Index

A

A-B-C system of inventory monitoring, 339
Accounts payable, 383, 386–388
Accounts receivable as collateral, 384, 391–393
Accounts receivable management (*see* Credit, Credit management, Monitoring accounts receivable, Terms of sale)
Accounts receivable turnover:
  in forecasting collections, 80–81
  in monitoring aggregate liquidity, 353–354
  in monitoring payment patterns, 253–256
Accruals, 383, 388–389
Adjusted net income method of cash forecasting, 75–76
Agency problems and credit limits, 239–240
Agency ratings in credit management, 197
Aging fractions, 253–256
Aggregate liquidity:
  basics of, 351
  Cash Conversion Cycle index of, 354–357, 360–362
  Comprehensive Liquidity Index of, 356–358, 360–362, 369–372
  evaluating strategies for, 366–372
  as hedge, 351–352
  improved indices of, 354–363
  in practice, 372–374
  Lambda index of, 356, 359–362
  management of, within the management process, 363–366
Aggregate liquidity (cont.)
  Net Liquid Balance index of, 356, 358–362
  reasons for managing, 351–352
  spreadsheet evaluation of, 360–362, 368–372
  traditional measures of, 352–354
Alternatives to holding inventory, 283–286
Anticipation system of cash transfer, 59–60
Autocorrelation of cash flows, statistical test for, 138–141
Automated clearinghouse transfers, 57–59

B

Bad debt expense:
  in forecasting collections, 80–82
  in terms of sale decisions, 160
  monitoring of, 267–270
Banks:
  concentration, 56–57
  correspondent, 35
  deregulation of, 63–64
  selection for reducing clearing float, 35
Basis risk:
  in currency futures and options, 452
  in interest rate futures and options, 113
Baumol model, 125–130
Beranek model, 125, 130–132
Beta, 11–12, 14
Borrowings (*see* Short term debt management)
Brand loyalty in credit granting, 224–226

C

Capital asset pricing model:
described, 12–15
in credit limit decisions, 238–239
Cash:
Baumol model for, 125–130
Beranek model for, 125, 130–132
control limits in the management of, 133–134, 141–143
as hedge of the cash forecast, 25, 101–102, 113–116
management of:
in international settings, 462–464
Stone model for, 125, 141–143
Miller-Orr model, 125, 133–141
models for, 124–145
in practice, 145–148
reasons for holding, 24–26
Cash concentration strategies:
concentration banking, 56–57
concentration mechanisms, 57–59
current practice in, 146–147
frequency of transfer in, 59–60
Cash Conversion Cycle, 354–357, 360–362
Cash flows, as basis for decisions, 6–8
Cash forecasting:
adjusted net income of, 75–76
certainty approach to, problems with, 92–93
collections within, 80–82
disbursements within, 76–78
distribution of, to shorter periods, 87–91
hedging uncertainties in, 101–116, 422–430
items to be forecast in, 76–78
reasons for, 72–74
receipts and disbursements method of, 75
sensitivity analysis in, 94–96
simulation analysis in, 94–96
spreadsheet example of, 82–85
types of, 74–76
uncertainty in, 91–100
using the result of, 85–87
Certainty approach:
to cash forecasting, problems with, 92–93
to inventory management, 280–313
Certificates of deposit, 30
Check clearing:
bank selection for reducing, 35
clearinghouses for, 35
electronic collections for, 36–37
times, 33–35
Clearinghouses:
automated, for cash transfer, 57–59
for checks, 35
for currency futures and options, 452
for interest rate futures and options, 105
Collection costs in credit granting, 161
Collection policy, 155
Collections, electronic, 36–37
Collections from accounts receivable:
in cash forecasting, 80–82
in terms of sale analysis, 159–160
monitoring changes in, 250–251
Commercial paper, 30, 148, 383–385
Compensating balances, 26
Comprehensive Liquidity Index, 356–358, 360–362, 369–372
Computers in finance, 16–17 (*see also* Sensitivity analysis, Simulation analysis, Spreadsheets)
Concentration banking, 56–57
Concentration mechanisms for cash, 57–59
Concentration strategies (*see* Cash concentration strategies)
Control limits in cash management, 133–134, 141–143
Controlled disbursing, 62
Correspondent banks, 35
Costs:
in short term borrowing, 396–401
types of:
in credit decisions, 159–162
in inventory models, 286–289
Country risk, in international management, 443–445
Credit:
management of:
monitoring results of, 250–274
in practice, 270–272
reasons for granting, 156–159
revenues and costs from, 159–162
to individuals, 158–159
Credit agency ratings, 197
Credit-granting decisions:
basics of, 195–196
collection costs in, 161
creditworthiness in, 213–214
decision-tree analysis for, 218–227
estimating parameters in, 230–235
expert systems for, 218
failure-forecasting functions in, 233–235
financial arbitrage in, 156–157
Five Cs of Credit in, 214–216
in international management, 464–466

