT 70.0%

IMPURITIES

• **CHLORIDE AND SULFATE,** *Chloride* ⟨221⟩
Sample solution: Dissolve 1.0 g in a mixture of 20 mL of water and 3 mL of nitric acid.
Acceptance criteria: The *Sample solution* shows no more chloride than corresponds to 0.03 mL of 0.02 N hydrochloric acid (0.002%).

• **SULFATE**
Sample solution: Dissolve 10.0 g in a mixture of 75 mL of water and 10 mL of hydrochloric acid, and filter. Neutralize the filtrate with ammonium hydroxide, and dilute with water to 100 mL.
Analysis: To 10.0 mL of the *Sample solution* add 1 mL of 0.6 N hydrochloric acid and 1 mL of barium chloride TS, and allow to stand for 10 min.
Acceptance criteria: The *Sample solution* shows no more turbidity than that produced in a solution containing 0.10 mL of 0.02 N sulfuric acid and the same quantities of reagents used to prepare the *Sample solution* (0.01%).

• **IRON** ⟨241⟩
Test preparation: Dissolve 0.5 g in 20 mL of water and 3 mL of hydrochloric acid.
Acceptance criteria: NMT 0.002%

• **LEAD**
Standard lead solution: Use standard lead solution TS.
Sample solution: Transfer 10.0 g to a 100-mL volumetric flask, add 20 mL of nitric acid and 10 mL of water, swirl to dissolve, and dilute with water to volume.
Blank: Nitric acid in water (1 in 25)
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelength: 217.0 nm (lead emission line)
Lamp: Lead hollow-cathode
Flame: Air–acetylene
Analysis: Add 10.0 mL of the *Sample solution* to each of three 25-mL volumetric flasks. To the respective volumetric flasks add 0, 5.0, and 10.0 mL of *Standard lead solution*, and dilute with water to volume. These solutions contain 0, 0.002, and 0.004 mg/mL of added lead, respectively. Determine the absorbances of these three solutions. Plot the absorbances of the three solutions versus their contents of added lead, in mg/mL, as furnished by the *Standard lead solution*. Draw a straight line (calibration curve) best fitting the three points, and extrapolate the line until it intersects the concentration axis. From the intercept determine the concentration, in mg/mL, of lead in the *Sample solution*. Calculate the quantity, in ppm, of lead in the specimen:

$$\text{Result} = (V_1/W) \times (V_2/V_3) \times (C/F)$$

V_1 = total volume of the *Sample solution*, 100 mL
W = weight of specimen (g)
V_2 = final volume of the solution used for analysis, 25 mL
V_3 = volume of the *Sample solution* used for analysis, 10 mL
C = concentration of lead in the *Sample solution*, as determined from the calibration curve (mg/mL)
F = conversion factor, 0.001 µg/mg

Acceptance criteria: NMT 5 ppm

• **INSOLUBLE MATTER**
Sample solution: Dissolve 10 g in a mixture of 100 mL of water and 7 mL of sulfuric acid.
Analysis: Heat the *Sample solution* on a steam bath for 1 h. Filter the solution through a tared sintered-glass crucible, wash with hot water, and dry the crucible at 105°. Cool, and weigh.
Acceptance criteria: The residue weighs NMT 2 mg (0.02%).

• **SUBSTANCES NOT PRECIPITATED BY AMMONIUM SULFIDE**
Sample solution: Dissolve 1.0 g in 10 mL of water and 2 mL of sulfuric acid. Dilute with water to 80 mL, add 10 mL of ammonium hydroxide, and pass hydrogen sulfide through the solution for 30 min. Dilute with water to 100 mL, and allow the precipitate to settle. Decant the supernatant through a filter. Use the clear filtrate.
Analysis: Transfer 50 mL of the *Sample solution* to a tared dish, and evaporate to dryness. Ignite, gently at first, and finally at 800 ± 25°. Cool, and weigh.
Acceptance criteria: The weight of the residue is NMT 2 mg (0.4%).

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers.

Zinc Chloride

$ZnCl_2$ 136.29
Zinc chloride [7646-85-7].

DEFINITION
Zinc Chloride contains NLT 97.0% and NMT 100.5% of zinc chloride ($ZnCl_2$).

IDENTIFICATION

• **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩**:** Meets the requirements

• **B. IDENTIFICATION TESTS—GENERAL,** *Chloride* ⟨191⟩**:** Meets the requirements

ASSAY

• **PROCEDURE**
Sample solution: Dissolve 12 g of Zinc Chloride in 500 mL of water in a 1-L volumetric flask. Add 12 g of ammonium chloride, and dilute with water to volume.
Analysis: Pipet 25 mL of the *Sample solution* into a 400-mL beaker. Add 100 mL of water, 10 mL of ammonia–ammonium chloride buffer TS, and 1 mL of 0.5 mg/mL of eriochrome black T solution. Titrate with 0.05 M edetate disodium VS to a deep blue endpoint. Each mL of 0.05 M edetate disodium is equivalent to 6.815 mg of zinc chloride ($ZnCl_2$).
Acceptance criteria: 97.0%–100.5%

IMPURITIES

• **CHLORIDE AND SULFATE,** *Sulfate* ⟨221⟩
Sample solution: 1.0 g in 30 mL of water
Acceptance criteria: 20 mL of the *Sample solution* shows no more sulfate than corresponds to 0.20 mL of 0.020 N sulfuric acid (0.03%).

• **LEAD** ⟨251⟩
Standard solution: Add 5 mL of water, 2.50 mL of standard lead solution TS, and 15 mL of *Potassium cyanide solution* (100 mg/mL) to a similar color-comparison tube.
Sample solution: Dissolve 0.50 g in 5 mL of water, and transfer the solution to a color-comparison tube. Add 15 mL of *Potassium cyanide solution* (100 mg/mL), and allow the mixture to become clear.
Analysis: To each tube add 0.1 mL of sodium sulfide TS. Mix the contents of each tube, and allow to stand for 5 min.
Acceptance criteria: Viewed downward over a white surface, the *Sample solution* is not darker than the *Standard solution* (NMT 0.005%).

www.webofpharma.com

• **LIMIT OF AMMONIUM SALTS**
Sample solution: 100 mg/mL
Analysis: To 5 mL of *Sample solution* add 1 N sodium hydroxide until the precipitate first formed is redissolved, then warm the solution.
Acceptance criteria: No odor of ammonia is perceptible.
• **LIMIT OF OXYCHLORIDE**
Sample solution: Dissolve 1.0 g in 20 mL of water, and add 20 mL of alcohol.
Analysis: To 10 mL of the *Sample solution* add 0.30 mL of 1.0 N hydrochloric acid.
Acceptance criteria: The solution becomes perfectly clear.
• **ALKALIES AND ALKALINE EARTHS**
Sample solution: Dissolve 2.0 g in 150 mL of water contained in a 200-mL volumetric flask. Add sufficient ammonium sulfide TS to precipitate the zinc completely, and dilute with water to volume. Pass through a dry filter, and reject the first portion of the filtrate.
Analysis: To 100 mL of the *Sample solution* add 5 drops of sulfuric acid. Evaporate to dryness, and ignite.
Acceptance criteria: The weight of the residue is NMT 10 mg (1.0%).

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in tight containers.

Zinc Chloride Injection

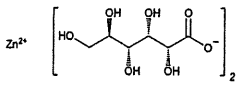
DEFINITION
Zinc Chloride Injection is a sterile solution of Zinc Chloride in Water for Injection. It contains NLT 90.0% and NMT 110.0% of the labeled amount of zinc (Zn).

IDENTIFICATION
• **A.** The *Sample solution*, prepared as directed in the *Assay*, exhibits an absorption maximum at 213.8 nm, when determined as directed in the *Assay*.

ASSAY
• **PROCEDURE**
[NOTE—The *Standard solutions* and the *Sample solution* may be diluted quantitatively with water, if necessary, to obtain solutions of suitable concentrations adaptable to the linear or working range of the instrument.]
Sodium chloride solution: 0.9 mg/mL of sodium chloride in water
Standard stock solution A: 10 mg/mL of zinc in water prepared as follows. Transfer 3.11 g of zinc oxide to a 250-mL volumetric flask. Add 80 mL of 1 N sulfuric acid, warm to dissolve, and cool. Dilute with water to volume.
Standard stock solution B: 125 µg/mL of zinc in water from *Standard stock solution A*
Standard solution A: Transfer 2.0 mL of *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a 500-mL volumetric flask, and dilute with water (0.50 µg/mL of zinc).
Standard solution B: Transfer 3.0 mL of *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a 500-mL volumetric flask, and dilute with water (0.75 µg/mL of zinc).
Standard solution C: Transfer 4.0 mL of *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a 500-mL volumetric flask, and dilute with water (1.0 µg/mL of zinc).
Sample solution: Transfer a volume of Injection, equivalent to 5 mg of zinc, to a 500-mL volumetric flask. Dilute with water to volume. Transfer 10.0 mL of this solution to a 100-mL volumetric flask. From the labeled amount of sodium chloride, if any, in the Injection, calculate the amount, in mg, of sodium chloride in the 10.0-mL portion, and add a sufficient amount of *Sodium chloride solution* to bring the total sodium chloride content of the 100-mL volumetric flask to 0.9 mg. Dilute with water to volume.
Blank: Water
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelength: Zinc emission line at 213.8 nm
Lamp: Zinc hollow-cathode
Flame: Air–acetylene
Analysis
Samples: *Standard solutions* and *Sample solution*
Plot the absorbances of the *Standard solutions* versus concentration, in µg/mL, of zinc, and draw the straight line best fitting the three plotted points. From the graph so obtained, determine the concentration, in µg/mL, of zinc in the *Sample solution*.
Calculate the percentage of the labeled amount of zinc (Zn) in the portion of Injection taken:

$$\text{Result} = (C_O/C_U) \times 100$$

C_O = concentration of zinc in the *Sample solution* as determined from the standard curve (observed concentration, µg/mL)
C_U = nominal concentration of the *Sample solution*, based on the label claim of the Injection and the dilution factor (calculated concentration, µg/mL)



Acceptance criteria: 90.0%–110.0%

IMPURITIES
• **PARTICULATE MATTER IN INJECTIONS** ⟨788⟩: Meets the requirements for small-volume injections

SPECIFIC TESTS
• **BACTERIAL ENDOTOXINS TEST** ⟨85⟩: It contains NMT 25.0 USP Endotoxin Units/mg of zinc.
• **pH** ⟨791⟩: 1.5–2.5
• **OTHER REQUIREMENTS:** It meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩.

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in single-dose or multiple-dose containers, preferably of Type I or Type II glass.
• **LABELING:** Label the Injection to indicate that it is to be diluted with Water for Injection or other suitable fluid to appropriate strength before administration.

Zinc Gluconate

$C_{12}H_{22}O_{14}Zn$ 455.67
Bis(D-gluconato-O^1,O^2) zinc;
Zinc D-gluconate (1:2) [4468-02-4].

DEFINITION
Zinc Gluconate contains NLT 97.0% and NMT 102.0% of zinc gluconate ($C_{12}H_{22}O_{14}Zn$), calculated on the anhydrous basis.

www.webofpharma.com

IDENTIFICATION

• **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩**:** A 100-mg/mL solution meets the requirements.

• **B. THIN-LAYER CHROMATOGRAPHY**

Standard solution: 10 mg/mL of USP Potassium Gluconate RS

Sample solution: 10 mg/mL of Zinc Gluconate, heating in a water bath at 60°, if necessary, to dissolve

Chromatographic system

(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)

Mode: TLC

Adsorbent: 0.25-mm layer of chromatographic silica gel

Application volume: 5 µL

Developing solvent system: Alcohol, ethyl acetate, ammonium hydroxide, and water (50:10:10:30)

Spray reagent: Dissolve 2.5 g of ammonium molybdate in 50 mL of 2 N sulfuric acid in a 100-mL volumetric flask, add 1.0 g of ceric sulfate, swirl to dissolve, and dilute with 2 N sulfuric acid to volume.

Analysis

Samples: *Standard solution* and *Sample solution*

Develop the chromatogram until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the chamber, and dry at 110° for 20 min. Allow to cool, and spray with the *Spray reagent*. Heat the plate at 110° for about 10 min.

Acceptance criteria: The principal spot of the *Sample solution* corresponds in color, size, and R_F value to that of the *Standard solution*.

ASSAY

• **PROCEDURE**

Sample: 700 mg of Zinc Gluconate

Blank: 100 mL of water

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.05 M edetate disodium VS

Endpoint detection: Visual

Analysis: Dissolve the *Sample* in 100 mL of water. Add 5 mL of ammonia–ammonium chloride buffer TS and 0.1 mL of eriochrome black TS. Titrate with *Titrant* until the solution is deep blue in color. Perform a blank determination.

Calculate the percentage of zinc gluconate ($C_{12}H_{22}O_{14}Zn$) in the *Sample* taken:

$$\text{Result} = \{[(V_S - V_B) \times M \times F]/W\} \times 100$$

V_S = *Titrant* volume consumed by the *Sample* (mL)
V_B = *Titrant* volume consumed by the *Blank* (mL)
M = *Titrant* molarity (mmol/mL)
F = equivalency factor, 455.7 mg/mmol
W = *Sample* weight (mg)

Acceptance criteria: 97.0%–102.0% on the anhydrous basis

IMPURITIES

• **CHLORIDE AND SULFATE,** *Chloride* ⟨221⟩

Standard solution: 0.7 mL of 0.020 N hydrochloric acid

Sample: 1.0 g

Acceptance criteria: NMT 0.05%

• **CHLORIDE AND SULFATE,** *Sulfate* ⟨221⟩

Standard solution: 1.0 mL of 0.020 N sulfuric acid

Sample: 2.0 g

Acceptance criteria: NMT 0.05%

• **ARSENIC,** *Method I* ⟨211⟩

Test preparation: 1 g in 35 mL of water

Acceptance criteria: NMT 3 ppm

• **LIMIT OF LEAD**

[NOTE—For the preparation of all aqueous solutions and for the rinsing of glassware before use, use water that has been passed through a strong-acid, strong-base, mixed-bed ion-exchange resin. Select all reagents to have as low a content of lead as practicable, and store all reagent solutions in containers of borosilicate glass. Cleanse glassware before use by soaking in warm 8 N nitric acid for 30 min and by rinsing with deionized water.]

Ascorbic acid–sodium iodide solution: 100 mg/mL of ascorbic acid and 192.5 mg/mL of sodium iodide

Trioctylphosphine oxide solution: 50 mg/mL of trioctylphosphine oxide in 4-methyl-2-pentanone.

[**CAUTION**—This solution causes irritation. Avoid contact with eyes, skin, and clothing. Take special precautions in disposing of unused portions of solutions to which this reagent is added.]

Standard solution: Transfer 5.0 mL of lead nitrate stock solution TS, to a 100-mL volumetric flask, and dilute with water to volume. Transfer 2.0 mL of the resulting solution to a 50-mL volumetric flask, and add 10 mL of 9 N hydrochloric acid and 10 mL of water. Add 20 mL of *Ascorbic acid–sodium iodide solution* and 5.0 mL of *Trioctylphosphine oxide solution*. Shake for 30 s, and allow to separate. Add water to bring the organic solvent layer into the neck of the flask, shake again, and allow to separate. The organic layer is the *Standard solution*, and it contains 2 µg/mL of lead.

Sample solution: To a 50-mL volumetric flask add 1.0 g of Zinc Gluconate, 10 mL of 9 N hydrochloric acid, 10 mL of water, 20 mL of *Ascorbic acid–sodium iodide solution*, and 5.0 mL of *Trioctylphosphine oxide solution*. Shake for 30 s, and allow to separate. Add water to bring the organic solvent layer into the neck of the flask, shake again, and allow to separate. The organic layer is the *Sample solution*.

Blank: To a 50-mL volumetric flask add 10 mL of 9 N hydrochloric acid, 10 mL of water, 20 mL of *Ascorbic acid–sodium iodide solution*, and 5.0 mL of *Trioctylphosphine oxide solution*. Shake for 30 s, and allow to separate. Add water to bring the organic solvent layer into the neck of the flask, shake again, and allow to separate. The organic layer is the *Blank*, and it contains 0 µg/mL of lead.

Instrumental conditions

(See *Atomic Absorption Spectroscopy* ⟨852⟩.)

Mode: Atomic absorption spectrophotometry

Analytical wavelength: 283.3 nm

Lamp: Lead hollow-cathode

Flame: Air–acetylene

System suitability

Samples: *Standard solution* and *Blank*

Suitability requirements: The absorbance of the *Standard solution* and the absorbance of the *Blank* are significantly different.

Analysis

Samples: *Standard solution*, *Sample solution*, and *Blank*

Concomitantly determine the absorbances of the *Blank*, *Standard solution*, and the *Sample solution*. Use the *Blank* to set the instrument to zero.

Acceptance criteria: NMT 10 ppm: the absorbance of the *Sample solution* does not exceed that of the *Standard solution*.

• **LIMIT OF CADMIUM**

Standard stock solution: 0.1372 mg/mL of cadmium nitrate

Standard solution: Pipet 25 mL of the *Standard stock solution* into a 100-mL volumetric flask, add 1 mL of hydrochloric acid, dilute with water to volume, and mix. It contains 12.5 µg/mL of cadmium (Cd).

www.webofpharma.com

Sample stock solution: Transfer 10.0 g of Zinc Gluconate into a 50-mL volumetric flask, and dissolve in and dilute with water to volume.
Sample solution A: Transfer 5.0 mL of the *Sample stock solution* to a 25-mL volumetric flask, and dilute with water to volume. This solution contains 0 µg/mL of added cadmium from the *Standard solution*.
Sample solution B: Transfer 5.0 mL of the *Sample stock solution* to a 25-mL volumetric flask, add 2.0 mL of the *Standard solution*, and dilute with water to volume. This solution contains 1.0 µg/mL of added cadmium from the *Standard solution*.
Sample solution C: Transfer 5.0 mL of the *Sample stock solution* to a 25-mL volumetric flask, add 4.0 mL of the *Standard solution*, and dilute with water to volume. This solution contains 2.0 µg/mL of added cadmium from the *Standard solution*.
Blank: Water
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelength: 228.8 nm
Lamp: Cadmium hollow-cathode
Flame: Air–acetylene
Analysis
Samples: *Sample solution A*, *Sample solution B*, and *Sample solution C*
Determine the absorbances. Correct the absorbance values of *Sample solution A*, *Sample solution B*, and *Sample solution C* from that of the *Blank*. Plot the corrected absorbances of *Sample solution A*, *Sample solution B*, and *Sample solution C* versus their added cadmium concentrations, in µg/mL. Draw the straight line best fitting the three points, and extrapolate the line until it intercepts the concentration axis. From the intercept, determine the amount, in µg/mL, of cadmium in *Sample solution A*.
Calculate the content of cadmium in the portion of Zinc Gluconate taken:

$$\text{Result} = (C \times V)/W$$

C = concentration of cadmium in *Sample solution A* (µg/mL), determined from the intercept of the linear regression line
V = volume of solvent taken to prepare *Sample solution A* (mL)
W = weight of Zinc Gluconate taken to prepare *Sample solution A* (g)

Acceptance criteria: NMT 5 ppm

• **REDUCING SUBSTANCES**
Sample: 1.0 g of Zinc Gluconate
Blank: 10 mL of water
Titrimetric system
(See *Titrimetry* ⟨541⟩.)
Mode: Residual titration
Titrant 0.1 N iodine VS
Back titrant: 0.1 N sodium thiosulfate VS
Endpoint detection: Visual
Analysis: Transfer the *Sample* to a 250-mL conical flask, dissolve in 10 mL of water, and add 25 mL of alkaline cupric citrate TS. Cover the flask, boil gently for 5 min, accurately timed, and cool rapidly to room temperature. Add 25 mL of 0.6 N acetic acid, 10.0 mL of *Titrant*, and 10 mL of 3 N hydrochloric acid, and titrate with *Back titrant*, adding 3 mL of starch TS as the endpoint is approached. Perform the blank determination.
Calculate the percentage of reducing substances (as dextrose) in the *Sample* taken:

$$\text{Result} = \{[(V_B - V_S) \times N \times F]/W\} \times 100$$

V_B = *Back titrant* volume consumed by the *Blank* (mL)
V_S = *Back titrant* volume consumed by the *Sample* (mL)
N = *Back titrant* normality (mEq/mL)
F = equivalency factor, 27 mg/mEq
W = *Sample* weight (mg)

Acceptance criteria: NMT 1.0%

SPECIFIC TESTS
• **pH** ⟨791⟩
Sample solution: 10 mg/mL
Acceptance criteria: 5.5–7.5
• **WATER DETERMINATION,** *Method Ib* ⟨921⟩**:** NMT 11.6%

ADDITIONAL REQUIREMENTS
• **PACKAGING AND STORAGE:** Preserve in well-closed containers.
• **USP REFERENCE STANDARDS** ⟨11⟩
USP Potassium Gluconate RS

Zinc Gluconate Tablets

DEFINITION
Zinc Gluconate Tablets contain NLT 93.0% and NMT 107.0% of the labeled amount of Zn, in the form of zinc gluconate ($C_{12}H_{22}O_{14}Zn$).

IDENTIFICATION
• **A. THIN-LAYER CHROMATOGRAPHY**
Standard solution: USP Potassium Gluconate RS in water; 10 mg/mL
Sample solution: Transfer a weighed quantity of powdered Tablets to a suitable flask, and add the necessary volume of water to obtain a solution containing about 10 mg/mL of zinc gluconate. Shake and sonicate, heating in a water bath at 60°, if necessary, and filter.
Chromatographic system
(See *Chromatography* ⟨621⟩, *Thin-Layer Chromatography*.)
Mode: TLC
Adsorbent: 0.25-mm layer of chromatographic silica gel
Application volume: 5 µL
Developing solvent system: Alcohol, water, ammonium hydroxide, and ethyl acetate (50:30:10:10)
Spray reagent: Dissolve 2.5 g of ammonium molybdate in about 50 mL of 2 N sulfuric acid in a 100-mL volumetric flask, add 1.0 g of ceric sulfate, swirl to dissolve, dilute with 2 N sulfuric acid to volume, and mix.
Analysis
Samples: *Standard solution* and *Sample solution*
When the solvent front has moved about three-fourths the length of the plate, remove the plate from the chamber, and dry at 110° for 20 min. Allow to cool, spray with *Spray reagent*, and heat the plate at 110° for about 10 min.
Acceptance criteria: The principal spot from the *Sample solution* corresponds in color, size, and R_F value to that from the *Standard solution*.
• **B. PROCEDURE**
Sodium hydroxide solution: 42 mg/mL of sodium hydroxide
Ammonium chloride solution: 107 mg/mL of ammonium chloride
Glycerin solution: A mixture of glycerin and water (85:15)

www.webofpharma.com

Sodium sulfide solution: Dissolve 12 g of sodium sulfide with heating in a 45-mL mixture of *Glycerin solution* and water (29:10), allow to cool, and dilute with the same mixture of solvents to 100 mL. The solution should be colorless.

Sample solution: Shake and sonicate the amount of powdered Tablets with the necessary volume of water to obtain a solution containing 100 mg/mL of zinc gluconate. Heat in a water bath at 60°, if necessary, and filter.

Analysis: To 5 mL of the *Sample solution* add 0.2 mL of *Sodium hydroxide solution*, add an additional 2 mL of *Sodium hydroxide solution*, and add 10 mL of *Ammonium chloride solution*. Add 0.1 mL of *Sodium sulfide solution*.

Acceptance criteria: A white precipitate is formed after the first addition of *Sodium hydroxide solution*. The precipitate dissolves after the second addition of *Sodium hydroxide solution*. The solution remains clear after addition of *Ammonium chloride solution*, and a white precipitate forms after addition of *Sodium sulfide solution*.

STRENGTH

• **PROCEDURE**

Sample solution: Weigh and finely powder NLT 20 Tablets. Weigh a portion of the powder, equivalent to about 80 mg of zinc, transfer to a suitable crucible, and ignite, gently at first, until free from carbon. Cool the crucible, add 25 mL of water and 5 mL of hydrochloric acid, and stir. Heat on a steam bath for 5 min, and filter, rinsing the filter with several portions of water. Dilute the combined filtrate and washes with water to about 100 mL.

Analysis: Add ammonia–ammonium chloride buffer TS until the solution is neutral to litmus. Add 5 mL of ammonia–ammonium chloride buffer TS and 0.1 mL of eriochrome black TS, and titrate with 0.05 M edetate disodium VS to a blue endpoint. Each mL of 0.05 M edetate disodium is equivalent to 3.27 mg of Zn or 22.78 mg of zinc gluconate ($C_{12}H_{22}O_{14}Zn$).

Acceptance criteria: 93.0%–107.0%

PERFORMANCE TESTS

• **DISINTEGRATION ⟨701⟩:** For Tablets intended to be mixed with water prior to intake as oral liquids

Time: NMT 60 s

• **DISINTEGRATION AND DISSOLUTION OF DIETARY SUPPLEMENTS ⟨2040⟩:** For Tablets not to be mixed with water prior to ingestion

Medium: Hydrochloric acid 0.01 N; 900 mL

Apparatus 2: 50 rpm

Time: 45 min

Analysis: Determine the amount of $C_{12}H_{22}O_{14}Zn$ dissolved, employing atomic absorption spectrophotometry at the resonance emission line for zinc, at 213.8 nm, on filtered portions of the solution under test, suitably diluted with water, in comparison with a standard solution having a known concentration of zinc in the same *Medium*.

Tolerances: NLT 75% of the labeled amount of $C_{12}H_{22}O_{14}Zn$ is dissolved.

• **UNIFORMITY OF DOSAGE UNITS ⟨905⟩:** Meet the requirements

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers, protected from light.

• **LABELING:** Label the Tablets in terms of elemental zinc, and also in terms of zinc gluconate ($C_{12}H_{22}O_{14}Zn$). The labeling indicates whether the Tablets are intended to be mixed with water before intake.

• **USP REFERENCE STANDARDS ⟨11⟩**

USP Potassium Gluconate RS

Zinc Oxide

ZnO 81.38

Zinc oxide [1314-13-2].

DEFINITION

Zinc Oxide, freshly ignited, contains NLT 98.0% and NMT 102.0% of zinc oxide (ZnO).

IDENTIFICATION

• **A.** When strongly heated, it assumes a yellow color that disappears on cooling.

• **B.** The retention time of the zinc peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

Change to read:

• **PROCEDURE**

Proceed as directed in ▲*Zinc Determination ⟨591⟩, Ion Chromatographic Method*▲ (CN 1-May-2020).

Diluent: 0.2% (w/v) hydrochloric acid

Standard solution: 20 µg/mL of USP Zinc Oxide RS in *Diluent*, prepared as directed in the chapter

Sample solution: 20 µg/mL of Zinc Oxide from the freshly ignited Zinc Oxide in *Diluent*, prepared as directed in the *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of zinc oxide (ZnO) in the portion of Zinc Oxide taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zinc from the *Sample solution*

r_S = peak response of zinc from the *Standard solution*

C_S = concentration of USP Zinc Oxide RS in the *Standard solution* (µg/mL)

C_U = concentration of Zinc Oxide in the *Sample solution* (µg/mL)

Acceptance criteria: 98.0%–102.0% on the ignited basis

IMPURITIES

• **ARSENIC ⟨211⟩, *Procedures, Method I*:** NMT 6 ppm

• **LEAD**

Sample solution: Add 2 g to 20 mL of water, stir well, and add 5 mL of glacial acetic acid. Warm on a steam bath until dissolved.

Analysis: Add 5 drops of potassium chromate TS.

Acceptance criteria: No turbidity or precipitate is produced.

• **IRON AND OTHER HEAVY METALS**

Sample solution: Use the solution from *Carbonate and Color of Solution*.

Analysis: Cool 2 separate 5-mL aliquots of the *Sample solution*. Add potassium ferrocyanide TS to the first aliquot, and add sodium sulfide TS to the second aliquot.

Acceptance criteria: White precipitates are formed in both aliquots.

• **LOSS ON IGNITION ⟨733⟩**

Sample: 2 g

Analysis: Ignite the *Sample* at 500° to constant weight.

Acceptance criteria: NMT 1.0%

USP Monographs

www.webofpharma.com

SPECIFIC TESTS

- **ALKALINITY**

Analysis: Mix 1.0 g with 10 mL of hot water, add 2 drops of phenolphthalein TS, and pass through a suitable filter of appropriate pore size.

Acceptance criteria: If a red color is produced, NMT 0.30 mL of 0.10 N hydrochloric acid is required to discharge it.

- **CARBONATE AND COLOR OF SOLUTION**

Analysis: Mix 2.0 g with 10 mL of water, add 30 mL of 2 N sulfuric acid, and heat on a steam bath with constant stirring.

Acceptance criteria: No effervescence occurs, and the resulting solution is clear and colorless. [NOTE—Use this solution in the test for *Iron and Other Heavy Metals*.]

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers.

Zinc Oxide Neutral

ZnO 81.39

DEFINITION

Zinc Oxide Neutral, freshly ignited, contains NLT 95.0% and NMT 98.0% of zinc oxide (ZnO).

IDENTIFICATION

- **A.** When strongly heated, it assumes a yellow color that disappears on cooling.
- **B.** The retention time of the zinc peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

Change to read:

- **PROCEDURE**

Proceed as directed in ▲*Zinc Determination* ⟨591⟩, *Ion Chromatographic Method*▲ (CN 1-May-2020).

Diluent: 0.2% (w/v) hydrochloric acid

Standard solution: 20 µg/mL of USP Zinc Oxide RS in *Diluent*, prepared as directed in the chapter

Sample solution: 20 µg/mL of Zinc Oxide Neutral from the freshly ignited Zinc Oxide Neutral in *Diluent*, prepared as directed in the *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of zinc oxide (ZnO) in the portion of Zinc Oxide Neutral taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zinc from the *Sample solution*

r_S = peak response of zinc from the *Standard solution*

C_S = concentration of USP Zinc Oxide RS in the *Standard solution* (µg/mL)

C_U = concentration of Zinc Oxide Neutral in the *Sample solution* (µg/mL)

Acceptance criteria: 95.0%–98.0%

IMPURITIES

- **CHLORIDE AND SULFATE** ⟨221⟩, *Sulfate*

Standard solution: 0.020 N sulfuric acid

Sample: 0.1 g

Acceptance criteria: The *Sample* shows no more sulfate than corresponds to 2.3 mL of the *Standard solution* (2.2%).

- **ARSENIC** ⟨211⟩, *Procedures, Method I*: NMT 2 ppm
- **LEAD**

Sample solution: Add 2 g to 20 mL of water, and stir well. Add 5 mL of glacial acetic acid, and warm on a steam bath until the solution is dissolved.

Analysis: Add 5 drops of potassium chromate TS.

Acceptance criteria: No turbidity or precipitate is produced.

- **MERCURY**

Diluent A: Carefully add 50 mL of nitric acid to 450 mL of water, and mix.

Diluent B: Carefully add 10 mL of nitric acid to 490 mL of water, and mix.

Aqua regia: [NOTE—Prepare immediately before use.] Hydrochloric acid and nitric acid (3:1)

Stannous sulfate solution: [NOTE—The mixture is a suspension and should be stirred continuously during use.] Add 25 g of stannous sulfate to 250 mL of 0.5 N sulfuric acid.

Sodium chloride–hydroxylamine sulfate solution: 120 mg/mL each of sodium chloride and hydroxylamine sulfate in water

Potassium permanganate solution: 50 mg/mL of potassium permanganate in water

Standard stock mercury solution: [NOTE—Use of a commercially prepared mercury standard is recommended.] 1.0 mg/mL of mercury from mercuric chloride in *Diluent A*

Standard working mercury solution: 0.5 µg/mL of mercury in *Diluent B*, from *Standard stock mercury solution*

Standard solutions: Transfer 1-, 2-, 3-, and 4-mL aliquots of *Standard working mercury solution* to four separate 300-mL biological oxygen-demand (BOD) bottles. To each bottle add 5 mL of water and 5 mL of *Aqua regia*. Heat the bottle for 2 min in a water bath at 95°. Cool, and add 50 mL of water and 15 mL of *Potassium permanganate solution*. Mix thoroughly, and place in a water bath for 30 min at 95°. Cool, add 5 mL of *Sodium chloride–hydroxylamine sulfate solution*, and dilute with water to 200 mL. These solutions contain the equivalent of 2.5, 5, 7.5, and 10 ng/mL of mercury, respectively.

Sample solution: Transfer 2.0 g of Zinc Oxide Neutral into a 300-mL BOD bottle. To the bottle add 5 mL of water and 5 mL of *Aqua regia*. Heat the sample in a water bath for 2 min at 95°. Cool, and add 50 mL of water and 15 mL of *Potassium permanganate solution*. Mix thoroughly, and place in a water bath for 30 min at 95°. Cool, add 5 mL of *Sodium chloride–hydroxylamine sulfate solution*, and dilute with water to 200 mL.

Blank solution: To a 300-mL BOD bottle add 5 mL of water and 5 mL of *Aqua regia*. Heat the solution for 2 min in a water bath at 95°. Cool, and add 50 mL of water and 15 mL of *Potassium permanganate solution*. Mix thoroughly, and place in a water bath for 30 min at 95°. Cool, add 5 mL of *Sodium chloride–hydroxylamine sulfate solution*, and dilute with water to 200 mL.

Mercury detection instrument and **Aeration apparatus:** Proceed as directed in *Mercury* ⟨261⟩, *Method IIa and Method IIb*.

Analysis: Add 5 mL of *Stannous sulfate solution* to a *Standard solution*, and immediately insert the bottle into the *Aeration apparatus*. Measure the absorbances of the *Standard solutions*. Repeat with the remaining *Standard solutions* and *Sample solution*. Perform a blank determination using the *Blank solution*, and make any necessary corrections. Plot the absorbances of the *Standard solutions* versus concentrations, in µg/mL, and draw the straight line best fitting the plotted points. From the graph

USP Monographs

www.webofpharma.com

so obtained, determine the concentration, in ppm of mercury, in the *Sample solution*.
Acceptance criteria: NMT 1 ppm

• **IRON AND OTHER HEAVY METALS**
Sample solution: Use the solution from the test for *Carbonate and Color of Solution*.
Analysis: Cool two separate 5-mL aliquots of the *Sample solution*. Add potassium ferrocyanide TS to the first aliquot, and add sodium sulfide TS to the second aliquot.
Acceptance criteria: White precipitates are formed in both aliquots.

• **MAGNESIUM OXIDE**
Blank: Carefully add 10 mL of concentrated nitric acid to 490 mL of water, and mix.
Standard solution: [NOTE—Use of a commercially prepared magnesium–inductively coupled plasma standard solution is recommended.] 25 µg/mL of magnesium in *Blank*
Sample solution: 4 mg/mL of Zinc Oxide Neutral in *Blank*
Instrumental conditions
(See *Plasma Spectrochemistry* ⟨730⟩.)
Mode: Inductively coupled plasma–atomic emission spectrometry
Analytical wavelength: 279.1 nm
Analysis
Samples: *Standard solution*, *Sample solution*, and *Blank*
Calculate the percentage of magnesium oxide in the portion of Zinc Oxide Neutral taken:

$$\text{Result} = (C_U/C_S) \times (M_{r1}/M_{r2}) \times 100$$

C_U = concentration of magnesium in the *Sample solution*, determined from the instrument (µg/mL)
C_S = concentration of Zinc Oxide Neutral in the *Sample solution* (µg/mL)
M_{r1} = molecular weight of magnesium oxide, 40.30
M_{r2} = molecular weight of magnesium, 24.31

Acceptance criteria: NMT 0.7%

• **LOSS ON IGNITION** ⟨733⟩
Sample: 1 g
Analysis: Ignite the *Sample* at 750° for 15 min.
Acceptance criteria: NMT 5.0%

SPECIFIC TESTS

• **ALKALINITY**
Analysis: Mix 1.0 g with 10 mL of hot water, and add two drops of phenolphthalein TS.
Acceptance criteria: No color change occurs.

• **CARBONATE AND COLOR OF SOLUTION**
Analysis: Mix 2.0 g with 10 mL of water, add 30 mL of 2 N sulfuric acid, and heat on a steam bath, with constant stirring.
Acceptance criteria: No effervescence occurs and the resulting solution is clear and colorless. [NOTE—Use this solution in the test for *Iron and Other Heavy Metals*.]

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in tight containers, and store at room temperature.

• **LABELING:** Label it to indicate that it is for use in sunscreen preparations only.

Zinc Oxide ▲Compounded▲ (USP 1-May-2019) Ointment

DEFINITION

Change to read:

Zinc Oxide ▲Compounded▲ (USP 1-May-2019) Ointment contains NLT 18.5% and NMT 21.5% of zinc oxide (ZnO).
Prepare Zinc Oxide ▲Compounded▲ (USP 1-May-2019) Ointment as follows.

Zinc Oxide	200 g
Mineral Oil	150 g
White Ointment	650 g
To make	1000 g

Levigate the *Zinc Oxide* with the *Mineral Oil* to a smooth paste, and incorporate the *White Ointment* [see *General Notices, 5.20.20 Added Substances (Excipients and Ingredients) in Official Products*].

IDENTIFICATION

• **A.** The residue obtained in the *Assay* is yellow when hot and white when cool.

ASSAY

Change to read:

• **PROCEDURE**
Sample solution: Weigh 700 mg of Ointment in a porcelain crucible, heat gently until melted, and continue heating, gradually raising the temperature until the mass is thoroughly charred. Ignite the mass until the residue is uniformly yellow, and cool. Dissolve the residue in 10 mL of 2 N sulfuric acid, warming if necessary to dissolve.
Titrimetric system
▲(See *Titrimetry* ⟨541⟩.)▲ (USP 1-May-2019)
Mode: Direct titration
Titrant: 0.05 M edetate disodium VS
Endpoint detection: Visual
Analysis: Transfer the *Sample solution* to a beaker, and rinse the crucible with small portions of water until the combined solution and rinsings measure 50 mL. Add 15 mL of ammonia–ammonium chloride buffer TS and 1 mL of eriochrome black TS, and titrate with *Titrant* until the solution is blue in color. Each milliliter of *Titrant* is equivalent to 4.069 mg of zinc oxide (ZnO).
Acceptance criteria: 18.5%–21.5%

PERFORMANCE TESTS

• **MINIMUM FILL** ⟨755⟩**:** Meets the requirements

SPECIFIC TESTS

• **CALCIUM, MAGNESIUM, AND OTHER FOREIGN SUBSTANCES**
Sample: Heat 2 g gently until melted, and continue heating, gradually raising the temperature until the mass is thoroughly charred. Ignite the mass until the residue is uniformly yellow.
Analysis 1: To the *Sample* add 6 mL of 3 N hydrochloric acid.
Acceptance criteria 1: No effervescence occurs.
Analysis 2: Heat the mixture obtained in *Analysis 1* on a steam bath for 10–15 min.
Acceptance criteria 2: NMT a trace of insoluble residue remains.

www.webofpharma.com

Analysis 3: Filter the solution from *Analysis 2*, dilute with water to 10 mL, add 6 N ammonium hydroxide until the precipitate first formed redissolves, and add 2 mL each of ammonium oxalate TS and dibasic sodium phosphate TS.
Acceptance criteria 3: NMT a slight turbidity is produced in 5 min.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Package in well-closed containers, and avoid prolonged exposure to temperatures exceeding 30°.

Zinc Oxide Powder

DEFINITION
Zinc Oxide Powder contains NLT 90.0% and NMT 110.0% of the labeled amount of zinc oxide (ZnO).

IDENTIFICATION
- **A.** The retention time of the zinc peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

Change to read:

- **PROCEDURE**

Proceed as directed in ▲*Zinc Determination* ⟨591⟩, *Ion Chromatographic Method*▲ (CN 1-May-2020).
Diluent: 0.2% (w/v) hydrochloric acid
Standard solution: 20 µg/mL of USP Zinc Oxide RS in *Diluent*, prepared as directed in the chapter
Sample stock solution: Nominally 500 µg/mL of zinc oxide prepared as follows. Transfer an appropriate amount of Powder to a suitable volumetric flask. Add hydrochloric acid to about 15% of the final volume of the flask. [NOTE—Sonication or shaking may be necessary.] Dilute with water to volume. Centrifuge or pass a portion of this solution through a suitable filter.
Sample solution: Nominally 20 µg/mL of zinc oxide in water from the *Sample stock solution*
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zinc oxide (ZnO) in the portion of Powder taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zinc from the *Sample solution*
r_S = peak response of zinc from the *Standard solution*
C_S = concentration of USP Zinc Oxide RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of zinc oxide in the *Sample solution* (µg/mL)

Acceptance criteria: 90.0%–110.0%

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers, and store at room temperature.

Zinc Oxide and Salicylic Acid Paste

» Zinc Oxide and Salicylic Acid Paste contains not less than 23.5 percent and not more than 25.5

USP Monographs

www.webofpharma.com

percent of zinc oxide (ZnO), and not less than 1.9 percent and not more than 2.1 percent of salicylic acid ($C_7H_6O_3$).

It may be prepared as follows:

Salicylic Acid, in fine powder	20 g
Zinc Oxide Paste, a sufficient quantity to make	1000 g

Thoroughly triturate the Salicylic Acid with a portion of the paste, then add the remaining paste, and triturate until a smooth mixture is obtained.

Packaging and storage—Preserve in well-closed containers.

Identification—

A: The residue obtained in the *Assay for zinc oxide* is yellow when hot and white when cool.

B: Shake 1 g of it with 10 mL of water, and filter. To the filtrate add 1 mL of ferric chloride TS: an intense reddish violet color is produced. To this solution add 1 mL of acetic acid: the color is not dispersed. To this solution add 2 mL of 2 N hydrochloric acid: the color is dispersed and a white crystalline precipitate is formed.

Minimum fill ⟨755⟩**:** meets the requirements.

Assay for zinc oxide—Weigh accurately in a tared porcelain crucible about 500 mg of Paste, heat gently until melted, and continue the heating, gradually raising the temperature until the mass is thoroughly charred. Ignite the mass strongly until all of the carbonaceous material has been dissipated, the residue is uniformly yellow, and the weight of the cooled residue is constant. The weight of the residue represents the quantity of ZnO in the weight of the Paste taken for the assay.

Assay for salicylic acid—Transfer to a suitable beaker about 5 g of Paste, accurately weighed. Add 40 mL of alcohol, previously neutralized with 0.1 N sodium hydroxide to a phenol red endpoint, and heat on a water bath for 5 minutes, with frequent swirling. While still hot, add phenol red TS, and titrate with 0.1 N sodium hydroxide VS to a red endpoint. Each mL of 0.1 N sodium hydroxide is equivalent to 13.81 mg of salicylic acid ($C_7H_6O_3$).

Zinc Stearate

Octadecanoic acid, zinc salt;
Zinc stearate [557-05-1].

DEFINITION

Zinc Stearate is a compound of zinc with a mixture of solid organic acids obtained from fats, and consists chiefly of variable proportions of zinc stearate and zinc palmitate. It contains the equivalent of NLT 12.5% and NMT 14.0% of ZnO.