Credit-granting decisions (cont.)
information costs in, 196–213
limits in, 237–240
multiperiod models for, 222–227
scoring systems for, 217–218
shareholder wealth maximization in, 217
single-period models for, 218–222, 227–230
problems with the traditional approach to, 216–218
taxes in, 227–230
to marginal accounts, traditional approach, 213–216
uncertainty in, 235–237
with recoveries in default, 218–222, 227–230
Credit information:
in international management, 465
sources of, 196–199
Credit investigation, 195–213
Credit limits, 237–240
Credit-scoring systems, 217–218
Credit standards, 195
Creditworthiness, 213–214
Currency risk (*see* Exchange risk)
Currency forwards (*see* Forward contracts)
Currency futures (*see* Futures contracts)
Currency options (*see* Option contracts)

D

Decision trees:
for credit granting with recoveries, 218–222
for credit investigation decisions, 199–213
for multiperiod credit granting, 222–227
Default, recoveries in, in credit granting, 219–220, 232
Depository transfer checks, 57–59
Deregulation of banks, 63–64
Disbursements:
controlled, 62
forecasting of, 76–78
management of, 60–63
with zero-balance accounts, 61–62
Distribution method of cash forecasting, 74, 87–91
Diversifiable risk (*see* Nonsystematic risk)
Dividend capture strategies, 31–33
Dual cash balances, 56
Dynamic inventory problems:
defined, 288–289
models for, 290–312, 330–338

E

Economic order quantity, models of, 290–300
Effective interest rate of borrowings, 398–401, 413–414
Electronic collections, 36–37
Electronic transfers, 57–59
Eurodollars, 31, 448–449
Exchange risk:
defined, 442–443
hedges of, 447–459
spreadsheets for evaluating hedges of, 455, 458–459
Expectations theory of term structure, 27
Expert systems for credit-granting decisions, 218

F

Factoring, 391–393
Failure forecasting functions, 233–235
Financial arbitrage in credit granting, 156–157
Financial decision-making:
and risk, 8–16
and shareholder wealth maximization, 5–6
Financial forecasting, 78–80
Finished goods inventory, 283
Five Cs of Credit, 214–216
Flotation of checks:
defined, 33
managing, 35–37
types of, 33
Forecasting:
of applicant's parameters in credit-granting decisions, 230–235
of cash balances, 72–91
of cash disbursements, 76–78
of cash receipts, 80–82
financial, 78–80
of sales, in terms of sale decisions, 175–178
Forward contracts, on currency, 450–451
Frequency of transfers in cash concentration, 59–60
Futures contracts:
basis risk in, 113, 452
clearinghouses for, 105, 452
on currency, 451–453
on interest-bearing instruments, 104–106, 107–113
options on:
currency futures, 453–454
interest rate futures, 106–113

H

Hedging:
via aggregate liquidity, 351–352
of cash balance uncertainties, 101–116
cash and near-cash assets for, 25, 101–102, 113–116
defined, 15–16
in dividend capture strategies, 31–33
using integer programming to formulate strategies for, 422–430
in international management, 447–462
with safety stocks in inventory problems, 281–282, 307–312