IDENTIFICATION

• **A. Identification Tests—General,** *Zinc* ⟨191⟩

Sample solution: Mix 25 g with 200 mL of hot water, add 60 mL of 2 N sulfuric acid, and boil until the fatty acids separate as a transparent layer. Cool the mixture, and remove the solidified layer of fatty acids.

Acceptance criteria: A portion of the water layer meets the requirements.

• **B. Congealing Temperature** ⟨651⟩

Analysis: Place the separated fatty acids obtained in *Identification* test *A* in a filter wetted with water, and wash with boiling water until free from sulfate. Collect the fatty acids in a small beaker, allow to cool, pour off the separated water, then melt the acids. Filter into a dry beaker while hot, and dry at 105° for 20 min.

Acceptance criteria: The fatty acids congeal at a temperature not below 54°.

ASSAY

• **Procedure**

Sample solution: Boil 1 g of Zinc Stearate with 50 mL of 0.1 N sulfuric acid for at least 10 min, or until the fatty acids layer is clear, adding more water as necessary to maintain the original volume. Cool, and filter. Wash the filter and the flask thoroughly with water until the last washing is not acid to litmus paper.

Analysis: Add to the combined filtrate and washings 15 mL of ammonia–ammonium chloride buffer TS and 0.2 mL of eriochrome black TS. Heat the solution to about 40°, and titrate with 0.05 M edetate disodium VS until the solution is deep blue in color. Each mL of 0.05 M edetate disodium is equivalent to 4.069 mg of ZnO.

Acceptance criteria: 12.5%–14.0% of ZnO

IMPURITIES

• **Arsenic,** *Method I* ⟨211⟩

Test preparation: Mix 5.0 g with 50 mL of water. Cautiously add 5 mL of sulfuric acid, and boil gently until the fatty acids layer is clear and the volume is reduced to about 25 mL. Filter while hot, cool the filtrate, and dilute with water to 50 mL. Transfer a 20-mL aliquot to the arsine generator flask, and dilute with water to 35 mL.

Acceptance criteria: NMT 1.5 ppm

• **Lead** ⟨251⟩

Standard solution: To 20 mL of 0.2 N nitric acid add 5 µg of lead, 4 mL of *Ammonia–Cyanide Solution*, and 2 drops of *Hydroxylamine Hydrochloride Solution*, and shake with 10.0 mL of *Standard Dithizone Solution* for 30 s. Pass through an acid-washed filter paper into a color-comparison tube.

Test preparation: Ignite 0.50 g in a platinum crucible for 15–20 min in a muffle furnace at 475°–500°. Cool, add 3 drops of nitric acid, evaporate over a low flame to dryness, and ignite again at 475°–500° for 30 min. Dissolve the residue in 1 mL of 8 N nitric acid, add 3 mL of *Ammonium Citrate Solution* and 0.5 mL of *Hydroxylamine Hydrochloride Solution*, and render alkaline to phenol red TS with ammonium hydroxide. Add 10 mL of *Potassium Cyanide Solution*. Immediately extract the solution with successive 5-mL portions of *Dithizone Extraction Solution*, draining off each extract into another separator, until the last portion of dithizone solution retains its green color. Shake the combined extracts for 30 s with 20 mL of 0.2 N nitric acid, and discard the chloroform layer. Add to the acid solution 4.0 mL of *Ammonia–Cyanide Solution* and 2 drops of *Hydroxylamine Hydrochloride Solution*. Add 10.0 mL of *Standard Dithizone Solution*, and shake the mixture for 30 s. Pass the chloroform layer through an acid-washed filter paper into a color-comparison tube.

Acceptance criteria: The color of the *Test preparation* does not exceed that of the *Standard solution* (NMT 10 ppm).

• **Alkalies and Alkaline Earths**

Sample solution: Mix 2.0 g with 50 mL of water, and add 10 mL of hydrochloric acid. Boil until the solution is clear, filter while hot, and wash the separated fatty acids with about 50 mL of hot water. Render the combined filtrate and washings alkaline with 6 N ammonium hydroxide. Add

www.webofpharma.com

ammonium sulfide TS to precipitate the zinc completely, dilute with water to 200 mL, mix, and filter.
Analysis: To 100 mL of the clear filtrate add 0.5 mL of sulfuric acid, evaporate to dryness, and ignite to constant weight.
Acceptance criteria: The weight of the residue does not exceed 10 mg (1.0%).

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in well-closed containers.

Zinc Sulfate

$ZnSO_4 \cdot xH_2O$
Sulfuric acid, zinc salt (1:1), hydrate;
Zinc sulfate (1:1) monohydrate 179.46
Zinc sulfate (1:1) heptahydrate 287.56
[7446-20-0].
Anhydrous 161.44
[7733-02-0].

DEFINITION
Zinc Sulfate contains one or seven molecules of water of hydration. The monohydrate contains NLT 89.0% and NMT 90.4% of zinc sulfate ($ZnSO_4$), corresponding to NLT 99.0% and NMT 100.5% of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$), and the heptahydrate contains NLT 55.6% and NMT 61.0% of zinc sulfate ($ZnSO_4$), corresponding to NLT 99.0% and NMT 108.7% of zinc sulfate heptahydrate ($ZnSO_4 \cdot 7H_2O$).

IDENTIFICATION
- **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩**:** Meets the requirements
- **B. IDENTIFICATION TESTS—GENERAL,** *Sulfate* ⟨191⟩**:** Meets the requirements

ASSAY
- **PROCEDURE**

Sample: An amount of Zinc Sulfate equivalent to 170 mg of zinc sulfate ($ZnSO_4$)
Analysis: Dissolve the *Sample* in 100 mL of water. Add 5 mL of ammonia–ammonium chloride buffer TS and 0.1 mL of eriochrome black TS, and titrate with 0.05 M edetate disodium VS until the solution is deep blue in color. Each mL of 0.05 M edetate disodium is equivalent to 8.072 mg of zinc sulfate ($ZnSO_4$).
Acceptance criteria
Monohydrate: 89.0%–90.4% of zinc sulfate ($ZnSO_4$), corresponding to 99.0%–100.5% of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$)
Heptahydrate: 55.6%–61.0% of zinc sulfate ($ZnSO_4$), corresponding to 99.0%–108.7% of zinc sulfate heptahydrate ($ZnSO_4 \cdot 7H_2O$)

IMPURITIES
- **ARSENIC,** *Method I* ⟨211⟩

Test preparation: Dissolve a portion equivalent to 215 mg of zinc sulfate ($ZnSO_4$) in 35 mL of water.
Acceptance criteria: NMT 14 ppm
- **LEAD** ⟨251⟩

Standard solution: Combine 5 mL of water, 0.50 mL of standard lead solution TS, and 10 mL of *Potassium Cyanide Solution* (1 in 10) in a color-comparison tube.
Test preparation: Dissolve an amount equivalent to 0.25 g of zinc sulfate ($ZnSO_4$) in 5 mL of water, and transfer the solution to a similar, matched color-comparison tube. Add 10 mL of *Potassium Cyanide Solution* (1 in 10), and allow the mixture to become clear.
Analysis: To the *Standard solution* and the *Test preparation* add 0.1 mL of sodium sulfide TS. Mix the contents of each tube, and allow to stand for 5 min.
Acceptance criteria: Viewed downward over a white surface, the *Test preparation* is not darker than the *Standard solution* (NMT 20 ppm of lead).
- **ALKALIES AND ALKALINE EARTHS**

Sample solution: Dissolve the equivalent of 1.12 g of zinc sulfate ($ZnSO_4$) in 150 mL of water contained in a 200-mL volumetric flask. Add sufficient ammonium sulfide TS to precipitate the zinc completely, and dilute with water to volume. Pass through a dry filter, and reject the first portion of the filtrate.
Analysis: To 100 mL of the *Sample solution* filtrate add a few drops of sulfuric acid, evaporate to dryness in a tared dish, and ignite to constant weight.
Acceptance criteria: The weight of the residue is NMT 5 mg (0.9%).

SPECIFIC TESTS
- **ACIDITY**

Sample solution: 28 mg/mL of zinc sulfate ($ZnSO_4$)
Acceptance criteria: The *Sample solution* is not colored pink by methyl orange TS.

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight containers.
- **LABELING:** The label indicates whether it is the monohydrate or the heptahydrate. Label any oral or parenteral preparations containing Zinc Sulfate to state the content of elemental zinc.

Zinc Sulfate Injection

DEFINITION
Zinc Sulfate Injection is a sterile solution of Zinc Sulfate in Water for Injection. It contains NLT 90.0% and NMT 110.0% of the labeled amount of zinc (Zn).

IDENTIFICATION
- **A. IDENTIFICATION TESTS—GENERAL,** *Zinc* ⟨191⟩ and *Sulfate* ⟨191⟩**:** Meets the requirements

ASSAY
- **PROCEDURE**

[NOTE—The *Standard solutions* and the *Sample solution* may be diluted quantitatively with water, if necessary, to obtain solutions of suitable concentrations adaptable to the linear or working range of the instrument.]
Sodium chloride solution: 0.9 mg/mL of sodium chloride in water
Standard stock solution A: 10 mg/mL of zinc in water prepared as follows. Transfer 3.11 g of zinc oxide to a 250-mL volumetric flask. Add 80 mL of 1 N sulfuric acid, warm to dissolve, and cool. Dilute with water to volume.
Standard stock solution B: 125 µg/mL of zinc in water, from *Standard stock solution A*
Standard solution A: Transfer 2.0 mL of the *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a 500-mL volumetric flask, and dilute with water (0.50 µg/mL of zinc).
Standard solution B: Transfer 3.0 mL of the *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a

www.webofpharma.com

500-mL volumetric flask, and dilute with water (0.75 µg/mL of zinc).
Standard solution C: Transfer 4.0 mL of the *Standard stock solution B* and 5 mL of *Sodium chloride solution* into a 500-mL volumetric flask, and dilute with water (1.0 µg/mL of zinc).
Sample solution: Transfer a volume of Injection, equivalent to 5 mg of zinc, to a 500-mL volumetric flask. Dilute with water to volume. Transfer 10.0 mL of this solution to a 100-mL volumetric flask. From the labeled amount of sodium chloride, if any, in the Injection, calculate the amount, in mg, of sodium chloride in the 10.0-mL portion and add sufficient *Sodium chloride solution* to bring the total sodium chloride content of the 100-mL volumetric flask to 0.9 mg. Dilute with water to volume.
Instrumental conditions
(See *Atomic Absorption Spectroscopy* ⟨852⟩.)
Mode: Atomic absorption spectrophotometry
Analytical wavelength: Zinc emission line at 213.8 nm
Lamp: Zinc hollow-cathode
Flame: Air–acetylene
Blank: Water
Analysis
Samples: *Standard solutions* and *Sample solution*
Plot the absorbances of the *Standard solutions* versus concentration, in µg/mL, of zinc, and draw the straight line best fitting the three plotted points. From the graph so obtained, determine the concentration, in µg/mL, of zinc in the *Sample solution*.
Calculate the percentage of zinc (Zn) in the Injection:

$$\text{Result} = (C_O/C_U) \times 100$$

C_O = concentration of zinc in the *Sample solution* as determined from the standard curve (observed concentration, µg/mL)
C_U = nominal concentration of the *Sample solution*, based on the label claim of the Injection and the dilution factor (calculated concentration, µg/mL)

Acceptance criteria: 90.0%–110.0%

IMPURITIES
- **Particulate Matter in Injections** ⟨788⟩: Meets the requirements for small-volume injections

SPECIFIC TESTS
- **Bacterial Endotoxins Test** ⟨85⟩: It contains NMT 25.0 USP Endotoxin Units/mg of zinc.
- **pH** ⟨791⟩: 2.0–4.0
- **Other Requirements:** It meets the requirements in *Injections and Implanted Drug Products* ⟨1⟩.

ADDITIONAL REQUIREMENTS
- **Packaging and Storage:** Preserve in single-dose or multiple-dose containers.
- **Labeling:** Label the Injection in terms of its content of anhydrous zinc sulfate ($ZnSO_4$) and in terms of its content of elemental zinc. Label it to state that it is not intended for direct injection but is to be added to other intravenous solutions.

Zinc Sulfate Ophthalmic Solution

DEFINITION
Zinc Sulfate Ophthalmic Solution is a sterile solution of Zinc Sulfate in Water rendered isotonic by the addition of suitable salts. It contains NLT 95.0% and NMT 105.0% of the labeled amount of zinc sulfate ($ZnSO_4$).

IDENTIFICATION
- **A. Identification Tests—General** ⟨191⟩, *Chemical Identification Tests, Sulfate*: Meets the requirements
- **B.** The retention time of the zinc peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

Change to read:

- **Procedure**

Proceed as directed in ▲*Zinc Determination* ⟨591⟩, *Ion Chromatographic Method*▲ (CN 1-May-2020).
Diluent: 0.2% (w/v) hydrochloric acid
Standard stock solution: Prepare as directed in the chapter.
Standard solution: 20 µg/mL of USP Zinc Oxide RS in *Diluent* from the *Standard stock solution*
Sample solution: Nominally 40 µg/mL of zinc sulfate from a suitable volume of Ophthalmic Solution in *Diluent*
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zinc sulfate ($ZnSO_4$) in the portion of Ophthalmic Solution taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of zinc from the *Sample solution*
r_S = peak response of zinc from the *Standard solution*
C_S = concentration of USP Zinc Oxide RS in the *Standard solution* (µg/mL)
C_U = nominal concentration of zinc sulfate in the *Sample solution* (µg/mL)
M_{r1} = molecular weight of zinc sulfate, 161.44
M_{r2} = molecular weight of zinc oxide, 81.38

Acceptance criteria: 95.0%–105.0%

SPECIFIC TESTS
- **Sterility Tests** ⟨71⟩: Meets the requirements
- **pH** ⟨791⟩: 5.8–6.2, or if it contains sodium citrate, 7.2–7.8
- **Other Requirements:** It meets the requirements in *Ophthalmic Products—Quality Tests* ⟨771⟩.

ADDITIONAL REQUIREMENTS
- **Packaging and Storage:** Preserve in tight containers.

Zinc Sulfate Oral Solution

DEFINITION
Zinc Sulfate Oral Solution contains NLT 90.0% and NMT 110.0% of the labeled amount of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$). It may contain one or more suitable flavors and sweeteners.

IDENTIFICATION
- **Identification Tests—General,** *Zinc* ⟨191⟩ and *Sulfate* ⟨191⟩: Meets the requirements

USP Monographs

www.webofpharma.com

ASSAY

• **PROCEDURE**

Sample: An accurately measured volume of Oral Solution, equivalent to 99 mg of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$)

Blank: 60 mL of water and 10 mL of ammonia–ammonium chloride buffer TS. Add 0.1 mL of eriochrome black TS.

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.05 M edetate disodium VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* to a 250-mL flask. Add 50 mL of water and 10 mL of ammonia–ammonium chloride buffer TS and 0.3 mL of eriochrome black TS. Titrate with *Titrant* to a green endpoint.

Calculate the percentage of the labeled amount of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$) in the portion of Oral Solution taken:

$$\text{Result} = \{[(V_S - V_B) \times M \times F]/W\} \times 100$$

V_S = *Titrant* volume consumed by the *Sample* (mL)
V_B = *Titrant* volume consumed by the *Blank* (mL)
M = actual molarity of the *Titrant* (mM/mL)
F = equivalency factor, 179.46 mg/mM
W = nominal amount of zinc sulfate monohydrate in the *Sample* (mg)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS

• **SPECIFIC GRAVITY** ⟨841⟩**:** 1.18–1.24

• **PH** ⟨791⟩**:** 2.5–4.5

ADDITIONAL REQUIREMENTS

• **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store in a cool, dry place protected from light.

• **LABELING:** Label the Oral Solution in terms of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$) and in terms of elemental zinc.

Zinc Sulfate Tablets

DEFINITION

Zinc Sulfate Tablets contain NLT 95.0% and NMT 105.0% of the labeled amount of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$). It may contain one or more suitable flavors and sweeteners.

IDENTIFICATION

• **A. SULFATE**

Sample solution: Dissolve a portion of powdered Tablets, nominally equivalent to 5 g of zinc sulfate, in 100 mL of water, filter in a Buchner funnel under vacuum, and use the filtrate.

Hydrochloric acid solution: Dilute 20 g of hydrochloric acid with water to 100 mL.

Barium chloride solution: 61 mg/mL of barium chloride

Analysis: To 5 mL of the *Sample solution* add 1 mL of *Hydrochloric acid solution* and 1 mL of *Barium chloride solution*.

Acceptance criteria: A white precipitate is formed.

• **B. ZINC**

Sample solution: Proceed as directed in *Identification* test *A*.

Sodium hydroxide solution: 420 mg/mL of sodium hydroxide

Ammonium chloride solution: 107 mg/mL of ammonium chloride

Glycerin solution: A mixture of glycerin and water (85:15)

Sodium sulfide solution: Dissolve 12 g of sodium sulfide with heating in a 45-mL mixture of *Glycerin solution* and water (29:10). Allow to cool, and dilute with the same mixture of solvents to 100 mL. The solution should be colorless.

Analysis: To 5 mL of the *Sample solution* add 0.2 mL of *Sodium hydroxide solution*.

Acceptance criteria: A white precipitate is formed. When an additional 2 mL of *Sodium hydroxide solution* is added, the precipitate dissolves. When 10 mL of *Ammonium chloride solution* is added, the solution remains clear. When 0.1 mL of *Sodium sulfide solution* is added, a white precipitate is formed.

ASSAY

• **PROCEDURE**

Sample: Portion of the powder, equivalent to 90 mg of zinc (about 247 mg of zinc sulfate monohydrate), from NLT 20 finely powdered Tablets

Blank: Proceed as directed in the *Analysis*, but without the *Sample*.

Titrimetric system

(See *Titrimetry* ⟨541⟩.)

Mode: Direct titration

Titrant: 0.1 M edetate disodium VS

Endpoint detection: Visual

Analysis: Transfer the *Sample* to a suitable flask or beaker. Dissolve in 15 mL of dilute acetic acid, and sonicate for 15 min. Add 200 mL of water and 50 mg of xylenol orange triturate, and mix. [NOTE—For preparation of xylenol orange triturate, triturate 1 part of xylenol orange with 99 parts of potassium nitrate. Xylenol orange triturate, 1% is also commercially available.[1]] Neutralize the solution with 2 g of methenamine until the solution is a violet-pink color. Titrate with *Titrant* until the solution is yellow. [NOTE—Add the titrant slowly near the endpoint with expedited stirring.] Perform a *Blank* determination.

Calculate the percentage of the labeled amount of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$) in the *Sample* taken:

$$\text{Result} = \{[(V_S - V_B) \times M \times F]/W\} \times 100$$

V_S = *Titrant* volume consumed by the *Sample* (mL)
V_B = *Titrant* volume consumed by the *Blank* (mL)
M = actual molarity of the *Titrant* (mM/mL)
F = equivalency factor, 179.46 mg/mM
W = nominal amount of zinc sulfate monohydrate in the *Sample* (mg)

Acceptance criteria: 95.0%–105.0%

PERFORMANCE TESTS

• **DISINTEGRATION** ⟨701⟩

Time: 60 s

Acceptance criteria: Meet the requirements

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩**:** Meet the requirements

ADDITIONAL REQUIREMENTS

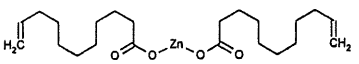
• **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store at controlled room temperature.

• **LABELING:** Label the Tablets in terms of zinc sulfate monohydrate ($ZnSO_4 \cdot H_2O$) and in terms of elemental zinc.

[1] Ricca Chemical Company, part number 9395-100.

www.webofpharma.com

Zinc Sulfide Topical Suspension



DEFINITION
Prepare Zinc Sulfide Topical Suspension as follows.

Zinc Sulfate	40 g
Sulfurated Potash	40 g
Purified Water, a sufficient quantity to make	1000 mL

Dissolve the *Zinc Sulfate* and the *Sulfurated Potash* separately, each in 450 mL of *Purified Water*, and filter each solution. Add the sulfurated potash solution slowly to the zinc sulfate solution with constant stirring. Then add sufficient *Purified Water* to bring to final volume, and mix.
[NOTE—Prepare the Topical Suspension fresh, and shake it thoroughly before dispensing.]

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Dispense in tight containers.

Zinc Undecylenate

$C_{22}H_{38}O_4Zn$ 431.91
10-Undecenoic acid, zinc(2+) salt.
Zinc 10-undecenoate [557-08-4].

» Zinc Undecylenate contains not less than 98.0 percent and not more than 102.0 percent of $C_{22}H_{38}O_4Zn$, calculated on the dried basis.

Packaging and storage—Preserve in well-closed containers.

Identification—
A: Acidify about 5 g with 25 mL of 2 N sulfuric acid, add 20 mL of water, and extract in a separator with two 25-mL portions of ether. Evaporate the ether solution until the odor of ether no longer is perceptible. Add potassium permanganate TS dropwise to a 1-mL portion of this residue: the permanganate color is discharged.
B: A 3-mL portion of the residue of undecylenic acid obtained in *Identification* test *A* responds to *Identification* test *B* under *Undecylenic Acid*.
C: Dissolve about 100 mg in a mixture of 10 mL of water and 1 mL of ammonium hydroxide, and add a few drops of sodium sulfide TS: a white, flocculent precipitate of zinc sulfide is formed.
Loss on drying ⟨731⟩—Dry it at 105° for 2 hours: it loses not more than 1.25% of its weight.
Alkalies and alkaline earths—Boil 1.50 g with a mixture of 50 mL of water and 10 mL of hydrochloric acid, filter while hot, and wash the separated acid with about 50 mL of hot water. Render the combined filtrate and washings alkaline with 6 N ammonium hydroxide, add ammonium sulfide TS to precipitate the zinc completely, dilute with water to 200 mL, mix, and filter. To 100 mL of the clear filtrate add 0.5 mL of sulfuric acid, evaporate to dryness, and ignite over a low flame to constant weight: the weight of the residue does not exceed 7.5 mg (1.0%).

Assay—Boil 50.0 mL of 0.1 N sulfuric acid VS with about 1 g of Zinc Undecylenate, accurately weighed, for 10 minutes, or until the undecylenic acid layer is clear, adding water, as necessary, to maintain the original volume. Cool, and transfer the mixture, with the aid of water, to a 500-mL separator. Dilute with water to about 250 mL, and extract with two 100-mL portions of solvent hexane. Wash the combined extracts with water until the last washing is neutral to litmus, add the washings to the original water layer, and evaporate on a steam bath to about 100 mL. Cool, add 3 drops of methyl orange TS, and titrate the excess sulfuric acid with 0.1 N sodium hydroxide VS. Perform a blank determination (see *Residual Titrations* under *Titrimetry* ⟨541⟩). Each mL of 0.1 N sulfuric acid is equivalent to 21.60 mg of $C_{22}H_{38}O_4Zn$.

Ziprasidone Capsules

DEFINITION
Ziprasidone Capsules contain an amount of ziprasidone hydrochloride equivalent to NLT 90.0% and NMT 110.0% of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$).

IDENTIFICATION
- **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**

Buffer: 0.3% (v/v) of triethylamine in water
Mobile phase: Acetonitrile and *Buffer* (35:65). Adjust with glacial acetic acid to a pH of 6.0.
Diluent: Acetonitrile, water, and glacial acetic acid (70:30:5)
Standard stock solution: 1.0 mg/mL of USP Ziprasidone Hydrochloride RS in *Diluent*
Standard solution: 0.2 mg/mL of USP Ziprasidone Hydrochloride RS from the *Standard stock solution* in *Mobile phase*
Sample stock solution: Nominally 1 mg/mL of ziprasidone prepared as follows. Empty the contents of NLT 20 Capsules into a container. Blend the contents. Transfer an amount of the contents, equivalent to NLT 50 mg of ziprasidone, to a suitable volumetric flask. Dissolve the contents in 60% of the flask volume of *Diluent*. Sonicate for NLT 5 min. Dilute with *Diluent* to volume. Pass a portion of the solution through a suitable filter of 0.45-µm pore size and use the filtrate to prepare the *Sample solution*.
Sample solution: Nominally 0.2 mg/mL of ziprasidone prepared from the filtered *Sample stock solution* and *Mobile phase*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm. For *Identification B*, a diode array detector may be used in the wavelength range of 200–300 nm.
Column: 4.6-mm × 15-cm; 5-µm packing L1
Flow rate: 2.0 mL/min
Injection volume: 20 µL
Run time: 1.5 times the retention time of ziprasidone
System suitability
Sample: *Standard solution*

USP Monographs

www.webofpharma.com

Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of ziprasidone from the *Sample solution*
r_S = peak response of ziprasidone from the *Standard solution*
C_S = concentration of USP Ziprasidone Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of ziprasidone in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of ziprasidone free base, 412.94
M_{r2} = molecular weight of ziprasidone hydrochloride; 467.41 for the monohydrate, 449.40 for the anhydrous form

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

Change to read:

• **DISSOLUTION** ⟨711⟩
Test 1
Tier 1
Phosphate buffer, pH 7.5: Dissolve 7.8 g of monobasic sodium phosphate dihydrate and 20 g of sodium dodecyl sulfate in 1 L water. Sonicate to dissolve and adjust with phosphoric acid or sodium hydroxide to a pH of 7.5.
Medium: *Phosphate buffer, pH 7.5*; 900 mL
Apparatus 2: 75 rpm. Use a suitable sinker, if necessary.
Time: 45 min
Buffer: 0.3% (v/v) of triethylamine in water. Adjust with glacial acetic acid to a pH of 6.0.
Mobile phase: Acetonitrile and *Buffer* (45:55)
Diluent: Acetonitrile, water, and glacial acetic acid (70:30:5)
Standard stock solution: 0.24 mg/mL of USP Ziprasidone Hydrochloride RS prepared as follows. Dissolve a suitable amount of USP Ziprasidone Hydrochloride RS in a suitable volumetric flask first in 60% of the flask volume of *Diluent*, and then dilute with *Diluent* to volume.
Standard solution: 0.024 mg/mL of USP Ziprasidone Hydrochloride RS in *Medium* from the *Standard stock solution*
Sample solution: Pass a portion of the solution through a suitable filter of 0.45-µm pore size. Dilute with *Medium* to a concentration similar to that of the *Standard solution*.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 15-cm; 5-µm packing L1
Flow rate: 1.5 mL/min
Injection volume: 10 µL
Run time: 1.5 times the retention time of ziprasidone
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 1.5
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of ziprasidone from the *Sample solution*
r_S = peak response of ziprasidone from the *Standard solution*
C_S = concentration of USP Ziprasidone Hydrochloride RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL
M_{r1} = molecular weight of ziprasidone free base, 412.94
M_{r2} = molecular weight of ziprasidone hydrochloride; 467.41 for the monohydrate, 449.40 for the anhydrous form

Tolerances: NLT 75% (*Q*) of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) is dissolved.
If the above tolerance cannot be met, proceed to *Tier 2*.
Tier 2
Solution A: Dissolve 7.8 g of monobasic sodium phosphate dihydrate in 1 L of water. Sonicate to dissolve and adjust with phosphoric acid or sodium hydroxide to a pH of 7.5. Dissolve 10 g of pancreatin in the resulting solution.
Solution B: Dissolve 7.8 g of monobasic sodium phosphate dihydrate in 1 L of water. Adjust with phosphoric acid or sodium hydroxide to a pH of 7.5. Dissolve 90 g of sodium dodecyl sulfate in the resulting solution. Sonicate to dissolve.
Medium: Transfer 700 mL of *Solution A* to the dissolution vessel and equilibrate at 37° for 15 min. Add 200 mL of *Solution B*; 900 mL.
Apparatus 2: 75 rpm. Use a suitable sinker, if necessary.
Time: 45 min
Analyze the *Sample solution* using the liquid chromatographic procedure described in *Tier 1*.
Tolerances: NLT 75% (*Q*) of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) is dissolved.
Test 2: If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 2*.
Tier 1
Medium: 2% sodium lauryl sulfate in pH 7.5 phosphate buffer (dissolve 6.9 g of monobasic sodium phosphate monohydrate and 1.6 g of sodium hydroxide in 900 mL of water, adjust with 1 N sodium hydroxide to a pH of 7.5 and dilute with water to 1000 mL); 900 mL
Apparatus 2: 75 rpm. Use a suitable sinker, if necessary.
Time: 60 min
Tier 2
Medium A: pH 7.5 phosphate buffer (dissolve 6.9 g of monobasic sodium phosphate monohydrate and 1.6 g of sodium hydroxide in 900 mL of water, adjust with 1 N sodium hydroxide to a pH of 7.5 and dilute with water to 1000 mL) with 1% pancreatin; 700 mL
Medium B: pH 7.5 phosphate buffer with 9% of sodium lauryl sulfate; 200 mL
Apparatus 2: 75 rpm. Use a suitable sinker, if necessary.
Time: 15 min for *Medium A*; 45 min for *Medium A* with the addition of *Medium B*

www.webofpharma.com

Solution A: Dissolve 2.7 g of monobasic sodium phosphate monohydrate in 1 L of water. Adjust with 1 N sodium hydroxide to a pH of 6.0.
Mobile phase: Acetonitrile and *Solution A* (50:50)
Diluent: Acetonitrile and water (50:50)
Standard stock solution: 0.48 mg/mL of USP Ziprasidone Hydrochloride RS in *Diluent*
Standard solution: (*L*/900) mg/mL of USP Ziprasidone Hydrochloride RS in *Medium* from *Standard stock solution*, where *L* is the label claim of ziprasidone in mg/Capsules
Sample solution: Pass a portion of the solution through a suitable filter of 0.45-µm pore size.
Procedure: Perform the test using the conditions in *Tier 1*. In the presence of cross-linking repeat the test with new Capsules using the conditions in *Tier 2* as follows. After 15 min with 700 mL of *Medium A*, stop the dissolution bath and timer and add 200 mL of *Medium B* pre-equilibrated at 37 ± 0.5°. Restart the bath and timer, and continue the dissolution for an additional 45 min.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 3.9-mm × 15-cm; 5-µm packing L1
Column temperature: 40°
Flow rate: 1.5 mL/min
Injection volume: 20 µL
Run time: 1.8 times the retention time of ziprasidone
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of ziprasidone from the *Sample solution*
r_S = peak response of ziprasidone from the *Standard solution*
C_S = concentration of USP Ziprasidone Hydrochloride RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL
M_{r1} = molecular weight of ziprasidone, 412.94
M_{r2} = molecular weight of ziprasidone hydrochloride; 467.41 for the monohydrate form, 449.40 for the anhydrous form

Tolerances: NLT 75% (*Q*) of the labeled amount of ziprasidone ($C_{21}H_{21}ClN_4OS$) is dissolved.

▲**Test 3:** If the product complies with this test, the labeling indicates that the product meets USP *Dissolution Test 3*.
Tier 1
Medium: 2% sodium lauryl sulfate in pH 7.5 phosphate buffer (6.9 g/L of monobasic sodium phosphate pH adjusted with 5 N sodium hydroxide); 900 mL
Apparatus 2: 75 rpm. Use a suitable sinker.
Time: 60 min

Tier 2
Medium A: pH 7.5 phosphate buffer (6.9 g/L of monobasic sodium phosphate pH adjusted with 5 N sodium hydroxide) with 1% pancreatin; 700 mL
Medium B: pH 7.5 phosphate buffer (6.9 g/L of monobasic sodium phosphate pH adjusted with 5 N sodium hydroxide) with 9% sodium lauryl sulfate; 200 mL
Apparatus 2: 75 rpm. Use a suitable sinker.
Time: 15 min for *Medium A*; 45 min for *Medium A* with the addition of *Medium B*
Buffer: 6.8 g/L g of monobasic sodium phosphate. To each liter of this solution, add 1 mL of triethylamine and adjust with phosphoric acid to a pH of 3.0.
Mobile phase: Acetonitrile and *Buffer* (30:70)
Diluent
Diluent 1: Acetonitrile and methanol (35:65)
Diluent 2
Tier 1: *Medium*
Tier 2: *Medium A* and *Medium B* (70:20)
Standard stock solution 1: 0.5 mg/mL of USP Ziprasidone Hydrochloride RS in *Diluent 1*
Standard stock solution 2: Prepare solutions of USP Ziprasidone Hydrochloride RS in *Diluent 2* at concentrations given in *Table 1* as follows. Transfer a suitable volume of *Standard stock solution* into a suitable volumetric flask and dilute with *Diluent 2* to volume.

Table 1

Strength of Ziprasidone Capsules (mg)	Concentration of Ziprasidone (mg/mL)
20	0.025
40	0.050
60	0.080
80	0.100

Standard solution: Transfer 5 mL of *Standard stock solution 2* to a 25-mL volumetric flask and dilute with *Mobile phase* to volume.
Sample solution: Centrifuge a portion of the solution under test. Dilute the supernatant with *Mobile phase* to volume to obtain nominal concentration of ziprasidone similar to that of the *Standard solution*. Pass through a suitable filter of 0.45-µm pore size. [NOTE—A centrifuge speed of 4000 rpm for 10 min may be suitable.]
Procedure: Perform the test using the conditions in *Tier 1*. In the presence of cross-linking repeat the test with new Capsules using the conditions in *Tier 2* as follows. After 15 min with 700 mL of *Medium A*, stop the dissolution bath and timer and add 200 mL of *Medium B* pre-equilibrated at 37 ± 0.5°. Restart the bath and timer, and continue the dissolution for an additional 45 min.
Chromatographic system

IMPURITIES

• **RESIDUE ON IGNITION** ⟨281⟩: NMT 0.2%

• **LIMIT OF TETRAHYDROFURAN**

[NOTE—Perform this test only if tetrahydrofuran is likely to be present as the result of the manufacturing process.]

Standard solution: 0.05 mg/mL of tetrahydrofuran in dimethyl sulfoxide. Transfer 4 mL of this solution to a 20-mL headspace vial, and seal.

Sample solution: Transfer 40 mg of Ziprasidone Hydrochloride and 4.0 mL of dimethyl sulfoxide to a 20-mL headspace vial, seal, and mix.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: GC with headspace injector

Detector: Flame ionization

Column: 30-m × 0.32-mm fused silica; coated with a 1.8-µm film of phase G43

Temperatures

Injection port: 180°

Detector: 260°

Column: See *Table 1*.

Table 1

Initial Temperature (°)	Temperature Ramp (°/min)	Final Temperature (°)	Hold Time at Final Temperature (min)
40	0	40	5
40	2	90	0
90	30	225	2

Carrier gas: Helium

Flow rate: 1.6 mL/min

Injection volume: 2 mL

Injection type: Headspace; split ratio, 30:1

Vial treatment: Maintain at 105° for 60 min prior to injection

System suitability

Sample: *Standard solution*

Suitability requirements

Relative standard deviation: NMT 5%

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of tetrahydrofuran in the portion of Ziprasidone Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of tetrahydrofuran from the *Sample solution*

r_S = peak response of tetrahydrofuran from the *Standard solution*

C_S = concentration of tetrahydrofuran in the *Standard solution* (mg/mL)

C_U = concentration of Ziprasidone Hydrochloride in the *Sample solution* (mg/mL)

Acceptance criteria: NMT 0.4% of tetrahydrofuran

• **ORGANIC IMPURITIES**

Buffer: 0.05 M monobasic potassium phosphate in water

Solution A: Methanol and *Buffer* (33:67). Adjust with phosphoric acid to a pH of 3.0.

Solution B: Acetonitrile, methanol, and *Buffer* (55:5:40). Adjust with potassium hydroxide TS to a pH of 6.0.

Mobile phase: See *Table 2*.

Table 2

Time (min)	Solution A (%)	Solution B (%)
0	100	0
15	100	0
20	85	15
30	85	15
40	55	45
55	40	60
65	25	75
70	20	80
71	100	0
75	100	0

Diluent: Acetonitrile, methanol, and water (40:10:50). Adjust with phosphoric acid to a pH of 2.5.

System suitability solution: 0.5 mg/mL of USP Ziprasidone Hydrochloride RS and 0.05 mg/mL each of USP Ziprasidone Related Compound A RS, USP Ziprasidone Related Compound B RS, USP Ziprasidone Related Compound C RS, USP Ziprasidone Related Compound D RS, and USP Ziprasidone Related Compound F RS in *Diluent*. [NOTE—Ziprasidone related compound F is stable for 6 h at 10°.]

Standard solution: 0.001 mg/mL of USP Ziprasidone Hydrochloride RS and 0.002 mg/mL each of USP Ziprasidone Related Compound A RS, USP Ziprasidone Related Compound B RS, USP Ziprasidone Related Compound C RS, and USP Ziprasidone Related Compound D RS in *Diluent*

Sample solution: 1.0 mg/mL of Ziprasidone Hydrochloride in *Diluent*. [NOTE—Because ziprasidone related compound F is stable only for 6 h at 10°, it is recommended that the freshly prepared *Sample solution* be analyzed.]

Chromatographic system

Tailing factor: NMT 1.5 for ziprasidone, *Standard solution*

Relative standard deviation: NMT 5.0% for ziprasidone, ziprasidone related compound B, ziprasidone related compound C, and ziprasidone related compound D, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of each specified impurity in the portion of Ziprasidone Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (M_{r1}/M_{r2}) \times 100$$

www.webofpharma.com

r_U = peak response of each specified impurity from the *Sample solution*
r_S = peak response of the corresponding specified impurity from the *Standard solution*
C_S = concentration of the corresponding specified impurity Reference Standard in the *Standard solution* (mg/mL)
C_U = concentration of Ziprasidone Hydrochloride in the *Sample solution* (mg/mL)
M_{r1} = molecular weight of ziprasidone free base, 412.94
M_{r2} = molecular weight of ziprasidone hydrochloride, 467.41 for the monohydrate, 449.40 for the anhydrous form

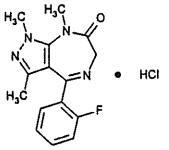
Calculate the percentage of chloroindolinone, ziprasidone related compound F, and any individual unspecified impurity in the portion of Ziprasidone Hydrochloride taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times (M_{r1}/M_{r2}) \times 100$$

r_U = peak response of chloroindolinone, ziprasidone related compound F, or any unspecified impurity from the *Sample solution*
r_S = peak response of ziprasidone from the *Standard solution*
C_S = concentration of USP Ziprasidone Hydrochloride RS in the *Standard solution* (mg/mL)
C_U = concentration of Ziprasidone Hydrochloride in the *Sample solution* (mg/mL)
F = relative response factor for chloroindolinone or ziprasidone related compound F or any individual unspecified impurity from *Table 3*
M_{r1} = molecular weight of ziprasidone free base, 412.94
M_{r2} = molecular weight of ziprasidone hydrochloride, 467.41 for the monohydrate, 449.40 for the anhydrous form

Acceptance criteria: See *Table 3*. The reporting threshold is 0.05% for any peak area in the *Sample solution*.

Table 3



Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Ziprasidone related compound A	0.22	—	0.1
Chloroindolinone[a]	0.59	0.47	0.15
Ziprasidone related compound B	0.70	—	0.2
Ziprasidone related compound F	0.84	0.83	0.2
Ziprasidone	1.0	—	—
Ziprasidone related compound C	1.84	—	0.2
Ziprasidone related compound D	2.18	—	0.2
Any individual unspecified impurity	—	1.0	0.1
Total impurities	—	—	0.5

[a] 6-Chloroindolin-2-one. A process impurity specific to a manufacturing process; may not be present in all manufacturing processes.

SPECIFIC TESTS
- **WATER DETERMINATION** ⟨921⟩, *Method I*
  Monohydrate: 3.7%–5.0%
  Anhydrous: NMT 2.0%

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Preserve in tight, light-resistant containers, and store at room temperature.
- **LABELING:** If this is an anhydrous form, it is so labeled.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Ziprasidone Hydrochloride RS
  USP Ziprasidone Related Compound A RS
  3-(Piperazin-1-yl)benzo[*d*]isothiazole monohydrochloride.
  $C_{11}H_{13}N_3S \cdot HCl$ 255.77
  USP Ziprasidone Related Compound B RS
  5-{2-[4-(Benzo[*d*]isothiazol-3-yl)piperazin-1-yl]ethyl}-6-chloroindoline-2,3-dione.
  $C_{21}H_{19}ClN_4O_2S$ 426.92
  USP Ziprasidone Related Compound C RS
  5,5′-Bis{2-[4-(benzo[*d*]isothiazol-3-yl)piperazin-1-yl] ethyl}-6,6′-dichloro-3-hydroxy-3,3′-biindoline-2,2′-dione.
  $C_{42}H_{40}Cl_2N_8O_3S_2$ 839.85
  USP Ziprasidone Related Compound D RS
  3-(Benzo[*d*]isothiazol-3-yl)-5-{2-[4-(benzo[*d*]isothiazol-3-yl)piperazin-1-yl]ethyl}-6-chloroindolin-2-one.
  $C_{28}H_{24}ClN_5OS_2$ 546.11
  USP Ziprasidone Related Compound F RS
  2-(2-Amino-5-{2-[4-(benzo[*d*]isothiazol-3-yl)piperazin-1-yl]ethyl}-4-chlorophenyl)acetic acid.
  $C_{21}H_{23}ClN_4O_2S$ 430.95

Zolazepam Hydrochloride

$C_{15}H_{15}FN_4O \cdot HCl$ 322.77
Pyrazolo[3,4-*e*][1,4]diazepin-7(1*H*)-one, 4-(2-fluorophenyl)-6,8-dihydro-1,3,8-trimethyl-, monohydrochloride.
4-(*o*-Fluorophenyl)-6,8-dihydro-1,3,8-trimethylpyrazolo [3,4-*e*][1,4]diazepin-7(1*H*)-one monohydrochloride [33754-49-3].

» Zolazepam Hydrochloride contains not less than 97.0 percent and not more than 103.0 percent of $C_{15}H_{15}FN_4O \cdot HCl$.

Packaging and storage—Preserve in tight containers.
Labeling—Label it to indicate that it is for veterinary use only. Where it is intended for use in preparing injectable dosage forms, the label states that it is sterile or must be subjected to further processing during the preparation of injectable dosage forms.
USP Reference standards ⟨11⟩—
USP Zolazepam Hydrochloride RS
Clarity of solution—Dissolve 2.0 g of it in 10 mL of water: the solution is clear.

www.webofpharma.com

Identification—

Change to read:

A: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Infrared Spectroscopy: 197K*▲ (CN 1-May-2020).

Change to read:

B: ▲*Spectroscopic Identification Tests* ⟨197⟩, *Ultraviolet-Visible Spectroscopy: 197U*▲ (CN 1-May-2020)—
Solution: 0.015 mg per mL.
Medium: 0.1 N hydrochloric acid.
Absorptivities at 223 nm do not differ by more than 3.0%.

C: It responds to the tests for *Chloride* ⟨191⟩.

Bacterial Endotoxins Test ⟨85⟩ —Where the label states that Zolazepam Hydrochloride is sterile or must be subjected to further processing during the preparation of injectable dosage forms, it contains not more than 0.07 USP Endotoxin Unit per mg of zolazepam.