I

Information costs in credit decisions, 196–213
Information problems in the sale of goods, 157–158
Insurance programs for international management, 461–462
Integer programming:
in credit investigation problems, 200
in hedging cash stockout risk, 422–428
introduction, 17
in lockbox location problems, 40–55
in structuring current debt, 415–430
International working capital management:
accounts receivable management in, 464–466
basics of, 441
cash management in, 462–464
economic risk in, 445–446
exchange risk in, 442–443
hedging:
exchange risk in, 447–459
nonexchange risk in, 459–462
insurance programs in, 461–462
inventory management in, 468–469
netting of payments in, 463–464
political risk in, 443–445
in practice, 468–469
reasons for, 441–442
repatriations in, structuring of, 460–461
short term financing in, 466–468
sources of risk in, 442–446
Inventory as collateral, 384, 393–394
Inventory, investment in:
in credit decisions, 160
in inventory modeling, 286, 291–294
Inventory management:
A-B-C approach to monitoring, 339
alternatives to, 283–286
approaches to, 289–290
basics of, 280–281
characteristics of, 288–289
costs in, 286–289
dynamic problems in, 288–213, 330–338
economic order quantity model for, 290–295
finished goods inventory, 283
in international management, 466
just-in-time systems for, 284–286
monitoring of balances, 338–344
optimization models for, 290–307
order points in, 295
in practice, 344–345
production order quantity model for, 296–300
quantity discounts in, 300–313
raw materials inventory, 281–282
reason for carrying inventory, 281–283
risk in, 288–289, 307–312, 320–338
safety stocks as a hedge in, 307–312
simulation analysis in dynamic problems, 330–338
spreadsheets for, 301–307, 321–322, 326–330, 332–335, 341–344
static problems in, 288–289, 321–330
stockout costs in, 287–288, 307–312
uncertainty approaches to:
dynamic problems, 330–338
static problems, 320–330
work-in-process inventory, 282–283

J

Just-in-time inventory systems, 284–286

K

Kanbans, 285

L

Lambda index, 356, 359–362
Liquidity (*see* Aggregate liquidity)
Lockboxes:
integer programming solution to location problem, 40–55
location problem:
defined, 38–41
example, 42–53

Lockboxes (cont.)
spreadsheet analysis of, 42–47
warnings about location problems in, 53–55

M

Marginal accounts, credit decisions regarding, 213–240
Market risk, 11–12
Market segmentation theory of term structure, 28
Marketable securities:
as collateral, 384, 390–391
as hedges of cash shortage, 102–104
management of, in practice, 145–148
models for the management of, 124–145
reasons for holding, 24–36
Maturity preference theory of term structure, 28
Miller-Orr model, 125, 133–141
Modern finance, principles of, 5–8
Money market instruments:
listed, 26–33
futures contracts on, 104–106, 107–113
Monitoring accounts receivable:
bias in measures for, 252–263
for bad debt losses, 267–270
payment patterns approach to, 256–263
ratios of receivables outstanding measure for, 256–263
reasons for, 250–252
Sales-Weighted Days Sales Outstanding measure for, 256–263
spreadsheet applications for, 259–260, 265–270
variance analysis for, 263–267
Monitoring inventory, 338–344
Multiperiod approach to terms of sale decisions, 165–174
Multiperiod models for credit granting, 222–227

N

Net availability of borrowing, 396–398, 412–413
Net Liquid Balance, 356, 358–362
Netting of international payments, 463–464
Nondiversifiable risk (*see* Market risk)
Nonnormality of cash flows, statistical test for, 136–138
Nonsystematic risk, 11–12

O

Order point inventory system, 295
Order quantity (*see* Economic order quantity, Inventory management, Production order quantity)
Optimal product life, 178–185
Optimization models:
in cash management, 125–141
in inventory management, 290–307
in lockbox location, 40–55
in structuring current debt, 415–430
Option contracts:
basis risk in, 113, 452
clearinghouses for, 105, 452
in hedged dividend capture strategies, 31–33
on currency and currency futures, 453–454
on interest rate futures, 106–113
Option pricing model, 323–327
Overbuying, 238

P

Payment patterns approach:
to forecasting receipts, 81–82
to monitoring accounts receivable balances, 256–263
Payment proportions approach (*see* Payment patterns approach)
Probability of default, estimating the, 232–235
Production order quantity model, 296–300

Q

Quantity discounts in inventory decisions, 300–313

R

Ratios of receivables outstanding, 256–263
Raw materials inventory, 281–282
Receipts and disbursements method, 75
Recoveries in default, 219–220, 232
Repatriations, structuring of, 460–461
Replenishment rates in inventory models, 288–289, 296–300
Repurchase agreements, 30–31, 102
Reserve borrowing capacity, 3, 16, 25, 102–103, 422–428
Risk:
addressing, methods of, 12–15

Risk (cont.)
and financial decision-making, 8–16
assessing amounts of, 8–12
in international management, 446
in cash forecasting, 91–116
in credit-granting decisions, 235–237
economic, in international management, 445–446, 459–462
exchange, in international management, 442–443
hedging of (*see* Hedging)
in inventory management, 288–289, 307–312, 320–338
in terms of sale decisions, 175–178
nonsystematic, 11–12
political, in international management, 443–445, 459–462
separate modeling of, 15–16
systematic, 11–12
total, 11–12
Risk-adjusted discount rates:
described, 7, 12–15
in static inventory problems, 329–330