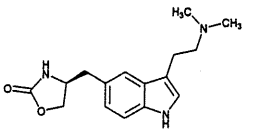
Sterility Tests ⟨71⟩ —Where the label states that Zolazepam Hydrochloride is sterile, it meets the requirements when tested as directed for *Membrane Filtration* under *Test for Sterility of the Product to be Examined.*

pH ⟨791⟩**:** between 1.5 and 3.5, in a solution (1 in 10).

Loss on drying ⟨731⟩—Dry it at 105° for 4 hours: it loses not more than 1.0% of its weight.

Residue on ignition ⟨281⟩**:** not more than 0.5%.

Chromatographic purity—



Modified Dragendorff's reagent—Dissolve 1.7 g of bismuth subnitrate in 80 mL of water and 20 mL of glacial acetic acid, warming, if necessary. Cool, add 100 mL of potassium iodide solution (1 in 2), and mix. Refrigerate this stock solution for prolonged storage. For use, dilute 10 mL of this stock solution with water to 100 mL, add 10 mL of glacial acetic acid, and mix. Then add 120 mg of iodine crystals, and shake until the iodine has completely dissolved. Store refrigerated, and discard after 2 weeks.

Procedure—Prepare a test solution of Zolazepam Hydrochloride in methanol containing 100 mg per mL. Prepare a Standard solution in methanol containing 2.0 mg of USP Zolazepam Hydrochloride RS per mL. Prepare a thin-layer chromatographic plate (see *Chromatography* ⟨621⟩) coated with a 0.25-mm layer of chromatographic silica gel mixture. Separately apply 5 µL of the test solution and the Standard solution to the plate, and allow the spots to dry. Place the plate in a saturated chamber containing a solvent system consisting of a mixture of toluene, acetone, and ammonium hydroxide (75:18:7), and lined with filter paper. Develop the chromatogram until the solvent front has moved about three-fourths of the length of the plate. Remove the plate from the chamber, mark the solvent front, allow the plate to air-dry. Spray the plate with *Modified Dragendorff's reagent*, and examine the plate: no individual secondary spot observed in the chromatogram obtained from the test solution is greater in size or intensity than the principal spot observed in the chromatogram obtained from the Standard solution, corresponding to 2%, and the total of any such spots observed does not exceed 3%.

Chloride content—Transfer about 400 mg of it, accurately weighed, to a conical flask, add 5 mL of water, 5 mL of glacial acetic acid, and 50 mL of methanol, and swirl to dissolve. Add 1 drop of eosin Y TS, and titrate with 0.1 N silver nitrate VS to the endpoint when the granular precipitate first turns to a permanent pink color. Each mL of 0.1 N silver nitrate is equivalent to 3.545 mg of chloride: between 10.5% and 11.5% is found.

Assay—Transfer about 480 mg of Zolazepam Hydrochloride, accurately weighed, to a conical flask, add 70 mL of glacial acetic acid, 10 mL of mercuric acetate TS, and swirl to dissolve. Titrate with 0.1 N perchloric acid VS, determining the endpoint potentiometrically. Perform a blank determination, and make any necessary correction (see *Titrimetry* ⟨541⟩). Each mL of 0.1 N perchloric acid is equivalent to 32.28 mg of $C_{15}H_{15}FN_4O \cdot HCl$.

Zolmitriptan

$C_{16}H_{21}N_3O_2$ 287.36

2-Oxazolidinone, 4-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-, (*S*)-;
(*S*)-4-[[3-[2-(Dimethylamino)ethyl]indol-5-yl]methyl]-2-oxazolidinone [139264-17-8].

DEFINITION

Zolmitriptan contains NLT 97.0% and NMT 102.0% of zolmitriptan ($C_{16}H_{21}N_3O_2$), calculated on the anhydrous and solvent-free basis.

IDENTIFICATION

Zolmitriptan Nasal Spray

DEFINITION
Zolmitriptan Nasal Spray is an aqueous solution of zolmitriptan, supplied in a form suitable for nasal administration. It contains NLT 90.0% and NMT 110.0% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS ⟨197⟩, *Infrared Spectroscopy*: 197K▲** (CN 1-May-2020)

Standard: Add 300 µL of a solution of 2.5 mg/mL of USP Zolmitriptan RS in methylene chloride to about 200 mg of

USP Monographs

www.webofpharma.com

dried potassium bromide. Allow the mixture to dry. Grind the residue.

Sample: Add the contents of NLT 5 units of Nasal Spray to a container with 3 mL of 0.1 M sodium hydroxide. Extract into a sufficient volume of methylene chloride to obtain a final concentration of about 1.0–2.5 mg/mL of zolmitriptan in the extract. Dry the extract over anhydrous sodium sulfate. Add a suitable volume of the extract containing about 0.8 mg of zolmitriptan to about 200 mg of dried potassium bromide. Allow the mixture to dry. Grind the residue.

Acceptance criteria: Meets the requirements

- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Diluent: 0.02 M hydrochloric acid

Mobile phase: Acetonitrile and water (135:865). Add 1 mL of trifluoroacetic acid and 0.25 mL of triethylamine to each liter of the mixture.

Standard stock solution: 0.5 mg/mL of USP Zolmitriptan RS in *Diluent*

Standard solution: 0.025 mg/mL of USP Zolmitriptan RS from *Standard stock solution* and *Mobile phase*

System suitability stock solution: 0.005 mg/mL each of USP Zolmitriptan Related Compound E RS and USP Zolmitriptan Related Compound G RS in *Mobile phase*

System suitability solution: Dilute 1 mL of *System suitability stock solution* with 9 mL of *Standard solution*.

Sample stock solution: Nominally 0.5 mg/mL of zolmitriptan prepared as follows. Discharge the contents of NLT 10 units of Nasal Spray to a suitable container. Transfer an amount of the composite solution containing about 5 mg of zolmitriptan to a 10-mL volumetric flask. Dilute with *Diluent* to volume.

Sample solution: Nominally 0.025 mg/mL of zolmitriptan from *Sample stock solution* in *Mobile phase*

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector: UV 210 nm

Column: 4.6-mm × 15-cm; 3-µm packing L1

Column temperature: 40°

Flow rate: 1.6 mL/min

Injection volume: 20 µL

Run time: NLT 3 times the retention time of zolmitriptan

System suitability

Samples: *Standard solution* and *System suitability solution*

[NOTE—See *Table 1* for the relative retention times.]

Suitability requirements

Resolution: NLT 4.0 between zolmitriptan and zolmitriptan related compound E, *System suitability solution*

Tailing factor: NMT 2.0 for zolmitriptan, *Standard solution*

Relative standard deviation: NMT 1.0%, *Standard solution*

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) in the portion of Nasal Spray taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zolmitriptan in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DELIVERED DOSE UNIFORMITY**

Diluent, Mobile phase, Standard solution, and **System suitability solution:** Prepare as directed in the *Assay*.

Sample solution: Nominally 0.025 mg/mL of zolmitriptan prepared as follows. Discharge the contents of a single unit into a suitable volumetric flask. Dilute with *Mobile phase* to volume.

Repeat this procedure with 9 additional units.

Chromatographic system and **System suitability:** Proceed as directed in the *Assay*.

Analysis

Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zolmitriptan in each dose of Nasal Spray taken:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$

r_U = peak response from the *Sample solution*

r_S = peak response from the *Standard solution*

C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)

V = volume of the *Sample solution*

L = label claim of zolmitriptan (mg/dose)

Acceptance criteria

Tier 1

1. The mean of 10 units is within 85.0%–115.0% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$).
2. NMT 1 dosage unit outside of 80%–120% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$)
3. None outside of 75%–125% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) for 10 units

If criterion 2 in *Tier 1* cannot be met, proceed to *Tier 2*.

Tier 2: Test an additional 20 units. All 30 results (including the results from *Tier 1*) meet the following acceptance criteria.

1. NMT 3 of the 30 dosage units outside of 80%–120% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$)
2. None of the 30 dosage units are outside of 75%–125% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$).

IMPURITIES

- **ORGANIC IMPURITIES**

Diluent, Mobile phase, Standard solution, System suitability solution, and **Sample stock solution:** Prepare as directed in the *Assay*.

Sensitivity solution: 0.1 µg/mL of USP Zolmitriptan RS in *Mobile phase* from *Standard solution*

Sample solution: Nominally 0.1 mg/mL of zolmitriptan from *Sample stock solution* in *Diluent*

  (*S*)-4-(4-Aminobenzyl)oxazolidin-2-one.
  $C_{10}H_{12}N_2O_2$ 192.21

Zolmitriptan Tablets

DEFINITION
Zolmitriptan Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$).

IDENTIFICATION
- **A.** The UV spectrum of the zolmitriptan peak in the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY
- **PROCEDURE**
  Buffer: Dissolve 2 mL of triethylamine in 1 L of water. Adjust with phosphoric acid to a pH of 3.0.
  Mobile phase: Acetonitrile and *Buffer* (15:85)
  Standard stock solution: 0.25 mg/mL of USP Zolmitriptan RS in methanol. Sonicate if necessary to aid dissolution.
  Standard solution: 0.025 mg/mL of USP Zolmitriptan RS in *Mobile phase* from *Standard stock solution*
  Sample stock solution: Nominally 0.25 mg/mL of zolmitriptan from Tablets in methanol prepared as follows. Transfer NLT 5 Tablets to a suitable volumetric flask. Add 70% of the flask volume of methanol. Sonicate for 30 min. Cool to room temperature, and dilute with methanol to volume.
  Sample solution: Nominally 0.025 mg/mL of zolmitriptan in *Mobile phase* from *Sample stock solution* passed through a suitable membrane filter of 0.45-µm pore size
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 225 nm. For *Identification A*, a diode array detector can be used in the wavelength range of 200–300 nm.
  Column: 4.6-mm × 15-cm; 5-µm packing L1
  Column temperature: 30°
  Flow rate: 1 mL/min
  Injection volume: 20 µL
  Run time: NLT 2.5 times the retention time of zolmitriptan
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 2.0
  Relative standard deviation: NMT 2.0%

www.webofpharma.com

Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zolmitriptan from the *Sample solution*
r_S = peak response of zolmitriptan from the *Standard solution*
C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zolmitriptan in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

• **Dissolution** ⟨711⟩
Test 1
Medium: 0.1 N hydrochloric acid; 500 mL
Apparatus 2: 50 rpm
Time: 15 min
[Note—Analyze the sample under test using either the *Chromatographic procedure* or the *Instrumental procedure*.]
Chromatographic procedure
Buffer, Mobile phase, Standard stock solution, Chromatographic system, and **System suitability:** Proceed as directed in the *Assay*.
Standard solution: (*L*/500) mg/mL of USP Zolmitriptan RS in *Medium* from *Standard stock solution*, where *L* is the Tablet label claim in mg
Sample solution: Pass a portion of the solution under test through a suitable membrane filter of 0.45-µm pore size.
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$

r_U = peak response of zolmitriptan from the *Sample solution*
r_S = peak response of zolmitriptan from the *Standard solution*
C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim of zolmitriptan (mg/Tablet)

Instrumental procedure
Standard solution: 0.01 mg/mL of USP Zolmitriptan RS from *Standard stock solution* in *Medium*
Sample solution: Pass a portion of the solution under test through a suitable membrane filter of 0.2-µm pore size.
Instrumental conditions
Mode: UV
Analytical wavelength: About 283 nm
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) dissolved:

$$\text{Result} = (A_U/A_S) \times C_S \times V \times (1/L) \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim of zolmitriptan (mg/Tablet)

Tolerances: NLT 80% (*Q*) of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) is dissolved.
Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: 0.1 N hydrochloric acid; 500 mL
Apparatus 2: 50 rpm
Time: 30 min
Buffer: 5.8 g/L of ammonium dihydrogen phosphate in water. Adjust with triethylamine to a pH of 7.0.
Mobile phase: Acetonitrile and *Buffer* (15:85)
Standard solution: (*L*/500) mg/mL of USP Zolmitriptan RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Pass a suitable portion of the solution under test through a suitable filter. Discard the first few mL of filtrate.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 280 nm
Column: 4.6-mm × 15-cm; 5-µm packing L1
Column temperature: 40°
Flow rate: 1 mL/min
Injection volume: 20 µL
Run time: NLT 1.8 times the retention time of zolmitriptan
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) dissolved:

$$\text{Result} = (r_U/r_S) \times C_S \times V \times (1/L) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zolmitriptan RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim of zolmitriptan (mg/Tablet)

Tolerances: NLT 80% (*Q*) of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$) is dissolved.
• **Uniformity of Dosage Units** ⟨905⟩**:** Meet the requirements

IMPURITIES

Change to read:

• **Organic Impurities**
Solution A: 2.7 g/L of monobasic potassium phosphate in water
Solution B: Acetonitrile
Mobile phase: See *Table 1*.

Table 1

Diluent: Methanol and water (25:75)

System suitability stock solution: 0.2 mg/mL each of USP Zolmitriptan Related Compound E RS and USP Zolmitriptan Related Compound G RS in methanol

System suitability solution: 0.25 mg/mL of USP Zolmitriptan RS and 0.002 mg/mL each of USP Zolmitriptan Related Compound E RS and USP Zolmitriptan Related Compound G RS from *System suitability stock solution* in *Diluent* prepared as follows. Dissolve a suitable quantity of USP Zolmitriptan RS in a suitable volumetric flask containing 50% of the flask volume of *Diluent*. Sonicate to dissolve. Transfer a suitable volume of *System suitability stock solution* to the flask. Dilute with *Diluent* to volume.

Standard stock solution: 0.25 mg/mL of USP Zolmitriptan RS in methanol. Sonicate if necessary to aid dissolution.

Standard solution: 0.001 mg/mL of USP Zolmitriptan RS in *Diluent* from a suitable volume of *Standard stock solution*

Sample solution: Nominally 0.25 mg/mL of zolmitriptan from NLT 5 Tablets prepared as follows. Transfer the required number of Tablets to a suitable volumetric flask. Add 25% of the flask volume of methanol. Sonicate for 30 min with intermittent shaking. Cool to room temperature. Dilute with water to volume. Pass through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability*.)

Mode: LC

Detector

For zolmitriptan and zolmitriptan related compound E and any other unspecified degradation product: UV 223 nm

For zolmitriptan and zolmitriptan related compound G: UV 235 nm

Column: 4.6-mm × 15-cm; 5-µm packing L1

Column temperature: 30°

Flow rate: 1.5 mL/min

Injection volume: 20 µL

System suitability

Samples: *System suitability solution* and *Standard solution*

[NOTE—See *Table 2* for relative retention times.]

Suitability requirements

Use 223 nm for *System suitability* evaluation.

Resolution: NLT 5.0 between zolmitriptan and zolmitriptan related compound E, *System suitability solution*

Tailing factor: NMT 2.0 for the zolmitriptan peak, *Standard solution*

Relative standard deviation: NMT 5.0%, *Standard solution*

Analysis

▲**Samples:** *Standard solution* and *Sample solution*▲ (ERR 1-Nov-2018)

Calculate the percentage of zolmitriptan related compound G in the portion of the Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of zolmitriptan related compound G at 235 nm from the *Sample solution*

r_S = peak response of zolmitriptan at 235 nm from the *Standard solution*

C_S = concentration of the USP Zolmitriptan RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zolmitriptan in the *Sample solution* (mg/mL)

F = relative response factor for zolmitriptan related compound G (see *Table 2*)

Calculate the percentage of zolmitriptan related compound E and any other unspecified degradation product in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of zolmitriptan related compound E or any other unspecified degradation product at 223 nm from the *Sample solution*

r_S = peak response of zolmitriptan at 223 nm from the *Standard solution*

C_S = concentration of the USP Zolmitriptan RS in the *Standard solution* (mg/mL)

C_U = nominal concentration of zolmitriptan in the *Sample solution* (mg/mL)

F = relative response factor (see *Table 2*)

Acceptance criteria: See *Table 2*. Disregard any impurity less than 0.05%.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Zolmitriptan related compound G	0.50	1.2	0.2
Zolmitriptan	1.0	—	—
Zolmitriptan related compound E	1.28	1.0	0.6
Any individual unspecified degradation product	—	1.0	0.2
Total degradation products	—	—	1.5

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed, light-resistant containers. Store at controlled room temperature.
- **LABELING:** When more than one *Dissolution* test is given, the labeling states the *Dissolution* test used only if *Test 1* is not used.
- **USP REFERENCE STANDARDS** ⟨11⟩

Zolmitriptan Orally Disintegrating Tablets

DEFINITION

Zolmitriptan Orally Disintegrating Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of zolmitriptan ($C_{16}H_{21}N_3O_2$).

IDENTIFICATION

- **A.** The UV spectrum of the zolmitriptan peak of the *Sample solution* corresponds to that of the *Standard solution,* as obtained in the *Assay.*
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution,* as obtained in the *Assay.*

ASSAY

- **PROCEDURE**

Buffer: Dissolve 2 mL of triethylamine in 1 L of water. Adjust with phosphoric acid to a pH of 3.0.

Mobile phase: Acetonitrile and *Buffer* (15:85)

Standard stock solution: 0.25 mg/mL of USP Zolmitriptan RS in methanol

Standard solution: 0.025 mg/mL of USP Zolmitriptan RS in *Mobile phase* from a suitable volume of *Standard stock solution*

Sample stock solution: 0.25 mg/mL of zolmitriptan in methanol, prepared as follows. Transfer NLT 20 Tablets to a suitable volumetric flask. Add 75% of the flask volume of methanol. Sonicate for 30 min. Allow to cool to room temperature and dilute with methanol to volume.

Sample solution: Nominally 0.025 mg/mL of zolmitriptan in *Mobile phase* from a suitable volume of *Sample stock solution.* Pass a portion of the solution under test through a suitable membrane filter of 0.45-µm pore size.

Chromatographic system

(See *Chromatography* ⟨621⟩, *System Suitability.*)

Mode: LC

Detector: UV 225 nm. For *Identification* test *A,* use a diode-array detector in the wavelength range of 200–300 nm.

Column: 4.6-mm × 15-cm; 5-µm packing L1

Column temperature: 30°

Flow rate: 1 mL/min

Injection volume: 20 µL

Run time: NLT 2.5 times the retention time of zolmitriptan

System suitability

Sample: *Standard solution*

Suitability requirements

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis

Zolpidem Tartrate

$(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6$ 764.87

Imidazo[1,2-*a*]pyridine-3-acetamide, *N*,*N*,6-trimethyl-2-(4-methylphenyl)-, [*R*-(*R**,*R**)]-2,3-dihydroxy butanedioate; *N*,*N*,6-Trimethyl-2-*p*-tolylimidazo[1,2-*a*]pyridine-3-acetamide L-(+)-tartrate [99294-93-6].

DEFINITION

Zolpidem Tartrate contains NLT 98.0% and NMT 102.0% of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$, calculated on the anhydrous basis.

IDENTIFICATION

Change to read:

- **A. ▲Spectroscopic Identification Tests ⟨197⟩, *Infrared Spectroscopy*:** 197A or 197K▲ (CN 1-May-2020)

  Sample: Dissolve 0.10 g of Zolpidem Tartrate in 10 mL of 0.1 M hydrochloric acid. Add 10 mL of water. Add dropwise with stirring 1 mL of diluted ammonia solution. Filter and collect the resulting precipitate. Wash the precipitate with water, and then dry at 100°–105° for 2 h. Use 2 mg of the dried residue.

  Analysis: The IR spectrum of the free base thus obtained corresponds to the IR spectrum of similarly prepared USP Zolpidem Tartrate RS.

- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

- **C. Reaction of Tartrates**

  Sample: 0.1 g of Zolpidem Tartrate

  Analysis: Dissolve the *Sample* in 1 mL of methanol with gentle heating. To 0.1 mL of the solution, add 0.1 mL of a 100-g/L solution of potassium bromide, 0.1 mL of a 20-g/L solution of resorcinol, and 3 mL of sulfuric acid. Heat on a water bath for 5–10 min. A dark blue color develops. Allow to cool, then pour the solution into water.

  Acceptance criteria: The dark blue color changes to red.

ASSAY

- **Procedure**

  Buffer: 5.6 g/L of phosphoric acid. Adjust with triethylamine to a pH of 5.5.

  Mobile phase: Methanol, acetonitrile, and *Buffer* (23:18:59)

  System suitability solution: 0.05 mg/mL each of USP Zolpidem Tartrate RS and USP Zolpidem Related Compound A RS in *Mobile phase*

  Standard solution: 0.1 mg/mL of USP Zolpidem Tartrate RS in *Mobile phase*

  Sample solution: 0.1 mg/mL of Zolpidem Tartrate in *Mobile phase*

  Chromatographic system

  (See *Chromatography* ⟨621⟩, *System Suitability*.)

  Mode: LC

  Detector: UV 254 nm

  Column: 3.9-mm × 15-cm; 4-µm packing L1

  Flow rate: 1.5 mL/min

  Injection volume: 20 µL

  Run time: NLT 3 times the retention time of zolpidem

  System suitability

  Samples: *System suitability solution* and *Standard solution*

  [Note—See *Table 1* for the relative retention times.]

  Suitability requirements

  Resolution: NLT 2.0 between zolpidem related compound A and zolpidem, *System suitability solution*

  Tailing factor: NMT 2.0, *Standard solution*

  Relative standard deviation: NMT 1.0%, *Standard solution*

  Analysis

  Samples: *Standard solution* and *Sample solution*

  Calculate the percentage of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ in the portion of Zolpidem Tartrate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

  r_U = peak response of zolpidem from the *Sample solution*

  r_S = peak response of zolpidem from the *Standard solution*

  C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)

  C_U = concentration of Zolpidem Tartrate in the *Sample solution* (mg/mL)

  Acceptance criteria: 98.0%–102.0% on the anhydrous basis

IMPURITIES

- **Residue on Ignition ⟨281⟩:** NMT 0.1%

- **Organic Impurities**

  Buffer, Mobile phase, System suitability solution, and Chromatographic system: Proceed as directed in the *Assay*.

  Standard solution: 0.001 mg/mL of USP Zolpidem Tartrate RS in *Mobile phase*

  Sample solution: 0.5 mg/mL of Zolpidem Tartrate in *Mobile phase*

  System suitability

  Samples: *System suitability solution* and *Standard solution*

  [Note—See *Table 1* for the relative retention times.]

  Suitability requirements

  Resolution: NLT 2.0 between zolpidem related compound A and zolpidem, *System suitability solution*

  Relative standard deviation: NMT 10.0%, *Standard solution*

  Analysis

  Samples: *Standard solution* and *Sample solution*

  Calculate the percentage of each impurity in the portion of Zolpidem Tartrate taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

  r_U = peak response of each impurity from the *Sample solution*

  r_S = peak response of zolpidem from the *Standard solution*

  C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)

  C_U = concentration of Zolpidem Tartrate in the *Sample solution* (mg/mL)

  Acceptance criteria: See *Table 1*. Disregard any peak less than 0.05%.

www.webofpharma.com

Table 1

Name	Relative Retention Time	Acceptance Criteria, NMT (%)
Tartaric acid[a]	0.16	—
Zolpidem related compound A	0.83	0.10
Zolpidem	1.0	—
Any individual impurity	—	0.10
Total impurities	—	0.2

[a] Counter ion peak; not to be reported and not to be included in total impurities.

SPECIFIC TESTS

- **WATER DETERMINATION** ⟨921⟩, *Method I*, *Method Ia*: NMT 3.0%

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in well-closed containers, and store at controlled room temperature.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Zolpidem Tartrate RS
  USP Zolpidem Related Compound A RS
  N,*N*-Dimethyl-2-(7-methyl-2-*p*-tolylimidazo[1,2-*a*]pyridin-3-yl)acetamide.
  $C_{19}H_{21}N_3O$ 307.39

Zolpidem Tartrate Tablets

DEFINITION

Zolpidem Tartrate Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$.

IDENTIFICATION

- **A.** The UV spectrum of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**

Buffer: 3.4 g/L of monobasic potassium phosphate in water; adjusted with ammonium hydroxide to a pH of 5.5
Mobile phase: Acetonitrile, methanol, and *Buffer* (30:20:50)
Standard stock solution: 0.8 mg/mL of USP Zolpidem Tartrate RS in 0.01 N hydrochloric acid
Standard solution: 0.16 mg/mL of USP Zolpidem Tartrate RS in *Mobile phase* from the *Standard stock solution*
Sample stock solution: Nominally 0.4 mg/mL of zolpidem tartrate from NLT 20 Tablets prepared as follows. Transfer the Tablets to a suitable volumetric flask and add 40% of the flask volume of 0.125 N hydrochloric acid. Mix well until the Tablets disintegrate, and add 50% of the flask volume of *Mobile phase*. Dilute with water to volume, and stir for 30 min using a magnetic stirrer. Allow solid particles to settle, and pass the supernatant through a suitable filter. [NOTE—Whatman No. 40 filter or equivalent may be suitable.]
Sample solution: Nominally 0.16 mg/mL of zolpidem tartrate in *Mobile phase*, from the *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm. For *Identification A*, use a diode array detector in the range of 200–400 nm.
Column: 4.6-mm × 15-cm; 5-µm packing L1
Flow rate: 1.2 mL/min
Injection volume: 10 µL
Run time: NLT 2.5 times the retention time of zolpidem tartrate
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 3.0 for zolpidem
Relative standard deviation: NMT 2.0% for zolpidem
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zolpidem tartrate in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩

Test 1
Medium: 0.01 N hydrochloric acid; 900 mL, deaerated
Apparatus 2: 50 rpm
Time: 15 min
Standard solution: (*L*/1000) mg/mL of USP Zolpidem Tartrate RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
Instrumental conditions
Mode: UV
Analytical wavelength: 295 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 900 mL

Tolerances: NLT 80% (*Q*) of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ is dissolved.
Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium: 0.1 N hydrochloric acid; 900 mL
Apparatus 2: 50 rpm
Time: 20 min

www.webofpharma.com

Standard solution: (*L*/900) mg/mL of USP Zolpidem Tartrate RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter.
Instrumental conditions
Mode: UV
Analytical wavelength: 295 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 900 mL

Tolerances: NLT 80% (*Q*) of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ is dissolved.

Test 3: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 3*.
Medium: 0.01 N hydrochloric acid; 900 mL
Apparatus 2: 50 rpm
Time: 15 min
Standard solution: (*L*/900) mg/mL of USP Zolpidem Tartrate RS in *Medium*, where *L* is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
Instrumental conditions
Mode: UV
Analytical wavelength: 295 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 900 mL

Tolerances: NLT 85% (*Q*) of the labeled amount of zolpidem tartrate $[(C_{19}H_{21}N_3O)_2 \cdot C_4H_6O_6]$ is dissolved.

• **Uniformity of Dosage Units** ⟨905⟩**:** Meet the requirements

IMPURITIES

• **Organic Impurities**
Solution A: 3.3 mL/L of phosphoric acid in water. Adjust with triethylamine to a pH of 6.0.
Solution B: Acetonitrile
Solution C: Methanol
Diluent: *Solution B*, *Solution C*, and *Solution A* (15:10:75)
Mobile phase: See *Table 1*.

Table 1

Time (min)	Solution A (%)	Solution B (%)	Solution C (%)
0	76	14	10
35.0	48	16	36
36.5	48	16	36
37.5	76	14	10
42.0	76	14	10

System suitability solution: 0.5 mg/mL of USP Zolpidem Tartrate RS and 0.8 µg/mL of USP Zolpidem Related Compound A RS in *Diluent*
Standard solution: 5 µg/mL of USP Zolpidem Tartrate RS in *Diluent*
Sample solution: Nominally equivalent to 0.5 mg/mL of zolpidem tartrate in *Diluent* from NLT 10 Tablets, prepared as follows. Transfer the Tablets to a suitable volumetric flask, add 70% of the flask volume of *Diluent*, and stir for 30 min. Dilute with *Diluent* to volume. Centrifuge a portion of the solution and use the clear supernatant.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 3.9-mm × 15-cm; 4-µm packing L1
Flow rate: 1.5 mL/min
Injection volume: 20 µL
System suitability
Samples: *System suitability solution* and *Standard solution*
Suitability requirements
Resolution: NLT 2.0 between the zolpidem and zolpidem related compound A, *System suitability solution*
Relative standard deviation: NMT 5.0%, *Standard solution*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of each degradation product in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times (1/F) \times 100$$

r_U = peak response of each degradation product from the *Sample solution*
r_S = peak response of zolpidem from the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zolpidem tartrate in the *Sample solution* (mg/mL)
F = relative response factor (see *Table 2*)

Acceptance criteria: See *Table 2*.

Table 2

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Tolyloyl propionic acid[a, b]	0.15	—	—
Zolpidem acid[c]	0.18	1.0	0.3
Tolyloyl propionamide[b, d]	0.54	—	—
Tolyloyl acrylamide[b, e]	0.65	—	—
Zolpidem related compound B[f]	0.83	1.1	0.3

Zolpidem Tartrate Extended-Release Tablets

DEFINITION

Zolpidem Tartrate Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$).

IDENTIFICATION

Change to read:

- **A. ▲SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Ultraviolet-Visible Spectroscopy*: **197U**▲ (CN 1-May-2020)
  Sample: 25 µg/mL of zolpidem tartrate in 0.01 M hydrochloric acid from a suitable quantity of powder obtained by grinding 1 Tablet
  Acceptance criteria: Meet the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

- **PROCEDURE**
  Buffer: 3.3 mL of phosphoric acid in 1 L of water. Adjust with triethylamine to a pH of 5.5.
  Mobile phase: Acetonitrile, methanol, and *Buffer* (4:5:11)
  Standard stock solution: 0.5 mg/mL of USP Zolpidem Tartrate RS in a mixture of alcohol and 0.01 M hydrochloric acid (4:1)
  Standard solution: 0.1 mg/mL of USP Zolpidem Tartrate RS from the *Standard stock solution* in *Mobile phase*
  Sample stock solution: Finely powder NLT 8 Tablets. Transfer the powder quantitatively to a suitable volumetric flask to obtain nominally 0.5 mg/mL of zolpidem tartrate. Add 70% of the flask volume of a mixture of alcohol and 0.01 M hydrochloric acid (5:2), and stir on a magnetic stirrer for 1 h. Dilute with alcohol to volume. Allow solid particles to settle, and pass the supernatant through a suitable filter (Whatman 40 or equivalent).
  Alternatively, the *Sample stock solution* can be prepared as follows. Transfer NLT 20 Tablets to a suitable volumetric flask to obtain a nominal concentration of 0.5 mg/mL of zolpidem tartrate. Add 10% of the flask volume of alcohol and stir for 30 min or until the Tablets have completely disintegrated. Add another 10% of the flask volume of alcohol and stir for another 90 min. Add 10% of the flask volume of 0.01 M hydrochloric acid followed by 40% of the flask volume of a mixture of alcohol and 0.01 M hydrochloric acid (5:2). Continue to stir for another 30 min. Remove the stirrer bar and rinse with alcohol. Dilute with alcohol to volume.
  Sample solution: Nominally 0.1 mg/mL of zolpidem tartrate from filtered *Sample stock solution* in *Mobile phase*. If the *Sample stock solution* is prepared using the alternative procedure, dilute the required volume of the *Sample stock solution* with *Mobile phase* and centrifuge instead of filtering before use.
  Chromatographic system
  (See *Chromatography* ⟨621⟩, *System Suitability*.)
  Mode: LC
  Detector: UV 240 nm
  Column: 4.6-mm × 15-cm; 5-µm packing L1
  Column temperature: 40°
  Flow rate: 1 mL/min
  Injection volume: 15 µL
  System suitability
  Sample: *Standard solution*
  Suitability requirements
  Tailing factor: NMT 3.0 for zolpidem
  Relative standard deviation: NMT 2.0% for zolpidem
  Analysis
  Samples: *Standard solution* and *Sample solution*
  Calculate the percentage of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

- **DISSOLUTION** ⟨711⟩
  Test 1
  Medium: 0.01 N hydrochloric acid; 500 mL

USP Monographs

www.webofpharma.com

Apparatus 1: 100 rpm
Times: 30, 90, and 240 min
Standard solution: Solution of USP Zolpidem Tartrate RS in *Medium* containing (*L*/500) mg/mL, where *L* is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter.
Detector: UV 295 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 500 mL

Tolerances: See *Table 1*.

Table 1

Time (min)	Amount Dissolved
30	50%–70%
90	70%–85%
240	NLT 90%

The percentages of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 2: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 2*.
Medium, Apparatus, and **Times:** Proceed as directed in *Test 1*.
Standard solution: Solution of USP Zolpidem Tartrate RS in *Medium* containing (*L*/500) mg/mL, where *L* is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter.
Instrumental conditions

www.webofpharma.com

Calculate the percentage of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at each time point (Q_i):

$$Q_{30} = (A_U/A_S) \times C_S \times V \times (1/L) \times 100$$

$$Q_{60} = [(A_U/A_S) \times C_S \times V \times (1/L) \times 100] + [Q_{30} \times (V_S/V)]$$

$$Q_{120} = [(A_U/A_S) \times C_S \times V \times (1/L) \times 100] + [(Q_{30} + Q_{60}) \times (V_S/V)]$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of USP Zolpidem Tartrate RS in the *Standard solution* (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim (mg/Tablet)
V_S = volume of the sample withdrawn (mL)

Tolerances: See *Table 4*.

Table 4

Time (min)	Amount Dissolved
30	30%–55%
60	55%–80%
120	NLT 85%

The percentages of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 5: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 5*.
Medium: pH 6.8 phosphate buffer (Dissolve 6.8 g of monobasic potassium phosphate and 0.8 g of sodium hydroxide in 1 L of water. Adjust with phosphoric acid or 1 N sodium hydroxide to a pH of 6.8.); 900 mL
Apparatus 1: 50 rpm
Times: 60, 180, and 360 min
Buffer: Dissolve 5.6 g of phosphoric acid in 1 L of water. Adjust with triethylamine to a pH of 5.5.
Mobile phase: Methanol, acetonitrile, and *Buffer* (28:22:50)
Standard stock solution: 0.5 mg/mL of USP Zolpidem Tartrate RS in methanol
Standard solution: (L/900) mg/mL of USP Zolpidem Tartrate RS from *Standard stock solution* in *Medium*, where L is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 254 nm
Column: 4.6-mm × 7.5-cm; 3.5-µm packing L1
Column temperature: 40°
Flow rate: 1 mL/min
Injection volume: 25 µL
Run time: NLT 2.5 times the retention time of zolpidem
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*

Calculate the percentage of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response of the *Sample solution*
r_S = peak response of the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)
L = label claim (mg/Tablet)
V = volume of *Medium*, 900 mL

Tolerances: See *Table 5*.

Table 5

Time (min)	Amount Dissolved
60	55%–75%
180	NLT 75%
360	NLT 85%

The percentages of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 6: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 6*.
Medium: 0.01 N hydrochloric acid; 500 mL
Apparatus 1: 100 rpm
Times: 15, 60, and 120 min
Diluent: Methanol and water (50:50)
Standard stock solution: 0.25 mg/mL of USP Zolpidem Tartrate RS in *Diluent*. Sonication may be used to aid complete dissolution.
Standard solution: (L/500) mg/mL of USP Zolpidem Tartrate RS from *Standard stock solution* in *Medium*, where L is the label claim in mg/Tablet
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size. Replace the volume withdrawn with an equal volume of *Medium*.
Instrumental conditions
Mode: UV
Analytical wavelength: 295 nm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the concentration of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) in the sample withdrawn at each time point (i):

$$C_i = (A_U/A_S) \times C_S$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amount (Q_i) of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at each time point (i):

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = [(C_2 \times V) + (C_1 \times V_S)] \times (1/L) \times 100$$

$$\text{Result}_3 = \{(C_3 \times V) + [(C_2 + C_1) \times V_S]\} \times (1/L) \times 100$$

C_i = concentration of zolpidem tartrate in the portion of sample withdrawn at time point i (mg/mL)
V = volume of *Medium*, 500 mL

www.webofpharma.com

L = label claim (mg/Tablet)
V_S = volume of the *Sample solution* withdrawn from the *Medium* (mL)

Tolerances: See *Table 6*.

Table 6

Time Point (*i*)	Time (min)	Amount Dissolved
1	15	45%–65%
2	60	63%–83%
3	120	NLT 80%

The percentages of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

Test 7: If the product complies with this test, the labeling indicates that it meets USP *Dissolution Test 7*.
Medium: 0.01 N hydrochloric acid; 500 mL
Apparatus 1: 100 rpm
Times: 30, 90, and 240 min
Standard stock solution: 0.5 mg/mL of USP Zolpidem Tartrate RS in methanol. Sonication may be used to aid complete dissolution.
Standard solution: 0.0125 mg/mL of USP Zolpidem Tartrate RS from *Standard stock solution* in *Medium*
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size. Discarding the first 2 mL of filtrate.
Instrumental conditions
Mode: UV
Analytical wavelength: 237 nm
Cell: 5.0 mm
Blank: *Medium*
Analysis
Samples: *Standard solution*, *Sample solution*, and *Blank*
Correct the instrument by using the *Blank*.
Calculate the concentration (C_i) of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at each time point (i):

$$C_i = (A_U/A_S) \times C_S$$

A_U = absorbance of the *Sample solution*
A_S = absorbance of the *Standard solution*
C_S = concentration of the *Standard solution* (mg/mL)

Calculate the percentage of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at each time point (i):

$$\text{Result}_1 = C_1 \times V \times (1/L) \times 100$$

$$\text{Result}_2 = \{[C_2 \times (V - V_S)] + (C_1 \times V_S)\} \times (1/L) \times 100$$

$$\text{Result}_3 = (\{C_3 \times [V - (2 \times V_S)]\} + [(C_2 + C_1) \times V_S]) \times (1/L) \times 100$$

C_i = concentration of zolpidem tartrate in the portion of sample withdrawn at the specified time point i (mg/mL)
V = volume of *Medium*, 500 mL
L = label claim (mg/Tablet)
V_S = volume of the *Sample solution* withdrawn at each time point (mL)

Tolerances: See *Table 7*.

Table 7

Time Point (*i*)	Time (min)	Amount Dissolved
1	30	70%–90%
2	90	NLT 75%
3	240	NLT 80%

The percentages of the labeled amount of zolpidem tartrate ($C_{42}H_{48}N_6O_8$) dissolved at the times specified conform to *Dissolution* ⟨711⟩, *Acceptance Table 2*.

• **Uniformity of Dosage Units** ⟨905⟩: Meet the requirements

IMPURITIES

• **Organic Impurities**
Buffer, Mobile phase, Standard stock solution, Sample solution, and **Chromatographic system:** Proceed as directed in the *Assay*.
System suitability solution: Dissolve a suitable amount of USP Zolpidem Related Compound A RS in the *Standard stock solution* to obtain a solution containing 1 µg/mL of zolpidem related compound A. Dilute 1 mL of the resulting solution with *Mobile phase* to 5 mL.
System suitability
Sample: *System suitability solution*
Suitability requirements
Resolution: NLT 1.5 between zolpidem related compound A and zolpidem
Tailing factor: NMT 3.0 for the zolpidem peak
Relative standard deviation: NMT 2.0% for the zolpidem peak
Analysis
Sample: *Sample solution*
Calculate the percentage of each impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_T) \times (1/F) \times 100$$

r_U = peak response for each impurity from the *Sample solution*
r_T = sum of all the peak responses from the *Sample solution*
F = relative response factor of the corresponding impurity (see *Table 8*)

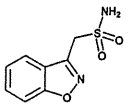
Acceptance criteria: See *Table 8*.

Table 8

Name	Relative Retention Time	Relative Response Factor	Acceptance Criteria, NMT (%)
Zolpidem acid[a]	0.3	1.2	0.20
Zolpidem related compound A[b]	0.9	1.0	0.20
Zolpidem	1.0	—	—
Any unspecified degradation product	—	1.0	0.20
Total impurities	—	—	0.5

[a] 2-(6-Methyl-2-*p*-tolylimidazo[1,2-*a*]pyridin-3-yl)acetic acid.
[b] *N*,*N*-Dimethyl-2-(7-methyl-2-*p*-tolylimidazo[1,2-*a*]pyridin-3-yl)acetamide.

ADDITIONAL REQUIREMENTS



• **Packaging and Storage:** Preserve in well-closed containers, and store at controlled room temperature.

USP Monographs

[CAS-73101-64-1].

Zonisamide Capsules

DEFINITION
Zonisamide Capsules contain NLT 90.0% and NMT 110.0% of the labeled amount of zonisamide ($C_8H_8N_2O_3S$).

IDENTIFICATION
• **A.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

Change to read:

• **B.** ▲**SPECTROSCOPIC IDENTIFICATION TESTS** ⟨197⟩, *Infrared Spectroscopy*: **197K**▲ (CN 1-May-2020)
Sample solution: Shake the contents of a sufficient quantity of Capsules, equivalent to about 100 mg of zonisamide, with 5 mL of methanol. Sonicate for 2 min and pass through a filter of 0.45-µm pore size or equivalent. Discard the initial 1-mL portion and evaporate the solution at 85°. Cool the residue. Use 1–2 mg of the residue.
Analysis: The IR spectrum of the *Sample solution* corresponds to the IR spectrum of similarly prepared USP Zonisamide RS.

ASSAY
• **PROCEDURE**
Mobile phase: Acetonitrile, methanol, and 0.1% trifluoroacetic acid TS (20:16:64)
Standard stock solution: 1 mg/mL of USP Zonisamide RS in methanol
Standard solution: 0.1 mg/mL of zonisamide in *Mobile phase*, from the *Standard stock solution*
Sample stock solution: Nominally 1.0 mg/mL of zonisamide prepared as follows. Transfer a suitable amount of Capsule contents (NLT 10) to a suitable volumetric flask and add a suitable volume of methanol. Sonicate and shake for 15 min. Dilute with methanol to volume.
Alternatively, the *Sample stock solution* can be prepared as follows. Transfer a suitable amount of Capsules (NLT 10) in a suitable volumetric flask, add 20% of the flask volume with water. Stir, and warm slightly for 30 min. Dilute with *Mobile phase* to volume.
Sample solution: 0.1 mg/mL of zonisamide in *Mobile phase*, from the *Sample stock solution*
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 237 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Column temperature: 30°
Flow rate: 1.0 mL/min
Injection volume: 10 µL
Run time: 1.5 times the retention time of the zonisamide
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0%
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zonisamide ($C_8H_8N_2O_3S$) in the portion of Capsules taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zonisamide from the *Sample solution*
r_S = peak response of zonisamide from the *Standard solution*
C_S = concentration of USP Zonisamide RS in the *Standard solution* (mg/mL)
C_U = nominal concentration of zonisamide in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

Change to read:

PERFORMANCE TESTS
• **DISSOLUTION** ⟨711⟩
Medium: Water; 900 mL
Apparatus 2: ▲75 rpm. Use suitable sinkers, if necessary.▲ (ERR 1-May-2018)
Time: 45 min
Determine the percentage of zonisamide dissolved using one of the following procedures.
Spectrophotometric procedure
Standard stock solution: 0.6 mg/mL of USP Zonisamide RS in methanol
Standard solution: Dilute the *Standard stock solution* with *Medium* to obtain solutions with final concentrations as given in *Table 1*.

Table 1

Capsule Strength (mg)	Final Concentration (µg/mL)
25	13
50	13
100	22

Sample solution: 10 mL of the solution under test. Dilute the filtrate with *Medium* as given in *Table 2*.