S

Safety stock strategies, 307–312
Sales-Weighted Days Sales Outstanding, 256–263
Scheduled system of cash transfers, 59
Secured borrowings, with:
accounts receivable as collateral, 384, 391–393
inventory as collateral, 384, 393–394
marketable securities as collateral, 384, 390–391
Sensitivity analysis:
in cash forecasting, 94–96
defined, 8–9
in terms of sale analysis, 176–178
Separate risk modeling, 15–16
Sequential method, 382, 401–403, 412–415
Serial correlation of cash flows (*see* Autocorrelation of cash flows)
Shareholder wealth maximization:
as a principle of financial management, 5–6
in judgmental credit analysis, 217
Short term debt management:
basics of, 382
calculating the availability of, 396–398, 412–413
calculating the cost in, 396–401
Short term debt management (cont.)
hedging cash stockouts with, 422–430
hedging interest rate risk in, 104–111, 112–113
integer programming method for, 415–422
in international management, 466–468
in practice, 430–432
problems with the sequential method for, 412–415
reasons for, 383
sequential method for, 401–403
sources of short term debt, 383–395
spreadsheets for, 401–403
Short term investments (*see* Money market instruments)
Simulation analysis:
computer packages for, 17
defined, 9–10
in cash forecasting, 96–100
in dynamic inventory problems, 330–338
Single-period models for credit granting, 218–222, 227–230
Sovereignty risk, in international management, 443–445
Spreadsheets:
in calculating effective interest cost, 401–402
in cash forecasting, 82–85
for evaluating exchange risk hedges, 455, 458–459
introduced, 16–17
in inventory decisions, 301–307, 321–322, 326–330, 332–335
in inventory monitoring, 341–344
in lockbox location analysis, 42–47
in managing aggregate liquidity, 360–362, 368–372
for monitoring accounts receivable, 259–260, 265–270
in the sequential method, 402–403
in terms of sale analysis, 166–174, 179–185
Static (one-period) inventory problems:
defined, 288–289
models for, 321–330
risk-adjusted discount rates in, 329–330
Statistical tests:
for autocorrelation of cash flows, 138–141
for nonnormality of cash flows, 137–138
Stockout costs of inventory:
defined, 287–288
models for the management of, 307–312
Stone model, 125, 141–143

Strategic aspects of terms of sale policy, 178–185
Surplus borrowing capacity (*see* Reserve borrowing capacity)
Systematic risk (*see* Market risk)

T

Taxes in credit-granting decisions, 227–230
Temporary investments (*see* Marketable securities, Money market instruments)
Term structure of interest rates:
  expectations theory of, 27
  market segmentation theory of, 28
  maturity preference theory of, 28
Terms of sale decisions:
  assessing risk in, 175–178
  bad debt expense within, 160
  collections within, 159–160, 166–167
  example problem in, 166–174
  inventory investment within, 160, 167
  multiperiod approach to, 165–174
  sensitivity analysis in, 175–178
  spreadsheets for, 166–174, 179–185
  standard approach to, 162–165
  strategic aspects of, 178–185
Total risk, 11–12
Traditional approach:
  to credit-granting decisions, 213–218
  to terms of sale decisions, 162–165
Transfers in cash concentration systems:
  anticipation, 59–60
  automated clearinghouse, 57–59
  depository transfer checks, 57–59
  electronic, 57–59
  frequency of, 59–60
  mechanisms for, 57–59
  scheduled, 59
Transfers in cash concentration systems (cont.)
  trigger points, 59
  wire, 57–59
Treasury bills, 29–30
Trigger point system of cash transfers, 59

U

Uncertainty (*see* Risk)
Unsecured credit line borrowings, 383,
Unsecured note and term loan borrowings, 383, 390

V

Variance analysis, used to monitor:
  accounts receivable balances, 263–267
  inventory balances, 341–344

W

Wire transfers, 57–59
Work-in-process inventory, 282–283
Working capital cycle, 3–5
Working capital management
  defined, 1
  importance of, 3–5
  necessity for, 2

Y

Yield curve (*see* Term structure of interest rates)

Z

Zero-balance accounts, 61–62