Table 2

Capsule Strength (mg)	Volume of Filtrate (mL)	Final Volume (mL)
25	5.0	10.0
50	5.0	25.0

www.webofpharma.com

Table 2 *(continued)*

Capsule Strength (mg)	Volume of Filtrate (mL)	Final Volume (mL)
100	5.0	25.0

Instrumental conditions
Mode: UV
Analytical wavelength: 241 nm
Cell: 1 cm
Blank: *Medium*
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zonisamide ($C_8H_8N_2O_3S$) dissolved:

$$\text{Result} = (A_U/A_S) \times (C_S/L) \times V \times 100$$

A_U = absorbance from the *Sample solution*
A_S = absorbance from the *Standard solution*
C_S = concentration of USP Zonisamide RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL

Chromatographic procedure
Solution A: Dilute 52 mL of 40% tetrabutylammonium hydroxide solution with 948 mL of water. Adjust with phosphoric acid to a pH of 7.5.
Mobile phase: Acetonitrile, methanol, and *Solution A* (25:5:70)
Standard stock solution: 0.4 mg/mL of USP Zonisamide RS prepared as follows. Transfer a suitable amount of USP Zonisamide RS to a suitable volumetric flask, and dissolve in 20% of the flask volume of acetonitrile. Dilute with *Medium* to volume.
Standard solution: (L/1000) mg/mL of USP Zonisamide RS in *Medium*, where L is the label claim in mg/Capsule from *Standard stock solution*
Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 238 nm
Column: 4.6-mm × 25-cm; 5-µm packing L1
Flow rate: 1.0 mL/min
Injection volume: 10 µL
System suitability
Sample: *Standard solution*
Suitability requirements
Tailing factor: NMT 1.5
Relative standard deviation: NMT 3.0%
Calculate the percentage of the labeled amount of zonisamide ($C_8H_8N_2O_3S$) dissolved:

$$\text{Result} = (r_U/r_S) \times (C_S/L) \times V \times 100$$

r_U = peak response from the *Sample solution*
r_S = peak response from the *Standard solution*
C_S = concentration of USP Zonisamide RS in the *Standard solution* (mg/mL)
L = label claim (mg/Capsule)
V = volume of *Medium*, 900 mL

Tolerances: NLT 70% (Q) of the labeled amount of zonisamide ($C_8H_8N_2O_3S$) is dissolved.

• **UNIFORMITY OF DOSAGE UNITS** ⟨905⟩: Meet the requirements

IMPURITIES

• **ORGANIC IMPURITIES**
Solution A: Dilute 52 mL of 40% tetrabutylammonium hydroxide solution with 948 mL of water. Adjust with phosphoric acid to a pH of 7.5.
Mobile phase: Acetonitrile, methanol, and *Solution A* (25:5:70)
Standard stock solution: 0.32 mg/mL of USP Zonisamide RS. Transfer a suitable amount of USP Zonisamide RS in a suitable volumetric flask, dissolve in 20% of flask volume of acetonitrile and dilute with *Mobile phase* to volume.
Standard solution: 0.32 µg/mL of zonisamide in *Mobile phase*, from the *Standard stock solution*
System suitability stock solution: 0.4 mg/mL of zonisamide related compound C. Transfer a suitable amount of USP Zonisamide Related Compound C RS to a suitable volumetric flask, and dissolve in 20% flask volume of methanol. Dilute with *Mobile phase* to volume.
System suitability solution: Equal volumes of *Standard stock solution* and *System suitability stock solution*
Sample stock solution: Transfer a suitable number of Capsules (NLT 10) to a suitable volumetric flask, dissolve in 20% flask volume of water and dilute with *Mobile phase* to volume to obtain a solution of concentration as given in *Table 3*. [NOTE—Stir and warm slightly for 30 min to dissolve the Capsules.]

Table 3

Zonisamide Compounded Oral Suspension

DEFINITION
Zonisamide Compounded Oral Suspension contains NLT 90.0% and NMT 110.0% of the labeled amount of zonisamide ($C_8H_8N_2O_3S$).

Prepare Zonisamide Compounded Oral Suspension 10 mg/mL as follows (see *Pharmaceutical Compounding—Nonsterile Preparations* ⟨795⟩).

Zonisamide capsules[a] equivalent to	1 g
Vehicle: a 1:1 mixture of Ora-Plus[b] and Ora-Sweet (regular or sugar-free),[b] a sufficient quantity to make	100 mL

[a] Zonisamide 100-mg capsules, Mylan, Morgantown, WV.
[b] Paddock Laboratories, Minneapolis, MN.

Empty the capsules, and pour the contents into a mortar or other suitable container. Crush the capsule contents into a fine powder using a pestle or other mechanical means. Wet the powder with a small amount of *Vehicle*, and triturate to make a smooth paste. Add the *Vehicle* to make the mortar contents pourable. Transfer the contents, stepwise and quantitatively, to a calibrated container using the remainder of the *Vehicle*. Add sufficient *Vehicle* to bring to final volume, and mix well. [**CAUTION**—Avoid skin contact or inhalation of zonisamide by using protective gloves and a fume hood or surgical mask.]

ASSAY
- **PROCEDURE**

Solution A: 50 mM sodium phosphate adjusted with phosphoric acid to a pH of 2.8
Mobile phase: Acetonitrile and *Solution A* (25:75)
Standard stock solution: 1 mg/mL of USP Zonisamide RS in *Mobile phase*. Sonicate for 10 min.
Standard solution: Transfer 1 mL of the *Standard stock solution* to a 10-mL volumetric flask, dilute with *Mobile phase* to volume, and mix well. Centrifuge an aliquot of the solution for 10 min at 13,000 rpm.
Sample solution: Shake each bottle of Oral Suspension thoroughly. Transfer 1 mL of Oral Suspension to a 10-mL volumetric flask, dilute with *Mobile phase* to volume, and mix well. Vortex for 30 s, and sonicate for 10 min. Transfer 1 mL of the resultant solution to a 10-mL volumetric flask, and dilute with *Mobile phase* to volume. Centrifuge an aliquot of the solution for 10 min at 13,000 rpm.
Chromatographic system
(See *Chromatography* ⟨621⟩, *System Suitability*.)
Mode: LC
Detector: UV 264 nm
Column: 4.6-mm × 15-cm; 3.5-µm packing L1
Column temperature: 32°
Flow rate: 1.0 mL/min
Injection volume: 50 µL
System suitability
Sample: *Standard solution*
[NOTE—The retention time for zonisamide is about 4.6 min.]
Suitability requirements
Tailing factor: NMT 2.0
Relative standard deviation: NMT 2.0% for replicate injections
Analysis
Samples: *Standard solution* and *Sample solution*
Calculate the percentage of the labeled amount of zonisamide ($C_8H_8N_2O_3S$) in the portion of Oral Suspension taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

r_U = peak response of zonisamide from the *Sample solution*
r_S = peak response of zonisamide from the *Standard solution*
C_S = concentration of zonisamide in the *Standard solution* (mg/mL)
C_U = nominal concentration of zonisamide in the *Sample solution* (mg/mL)

Acceptance criteria: 90.0%–110.0%

SPECIFIC TESTS
- **pH** ⟨791⟩: 3.9–4.9

ADDITIONAL REQUIREMENTS
- **PACKAGING AND STORAGE:** Package in tight, light-resistant containers. Store at 2°–8° or at controlled room temperature.
- **BEYOND-USE DATE:** NMT 90 days after the date on which it was compounded when stored at 2°–8° or at controlled room temperature.
- **LABELING:** Label it to indicate that it is to be well shaken before use, and to state the *Beyond-Use Date*.
- **USP REFERENCE STANDARDS** ⟨11⟩
  USP Zonisamide RS

Combined Index to USP 43 and NF 38, Volumes 1–5

Page citations refer to the pages of Volumes 1, 2, 3, 4 and 5 of USP 43–NF 38. This index is repeated in its entirety in each volume.

1–2482	Volume 1
2483–4722	Volume 2
4723–6108	Volume 3
6109–7208	Volume 4
7209–8760	Volume 5

Numbers in angle brackets such as ⟨421⟩ refer to chapter numbers in the General Chapters section.

General chapters

Applications of mass spectrometry ⟨1736⟩, 8508
Radiopharmaceuticals—preparation, compounding, dispensing, and repackaging ⟨825⟩, 7109
Acetic acid in peptides ⟨503⟩, 6741
Acid-neutralizing capacity ⟨301⟩, 6661
Acoustic emission ⟨1005⟩, 7230
Alcohol determination ⟨611⟩, 6848
Alginates assay ⟨311⟩, 6662
Alternative microbiological sampling methods for nonsterile inhaled and nasal products ⟨610⟩, 6846
Aluminum ⟨206⟩, 6605
4-Aminophenol in acetaminophen-containing drug products ⟨227⟩, 6637
Analysis of biological assays ⟨1034⟩, 7351
Analytical data—interpretation and treatment ⟨1010⟩, 7233
Analytical instrument qualification ⟨1058⟩, 7522
Analytical methodologies based on scattering phenomena—electrophoretic light scattering (determination of zeta potential) ⟨1430.4⟩, 8389
Analytical methodologies based on scattering phenomena—general ⟨1430⟩, 8376
Analytical methodologies based on scattering phenomena—light diffraction measurements of particle size ⟨1430.2⟩, 8386
Analytical methodologies based on scattering phenomena—small angle x-ray scattering and small angle neutron scattering ⟨1430.5⟩, 8392
Analytical methodologies based on scattering phenomena—static light scattering ⟨1430.1⟩, 8379
Analytical procedures for recombinant therapeutic monoclonal antibodies ⟨129⟩, 6565
Ancillary materials for cell, gene, and tissue-engineered products ⟨1043⟩, 7381
Animal drugs for use in animal feeds ⟨1152⟩, 7952
Antibiotics—microbial assays ⟨81⟩, 6488
Anti-factor Xa and anti-factor IIa assays for unfractionated and low molecular weight heparins ⟨208⟩, 6611
Antimicrobial agents—content ⟨341⟩, 6664
Antimicrobial effectiveness testing ⟨51⟩, 6449
Apparent intrinsic dissolution—dissolution testing procedures for rotating disk and stationary disk ⟨1087⟩, 7681
Applications of nuclear magnetic resonance spectroscopy ⟨1761⟩, 8529
Application of water activity determination to nonsterile pharmaceutical products ⟨1112⟩, 7820
Arsenic ⟨211⟩, 6621
Articles of botanical origin ⟨561⟩, 6774
Assay for citric acid/citrate and phosphate ⟨345⟩, 6668
Assay for steroids ⟨351⟩, 6669
Assessment of drug product performance—bioavailability, bioequivalence, and dissolution ⟨1090⟩, 7695
Assessment of drug product leachables associated with pharmaceutical packaging/delivery systems ⟨1664⟩, 8455
Assessment of extractables associated with pharmaceutical packaging/delivery systems ⟨1663⟩, 8442
Atomic absorption spectroscopy ⟨852⟩, 7142
Atomic absorption spectroscopy—theory and practice ⟨1852⟩, 8632
Auxiliary packaging components ⟨670⟩, 6916
Bacterial endotoxins test ⟨85⟩, 6508
Balances ⟨41⟩, 6449
Bioburden control of nonsterile drug substances and products ⟨1115⟩, 7827
The biocompatibility of materials used in drug containers, medical devices, and implants ⟨1031⟩, 7313
Biological assay chapters—overview and glossary ⟨1030⟩, 7300
Biological assay validation ⟨1033⟩, 7337
Biological indicators—resistance performance tests ⟨55⟩, 6452
Biological indicators for sterilization ⟨1229.5⟩, 8216
Biological reactivity tests, in vitro ⟨87⟩, 6514
Biological reactivity tests, in vivo ⟨88⟩, 6516
Biologics ⟨1041⟩, 7379
Biotechnology-derived articles—amino acid analysis ⟨1052⟩, 7481
Biotechnology-derived articles—isoelectric focusing ⟨1054⟩, 7499
Biotechnology-derived articles—peptide mapping ⟨1055⟩, 7501
Biotechnology-derived articles—polyacrylamide gel electrophoresis ⟨1056⟩, 7508
Biotechnology-derived articles—total protein assay ⟨1057⟩, 7515
Botanical extracts ⟨565⟩, 6798
Bovine serum ⟨1024⟩, 7260
Bulk density and tapped density of powders ⟨616⟩, 6850
Bulk pharmaceutical excipients—certificate of analysis ⟨1080⟩, 7647
Bulk powder sampling procedures ⟨1097⟩, 7732
Calcium pantothenate assay ⟨91⟩, 6536
Capillary electrophoresis ⟨1053⟩, 7492
Capsules—dissolution testing and related quality attributes ⟨1094⟩, 7725
Cellular and tissue-based products ⟨1046⟩, 7400
Characterization of crystalline and partially crystalline solids by X-ray powder diffraction (XRPD) ⟨941⟩, 7201
Characterization of crystalline solids by microcalorimetry and solution calorimetry ⟨696⟩, 6931
Chemometrics ⟨1039⟩, 7363
Chloride and sulfate ⟨221⟩, 6636
Chromatography ⟨621⟩, 6853
Cleaning glass apparatus ⟨1051⟩, 7481
Collagenase I ⟨89.1⟩, 6524
Collagenase II ⟨89.2⟩, 6529
Color and achromicity ⟨631⟩, 6865
Color—instrumental measurement ⟨1061⟩, 7553
Completeness of solution ⟨641⟩, 6866
Compounding for phase I investigational studies ⟨1168⟩, 7985
Conductivity of solutions ⟨644⟩, 6868
Congealing temperature ⟨651⟩, 6874
Container content for injections ⟨697⟩, 6934
Containers—glass ⟨660⟩, 6881
Containers—performance testing ⟨671⟩, 6922
Cotton ⟨691⟩, 6929
Cryopreservation of cells ⟨1044⟩, 7389
Crystallinity ⟨695⟩, 6931
Deliverable volume ⟨698⟩, 6935
Density of solids ⟨699⟩, 6938
Depyrogenation ⟨1228⟩, 8176
Depyrogenation by filtration ⟨1228.3⟩, 8184
Depyrogenation by Rinsing ⟨1228.4⟩, 8187
Design, evaluation and characterization of viral clearance procedures ⟨1050.1⟩, 7472
Design and analysis of biological assays ⟨111⟩, 6543
Design and development of biological assays ⟨1032⟩, 7320
Detection of irradiated dietary supplements ⟨2250⟩, 8722
Dexpanthenol assay ⟨115⟩, 6547
Dimethylaniline ⟨223⟩, 6636
Diphtheria antitoxin potency testing for human immune globulins ⟨162⟩, 6582
Disinfectants and antiseptics ⟨1072⟩, 7608
Disintegration ⟨701⟩, 6940
Disintegration and dissolution of dietary supplements ⟨2040⟩, 8711
Dissolution ⟨711⟩, 6945
The dissolution procedure: development and validation ⟨1092⟩, 7707
Distilling range ⟨721⟩, 6955
Drug release ⟨724⟩, 6957
Dry heat depyrogenation ⟨1228.1⟩, 8181
Dry heat sterilization ⟨1229.8⟩, 8225
Elastomeric closures for injections ⟨381⟩, 6669
Elemental contaminants in dietary supplements ⟨2232⟩, 8719
Elemental impurities—limits ⟨232⟩, 6641
Elemental impurities—procedures ⟨233⟩, 6645
Endotoxin indicators for depyrogenation ⟨1228.5⟩, 8190
Enzymes used as ancillary materials in pharmaceutical manufacturing ⟨89⟩, 6521
4-Epianhydrotetracycline ⟨226⟩, 6636
Epinephrine assay ⟨391⟩, 6676
Erythropoietin bioassays ⟨124⟩, 6557
Ethylene glycol, diethylene glycol, and triethylene glycol in ethoxylated substances ⟨469⟩, 6733
Ethylene oxide and dioxane ⟨228⟩, 6639
Evaluation of plastic packaging systems and their materials of construction with respect to their user safety impact ⟨1661⟩, 8434
Evaluation of screening technologies for assessing medicine quality ⟨1850⟩, 8626
Evaluation of the inner surface durability of glass containers ⟨1660⟩, 8429
Excipient biological safety evaluation guidelines ⟨1074⟩, 7613
Excipient performance ⟨1059⟩, 7528

Clindamycin palmitate hydrochloride for oral, 1068
Clindamycin phosphate topical, 1072
Clobetasol propionate topical, 1082
Clotrimazole topical, 1122
Cloxacillin sodium for oral, 1130
Coal tar topical, 1133
Cocaine hydrochloride tablets for topical, 1134
Codeine sulfate oral, 1141
Cromolyn sodium ophthalmic, 1185
Cupriethylenediamine hydroxide, 1.0 M, 6154
Cyclopentolate hydrochloride ophthalmic, 1201
Cyclosporine oral, 1216
Cyproheptadine hydrochloride oral, 1219
Demecarium bromide ophthalmic, 1247
Dexamethasone elixir, 1286
Dexamethasone oral, 1288
Dexamethasone sodium phosphate ophthalmic, 1296
Dexbrompheniramine maleate and pseudoephedrine sulfate oral, 1298
Dexchlorpheniramine maleate oral, 1301
Dextromethorphan hydrobromide oral, 1321
Diatrizoate meglumine and diatrizoate sodium, 1327
Diatrizoate sodium, 1329
Dichlorophenol–indophenol, standard, 6240
Dicyclomine hydrochloride oral, 1361
Diethyltoluamide topical, 1373
Digoxin oral, 1385
Dihydrotachysterol oral, 1392
Diltiazem hydrochloride oral, 1405
Dimenhydrinate oral, 1410
Dimethyl sulfoxide topical, 1414
Diphenhydramine hydrochloride oral, 1429
Diphenoxylate hydrochloride and atropine sulfate oral, 1438
Dipivefrin hydrochloride ophthalmic, 1442
Docusate sodium, 1480
Dolasetron mesylate oral, 1485
Dorzolamide hydrochloride and timolol maleate ophthalmic, 1499
Doxepin hydrochloride oral, 1510
Doxylamine succinate oral, 1546
Dyclonine hydrochloride topical, 1571
Dyphylline and guaifenesin oral, 1575
Dyphylline oral, 1573
Ecamsule, 1576
Echothiophate iodide for ophthalmic, 1579
Emedastine ophthalmic, 1610
Ephedrine sulfate oral, 1644
Epinephrine bitartrate for ophthalmic, 1652
Epinephrine bitartrate ophthalmic, 1651
Epinephrine ophthalmic, 1649
Epinephryl borate ophthalmic, 1652
Ergocalciferol oral, 1667
Ergoloid mesylates oral, 1671
Erythromycin topical, 1690
Escitalopram oral, 1706
Ethosuximide oral, 1776
Fehling's, 6229
Ferric ammonium citrate for oral, 290
Ferric subsulfate, 1852
Ferrous gluconate oral, 1860
Ferrous sulfate oral, 1863
Fluocinolone acetonide topical, 1936
Fluocinonide topical, 1939
(+)-1-(9-Fluorenyl) ethyl chloroformate, 6166
Fluorescein sodium and benoxinate hydrochloride ophthalmic, 1944
Fluorescein sodium and proparacaine hydrochloride ophthalmic, 1945
Fluorouracil topical, 1957
Fluoxetine oral, 1961
Fluphenazine hydrochloride elixir, 1971
Fluphenazine hydrochloride oral, 1973
Flurbiprofen sodium ophthalmic, 1982
Formaldehyde, 2035, 6167, 6229
Furosemide oral, 2055
Gentamicin sulfate and betamethasone acetate ophthalmic, 2102

www.webofpharma.com

Solution *(continued)*
Gentamicin sulfate and betamethasone valerate otic, 2104
Gentamicin topical, 2105
Gentamicin sulfate ophthalmic, 2102
Gentian violet topical, 2109
Glutaral disinfectant, 5789
Glycerin ophthalmic, 2133
Glycerin oral, 2134
Guaifenesin and codeine phosphate oral, 2172
Guaifenesin oral, 2171
Halazone tablets for, 2182
Halcinonide topical, 2186
Haloperidol oral, 2189
Heparin lock flush, 2194
Homatropine hydrobromide ophthalmic, 2208
Hydralazine hydrochloride oral, 2215
Hydrocortisone and acetic acid otic, 2235
Hydrogen peroxide, 6171
Hydrogen peroxide topical, 2249
Hydroquinone topical, 2255
Hydroxyamphetamine hydrobromide ophthalmic, 2258
Hydroxyzine hydrochloride oral, 2266
Hyoscyamine sulfate elixir, 2276
Hyoscyamine sulfate oral, 2277
Hypromellose ophthalmic, 2281
Idoxuridine ophthalmic, 2293
Indium In 111 chloride, 2318
Indium In 111 oxyquinoline, 2320
Iodine, strong, 2363
Sodium iodide I 123, 2366
Sodium iodide I 131, 2368
Iodine topical, 2362
Ipecac oral, 2397
Ipratropium bromide and albuterol sulfate inhalation, 2399
Isoniazid oral, 2426
Isosorbide oral, 2440
Ivermectin topical, 2476
Lactulose, 2522
Lead, standard, 6236
Levalbuterol inhalation, 2576
Levobunolol hydrochloride ophthalmic, 2595
Levocarnitine oral, 2600
Levofloxacin oral, 2608
Lidocaine hydrochloride topical, 2627
Lincomycin oral, 2632
Lithium oral, 2648
Locke-Ringer's, 6231
Loperamide hydrochloride oral, 2661
Loratadine oral, 2674
Mafenide acetate for topical, 2704
Magnesium carbonate and citric acid for oral, 2710
Magnesium carbonate, citric acid, and potassium citrate for oral, 2711
Manganese chloride for oral, 2732
Magnesium citrate for oral, 2715
Magnesium citrate oral, 2714
Maltitol, 5871
Meperidine hydrochloride oral, 2784
Metaproterenol sulfate oral, 2813
Methadone hydrochloride oral, 2838
Methoxsalen topical, 2865
Methylcellulose ophthalmic, 2876
Methylcellulose oral, 2876
Metoclopramide oral, 2910
Metoprolol tartrate oral, 2925
Mibolerone oral, 2945
Minoxidil topical, 2975
Mometasone furoate topical, 3005
Moxifloxacin ophthalmic, 3034
Myrrh topical, 3057
Naphazoline hydrochloride ophthalmic, 3076
Naphazoline hydrochloride and pheniramine maleate ophthalmic, 3076
Neomycin and polymyxin B sulfates and gramicidin ophthalmic, 3123
Neomycin and polymyxin B sulfates and hydrocortisone otic, 3124
Neomycin and polymyxin B sulfates for irrigation, 3114
Neomycin and polymyxin B sulfates ophthalmic, 3115
Neomycin sulfate and dexamethasone sodium phosphate ophthalmic, 3106
Neomycin sulfate oral, 3103
Nickel standard TS, 6232
Nitrofurazone topical, 3183
Nitromersol topical, 3190
Nortriptyline hydrochloride oral, 3216
Ofloxacin ophthalmic, 3231
Olopatadine hydrochloride ophthalmic, 3249
Ondansetron, oral, 3266
Oral, containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 56
Oxybutynin chloride oral, 3328
Oxycodone hydrochloride oral, 3337
Oxymetazoline hydrochloride ophthalmic, 3350
Papain tablets for topical, 3396
Paromomycin oral, 3409
Penicillin G potassium for oral, 3439
Penicillin V potassium for oral, 3456
Phenobarbital oral, 3498
Phenol, topical, camphorated, 3502
Phenylephrine hydrochloride ophthalmic, 3519
Physostigmine salicylate ophthalmic, 3536
Pilocarpine hydrochloride ophthalmic, 3543
Pilocarpine nitrate ophthalmic, 3545
Podophyllum resin topical, 3582
Polyethylene glycol 3350 and electrolytes for oral, 3587
Polymyxin B sulfate and hydrocortisone otic, 3592
Polymyxin B sulfate and trimethoprim ophthalmic, 3592
Potassium bicarbonate effervescent tablets for oral, 3596
Potassium bicarbonate and potassium chloride for effervescent oral, 3597
Potassium bicarbonate and potassium chloride effervescent tablets for oral, 3597
Potassium bicarbonate, potassium chloride, and potassium citrate effervescent tablets for oral, 3609
Potassium bromide oral, veterinary, 3600
Potassium chloride for oral, 3605
Potassium chloride oral, 3604
Potassium citrate and citric acid oral, 3617
Potassium gluconate and potassium chloride for oral, 3621
Potassium gluconate and potassium chloride oral, 3621
Potassium gluconate, potassium citrate, and ammonium chloride oral, 3622
Potassium gluconate and potassium citrate oral, 3622
Potassium gluconate oral, 3619
Potassium iodide oral, 3624
Potassium nitrate, 3626
Potassium and sodium bicarbonates and citric acid effervescent tablets for oral, 3598
Povidone–iodine cleansing, 3635
Povidone–iodine topical, 3636
Prednisolone oral, 3661
Prednisolone sodium phosphate compounded oral, 3667
Prednisolone sodium phosphate ophthalmic, 3668
Prednisone oral, 3671
Prochlorperazine oral, 3697
Promazine hydrochloride oral, 3713
Promethazine and phenylephrine hydrochloride and codeine phosphate oral, 3724
Promethazine and phenylephrine hydrochloride oral, 3721
Promethazine hydrochloride oral, 3717
Proparacaine hydrochloride ophthalmic, 3739
Protein standard (8 g/dL), 6194
Pseudoephedrine hydrochloride, carbinoxamine maleate, and dextromethorphan hydrobromide oral, 3767
Pseudoephedrine hydrochloride oral, 3762
Pyridostigmine bromide oral, 3780
Ranitidine oral, 3846
Risperidone oral, 3905
Saccharin sodium oral, 3967
Scopolamine hydrobromide ophthalmic, 4013
Senna oral, 4026
Silver nitrate ophthalmic, 4041
Sodium acetate, 4055
Sodium bromide oral, veterinary, 4063
Sodium chloride, isotonic, 6202
Sodium chloride ophthalmic, 4068
Sodium chloride tablets for, 4069
Sodium citrate and citric acid oral, 4069
Sodium fluoride and acidulated phosphate topical, 4074
Sodium fluoride oral, 4072
Sodium hypochlorite, 4076, 6235, 6235
Sodium hypochlorite topical, 4077
Sodium lactate, 4078
Sodium phosphates oral, 4090
Sodium phosphates rectal, 4090
Sorbitol, 4101
Sorbitol noncrystallizing, 6036
Sorbitol sorbitan, 6038
Stavudine for oral, 4122
Sulfacetamide sodium ophthalmic, 4143
Sulfaquinoxaline oral, 4169
Terpin hydrate and codeine oral, 4284
Terpin hydrate oral, 4284
Tetracaine hydrochloride ophthalmic, 4299
Tetracaine hydrochloride topical, 4299
Tetracycline hydrochloride for topical, 4309
Tetrahydrozoline hydrochloride ophthalmic, 4315
Tetramethylammonium hydroxide, in methanol, 6211
Theophylline and guaifenesin oral, 4332
Theophylline oral, 4325
Theophylline sodium glycinate oral, 4334
Thiamine hydrochloride oral, 4338
Thiamine mononitrate oral, 4341
Thimerosal topical, 4347
Thioridazine hydrochloride oral, 4354
Thiothixene hydrochloride oral, 4361

Suspension *(continued)*
Clindamycin phosphate topical, 1072
Clonazepam oral, 1097
Clopidogrel compounded oral, 1111
Colestipol hydrochloride for oral, 1147
Colistin and neomycin sulfates and hydrocortisone acetate otic, 1150
Colistin sulfate for oral, 1150
Desoxycorticosterone pivalate injectable, 1279
Dexamethasone acetate injectable, 1291
Dexamethasone ophthalmic, 1287
Diazoxide oral, 1335
Didanosine tablets for oral, 1367
Diltiazem hydrochloride oral, 1406
Dipyridamole oral, 1445
Dolasetron mesylate oral, 1485
Doxycycline calcium oral, 1529
Doxycycline compounded oral, veterinary, 1530
Doxycycline for oral, 1525
Enalapril maleate compounded oral, veterinary, 1613
Erythromycin estolate for oral, 1694
Erythromycin estolate oral, 1693
Erythromycin estolate and sulfisoxazole acetyl oral, 1695
Erythromycin ethylsuccinate for oral, 1699
Erythromycin ethylsuccinate oral, 1698
Erythromycin ethylsuccinate and sulfisoxazole acetyl for oral, 1701
Estrone injectable, 1752
Famotidine for oral, 1818
Ferumoxsil oral, 1868
Flucytosine oral, 1917
Fluorometholone ophthalmic, 1952
Furazolidone oral, 2052
Ganciclovir oral, 2090
Gentamicin and prednisolone acetate ophthalmic, 2107
Griseofulvin oral, 2166
Hydrocortisone rectal, 2233
Ibuprofen oral, 2283
Imipenem and cilastatin for injectable, 2298
Indomethacin oral, 2332
Isophane insulin human, 2352
Human insulin isophane and human insulin injection, 2349
Isophane insulin, 2351
Insulin zinc, 2356
Insulin zinc, extended, 2357
Insulin zinc, prompt, 2359
Isoflupredone acetate injectable, 2419
Ketoconazole oral, 2507
Labetalol hydrochloride oral, 2519
Lamotrigine compounded oral, 2545
Lansoprazole compounded oral, 2556
Magaldrate and simethicone oral, 2706
Magnesium carbonate and sodium bicarbonate for oral, 2712
Mebendazole oral, 2744
Medroxyprogesterone acetate injectable, 2755
Megestrol acetate oral, 2763
Meloxicam oral, 2770
Mesalamine rectal, 2803
Methacycline hydrochloride oral, 2835
Methadone hydrochloride tablets for oral, 2839
Methylprednisolone acetate injectable, 2901
Metolazone oral, 2913
Metoprolol tartrate oral, 2926
Metronidazole benzoate compounded oral, 2933
Minocycline hydrochloride oral, 2966
Naproxen oral, 3079
Natamycin ophthalmic, 3096
Neomycin and polymyxin B sulfates and dexamethasone ophthalmic, 3122
Neomycin and polymyxin B sulfates and hydrocortisone otic, 3124
Neomycin and polymyxin B sulfates and hydrocortisone acetate ophthalmic, 3125
Neomycin and polymyxin B sulfates and hydrocortisone ophthalmic, 3123
Neomycin and polymyxin B sulfates and prednisolone acetate ophthalmic, 3127
Neomycin sulfate and hydrocortisone otic, 3109
Neomycin sulfate and hydrocortisone acetate ophthalmic, 3110
Neomycin sulfate and prednisolone acetate ophthalmic, 3128
Nevirapine oral, 3132
Nitrofurantoin oral, 3179
Nystatin for oral, 3221
Nystatin oral, 3221
Ondansetron hydrochloride oral, 3268
Oxfendazole oral, 3322
Oxytetracycline hydrochloride and hydrocortisone acetate ophthalmic, 3363
Penicillin G benzathine injectable, 3433
Penicillin G benzathine and penicillin G procaine injectable, 3434
Penicillin G benzathine oral, 3433
Penicillin G, neomycin, polymyxin B, hydrocortisone acetate, and hydrocortisone sodium succinate topical, 3430
Penicillin G procaine, dihydrostreptomycin sulfate, chlorpheniramine maleate, and dexamethasone injectable, 3445
Penicillin G procaine and dihydrostreptomycin sulfate injectable, 3444
Penicillin G procaine, dihydrostreptomycin sulfate, and prednisolone injectable, 3447
Penicillin G procaine, neomycin and polymyxin B sulfates, and hydrocortisone acetate topical, 3448
Penicillin G procaine injectable, 3443
Penicillin G procaine for injectable, 3443
Penicillin V benzathine oral, 3454
Penicillin V for oral, 3452
Perflutren protein-type A microspheres injectable, 3475
Pergolide, oral, veterinary, 3478
Phenoxybenzamine hydrochloride compounded oral, 3504
Phenytoin oral, 3526
Piroxicam compounded oral, 3579
Prednisolone acetate injectable, 3663
Prednisolone acetate ophthalmic, 3663
Prednisolone compounded oral, veterinary, 3664
Prednisone injectable, 3672
Prednisolone tebutate injectable, 3670
Primidone oral, 3684
Progesterone injectable, 3706
Psyllium hydrophilic mucilloid for oral, 3771
Pyrantel pamoate oral, 3774
Pyrvinium pamoate oral, 3789
Quinidine sulfate oral, 3814
Ractopamine hydrochloride, 3826
Resorcinol and sulfur topical, 3862
Rifampin oral, 3877
Rimexolone ophthalmic, 3887
Selenium sulfide topical, 4023
Simethicone oral, 4045
Sodium polystyrene sulfonate, 4092
Spectinomycin for injectable, 4108
Spironolactone compounded oral, 4111
Structured vehicle, 6086
Structured vehicle, sugar-free, 6087
Sulfacetamide sodium and prednisolone acetate ophthalmic, 4145
Sulfacetamide sodium topical, 4143
Sulfadimethoxine oral, 4153
Sulfamethizole oral, 4158
Sulfamethoxazole oral, 4161
Sulfamethoxazole and trimethoprim oral, 4163
Sulfisoxazole acetyl oral, 4175
Sumatriptan succinate oral, 4188
Temozolomide oral, 4257
Testosterone injectable, 4287
Tetracycline hydrochloride ophthalmic, 4310
Tetracycline hydrochloride oral, 4310
Tetracycline oral, 4302
Thiabendazole oral, 4335
Tobramycin and dexamethasone ophthalmic, 4411
Tobramycin and fluorometholone acetate ophthalmic, 4412
Topiramate compounded oral, 4436
Triamcinolone acetonide injectable, 4490
Triamcinolone diacetate injectable, 4491
Triamcinolone hexacetonide injectable, 4493
Trifluprazine oral, 4514
Trisulfapyrimidines oral, 4536
Vehicle for oral, 5913
Verapamil hydrochloride oral, 4609
Zinc sulfide topical, 4695

Suspension structured vehicle, 6086
sugar-free, 6087
Suture
absorbable surgical, 4189
nonabsorbable surgical, 4191

Tablets

Abacavir, 6066
Abiraterone acetate, 26
Acarbose, 31
Acepromazine maleate, 38
Acetaminophen, 45
Containing at least three of the following—acetaminophen and (salts of) chlorpheniramine, dextromethorphan, and pseudoephedrine, 58
Acetaminophen and aspirin, 48
Acetaminophen, aspirin, and caffeine, 49
Acetaminophen and caffeine, 51
Acetaminophen, chlorpheniramine maleate, and dextromethorphan hydrobromide, 60
Acetaminophen and codeine phosphate, 66
Acetaminophen and diphenhydramine citrate, 69
Acetaminophen, diphenhydramine hydrochloride, and pseudoephedrine hydrochloride, 70
Acetaminophen extended-release, 47
Acetaminophen and hydrocodone bitartrate, 2224
Acetaminophen and pseudoephedrine hydrochloride, 72
Acetazolamide, 76
Acetohydroxamic acid, 79
Acyclovir, 92
Albendazole, 103
Albuterol, 105
Albuterol extended-release, 106
Alendronate sodium, 120
Alfuzosin hydrochloride extended-release, 125
Allopurinol, 134
Almotriptan, 138
Alosetron, 142
Alprazolam, 146
Alprazolam extended-release, 148
Alprazolam orally disintegrating, 152
Alumina and magnesia, 167
Alumina, magnesia, and calcium carbonate chewable, 169
Alumina, magnesia, calcium carbonate, and simethicone chewable, 170
Alumina, magnesia, and simethicone chewable, 174
Alumina and magnesium carbonate, 177
Alumina, magnesium carbonate, and magnesium oxide, 178
Alumina and magnesium trisilicate, 180
Aluminum hydroxide gel, dried, 190
Aluminum sulfate and calcium acetate for topical solution, 195
Amiloride hydrochloride, 223
Amiloride hydrochloride and hydrochlorothiazide, 224
Aminocaproic acid, 237
Aminopentamide sulfate, 240
Aminophylline, 248
Aminophylline delayed-release, 250
Amiodarone hydrochloride, 257
Amitriptyline hydrochloride, 263
amlodipine and atorvastatin, 265
Amlodipine and olmesartan medoxomil, 272
Amlodipine and valsartan, 275
Amlodipine besylate, 286
Amlodipine, valsartan and hydrochlorothiazide, 279
Ammonium chloride delayed-release, 288
Amodiaquine hydrochloride, 294
Amoxapine, 297
Amoxicillin, 304
Amoxicillin and clavulanic acid extended-release, 310
Amoxicillin and clavulanate potassium, 308
Amphetamine sulfate, 313
Ampicillin, 325
Anastrozole, 337
Anileridine hydrochloride, 341
Apomorphine hydrochloride, 358
Arginine, 4764
Aripiprazole, 375
Aripiprazole orally disintegrating, 377
Ascorbic acid, 385
Aspirin, 392
Aspirin, alumina, and magnesia, 397
Aspirin, alumina, and magnesium oxide, 399
Aspirin, buffered, 393
Aspirin and codeine phosphate, 403
Aspirin, codeine phosphate, alumina, and magnesia, 404
Aspirin delayed-release, 394
Aspirin effervescent, for oral solution, 395
Aspirin extended-release, 396
Atenolol, 407
Atenolol and chlorthalidone, 409
Atorvastatin calcium, 418
Azatadine maleate, 438
Azathioprine, 441
Azithromycin, 457
Baclofen, 473
Barium sulfate, 483
Belladonna extract, 487
Benazepril hydrochloride, 491
Bendroflumethiazide, 497
benzphetamine hydrochloride, 530
Benztropine mesylate, 533
Betaxolol, 559
Bethanechol chloride, 564
Bicalutamide, 567
Biotin, 571
Bisacodyl delayed-release, 574
Bismuth subsalicylate, 583
Bisoprolol fumarate, 586
Bisoprolol fumarate and hydrochlorothiazide, 587
Black cohosh, 4823
Bromocriptine mesylate, 597
Brompheniramine maleate, 603
Bumetanide, 608
Buprenorphine and naloxone sublingual, 616
Bupropion hydrochloride, 620
Bupropion hydrochloride extended-release, 621
Buspirone hydrochloride, 637
Busulfan, 640
Butabarbital sodium, 643
Butalbital, acetaminophen, and caffeine, 646
Butalbital and aspirin, 646
Butalbital, aspirin, and caffeine, 649
Cabergoline, 659
Calcium acetate, 682
Calcium carbonate, 687
Calcium carbonate, magnesia, and simethicone chewable, 689
Calcium citrate, 4835
Calcium gluconate, 701
Calcium L-5-methyltetrahydrofolate, 4842
Calcium lactate, 703
Calcium and magnesium carbonates, 691
Calcium pantothenate, 707
Calcium phosphate, dibasic, 712
Calcium with vitamin D, 4843
Calcium and vitamin D with minerals, 4845
Candesartan cilexetil, 717
Candesartan cilexetil and hydrochlorothiazide, 719
Capecitabine, 723
Captopril, 735
Captopril and hydrochlorothiazide, 737
Carbamazepine, 743
Carbamazepine extended-release, 746
Carbenicillin indanyl sodium, 749
Carbidopa and levodopa, 751
Levodopa and carbidopa extended-release, 753
Carbidopa and levodopa orally disintegrating, 759
Carbinoxamine maleate, 763
Calcium carbonate and magnesia chewable, 688
Carboxymethylcellulose sodium, 774
Carisoprodol, 777
Carisoprodol, aspirin, and codeine phosphate, 780
Carisoprodol and aspirin, 778
Carprofen, 786
Carteolol hydrochloride, 790
Carvedilol, 793
Cascara, 800
Cat's claw, 4858
Cefaclor extended-release, 811
Cefadroxil, 817
Cefixime, 838
Cefpodoxime proxetil, 864
Cefprozil, 870
Cefuroxime axetil, 889
Cephalexin, 899
Cephalexin, for oral suspension, 899
Cephradine, 909
Cetirizine hydrochloride, 913
Cetirizine hydrochloride orally disintegrating, 915
Cetrizine hydrochloride and pseudoephedrine hydrochloride extended-release, 917
Chlorambucil, 926
Chloramphenicol, 932
Chlordiazepoxide, 937
Chlordiazepoxide and amitriptyline hydrochloride, 938
Chloroquine phosphate, 961
Chlorothiazide, 964
Chlorpheniramine maleate, 971
Chlorpromazine hydrochloride, 977
Chlorpropamide, 978
Chlortetracycline hydrochloride, 987
Chlorthalidone, 983
Chlorzoxazone, 984
Cholecalciferol, 988
Chondroitin sulfate sodium, 4897

X-ray fluorescence spectrometry ⟨735⟩, 6971
X-ray fluorescence spectrometry—theory and practice ⟨1735⟩, 8490
Xylazine, 4656
hydrochloride, 4658
injection, 4659
Xylene, 6218
m-Xylene, 6218
o-Xylene, 6218
p-Xylene, 6218
Xylene cyanole FF, 6219
Xylenol orange, 6221
TS, 6237
Xylitol, 6105
Xylometazoline hydrochloride, 4659, 6219
nasal solution, 4661
Xylose, 4662, 6219

Y

Yeast extract, 6219
Yellow mercuric oxide, 6219
Yohimbine
hydrochloride, 4663
injection, 4664
Yttrium Y 90 ibritumomab tiuxetan injection, 4665

Z

Zalcitabine, 4666
tablets, 4667
Zaleplon, 4668
capsules, 4669
Zanamivir, 4671
meso-Zeaxanthin, 5570
preparation, 5572
Zein, 6106
Zidovudine, 4673
capsules, 4674
injection, 4675
and lamivudine tablets, 2528
oral solution, 4676
tablets, 4678
Zileuton, 4679
Zinc, 6219
acetate, 4681, 6219
acetate oral solution, 4682
activated, 6219
amalgam, 6219
carbonate, 4682
chloride, 4683
chloride, anhydrous, powdered, 6219
chloride injection, 4684
citrate, 5574
citrate tablets, 5575
determination ⟨591⟩, 6817
gluconate, 4684
gluconate tablets, 4686
oxide, 4687
oxide neutral, 4688
oxide ointment, 4689
oxide paste, 4690
oxide and salicylic acid paste, 4690
stearate, 4691
sulfate, 4692
sulfate heptahydrate, 6219
sulfate injection, 4692
sulfate ophthalmic solution, 4693
sulfate oral solution, 4693
sulfate tablets, 4694
sulfate, twentieth-molar (0.05 M), 6252
sulfide topical suspension, 4695
undecylenate, 4695
uranyl acetate TS, 6237
and vitamin C lozenges, 5576
Zinc oxide
powder, 4690
Zinc sulfate
0.02 M VS, 6252
0.1 M VS, 6252
Ziprasidone
capsules, 4695
Ziprasidone hydrochloride, 4699
Zirconyl
nitrate, 6219
Zolazepam
hydrochloride, 4701
and tiletamine for injection, 4383
Zolmitriptan, 4702
nasal spray, 4704
tablets, 4706
orally disintegrating tablets, 4709
Zolpidem tartrate, 4711
tablets, 4712
extended-release tablets, 4714
Zonisamide, 4718
capsules, 4719
Zonisamide compounded
oral suspension, 4721
